NEW YORK, THURSDAY, JULY 7, 1881.

The Week.

THE country was startled on Saturday by the news that the President had been shot just as he was about leaving Washington for New York, and was dangerously, if not mortally, wounded. As he was entering the Baltimore and Ohio Station to take the early morning train for New York he was shot twice by a man who had been lying in wait for him there with a revolver. The first ball struck the President in the shoulder, but seems merely to have inflicted a flesh-wound; the second struck him in the back near the hip, and is lodged in the body—the physicians in attendance have found it impossible to ascertain exactly where. It was at first believed that it had passed into the liver, but of this there is now, at this writing, considerable doubt. At first, too, the general impression seemed to be that recovery was impossible; but the mere continuance of life soon began to give grounds for hope, and notwithstanding what seemed to be a dangerous relapse on Sunday evening the official bulletins as we go to press give decidedly encouraging accounts of the President's condition. The would-be assassin, Guiteau, was at once overpowered and carried off to jail, not, however, before he succeeded in crying out in a melodramatic and evidently premeditated way something to the effect that he had done it as a "Stalwart," and that "Arthur was President now." He had also written a letter to General Sherman, which was found in the street shortly after his arrest, and in which he referred to the death of the President as "a political necessity," described himself as "a lawyer, theologian, and politician," and a "Stalwart of the Stalwarts," and requested General Sherman to send troops to the jail, apparently anticipating mob-violence.

All the details of the crime show a cool deliberation which, in an ordinary case and with any adequate motive, would remove all doubts on the subject of the prisoner's sanity; but there are features in it which look the other way. Guiteau has always led a wild, irregular life, and has conducted himself on various occasions in such a manner as to produce the impression on the minds of people with whom he came into contact that he was irresponsible. Since his arrest he has talked like a lunatic, and shown a levity which is not at all common among sane persons who commit murder from political fanaticism. His only cause for personal hostility to the President (which, by the way, he entirely disclaims) is that he had failed to get an office from him. Stalwartism is of itself with many persons a sort of mental disease, which prevents them from seeing anything in the light in which it appears to the rest of mankind, and it has excused before now a good many serious violations of the moral law. Whether of itself it ought to furnish a legal ground for acquittal of homicide is another and a distinct question, which the courts would probably decide in the negative. The punishment for an assault with intent to kill in the District of Columbia is only a short term of imprisonment, which certainly seems an entirely inadequate penalty for such a case as this, and the suggestion has been made that the Constitution ought to be altered so as to increase the penalty for any attempt on the life of the President.

The President's fate is so solemn a theme, and concerns so many both in its lessons and its results, that there is no point in it which will bear being passed over lightly. This the Vice-President has already begun to find to his cost, but we hope also to his profit. There was probably not a voter able to read in this country, outside the small circle of Mr. Conkling's personal following, who did not find the grief and dismay with which he heard on Saturday morning that the President had been killed greatly intensified by the reflection that Mr. Chester A. Arthur was his legal successor. There is, we presume, no doubt in any one's mind that had it been possible to vote on Mr. Arthur directly and separately from the President, he would not have carried a single State. His nomination was felt to be most unfortunate, and was acquiesced in in the belief that the office had no influence, and that the probability of his succeeding to the Presidency was too remote to be worth considering, in view of General Garfield's age and bodily vigor. It was hoped, too, by many that, although Mr. Arthur's political activity and tastes had been of a very objectionable kind, his elevation would have the sobering and educating effect which has been so often, even in ordinary men, produced by the sudden imposition of a new kind of responsibility. There was a very rude shock given to this expectation by the speech at the Dorsey dinner, in which Mr. Arthur treated that person's operations in Indiana, the corruption of which he virtually confessed, as an excellent joke. The way in which the Republican press received this escapade, coupled with the revelations subsequently made about Dorsey, ought to have stung a man of ordinary susceptibility into watchfulness and prudence at least. But the Conkling struggle at Albany had no sooner begun than the Vice-President hurried to play a prominent but subordinate part in it, in apparent indifference to the indignant protests of all that was best in the community. The worst has since happened. The awful tragedy at Washington found him still busy with the details of a contest in which charges of bribery on one side had been met by charges of adultery on the other, and in which suspected perjury was foiled by peeping through bedroom keyholes. It is out of this mess of filth that Mr. Arthur will go to the Presidential chair in case of the President's death.

In a matter in which there is so much to deplore and dread, it is well to look for things which are compensatory or consolatory. Foremost among these is the fact that the attack on the President did not occur until the public mind had been thoroughly enlightened as to the character and aims of his Conklingite opponents. Conkling and Platt were in no way better men before their resignation than they are now, but they are now known and understood by hundreds of thousands whom they had previously imposed upon. Conkling can hardly be so bold or rapacious now as he would have been before his Albany trials. A second source of consolation is the way in which the tragedy has brought home to the public the need of some change in the mode of appointment and in the tenure-of-office in the civil service. Thousands who did not see it before now see that it will not do to lead great hordes of shiftless, half-cracked ne'er-do-weels to look to the Government for a living when their friends get tired of supporting them; that it will not do to expose a President, to whom all have access, first to their solicitations and then to their resentment; and, finally, that it will not do to leave it in the power of disappointed politicians to denounce the President in the vilest billingsgate, and hold him up to popular execration, because he does not satisfy them with collectorships, gaugerships, and consulates. Guiteau's shot did much for civil-service reform. Nothing that the Conklingite faction can accomplish, even if they come into power during the next four years, will do away with the impression it has made.

Mr. Conkling and Guiteau seem to be the only persons who have announced publicly that they take a cheerful view of the situation. Everybody else, as far as our knowledge goes, who has spoken about it thinks it looks gloomy. Mr. Conkling, however, in a very remarkable interview with a *Herald* reporter, says: "There is no occasion for public apprehension or excitement"; and "the Constitution points out just what should be done in just such an emergency. The Vice-President on the death of the President instantly succeeds, and the Government goes on as if no change had occurred." Unfortunately, this view is not supported by experience. The Government has not gone on under any of the Vice-Presidents just as if no change had occurred. One of the reasons why people are gloomy just now is that they think if Vice-President Arthur succeeds to the Presidency things will change very much, and that a very obnoxious person named Conkling will "run" the Government as he has long run the "Machine." Nor are they reassured by his announcement that now is the time for "preaching peace and good-will," any more

than they were reassured when, on Robertson's nomination, he called for civil-service reform. His horror of gambling, and desire to go home, when he thinks he has won all the money on the table, are very diverting, but they impose on no one.

The expressions of sympathy over the attempt on the President in Europe, from men of all shades of opinion and from all kinds of governments, have poured in and continue to pour in in rich abundance. It is well known that there is here no body of stifled discontent, and no subject districts and provinces which do not govern themselves. There has been a tendency on the part of some foreign newspapers to ascribe the attempt to disappointed political opponents, or, in other words, to assume that Conkling and Platt had something to do with it; but, on the whole, the affair has been pretty well understood from the beginning, with some ludicrous mistakes in matters of fact and of law. One of the French papers considers Mr. Arthur a highly respectable Democrat, while an Italian paper, the *Opinione*, is strongly opposed to the holding of another election in the case of the President's death, as it fears the consequences in the present excited state of the public mind. The affair had little or no effect on American securities in England. Twenty years ago it would have sent them tumbling.

The proceedings at Albany have been varied by the withdrawal of Platt from the Senatorial contest. He gives no reasons, but his course is naturally ascribed to the discovery of his connection with a scandal of a private but disgraceful character by a self-constituted Half-Breed committee of investigation in the matter. His Senatorial career, thus definitively closed, will probably, taking it all around, prove an unsatisfactory subject for retrospective meditation. His vigilant foes to whom his retirement at this juncture is due, have still a short time to remain in public life, but will doubtless find it difficult to procure renominations in doubtful districts with a preponderance of decent voters in their constituencies. Part of Platt's following took up Crowley, but no substantial change resulted in the balloting, the end of which appears as problematical as ever. Thursday last Barber, Phelps, and Edwards, the principal professional lobbyists of Albany, were indicted for bribery, arrested, and released on bail after pleading not guilty, with the privilege of modifying the plea in future if they chose.

The principal financial event of the week was the practical closing of the refunding operations of the U. S. Treasury which began in March. On the first of July about $607,000,000 of bonds bearing 5 and 6 per cent. interest respectively had been extended at the pleasure of the Government at the rate of 3½ per cent. per annum, and the remaining $58,000,000 had either been paid or provision made for paying them as presented in the next few months. This successful reduction in the rate of interest on so large a part of the public debt, and the heavy disbursements of the Treasury, present and prospective, imparted a strong tone to the speculative markets, and all became buoyant, when suddenly on Saturday morning news came that the President had been assassinated; this caused at once a small panic. The foreign markets, however, were comparatively little affected, and on Tuesday the markets here regained a quiet and steady tone. The event had no influence on the foreign exchanges, and had little on the money market. All the Exchanges, except the Stock Exchange, were closed on Saturday, so as to make the July holidays extend from the 2d to the 5th instant; therefore the trade exchanges were not influenced by the shocking event. The price of silver bullion in London advanced during the week to 52½*d.* per ounce; and the bullion value here of the 412½-grain silver dollar to 87⅝ cents.

Collector Smith, of Bangor, whose performance of his duties has been unexceptionable, and against whom nothing is or was alleged, except that he was not the political "worker" he ought to have been, has been suspended, and ex-Governor Davis appointed in his place. The New England Republican press have condemned this procedure with singular unanimity, and the Maine journals were filled with complaint and protest on the very morning of the day which saw the President attacked by a "Stalwart" fanatic. There must, therefore, in that quarter a saner judgment prevail than elsewhere as to the remoter causes of the attempted assassination, and as to the moral of it for the victim as well as for the country at large. When we compare the cases of Collector Merritt and Collector Smith, we perceive that the President has been guilty of the same injustice while complying with one Senator's wishes and disregarding another's, and has invited the personal resentment of both the officers removed. We must not, therefore, lay all the blame of Guiteau's act upon the doctrine of the Senatorial prerogative, or forget that while the President's attitude towards Mr. Conkling was right, the occasion for coming in conflict with him was wholly wrong. We are glad to observe that the Eastern press appreciate the bearing of Collector Smith's removal on local politics in Maine. It means a perpetuation of the insolent Machine rule which paved the way for the rise of the Greenback party in that State, and drove hundreds of honest Republicans, from sheer disgust, into the ranks of the opposition.

President Porter read at the alumni meeting of Yale College on Tuesday last a very interesting report of the progress of the university during the last fifteen years. There has been a large increase in the corps of instructors in every department. A "university fund" for general use, which had no existence fifteen years ago, has been accumulated, and now amounts to over $400,000, while $444,000 has been added to the resources of the Academical Department. Donations and bequests for special purposes within the same period amount to nearly $2,000,000. In the college buildings the growth has been equally remarkable. Several dormitories and two chapels have been erected, wholly, or in large part, with funds furnished by donations. The library has been nearly doubled in accommodation and number of volumes. President Porter's exhibit, in truth, must have been highly satisfactory to the graduates and friends of the college. It had, however, one fault, and in our eyes a considerable one. Instead of being the report of fifteen years, it ought to be the fifteenth annual report. In other words, the governing body of the university ought to make just such a report as this, only more detailed, to its graduates and to the public every year. Harvard has made such a report now for some years, and the effect is excellent both on those who make it and on the public which reads it; but Harvard is, we believe, the only large college which does this. Yale has refrained from doing it until now. Our own Columbia treats its affairs as if they were the affairs of a private business partnership—that is, keeps the details of its management more secret than the law allows any banking corporation to keep theirs.

This is all wrong. A university is not a private trust in any sense of the term. It is a public trust in the largest and most solemn sense of the term. There is no class of trusts which the American people is more interested in seeing faithfully executed than college trusts. No man, or body of men, should bring to the execution of such trusts any of the traditions or methods of commercial firms or corporations, except strict probity and regularity in the management of the funds. For these things all our leading colleges are remarkable. Their management of their estates has been admirable. But it has to be borne in mind that their business is not, like that of commercial corporations, to grow rich; it is their business to remain always poor. They are bound, in fact, to grow rich in order to be poor. They are bound always to live up to the last limits of their income, and they are bound to give the world reasonable assurance that they are doing this. No board of college trustees has any right to ask the public to believe that they are doing all they can do for the higher education with the funds at their disposal, without giving the proof of it every year in black and white. There is still another consideration of importance. American colleges, unlike those of continental Europe, owe nearly all they have in the way of endowment to the munificence of individuals. They must rely on them, too, in the main for their future expansion. The gifts of the state in this country to universities are almost fatal gifts. But nothing does more to chill this munificence than secrecy. Moneyed men have to have their liberality and memory stimulated, and their interest excited and supplied with suggestions, by frequent re-

ports, such as they can understand, of what the colleges are doing and would like to do if they had the means. Harvard finds her account in such reports. Yale will find it if she adopts the Harvard practice. Columbia is suffering, and must always suffer, from her mistaken privacy. There is about as much known, and as much interest felt, about her by the ordinary New-Yorker as about Trinity Church or the Sailors' Snug Harbor.

Mr. Corcoran writes to us complaining that we have done him injustice in overlooking the fact that his plan of electing the President provides for the election of the three Senators from whom the President would be chosen by lot by a majority of the House of Representatives, and that therefore the election could not, as we suggested it might, result in the election of a Senator whom the majority of the voters would distrust. We undoubtedly did overlook the vote of the House of Representatives as a feature in his plan. But has he duly considered what its effect on the House of Representatives would be, and whether it would do any legislative business in the Presidential year, and whether the members of the Congress that was to elect would be chosen with reference to anything but the Presidential vote, and whether there would be any means of preventing the election of the three Senators by combinations which would give each "section" a chance, and of preventing interminable "deadlocks"?

The conviction of the nine persons, including Midhat Pasha, accused of murdering the late Sultan Abdul Aziz, who figured prominently in London during the Beaconsfield Ministry as the great Turkish reformer, is a curious termination to what may be considered the last attempt to regenerate Turkey. Abdul Aziz was undoubtedly insane, though not very insane for a sultan. All the sultans, like all the Asiatic despots, seem insane to the Western world in our day, owing to their habit of gratifying every whim the moment it seizes them, and recognizing no artificial bounds to the power of their will. When he was in England he greatly amused the public by having the railroad train in which he was travelling stopped that he might take a nap—a proceeding which, however, did not seem in the least singular to his suite. He had the great advantage over his predecessor, Abdul Medjid, of being physically strong, which sultans now seldom are, owing to the early sapping of their constitutions by excesses of all sorts, and people somehow imagined that a sultan who could sit erect on a horse and bend a poker was just the man for the crisis through which Turkey was passing. These pleasant dreams were dissipated, however, when he got hold of the proceeds of the loans made in France and England. He spent most of the money in palace-building, and the balance in ironclads and improved rifles, but nothing in any public improvement, not even the reorganization of the public service, and refused to be interfered with. He would probably have been allowed to finish his mad career without interference if the insurrection had not broken out in Herzegovina, and Austria had not started a demand for internal reforms in the Andrássy Memorandum, which Russia and Germany backed up in the Berlin Memorandum, and if the remonstrances of the Turkish bondholders had not begun to sound angry.

Some half-dozen pashas, of whom Midhat was one, then determined, either because they really were alarmed about the Empire or because they wanted to put on the throne a man whom they could manage, to depose him and put his nephew in his place. They did this very neatly and effectively by seizing him in the night, locking him up in another palace, and proclaiming the nephew. Such revolutions have often occurred in Turkey; but this revolution was unprecedented in the fact that the life of the deposed monarch was spared. We believe that there had been previously no exception to the rule that an overthrown sultan must either be killed or have his eyes put out. The conspirators in this instance were either too civilized or wished too much to appear civilized to adhere to the ancient usage, and they contented themselves with keeping their old master in a kind of splendid imprisonment. The deposed uncle was found dead one morning in the palace in which he was confined, with extensive slits in his veins made by a pair of scissors. When the news first got abroad it was naturally concluded that he had been murdered, after the manner of his nation in like cases, but this theory was most unexpectedly set aside by the report of seventeen doctors, mostly European and of high standing, who made an autopsy immediately after his death and pronounced it suicide, with abundance of illustrative proof. His mother, too, the Sultana Validè, who lived in the next suite of apartments, and was tenderly attached to him and really feared for his life, confirmed their report, and as nobody denied his insanity, it was generally accepted as final. Within a few months, however, confessions, whether voluntary or extorted, have been made by a wrestler and a pair of sergeants of having murdered Abdul Aziz on the instigation of some pashas, the chief of whom, Avni, was himself murdered two years ago by a Circassian, and the Sultan has eagerly adopted the theory and prosecuted the accused to conviction. The sentence of death has been passed, but it is not likely that it will be carried out.

On Friday the Irish Land Bill had passed what was considered the most critical point in its progress, the discussion of the Seventh Clause. The Seventh Clause attempts to furnish the court with guidance in fixing "a fair rent," and as it stood it was believed, and with good reason, that the court would be bound to base the amount of the rent on the yearly value of the farm, minus the tenant right—that is, minus the amount the tenant would be entitled to receive by way of compensation in case he were arbitrarily ejected. This would, of course, be equivalent to a great reduction in the value of the landlord's property. The tenant's interest, which now has no value unless he leaves his farm, would then become a permanent share in the value of the farm itself. This has excited a great deal of acrimony, and was a consequence of the Clause which the Ministry had not contemplated. The Clause has now been amended, and the definition of a fair rent is to be left to the court under a general direction to take into account the interest of both landlord and tenant. In this shape it has passed by 289 to 157.

The "délicatesse" between France and Italy continues to grow, and is aggravated every day by incidents which would at other times be insignificant. The Italians have become possessed with the idea that the French wish to get back some of their lost military prestige, and think that a quarrel with Italy would enable them to do so with safety. The French, apparently, take no pains to disabuse the Italians that they contemn them as a military power, while the Italians seem satisfied that the French are mistaken about their prowess, and that with their formidable iron-clads and their army of 450,000 men they could at least hold their own. The Italian populace in the large cities is greatly excited, and the high-handed treatment of Italian interests in Tunis by the French officials, coupled with the riotous attacks on Italian workmen in Marseilles, increases the excitement. In fact, a state of feeling has grown up in both countries not unlike that which in France and Germany preceded the war of 1870—that is, a state of feeling which makes war probable on some very trifling provocation, though there now exists no provocation which either side would say came anywhere near furnishing a justification for war.

The Pope has issued an Encyclical, apparently suggested by Guiteau's crime, coming close on others like it, in which he points out that the precepts of the Church, if heeded, would prevent all such excesses. This is very true. If precepts kept the world in order it would never have been stained by any disorder. But the difficulty with which all religious systems of morality have had to contend from the beginning is the difficulty of getting men to obey. This is what the Pope and all other moralists should now work at.

The returns from the Bulgarian elections show that of 342 members elected 198 are for the Prince and 144 for the opposition. The telegram states that as the Prince wants a two-thirds vote he is going to order some supplemental elections. This is all very blind; why he wants a two-thirds vote it is hard to say, except to give more weight to any action of the Assembly in his favor. As the whole proceeding is revolutionary there is no rule applicable to the matter. Nor do we know what is meant by supplementary elections, unless he is ordering elections to be held in any place in which he thinks he is likely to get a majority. The minority is remarkably large, considering the administrative pressure which has been brought to bear for the Government.

PRESIDENT GARFIELD.

THE effect on the public mind of the attack on President Garfield differs in kind from that produced by the attack on President Lincoln in that the shot fired at Lincoln was regarded as the last shot of the civil war. The land was still covered with camps and smoking ruins and newly-made graves. Men's pulses were still throbbing with the hates and fears and hopes and sorrows of the struggle through which the country had just passed. Even the most sanguine of the victors was still not sure that peace had really come. So that though there was something wonderfully pathetic in Lincoln's career, in its close as well as in its progress, his death was not received in pure sorrow. There was rage as well as grief in the mourning round his grave, and none who mourned him could forget for a moment in 1865 that a very large proportion of the population of the South regarded him as the author of immense national calamities, and as the champion and representative of an unjust cause.

The sympathy and sorrow which the attack on President Garfield has aroused have, however, no taste of bitterness or discord. He has fallen under the assassin's bullet in a time of profound peace, of general prosperity, and of unequalled hopefulness. His title was disputed by no man, and to no citizen in any part of the Union did he represent anything but order and legality, and social and political harmony. He was, in fact, on last Saturday morning the chief officer of the happiest and most cheerful nation on the globe—the nation which looks into the future with least fear or misgiving; which to all outward appearance has least to dread either from foreign aggression or domestic treason. In this he is happier than Lincoln, though much less happy in the record of accomplished work. When Lincoln died he had successfully borne the burden of the most conspicuous, the most responsible, and in many ways the most trying, office ever filled by man, at least in modern times. For it must be remembered that failure and shortcoming are easily forgiven to him who attempts great things with scanty resources. If Washington had failed, the world would have simply wondered that with such troops and such a treasury he should ever have expected to succeed. But Lincoln was the master of one of the largest armies and some of the best rank and file the world has seen since Cromwell drove the King off the field at Naseby, and he was able to spend in four years the sum which other nations have used to meet the cost of two centuries of war, and he had at his back an enthusiasm whose depths were never fathomed. To wield such weapons was to undertake an immense accountability. To wield them so that when all was over the civilized world cried, "Well done!" was to achieve a wonderful fame.

No such opportunity came in General Garfield's way; none such will come in any man's way, probably, for centuries to come. But in the slow and steady fight with adverse circumstances through which he rose to prominence there was the same picturesque and pathetic interest which has made Lincoln's life one of the most popular of modern tales. He started in just as humble a position, with prospects in no way better, and he got out of life everything except wealth that life in this country gives to steady toil and endeavor. He made himself, too, far more accomplished and better equipped, as far as intellectual cultivation goes, than Lincoln ever was. The duties of the Presidency had nothing to teach him. He had achieved at forty-eight a long and wide experience of civil affairs, and had served with distinction in the field. He was emphatically a self-made man, and yet he had kept himself completely free from the greatest defect of the self-made man, the notion that his own personal experience is more valuable than that of the rest of the human race, and that what he does not know is not worth knowing. The rise of a self-made man in American life, too, is not a hardening process, as it is in many other countries. He encounters very little of the embittering indifference to patient merit, of the insolence of office, and of the hindering malice and envy, through which the ambitious youth, who seeks eminence from humble beginnings, has to fight his way in the Old World. On the contrary, at nearly every mile of the road he finds a helping hand and an encouraging word. This sweetens rather than sours the temper, and if it have any injurious effect at all it lies in making an easy temper too easy, and in increasing the difficulty which probably every high officer finds the greatest difficulty in the successful discharge of executive duties in a democratic country—the difficulty of saying No. General Garfield's fault as an executive officer, and most of his troubles, have arisen out of this shrinking from refusal. But it is the fault of a man to whom the world has been kind and helpful, to whom friends came easily, whom every one likes, and who sees life on that large scale without which, as has been well said, it is not possible to be either hopeful or happy.

THE VICE-PRESIDENT.

NEXT to the deep sympathy which moves all hearts for President Garfield, making his wounds a personal grief to millions of people, lies the dread of evil to result from a change of administration forced upon the country without warning and without cause. General Garfield was elected, as other Presidents have been, upon due consideration and after full discussion. In choosing him, as in choosing his predecessors, we had made our own bed for a fixed time, and whether it should prove a comfortable one or not we were bound to lie in it and make the best of it. He entered office with the solid backing implied by the deliberate consent of a free people. Democrats were bound to take this view equally with Republicans. They had used every means in their power to prevent his election, and when he was elected beyond dispute the sense of loyalty in politics which distinguishes the Anglo-Saxon family, and which has only once been departed from in our history, committed them to the support of the President, as to all lawful and non-partisan acts, as firmly as his own friends.

All those guaranties of smoothly-working government founded upon popular assent and good understanding are wanting when the office devolves upon the Vice-President. The sense of duty which the people owe to their institutions is always strong enough to secure to the Vice-President in these circumstances respectful consideration; but as to the quality of support which he can command there is the same difference between the elected President and the *locum tenens* as between chemical adhesion and mechanical adhesion. This inherent difference is greatly aggravated by the slipshod method in which the Vice-President is commonly chosen by party conventions. The person chosen for this office ought always to be selected with a view to his possible accession to the Presidency. He ought to be a well-known man, and one among the list of those whom the people would not unwillingly choose to fill vacancies in that office if vacancies were filled by election. Experience, if nothing else, should have taught this. John Tyler, Millard Fillmore, and Andrew Johnson ought to have stood for ample warning to all conventions subsequent to their time. Each of these accidental Presidents wrought as much mischief as was possible within the space of four years to his own party. Though not inferior, perhaps, intellectually or otherwise, to Polk, Pierce, and Buchanan, they had none of the reserve power which an election by the people bestows. Consequently, their first misstep sent them to destruction, and in the cases of two of them shipwrecked their party also. But these solemn warnings have taught nothing to the nominating conventions. With the exceptions of Colfax and Wilson, all our later Vice-Presidents have been chosen by the rules of blind-man's-buff.

When a contest has taken place over the nomination of a President the usual course of a convention is, first, to cast a glance around the horizon to see how far distant from the President's habitation the Vice-President's ought to be; second, to use the Vice-Presidency as a poultice for the bruises of the defeated faction; and, third, to adjourn and get out of town as soon as possible. In the campaign of last year both parties selected their candidates for the Vice-Presidency in this wise. Little was known of them outside of their own States, and that little was not altogether favorable. Mr. Arthur's nomination was highly provoking to a large section of his party, and the best that could be said of him in connection with it was that he had not sought the place, but that by the rules of blind-man's-buff he had obtained it. Since last Saturday he has been very near the Presidency, and may yet accede to it. That he has no desire to obtain it as the result of the President's assassination, we fully believe. No circumstances could exist rendering it less desirable, and these are partly of his own making. All former Vice-Presidents have been able to assume the office with dignity, but to him this is impossible, for at the time when the calamity occurred he was openly engaged

in attempts to harass if not to break down Gen. Garfield's Administration. Not only so, but he had laid aside the rules of decorum which appertain to the second office in the Government, and had made himself the henchman of an ex-Senator in a local squabble whose only significance was that the success of his faction implied a rebuke to President Garfield. The ex-Senator resigned in order to get new weapons for an unseemly contest with the President; and the Vice-President obeyed his summons to the field with the docility of an old retainer. Burrowing here and there in company with John F. Smyth and others whom he has in part created and who have in part created him, the shot of Guiteau threw on him and his comrades and the work they were doing a sudden and blinding glare of light. We can well conceive that he may pray to be spared the necessity of stepping from such an enterprise into a dead President's shoes. The embarrassments inevitable to his situation, because growing out of his own acts, will be further heightened by unjust suspicions and cruel accusations. Against these it will be the duty and should be the pleasure of all right-minded persons to defend him.

Happily, there is nothing to fear as to the material prosperity of the country. Mr. Arthur's views and commitments on the subject of public finance are not different from General Garfield's. Nor is there any marked difference between them as regards the Southern question. This question is no longer a leading one. It apparently expired with Mr. Conkling's last speech at the Academy of Music impeaching the census returns of South Carolina. We infer that it expired then because Mr. Conkling himself failed to take it up again when challenged to the encounter by Senator Butler during the extra session. Mr. Blaine is as good a Stalwart as Mr. Conkling or Mr. Arthur, so far as that title signifies any particular views and feelings towards the South. In these times of swift changes, the designation of a Stalwart means one who believes that Senators should control the offices in their respective States. Next year it may mean that the Vice-President should control the New York Custom-house; or it may mean anything or nothing. Since Guiteau has adopted it it will perhaps be abandoned to the exclusive use of assassins. This is probably the best disposition to make of it, seeing that it has now lost its meaning, if it ever had any.

There being no discernible difference between the President and the Vice-President as to public policy, why should there be such great and manifest anxiety respecting the possible change of administration? It is believed —and here we do not wish to express any belief of our own—that Mr. Arthur as President could not leave behind him the faction fight in which he was so lately engaged; that he would use his newly-acquired power to beat down the enemies of Conkling in New York and elsewhere; that he would bring the Albany fracas upon the broader theatre of national politics, and set up the "Machine" at Washington with all the engineers, big and little, who were thrown overboard at Chicago last summer. The attempt, if it should be made, would be resisted by the better elements of the Republican party, reinforced by hot passions excited and kept alive by memories of the murdered President. Such a contest would be the Andrew Johnson mêlée repeated, and its probable outcome would be a Democratic victory in 1884. From all this, and from the possibility of it, the country prays to be delivered.

Hoping, as we ardently do, that General Garfield's life may be saved, we deem it wise to take into account what may happen in the event of his death. This is what the Chicago Convention ought to have fully considered last year, but did not. If Mr. Arthur is summoned to the Presidency by the act of a murderer, sane or insane, it is to be hoped that he will look upon his new responsibilities from the loftiest standpoint. His administration will be, to all intents and purposes, an interregnum, or a Presidency *pro tem.* It will be possible for him to make it dignified and useful, but he can make it so only by leaving most of his political training behind him.

THE LAND REVOLUTION IN ENGLAND.

THE English land question, which is really a much larger one and probably less easy of solution than the Irish land question, made its appearance in the House of Commons ten days ago in a speech of which the report has just reached us. The strong opposition of the English Tories to the Irish Land Bill is due in the main not to any particular concern about the Irish landlords, or any particular interest in Irish affairs generally, but to the fear that the legislation for Ireland is but the forerunner of legislation of a similar character for England. There has been a great deal of writing and out-door speaking about the need of a change in the English land laws ever since the bad harvests set in and were aggravated by American competition—that is to say, since 1875. But it is only within the last fortnight that any official utterance on the subject has appeared. Mr. Gladstone, after complimenting Mr. Fowler, who brought the subject up in the House of Commons, on his speech, which related mainly to the power of entailing estates by marriage "settlements," said:

"I believed a still wider field was opened to us by the resolution of the honorable member than he entered upon. Upon the question of life estates hang a number of other great questions of vital interest to the landed proprietors and to the public of this country—such, for instance, as the great questions of the transfer of land and of the whole system by which a man who possesses land may borrow upon that land as others may borrow upon their property—which questions, when they come to be dealt with by Parliament, may lead to fundamental alterations in our law of landed property. I shall presently deal with a question that lies at the root and threshold of this subject; but do not let it be supposed for a moment that this is a question involving hostility to the landed proprietor. Whatever system will give the greatest freedom to the descent of land, to the transfer of land, to the holding of land, to the raising of money upon land, is the system which will be by far the best for the interests of the owner of land as well as for those of the public generally. I do not deny that there are difficulties attending the subject; but as regards the domestic and social aspect of the question I confess that I have a very strong opinion that nothing can be more mischievous than the present system of settlement and of entail of this country, and I believe that nothing would tend more to the moral strength of the aristocracy than a great and fundamental change effected in that system. I must say I think that when Parliament comes to deal with this subject the question should be dealt with broadly."

The interest in the subject, and the readiness even of Tories to contemplate the possibility of its being dealt with in some manner in the near future, is of course largely due to the great fall in rents and in the value of land caused by the bad harvests and American competition. The harvests will doubtless improve, but Mr. Gladstone warned his hearers, in the speech from which we have quoted above, against the notion that there was anything temporary or transitory in American competition. This, he believes, will last, and, in fact, must be taken as a permanent factor in all calculations as to the future of English agriculture. Consequently it is safe to predict that the English landowner need never again look for the prosperity he enjoyed during the twenty years ending in 1875, when the investments in land, at constantly rising prices, were enormous. But the effect of the fall in the value of agricultural produce which is likely to be most powerful and far-reaching, is the light it has let in on the financial situation of the great body of the English landed gentry under the system of entailing by marriage settlements, which was introduced in the seventeenth century, and is now deeply rooted in their manners and customs.

It is curious how little has been hitherto known among economists and statisticians on this point. A great deal is known about the credit of the commercial class, because commercial men are constantly obliged to submit their pecuniary condition to tests of various kinds and to make explanations about it, and are every day engaging in transactions which outsiders are able to watch and calculate the result of. In this country, too, landowners, though they might conceal their gains, could not possibly conceal any liabilities which affected their land, because every instrument creating a lien on the land has to be registered and is open to the inspection of the public. But in England there is no compulsory registration of deeds or mortgages except in the counties of York and Middlesex. In every other part of the kingdom instruments conveying land or charging it with a lien are practically secret. Any one purchasing a piece of land has to rely for his protection against prior conveyances on the good faith of the vendor and the diligence and perspicacity of his own lawyer. Hitherto all attempts to remedy this state of things have proved ineffectual, owing to the difficulty of making a beginning. Registration of deeds, in order to be of much use, has to start from a clear title, and in order to give the owner of an estate a certificate of clear title his title-deeds would have to be rigidly scrutinized and

made public. To every such process as this, however, English landowners have an invincible repugnance. Few of them feel quite sure that there is not a flaw in their title somewhere, and that if their papers were overhauled it would not be discovered, and they have, therefore, opposed anything like compulsory registration with the utmost determination, and in a matter of this sort they are all-powerful with the House of Commons as well as with the House of Lords. In fact, the rest of the nation has comparatively little interest in questions of conveyancing, there are so few holders of land in fee. The fall in rents, which is estimated at thirty-three per centum on the average, has, however, brought to light a state of things which probably few except the class of lawyers known in England as "family solicitors" suspected or thought much about, and it is to most of the world a veritable revelation.

No position in the world, seen from the outside, seems on the whole brighter, happier, and more assured than that of the owner of a good landed estate in England. It now appears that this is not so, that it has not been so for a long time, that it has been becoming less and less so for many years, and that the crisis in landed property which has been precipitated by the bad harvests and American competition was pretty sure to come before long in the ordinary course of events. The reason of this is plain enough. The country gentleman's scale of living, as regards number of servants, hospitality, game-preserving, number of horses, hunting, carriages, the size and finish of the manor-house, the park, the conservatories and gardens, is fixed as a general rule by the person who has first come into possession of the property without encumbrance, whether it be ten or one hundred years ago, and it is an unwritten law of English country life that the squire must live on the scale which the known amount of his rental seems to permit. But the first unencumbered possessor's son no sooner comes of age than he joins his father in a deed of "settlement," which saddles the rental with a variety of permanent or nearly permanent charges. He agrees to charge the estate with an income for his father's widow and with provisions for his younger brothers and sisters. He then marries and has children of his own, and his widow and younger children have to be provided for in like manner by a resettlement which he makes with *his* eldest son when he comes of age. So that Mr. Broderick, in his book on 'English Land and English Landlords,' points out that it is quite possible, and probably in practice frequently occurs, that the owner of an estate may, under his deed of settlement, find himself compelled to maintain out of his income two widows and two generations of children, to say nothing of other debts, and may have to live on £5,000 a year in a style which calls for £10,000. For it must be remembered that none of these charges and liabilities become known positively to the public. The deeds of settlement are not put on record. They are locked up in a solicitor's safe and kept carefully private. So is the mortgage, on which he may have to raise a heavy loan. To his neighbor and tenants, who see him at quarter-sessions and at the cover-side, and to his friends in the London clubs and drawing-rooms, he enjoys an income of £10,000 a year; and he makes a gallant struggle to play the part they assign him with exactly half that amount.

It is easy to see how liabilities of this sort must accumulate from generation to generation, except where removed now and then by marriage with an heiress, or by the growth of a town in the neighborhood, or by the discovery of a coal or iron mine. In fact, the system of landed property in England has been for some time rapidly breaking down under the burden placed on it by the custom of entail through family settlements, and converting those most charming of human abodes, English country-houses, all over the country into mansions of despair. But the process was going on almost secretly. The outward signs of it were visible only to persons conversant with the management of estates and to family lawyers. It was only when the fall in prices swept away a large portion if not the whole of the landlords' disposable income—the charges imposed by deeds and mortgages remaining fixed—that the country woke up to the fact that the most prominent feature in the English social fabric was threatened with destruction. Families who were supposed to be rolling in wealth are now being compelled by the thousand to confess their penury and to look for situations for their sons, in many cases to emigrate bag and baggage, to lay aside all style or pretence of style in hall or field, and seek economical obscurity at foreign watering-places or provincial towns. The change is a curious one, and worth watching carefully, for it will undoubtedly prove one of the great landmarks of English history.

THE UNIVERSITY RACE.

NEW LONDON, CONN., July 1, 1881.

IF Harvard and Yale could always row as close and exciting a race as that pulled to-day there would be no such lack of general interest in their annual contest as has been shown for the last few years. Ever since the two universities began to row in eights, the races, with the single exception, perhaps, of that rowed in 1877, when Harvard won by seven seconds only, have been absurdly one-sided, the winner invariably taking the lead at the very start and keeping it with such ease that it came to be reckoned in eighths of a mile and minutes, instead of lengths and seconds. In spite of the fact that New London affords better accommodation for spectators than any other course in the world, few outside of those personally interested in the respective crews, as students or alumni, have cared to spend a day in coming to look upon what in each successive year has been regarded as a foregone conclusion one way or the other. But for the fine form which Harvard showed in its race with Columbia last Monday, and which seemed to give promise of a closer contest with Yale than any one had supposed it would be able to make, against the same crew that had defeated it so easily the year before, I doubt if there would have been enough spectators to fill the "observation train," or moving grand stand. As it was, for the reason already given, the grand stand opposite the winning line was full of empty benches, only a part of it being occupied by a meagre throng of three or four hundred people. Those, however, who took the trouble to attend the race of 1881 were well repaid for their pains. Never but once before in an American college race has the winner been so quickly followed over the "finish" line by the second crew, whilst out of twenty-five races between Oxford and Cambridge only three have been lost and won by so short a distance, a bare length and a half, as that which separated Yale's rudder and Harvard's bow to-day.

The start had been set for four o'clock, an unfortunate hour at New London, for, although in other respects the course is well-nigh perfect, it has this serious drawback, that it is exposed to a southwest breeze which almost invariably springs up in the afternoon, and, as the race is pulled with the tide, the wind, blowing up stream from the quarter named, is apt to "freshen" the water until it becomes too rough for racing craft, and then follows the postponement which has come to be regarded as almost as inevitable a part of a college boat-race as the crews themselves. Such was the case to-day. The breeze veered half way around the compass during the early hours of the afternoon, and but for a lucky thunder-shower, which laid the water, we should undoubtedly have had to wait over another day. In fact, the referee, Mr. Alexander Agassiz, of Harvard, signalled a postponement to six o'clock; but at 5:40, taking advantage of a turn in the wind, and before the breeze had time to raise a sea, he wisely called the crews out and sent them off by six. For once in the history of college regattas the crews got out their boats and paddled to their stations without delay. For this promptness the spectators are indebted to Mr. Agassiz, who emphasized his first signal to "get ready" by a series of loud and impatient whistles from his steam yacht. A glance at the Yale eight as they lay waiting for the word showed that the reports of the "giants" had not been exaggerated. They were, if anything, a bigger and sturdier-looking set of men than Harvard's famous crew of 1878, and, as the slighter and much younger-looking eight from Cambridge drew up alongside, the Harvard men aboard the press-boat shook their heads gloomily, and privately admitted to one another their fears of a defeat of four or five lengths at least.

The race, despite its closeness, was won in the first quarter-mile, for the lead which Yale took in that distance was the amount by which she showed in front at the finish. Both crews got off before the word, but so evenly that Mr. Agassiz did not recall them. Yale's forty-two strokes gave her a decided advantage in the first minute, and before the Harvard men could recover themselves their rivals had opened clear water between the boats. For the first two hundred yards it looked as though Yale would win as they chose, and the prospect of a repetition of the dreary "processions" of past years was alarming. But to the surprise of all, and the delight certainly of half the crowd, the Harvard men, pulling a beautifully even stroke, drew up rapidly after the first half-mile, and at the mile, which was reached by Yale in five minutes and twenty seconds, were only five seconds behind. At the end of another half-mile they had closed up the gap of clear water and their bow began to creep up on Yale's stern. From here on for another mile followed the closest and most exciting race I have ever seen. Curtis set the Harvard boat a beautiful

stroke. Indeed, he pulled from start to finish with a dash, strength, and judgment most remarkable, considering that he is by fourteen pounds the lightest man in either crew. Folsom, the Yale stroke, drove the pace up to forty and forty-one strokes per minute, and a slight unsteadiness in the crew, combined with the want of uniformity in the swing of their bodies, made it seem as though the Yale men were "going to pieces." But a glance along the line of the oar-blades showed that they took the water with perfect precision, and Harvard, although she continued to gain inch by inch until Yale's lead was reduced to half a dozen feet, never reached the front. For nearly a mile the two boats were lapping, Yale passing the two-mile buoy four seconds ahead in ten minutes and fifty seconds. After this the severe struggle which the Harvard men had made to regain what they had lost in the first quarter-mile began to tell, and Yale, drawing slightly away, completed the third mile in sixteen minutes and forty seconds, with a lead of five seconds. After this the relative positions of the crews changed but little. The last half-mile was rowed down a lane of yachts, steamboats, and smaller craft, and amidst the boom and bang of guns, rockets, and crackers. Both crews "spurted" finely at the close, Harvard showing better form than I ever saw in a beaten crew at the finish—if anything, gaining a trifle as they neared the line over which Yale shot a winner by a length and a half, or six seconds, in twenty-two minutes thirteen seconds, Harvard following in twenty-two nineteen seconds.

Throughout the race Yale rowed a faster stroke, varying from one to three strokes a minute more than Harvard. There was a radical difference in their "styles" of rowing. The former put all their strength into the use of the "slide," which they had lengthened out to twenty inches. It was not a taking stroke to look at. What little swing there was to their bodies was not uniform; they carried their heads as they liked; and, worst of all, they apparently "bucketed"—*i.e.*, they seemed to come forward to meet their oars without rowing the stroke out. But they caught the water in perfect unison and tore their odd-looking "leg-of-mutton" oars through it with a vicious kick upon the stretcher. Therein lay the secret of their success. They used their great strength in perfect time. In this their extra year of pulling together gave them a great advantage over their opponents. They cared little, apparently, about keeping a straight back, "rowing the stroke out" by pulling the oar clean through to the body, or holding the head well up—cardinal points usually insisted upon in the coaching of college teams. But the work of the legs and loins was done with tremendous vigor and as of one man. It was plain to see what this rowing meant—an attempt to introduce Hanlan's style in an eight-oared boat. This statement is borne out by the fact that the professional sculler, Davis, whose oars and rowlocks Hanlan introduced in England with such telling effect, is said to have looked after the rigging of the Yale boat, and to some extent their rowing. Harvard, on the other hand, pulled the traditional Bancroft stroke, and pulled it well. They did not slide so far as their rivals, a point which they will do well to notice before next year, but they helped out the work of their legs by a strong heave with their backs, which they swung to and fro in beautiful unity, "catching" the water in admirable time. One fault, which was apparent throughout the race, marred their speed. They carried this "swing" too far back, so that at the end of each stroke as they went forward on the recover the nose of their boat dipped and sometimes buried itself, whilst the Yale boat, under a crew averaging three pounds more to the man, rode clear and high above the water.

The race was in every way a fine one, splendidly fought and gallantly won. That a crew, only one of whose men had ever pulled in a university race before this year, should push so closely its rival, all of whom sat in the same positions in which they rowed the easy winners by a dozen lengths of the race of a year ago, is almost as great a triumph for the losers as their victory is for the winners. Finally, it should be said that the accommodations upon the press-boat, the details of which were admirably managed by Mr. Lyman H. Bagg, of Yale '69, and the arrangements by the local committees for keeping the course clear and providing visitors with necessary information, contributed in no small degree to make the day the most successful in the annals of college races.

G. W. G.

THE NEW GERMAN ELECTIONS.

BERLIN, June 20, 1881.

ON June 16 the fourth Reichstag held its last session and closed the legislative period of the last three years. None of the parties concerned is satisfied with the result of its labors. The deputies return home rather humiliated and even despondent, as by Bismarck's constant assaults upon the parliamentary principle and the unbecoming conduct of some of its members the Reichstag has lost much of its authority in the eyes of the people. The Government feels somewhat angry because the Conservative members refrained from wading through thick and thin with the Chancellor, and did not carry out his new tax-laws and socialistic experiments. The people at large, however, are quite easy at being delivered from a representative body which, if not sent home, would have made an even greater intellectual sacrifice than it had already made.

Bismarck, in fact, had succeeded so well in dissolving and entangling old party ties and in baffling the attempts at new party formations that he was not able to obtain a perfectly reliable majority for his pet schemes. In spite of all the favors bestowed upon the Ultramontanes, and of all allurements extended to the Conservatives, who were resuscitated solely by the fiat of the almighty man, his new friends have only shown a united front when they were allowed or ordered to attack some Liberal leader, or to do away with the remnants of some Liberal law. The interests of Bismarck's strongest followers—viz., the agrarians and ironmongers—naturally agreed as long as they felt sure of obtaining a new monopoly and of making a handsome profit out of the new taxes laid on the people; but they separated when they had to face the solution of a practical question lying beyond their personal interest. This time the agrarians defeated the ironmongers by saddling them with the compulsory insurance of the workingmen, while they exempted their rural help from such insurance and the landowners, of course, from the compulsory payment of the premium. Although this fact is of no consequence, as the bill will never become a law, it shows the brotherly love which prevails in the happy family of our protectionists, and does not augur well for their alliance in the future.

For the above reasons it is admitted on all sides that the last session was a session of failures, only a few very insignificant laws having been passed. Thus, the project of biennial sessions and quadrennial elections, and all plans of taxation with the exception of a higher duty on flour and wool, were defeated; the military tax on those unable to serve in the army found a single supporter in the son of the Chancellor; of all the bills directed against the merchants' exchange, such as stamps on receipts and checks, only one passed; the German (not Prussian) council of experts (*Volkswirthschaftsrath* or *conseil supérieur du commerce*) was disdainfully rejected; the bill against drunkenness, together with that touching trade regulations (*Gewerbeordnung*) and that on breweries (beer), were thrown into the waste-paper basket; and last, not least, the leading measure of the session, that bold and reckless socialistic experiment, the compulsory insurance of workingmen by the Government, was so materially changed that Bismarck refused to endorse it.

He will, of course, not quietly submit to his defeat, but, accusing the obstinate Reichstag of dogged resistance to his benevolent plans, will throw all the weight of his position and influence into the scales at the approaching elections. When they are to take place is not yet fixed—they will probably be held in the month of September; but there will certainly be a bitter strife between the exasperated Chancellor, with his rich resources and unlimited means, his numberless official and officious assistants, and with his cries for helping the poor man, on one side, and the progressive liberal element of the country, which forms about one-half of the whole population and is divided against itself, on the other. In surveying the field of action the question arises, what the chances for the several opposing parties will be.

The Reichstag altogether numbers 397 members. During the late session its Ultramontane-Conservative majority consisted of about 220 members. The Ultramontanes are at present the most powerful party, having been elevated by the Chancellor's domestic policy to the proud position of a parliamentary arbiter, whose every demands are almost sure to be granted. The appointment of Herr von Gossler, the last President of the Reichstag and a very insignificant but orthodox gentleman, as Minister of Public Instruction and Worship, shows how the Government is steering towards Rome. The Ultramontanes already now triumphantly hail Herr von Gossler as their redeemer from state authority and suppression. They will of course, for a valuable consideration, support Bismarck in his reactionary policy. With the appointment of the new minister they have, in fact, won the battle, and the late conquests of the Government will be surrendered to the Roman clergy. We are more than half way to Canossa. Although the Centre has lately shown some signs of intestine war, and a tendency to form at least a liberal wing against its still dominant aristocratic elements, all mutiny will be suppressed when the advantage of the Church is at stake. Flattering themselves with the hope of victory, they will, therefore, at the present moment keep together more than ever. The ultra-Conservatives, for the greater part belonging to the landed aristocracy, are the natural allies of the Ultramontanes, and most cheerfully side with them as well as with any government which tries to blend secular and spiritual interests. The free Conservatives are to a man protectionists and enthusiastic admirers of Bismarck's person and policy, but even they have shown signs of meek disobedience, which does not

prevent them, whenever ordered, from giving up their coyness and falling into line again. As to their numerical strength, the two Conservative wings together have 120, the Centre about 100 members.

To these 220 votes are opposed three groups of Liberals—viz., about 80 National-Liberals, 40 Progressists, and 20 Secessionists, or 140 in all, to whom in the majority of cases must be added 15 Poles, 9 Social-Democrats, and a small independent Liberal fraction. Thus, if the Liberals of all shades conquer 20 to 25 new seats at the approaching elections, they will obtain a majority in the next Reichstag. Can that be done? I think it may be; but I do not say it will. What, then, are the *pros* and *cons*? Let me first state that the Chancellor has lost enormously in popularity. The new era of wealth and abundance which for the last three years he has been promising the people, if they would follow him in his protective policy, has not set in. The taxes have been increased and raised, but the material condition of the masses has not changed for the better. The workingmen understand that the Government's socialistic schemes aim at taking the wind out of the sails of the Social-Democrats, and are waiting for their turn; the farmers and peasants begin to realize the fact that a comparatively small number of noblemen and large real-estate holders are benefited by the duties on the necessaries of life, and every citizen has daily experience that he himself, and not the foreign exporter, must pay the duties laid on his indispensable wants. By treating as his adversary every independent man who dares to think for himself, and to act accordingly, Bismarck has lost the support of unselfish and public-spirited Liberals, and won only a small number of doubtful and egoistic friends, with an eye to a handsome profit from their adherence to his wild schemes. The manufacturing and industrial classes are kept in perpetual suspense and fear. They are threatened with the tobacco monopoly, with new taxes and amendments of the tariff. Although they do not yet appreciate it, they begin to feel that their conservatism has to deal with, or rather to submit to, a strong revolutionary power, which resorts to every stratagem and violent measure (see Hamburg) in order to gain its ends.

Thus, there is really a Liberal, or at least an anti-governmental, breeze passing over the whole country. Will Liberals avail themselves of it, and will they be able to swell it to a storm which will bring in a new order of things? For this purpose the petty jealousies and personal animosities which too long have prevailed among the Liberals ought to be buried. The Secessionists have thus far tried in vain to rally them under the same flag, but to-day it looks as if they understood the signs of the times, and as if, although marching separately, they would this time fight together against the common enemy. This hope is strengthened by the position into which the National-Liberals have been driven. Up to the last session they were the most willing and obedient followers of Bismarck. If he really had wanted that compact majority the absence of which he has always complained of, he would have respected their patriotic sentiments and given them a small share of his favor, instead of wantonly offending them and insisting upon their absolute submission. Thus it happened that even so moderate and far-seeing a gentleman as Herr von Bennigsen, the leader of the National-Liberals, gave public notice of the dissolution of the partnership hitherto existing between his party and Bismarck, and that he cannot help working against him. If united, the Liberals will carry the next elections. But, whether these prove a victory or a defeat for the Chancellor, his efforts at personal government and imperialism in its worst form are doomed. Awkward as the German people still may be in the management of its political affairs, it is mature enough not to suffer a dictator, and to thwart his schemes and cravings. We stand at a turning-point of our political development, and just as in your Presidential election in 1856 the slaveholders' last victory was the forerunner of their ultimate defeat in 1860, our next political campaign will be the dawn of a better and clearer day. ??

Correspondence.

"THE CAMPBELLITE CHURCH."

To the Editor of The Nation:

Sir: I am emboldened by your evident intention to treat everybody fairly to call your attention to a matter which has twice appeared in your very worthy paper. In speaking of the body of people with whom the President of the United States is religiously identified you have called it "the Campbellite Church." I sincerely hope that you were not aware of the fact that that people unanimously and universally object to being so designated. Webster says, in speaking of the matter: "They themselves repudiate the term as a nickname, acknowledging no human leadership, and wishing to be known simply as Disciples of Christ, or Christians." This statement is exactly true. Moreover, this is true: The people calling themselves Disciples of Christ, or Christians, have never been known to apply any name to any body of people which they knew to be objectionable, not to say odious.

Now, if there be any good reason why they cannot, as a people, be treated as they desire to be, and as they with religious exactness treat all others, please let the public know what it is. In all kindness I remain

Yours very truly,

James Vernon, jr.

Chagrin Falls, Ohio, June 29, 1881.

Notes.

D. Appleton & Co. will publish immediately the 'Letters of Mme. de Rémusat,' in the translation of Mrs. Cashel Hoey and Mr. John Lillie. They also announce a series of "English Classics," in small volumes elegantly printed; 'Illusions: a Psychological Study,' by James Sully; and a new and enlarged edition of 'New York Illustrated.'——The Century Co. will eventually publish a critical and historical sketch of music in America, by Richard Grant White, of which a foretaste—a series of articles on the history of opera in this country—will soon be given in *Scribner's Monthly*.——Following Catlin's well-known monograph, 'The Breath of Life,' Dr. Clinton Wagner's 'Habitual Mouth-Breathing' (New York: Putnams) reinforces from a medical point of view the evils of this unfortunate practice, and points out its causes and mode of treatment.——We have received the Rules, Programmes, and List of Officers of the International Medical Congress which holds its seventh session in London on August 2–9. The Secretary for this country is Dr. L. Duncan Bulkley, whose address is No. 1 East 33d St., N. Y. City. Noticeable, in this programme, which is printed in three languages, is the superiority in conciseness of the English to the French or German.——The two remarkable Government publications of the week are vol. ii., Berlioz-Cholas, of Dr. Billings's *magnum opus*, the 'Index-Catalogue of the Library of the Surgeon-General's Office, U. S. A.'; and the seventh and concluding volume of the Report of the Geological Exploration of the Fortieth Parallel, being Prof. O. C. Marsh's monograph on 'Odontornithes,' or the extinct toothed birds of North America. The plates which accompany this fine volume and show the anatomy of the *Hesperornis regalis* and *Ichthyornis dispar*, justify the scientific interest in the discovery of these wonderful links in the animal creation.——Dr. Leonard Waldo's first annual report on the work of the horological and thermometric bureaus of the Winchester Observatory of Yale College deserves a wide reading. It records with name and rank the performances of a great number of time-pieces, tested in various positions and temperatures, to which certificates were issued; shows what an improvement in the manufacture of thermometers has been already brought about by the tests of these instruments, and how much at fault clinical thermometers were found to be; and gives the text of the Connecticut law (the first of the kind in this country) prescribing a State standard time, viz., that of the meridian of the New York City Hall.——The Harvard College library has just received, according to the current *University Bulletin*, from Josiah P. Cooke, Professor of Chemistry, two Talbotypes of Boston buildings taken by himself about 1842, and a third, of the library building itself, in 1844. It was not till ten years after these photographs were made that graduating classes began to leave behind them photographic portrait albums.——The growing importance of the sorghum culture ensures widespread attention to the Report on sorghum and cornstalk analysis just issued from the chemical division of the Department of Agriculture. Plates exhibit the characteristic tassel of the several varieties of sorghum, and the proportions and other elements of the analyses.——The editor of the *Magazine of American History* invites the contribution of brief historic bibliographies on a number of designated topics—Northwest Territory, Red River Settlement, Hudson's Bay Co., etc.

—No. 1 in the American series of Papers of the Archæological Institute of America (Boston: A. Williams & Co.) is a publication which would do credit to any similar organization the world over. It consists of an "Historical Introduction to Studies among the Sedentary Indians of New Mexico," and a "Report on the Ruins of the Pueblo of Pecos," both from the pen of Mr. A. F. Bandelier, of Highland, Illinois. Undoubtedly it requires a special effort to interest ourselves deeply in the antiquities of a people which, though aboriginal to our native land, has no relation whatever to our derived civilization, and whose written history has to be studied in a foreign tongue, in connection with the Spanish conquest of America. For this laborious task no one has more scholarly qualifications than Mr. Bandelier, and it will be strange if his Historical Introduction do not attract other and younger minds to the pursuit upon which he has entered with so much ardor. He sets out with showing the romantic nature of the causes which led the Spanish on to the discovery of New Mexico, and then sifts the various itineraries which mention the pueblos encountered on the northern

march by Fray Marcos, Coronado, etc. In this way he identifies "Cibola" with Zuñi, "Tusayan" with the Moqui district, and "Acuco" with Acoma—"*three* of the principal pueblos or groups of pueblos of New Mexico and Arizona"; and "Cicuyé" with Pecos, the immediate subject of his report. Mr. Bandelier hopes to continue these historical researches in a discussion of "the various expeditions into New Mexico, and from it to other points northwest and northeast, up to the year 1605." He pays a high tribute to the works of his predecessors, Mr. W. H. H. Davis ('Spanish Conquest of New Mexico') and General Simpson ('Coronado's March,' 'Reconnoissance,' etc.) The report on the ruined pueblo (Cicuyé, Pecos) in the valley of the Rio Pecos to the southeast of Santa Fé is painstaking and cautious, with exact topographical details, and with ground-plans, sections, and excellent outline illustrations after photographs. One of the communal buildings on the *mesilla* at Pecos "is probably the largest aboriginal structure of stone within the United States so far described," and "will even bear comparison with many of the aboriginal ruins of Mexico and Central America." Associated with the Pecos tribe is the tradition of Montezuma, which Mr. Bandelier calls a "Spanish-Mexican importation," and notes the fact that "not a single one of the numerous chronicles and reports about New Mexico, up to the year 1680," mentions it. He does not attach "any historical importance whatever, not even a traditional value," to a legend whose rhetorical serviceability in the past is notorious. It is shocking to learn from this report that the archives of Santa Fé, subsequent to the return of the Spaniards after the pueblo Indians' revolt of 1680, were kept in good order up to the year 1870, when they were sold for waste paper or used for kindling by the then Governor of the Territory, whose name Mr. Bandelier charitably suppresses.

—Few native institutions in this country can boast a more genuine antiquity than the First Church in Boston, which celebrated last year its 250th anniversary. The Society has just published a handsome volume of the memorial sermons and proceedings (Boston: Hall & Whiting); the three historical discourses by the present pastor, the Rev. Rufus Ellis, meriting special notice both for their admirable literary quality and for their picture of a time when the Society was "as truly the town as it was the church." The period in question was the twenty years from the drawing up of the church covenant (July 30, 1630, O.S.) to the foundation of the Second Church in 1650. The identical form of the covenant is retained to this day as it was originally drafted by Winthrop and, though the First Church has for several generations been Unitarian, is blazoned in stained glass in its latest house of worship. At the celebration last November a descendant of Governor Winthrop in the sixth generation (ex-Gov. Robert C. Winthrop), a descendant of John Wilson, the first pastor (the Rev. Grindall Reynolds, of Concord, Mass.), and a descendant of John Cotton, the "teacher" associated with Wilson in his pastorate (the Rev. Phillips Brooks), by their presence and speeches strikingly illustrated the continuity both of the church and of the Puritan stock. The Apostle Eliot, Roger Williams, John Davenport, Mrs. Anne Hutchinson, Sir Harry Vane, and other famous characters of the colonial epoch all figure in connection with the First Church in Dr. Ellis's lucid retrospect. In two centuries and a half the Society has had five church edifices, views of three of which are here given; and seventeen pastors, many of them eminent, and one of whom, Benjamin Wadsworth, became President of Harvard College. Two, the Rev. William Emerson and the Rev. Nathaniel L. Frothingham, were the fathers of clergymen yet more distinguished than themselves. It is announced in this interesting volume that a full history of the church is in preparation by Mr. Arthur B. Ellis.

—Mr. Harry Quilter's 'Giotto' is one of the best, and Mr. Edwin Stowe's 'Velazquez' probably the worst, of the Great Artist Series of handbooks issued here by Scribner & Welford. Mr. Quilter is an ardent disciple of Mr. Ruskin, and as fervent an apostle of pre-Raphaelitism as it is possible for an intelligent writer to be, perhaps, now that the balance of action and reaction in this once burning question has been adjusted by sheer lapse of time. Moreover, aside from being thus sympathetically disposed towards his subject, he has made an apparently thorough study of it, and, so far as it depended upon his efforts, is qualified to write the life of Giotto well. His work is thus an instructive compendium from which any one will be able to arrive at an understanding of the work of Giotto and his place in the history of art—any one, that is to say, who knows how to allow for an enthusiasm against which the writer himself strives laudably to be on his guard. The chapter on "Giotto's Style" is very good indeed in clearness and appreciation of its immediate theme; but until painters are agreed upon their terminology, such references as it makes by way of illustration will be confusing. We are not sure whether by chiaroscuro Mr. Quilter means "light and shade," as he seems to mean, or the design of light and dark in a picture; he ought certainly to mean the latter when he speaks of chiaroscuro in Rembrandt "thrusting color and subject out of the field altogether"—a misleading statement in any view. A writer of a popular hand-book who attempts these subtleties ought to define his terms precisely. The ordinary reader might get from these pages the notion that, for two centuries and a half after Giotto, painters remained ignorant of the fact that objects in sunlight cast shadows, whereas it was Rembrandt's mission to emphasize the great truth that they do. The only other shortcoming of the book is the surplusage involved in the author's consciousness of the importance of his task, for which he has the air of squaring his elbows with a view to making more of a book than is really justified by its substance. But in this respect he is reserve itself beside Mr. Stowe, whose 'Velazquez' one would have pronounced a work impossible to be written after Thackeray's parody upon "G. P. R. Jeames, Esquire." It begins in this way: "It is spring-time of the year 1623. North and south the world, roused from its winter lethargy, yields itself a willing victim to the sweet and subtle influences. . . . Away in Spain, beside a well-known dwelling in the far-off city of Seville, there stand—scarcely discernible in the darkness of early morning, ere yet the first faint streaks of dawn begin to light the eastern horizon—a couple of mules tended by a solitary domestic." This is kept up through the book, which accordingly needs to be expurgated before any one careless about imaginative literature and curious about Velazquez would find it of value. Mr. Stowe was "formerly Scholar and Exhibitioner of Brasenose College, Oxford." The illustrations are very poor. Those of Mr. Quilter's book are relieved by a double-page chromo-lithograph from a water-color by the author after one of the Assisi frescoes, and the precedent is a good one for future volumes of the series to follow.

—Much more valuable is the series of "Text-Books of Art" edited by Mr. E. J. Poynter, of which we have now the third volume, "German, Flemish, and Dutch Painting," written jointly by Mr. H. J. Wilmot Buxton and the Editor. It is a perfectly dispassionate running account of Northern masters, biographical, descriptive, and critical. The tone adopted in the preface is excellent, and is maintained. We may, perhaps, need to bear in mind five or six great names in reading that the painters of Germany and the Netherlands provide "a field of study no less interesting than that furnished by the Italian masters"; but "interesting" is an epithet that may be variously understood, and any implication of over-praise is sufficiently qualified by what follows. Considering the abundance and character of German art-literature such remarks as these sound agreeably, and are worth making: "Art gradually declined [after Dürer and Holbein and their immediate disciples] in the hands of such copyists as Mengs, who was nothing better than a feeble imitator of Michelangelo, and of Denner, who smothered Art by his excessive elaboration. The later revival under Cornelius and Overbeck, if it does not arouse enthusiasm, at least commands respect and admiration." After this one feels sure of candor, and, as he proceeds, of competence. Proportion has been as well observed as is possible in a compendium of the limits of this, and the conciseness, necessarily studied and necessarily making the critical accounts of some of the greatest names seem a little meagre, is relieved by the fact that it relates to style rather than substance. Now and then an observation occurs of sufficient pith to more than compensate for a chapter of the usual thing. For example, the Dutch painters "confined themselves to loving, understanding, and representing nature; every one adding his own feeling and tastes—in fact, adding *himself*." Or this, describing Rembrandt's pictures as "warmed by a clear, though limited, light, which dawns through masses of shadow," in which the word "dawns" is extremely felicitous—far better than Mr. Quilter's remark about "chiaroscuro thrusting color and subject out of the field." The illustrations are very numerous, most of them indifferent, a few bad, and some very good indeed.

—In connection with the foregoing Mrs. Ednah Dean Cheney's 'Gleanings in the Fields of Art' (Boston: Lee & Shepard) may be mentioned. It is, however, as the title indicates, a *mélange* rather than a compendium, and its value, being mainly cyclopædic, is correspondingly lessened by the fact. It begins with a rather elementary discourse upon "Art," and proceeds with "Greek Art," "Early Christian Art," and so on to "David Scott" and "Contemporaneous Art." Much of what is said strikes one as very sensible; much else that is equally sensible "has been so a long time," in the familiar phrase. In fact, one wonders a little that so apparently unimaginative a writer, whose main characteristic is evidently soundness, should have been moved to deliverances upon so poetic a theme. And the unimaginativeness of the book, though a safeguard in some respects, is a drawback in others, as naturally happens to unsympathetic treatment of any subject. The style is in keeping—a little disconnected and spasmodic, or, perhaps, we should rather say "Emersonian." The reader is somehow prepared by it for such inaccuracies as "William" for *Walter* Pater, and attributing to Emerson a misquotation from "Locks-

ley Hall," and such statements as that Shakspere is "one of the three great poets of the world," and, "There is to-day, I firmly believe, more genuine popular interest in, and love of, art in America than in any other country." These things are unavoidable when one joins to the habit of "going near the ground" a certain perfunctoriness of thought and statement, and are perfectly consistent with the acuteness of the remark that Ruskin's praise is interpretation but his censure misleading, and of similar observations that are the salt of Mrs. Cheney's book.

—The tobacco crop of the country in 1879 was, according to the returns of the late census, 473,107,573 pounds. This was raised upon an area of 637,659 acres, giving an average of 731 pounds to the acre. The crop, compared with the yield in 1869, shows an apparent increase of 80 per cent. This, however, exaggerates the increase in tobacco culture, as the crop of 1869 was a light one, below the average of the years immediately preceding and following it, while, moreover, through fear of taxation, planters did not, in 1870, return their full production. Fifteen States produced, as in 1870, more than $\frac{99}{100}$ of the whole tobacco crop. These States are as follows, naming them in the order of production :

	Acres.	Pounds.	Pounds per acre.
Kentucky	226,127	171,121,134	756
Virginia	139,423	80,099,936	573
Pennsylvania	27,567	36,957,772	1,340
Ohio	34,679	34,725,405	1,001
Tennessee	41,132	29,365,052	707
North Carolina	57,215	26,986,448	471
Maryland	38,174	26,082,147	683
Connecticut	8,666	14,044,642	1,620
Missouri	15,500	11,994,177	773
Wisconsin	8,811	10,878,463	1,234
Indiana	11,955	8,872,842	742
New York	4,968	6,553,351	1,327
Massachusetts	3,358	5,309,336	1,599
Illinois	5,625	3,936,700	699
West Virginia	4,071	2,256,146	564

Of the above tobacco-producing States only four—Missouri, Illinois, Indiana, and Massachusetts—produced less than in 1869. The difference in yield per acre in different States is due to the use or non-use of fertilizers, the habit of growth of different varieties, and the vicissitudes of the seasons.

—One of the most interesting of the mediæval collections of stories is the Italian work known as the 'Cento Novelle Antiche,' or (to distinguish it from the 'Decameron') which went by the name of 'Centonovelle,' 'Libro di Novelle e di bel parlar gentile,' or, again, more concisely, 'Il Novellino.' Boccaccio took from it the novel of the "Three Rings," which plays such an important part in Lessing's 'Nathan der Weise,' and Sancho Panza's celebrated story of the goats crossing the river is also found in it The two principal editions of the 'Novellino' are those published in 1525 and 1572 by Carlo Gualteruzzi and Vincenzo Borghini, which differ materially in the choice of stories and text, the latter omitting from his selection a number of indecent stories. Succeeding editors have reproduced one or the other of the above editions, or combined them, according to the object in view. No attempt, however, was made to investigate the relations of the two editions to each other and to the original MSS. until Professor D'Ancona's articles in the *Romania* (1873–74), "Del Novellino e delle sue Fonti" (reprinted in 'Studi di critica e storia letteraria,' Bologna, 1880). Professor D'Ancona's concern was chiefly with the sources of the various novels, and not so much with the text, although he threw much light on the question of the authorship and date of the collection, concluding that there was but one author, and that the time was not later than the end of the thirteenth century. It was, however, reserved for Signor Guido Biagi to settle decisively almost every question connected with the text, and to enrich Italian literature by the publication of the version contained in two Florentine MSS. The title of the handsome volume, of which five hundred copies only were printed, is 'Le Novelle Antiche dei codici Panciatichiano-Palatino 138 e Laurenziano-Gaddiano 193, con una Introduzione sulla Storia esterna del Testo del Novellino' (Florence, 1880), forming the first volume of a 'Raccolta di Opere inedite o rare di ogni secolo della letteratura italiana.' Biagi discusses solely the question of the text, examining in the first chapter the external history of the 'Novellino,' the opinions of the various editors, critics, etc. In the second chapter he gives a complete bibliography, and then passes to an examination of the MSS. The two remaining chapters are devoted to the editions of Gualteruzzi and Borghini. We cannot give here the results reached by the editor, but may mention that he was fortunate enough to find the autograph notes of Borghini showing exactly how he made up his edition by substitution and alteration. The remainder of the volume, two hundred and twenty-nine pages, is occupied with the novels contained in the above-mentioned MSS. Signor Biagi deserves the gratitude of all students of early Italian literature for his conscientious labors, and the highest praise we can bestow on his work is to say that it is worthy of the school of scientific investigation which Professor Adolfo Bartoli has formed in Florence, and which has already begun to bear such good fruit.

—In view of the fact that students of Sanskrit are rapidly increasing in number, Mr. Frederic Pincott's version of the first reading-book usually placed in their hands is to be welcomed ('Hitopades'a: A new literal Translation from the Sanskrit Text of Prof. F. Johnson.' London: W. H. Allen & Co. 1880). The most available edition of the 'Hitopades'a' in the original Sanskrit is that of Professor Johnson, which is also the most convenient, from being accompanied by a full and accurate vocabulary. Professor Johnson's translation has, however, been for some time out of print, and we are here offered what is much more acceptable than a reimpression of it would have been. Mr. Pincott has accomplished his task meritoriously; and the occasional roughness of his renderings will be more than compensated, to the incepting Sanskritist, by their strict literality. Near the foot of p. 37 there is an awkward error of the press—"again" for "a gain."

JEFFERSON DAVIS AND THE CONFEDERACY.—I.

The Rise and Fall of the Confederate Government. By Jefferson Davis. New York: D. Appleton & Co. 1881. 2 vols. 8vo, pp. 707, 808.

THE book Mr. Davis has written is not the book which real students of history would have asked him to write. They would like to have him tell the things which he knows better than other men, and of which his personal reminiscence will be original and valuable evidence. They would like to question him as to the inner history of the secession movement from the time the Republican party was formed—when the purpose of separation took definite shape, what were the methods used in its propagandism, who were the leaders in it, how the Union sentiment of the Southern States opposed it, the extent to which Unionism was weakened before the secession action of South Carolina, and the truth of the common belief that the collision at Sumter was hastened for the purpose of precipitating the States into rebellion contrary to the prevalent wish and sentiment of the people. They would eagerly enquire whether a general belief that a great war would ensue would not have prevented the struggle, and how early a reaction set in after the bloody strife had been begun; what were the elements of opposition which were developed in the Confederate Congress, their history and progress, their leaders and their purposes; how soon did leading army men indicate their belief in the ultimate destruction of the Confederate armies, and what part did such a belief play in the final rapid collapse of the military power. These and similar questions are the unsettled ones in reference to which original evidence will be precious historical material, and it will be a general and serious disappointment to his readers to find that Mr. Davis in his two bulky volumes throws hardly a single ray of light upon the real secrets of the great conflict. We may be forced to admit that the time has not yet come when the Southern leaders would be disposed to take the public so fully into their confidence, and that it is usually in posthumous memoirs that the chief actors in so terrible events tell the true story of a lost cause. Such reflections, however, only move us to ask, further, why Mr. Davis should write at all unless he were ready to deal with the subject in a thoroughly historical way. It is hardly in his *rôle* to be the compiler of facts at second hand. His work should either be the opening of his heart as to his peculiar knowledge, or a large historical handling of the important era in which he had so conspicuous a part. It is a misnomer to call that "The Rise and Fall" of the Confederacy which deals only with the surface of events; and we suspect that Mr. Davis will not escape the judgment of competent critics abroad, as well as at home, that he has given us very little indeed that could with any truth be called the inner history of his own time.

From the reading of this work we get a decided impression as to its literary growth, which we mention, not as a matter of much importance in itself, but because it seems to explain, to some extent, the purpose and object which the author adopted before its completion. The basis of it seems to have been a direct and often vigorous narrative of the leading events of the war, with expansions at points where the writer had been made the subject of criticism and had been charged with partiality in his treatment of military men, or with unjustifiable interference with their plans. Into this have, seemingly, been dovetailed several theoretic discussions of the relations of the States to the Federal Government and of the asserted rights of secession and coercion. These discussions have so completely the marks of being separate compositions that we are led to suspect that they either formed the body of a separate treatise intended for other use, or that they were subsequently written and inserted into the narrative with comparatively little care for the literary joiner-work. Part Second of the whole work is the most extensive *excursus* of this sort, and gives us rather more than a hundred pages of disquisition upon the Constitution of the United States in its relations to the slavery question and the so-called "reserved rights" of the States and the people. The result

is that we have a composite work, of which the two parts may easily be separated, one being the final argument of the secessionist leader, upon which he rests the defence of those who undertook with him to break up the national Union.

It will be convenient to review these two portions of the book separately, but before doing so it is necessary to say a few words as to the writer's standpoint and the tone and spirit he has shown. It was not to be expected that Mr. Davis would put off the spirit of partisanship and look back upon the civil war with the calmness of a philosopher or of a disinterested observer; but since the whole world agrees in regarding such an armed collision as a means of deciding controversies which exceed the jurisdiction of ordinary tribunals, it was not unreasonable to look for some recognition of this fact on his part, and the adoption of a tone in accord, in some measure at least, with the prevailing judgment of the world. Mr. Davis has very distinctly admitted that the governments of Europe decided against his and the secession theory of the independence of the Southern States by the sole force of their ordinances of secession. His efforts to open formal diplomatic intercourse was a failure, and he says of it "that the course of action adopted by Europe . . . was, in point of fact, an actual decision against our rights and in favor of the groundless pretensions of the United States" (vol. ii. 369). When other civilized states thus concurred with the view of the United States Government, that the Constitution forbade the severance of the national Union at the will of any State, and that armed opposition to the Federal power was a rebellion which could only culminate in independence at the end of a successful war, we may reasonably demand that a writer of intelligence, however ardent a secessionist he may have been, will recognize the fact that the *prima-facie* right is with his opponents. When, therefore, he assumes that the independence of the rebelling States was too evident for argument, that it was a "crime" not to recognize it instantly, and that "outrage," "infamy," "perfidy," "despotism," "usurpation" are the only terms fit to be applied to the conduct of the Government, he weakens the force of his argument by showing an incapacity to understand the situation. Whether this tedious iteration of expletives be merely from force of habit, established in times when such rhetoric was supposed to be useful in "firing the Southern heart," or be chosen with a view to please a select circle of irreconcilables, it is equally a blunder which will weaken any effect the book might possibly have had upon public opinion in Europe or in America. The settled judgment of Christendom is that the attempted secession was what our Government declared it to be, a revolutionary rebellion which we had the right to suppress by force of arms, and that all the ordinary appliances of war could be justly used to this end. Mr. Davis might combat this judgment by temperate argument, if he chose; but hysterical abuse only makes him ridiculous, and none the less so because the very publication of his jeremiad over the total destruction of liberty in this country will be taken to be some slight evidence that freedom of speech, at least, remains.

The further we get from the events of 1861 and the discussions that preceded that crisis the more clearly one great fact is seen to be dominant in our history. To put an end to slavery was the conscious or unconscious aim of all the political agitation of the century. Von Holst treats the slavery question as the only matter of real significance in our history since Great Britain recognized our independence, and makes the constitutional history of the United States consist in the rise and progress of the controversy over this institution, culminating in the civil war and the anti-slavery amendment of the Constitution as a consequence of it. The philosophic German historian is undoubtedly right, and growing familiarity with American politics is making his view the prevalent one throughout Europe. We in this country have had personal knowledge of the truth of his interpretation of our history. Mr. Davis is wholly unable to see so plain a fact, and still insists that the slavery question was not a great moral controversy, naturally growing into one of those popular movements which mark an era in human progress. "Had it been left to pseudo-philanthropists and fanatics," he says, "most zealous when least informed, it never could have shaken the foundations of the Union." That it was not so left to a few zealots was, he thinks, because "demagogues seized upon it as a means to acquire power." No doubt demagogues are ready, the world over, to seize upon popular questions for such purposes; but we may fairly hesitate to admit that he has gone below the surface of events who reasons in such a way regarding such an epoch. A Tory during the Revolution of 1776 would have argued just so about the agitation of independence, and in his opinion the Adamses, Patrick Henry, Franklin, Jefferson, and the rest were "zealots" and "demagogues," of close kin to those Mr. Davis has in his eye. The proof that demagogues are the accompaniment and not the cause of a movement is to be found in the character and proportions of the movement itself.

The same narrowness of view is shown in the handling of the controversy over the "extension" of slavery. We are sure that a majority of intelligent men in the South will smile at Mr. Davis's reproduction of the puerile argument that extension of slavery "does not, never did, and never could imply the addition of a single slave to the number already existing" (vol. i. 7). If Delaware had been the only slave State he would ask young Southerners now to believe there would have been and continued to be as many slaves as were found from Cape Henry to the Rio Grande! What must we think of the mental fitness of a writer to deal with such subjects when he not only makes the absurd assertion quoted, but fills pages with the forgotten application of the Territory of Indiana in 1806 for a suspension of the prohibition of slavery, based on this argument, supplemented by the contradictory one that slavery was getting to be unprofitable in some of the States "overburdened with negroes," and that, therefore, it would be an advantage to them to sell off the surplus? Everybody knew then, as well as we know now, that the territorial limitation of slavery meant its ultimate extinction.

On the general question of the right of Congress to prohibit slavery in the Territories, Mr. Davis declares it a "recognized principle" that the Federal legislature had no such power (vol. i. 27). This is a definite term, and refers properly to some rule which has been generally if not uniformly acted upon. If we ask how the facts accord with this declaration, we find that under the articles of Confederation, and before the adoption of the Constitution, the famous ordinance of 1787 prohibited slavery in all the territory ceded by Virginia to the United States. The question of power to prohibit came up for action again in 1820, when the Missouri Compromise was enacted, in which Congress again forbade slavery in a vast territory, viz., all that acquired from France in the Louisiana purchase which lay north of 36° 30′ north latitude. Again, in 1850, upon the admission of California as a State, the free State representatives refused to extend the line to the Pacific, California was admitted as a free State with boundaries reaching to Mexico, and the power of Congress to exclude slavery from all the territory acquired by the Mexican War was distinctly asserted. The power of prohibition had thus been practically asserted by Congress, and acknowledged by the whole country, from the organization of the Government down to the Kansas-Nebraska struggle of 1856. It is in the face of these undisputed facts that Mr. Davis asserts his "recognized principle," and if we seek an explanation of such curious oblivion of the history of the country, we find that he adopts and repeats the political catchword of the campaign of the last-mentioned year, that the ultra State-rights doctrine was "only a return to that rule which had been infringed by the compromise of 1820, and the restoration of which had been foreshadowed by the legislation of 1850." In other words, the "rule" was the exact opposite of the continuous practice of Congress from 1787, and was the dogmatic theory of the secessionists, whilst the "return" to it was "foreshadowed" by the defeat of these theorists in their efforts to protect and perpetuate slavery in the territory acquired from Mexico! We cannot help believing that if Mr. Davis had mingled a little with the world during the past fifteen years he would have been conscious of the absurdity of gravely reproducing these campaign arguments, which never secured respect, and which were scarcely enough to satisfy the most heated partisans at the time.

With the same inability to "orient" himself and to discard the most thoroughly exploded inventions of that period of fierce and unscrupulous political contest, he repeats the libel that the anti-slavery movement was "contemned on account of the character of its leaders, and the more odious because chief among them was an Englishman, one Thompson, who was supposed to be an emissary whose mission was to prepare the way for a dissolution of the Union." He charitably "hopes" that the mobbing of the eloquent philanthropist, George Thompson, was through "reverence for the obligations of the Constitution," though why the chief of secessionists should approve of such punishment for one who is only charged with being a "preparer of the way" for dissolution, is a little puzzling. Bostonian Democrats of the old school will appreciate these references to the performance of their sacred duty to the Constitution.

The treatment of the conduct of Mr. Lincoln's Administration at the outbreak of the war is strictly of a piece with the rest of the presentation of the case. We see no trace of a suspicion that possibly the President and his advisers, as well as the great party behind him, had some conviction of duty; that possibly they had some patriotic devotion to the flag and that country which was something other and more than Illinois or New York alone; that possibly the Northern men experienced a terrible shock of pain, quickly changing to wrath, when the flag was fired upon at Sumter; and that the swelling enthusiasm which swept away the political orators whom Mr. Davis quotes as promising the "fire in the rear," and answered (as he also mentions without seeming to know its meaning) with

seven hundred thousand enlistments in response to the call for half a million, might possibly indicate that in men's hearts the object of the Constitution to create a "more perfect union" had so far been accomplished that they preferred death to its destruction. He went from the Senate to the South in the spring of 1861, leaving, as he supposed, a full half of the Northern people more willing to fight against their national Government than for it, and to this day he is unable to see anything in what followed except a surge of ignorant passion led and moulded by a few corrupt and cruel demagogues! Supplement this with his theory that we had no national existence, but only a partnership between individuals, which, as he proves by an extract from Parsons on Contracts, "may be dissolved at the pleasure of either partner" in the absence of a specified time in the articles of partnership, and the rest follows logically enough. The United States had ceased to exist when South Carolina withdrew from the firm. It had no right to its forts, its custom-houses, its cannon and arms, or its ships of war. Mr. Davis thinks it an excess of sentiment in those naval officers who laid down their commissions that they did not first carry their ships into Southern ports and hand them over to the enemy (vol. i. 313). To call for volunteers to sustain the Union or hold its property was usurpation on the part of the President. To march through Maryland to the capital was invasion, and a Baltimore mob was patriotic in stoning the troops. Everything which could be imagined against the Union was right, everything which could defend it was wrong. There never was a case more exactly like poor Pat's when he humorously complained that he found the dogs all loose and the paving-stones all fast.

Mr. Davis will find that the young men of the South have moved in twenty years, if he has not, and there will be among them a pretty clear apprehension of the fact that the secession leaders of 1861 began a terribly destructive war, upon theories that had no solidity. He would seem more than half conscious of this when, in his dedication, he appeals rather to the sentiment and the sympathy of Southern women than to the intelligence and judgment of Southern men. Our lamentable experience only adds another to the examples which prove that national organizations are not dissolved, like mercantile firms, under the rules laid down in Parsons, and even a school-boy should know that a great government is never broken up but by a bloody revolution. The secessionists began such a revolution under Mr. Davis's lead, presumably counting the cost, and he must expect scant respect for his ponderously-labored argument that there was no right or power in the Government to sustain itself by warlike force. We may deplore the necessity of a resort to arms, but the Administration of Mr. Lincoln would have had and deserved the contempt of the civilized world if it had tamely allowed disintegration to become an accepted fact without striking a blow. Proud-spirited Southern men would have shared this contempt, and war would not have been avoided—it would only have become a war for Southern conquest over those who had proved their pusillanimity. Because these things are universally known, Mr. Davis's book will appear as weak and inconclusive to Southern readers as to others. They will instinctively say that they would have done, in our places, what we did; and all the forcible-feeble repetition of abusive words which mars almost every page of these volumes will be its own antidote, and be generally reckoned only as foolish scolding.

MODERN BOSWELLIANS.

Croker's Boswell, and Boswell Studies in the 'Life of Johnson.' By Percy Fitzgerald, M.A., F.S.A. London: Chapman & Hall.

Boswell has left a tribe of descendants who reproduce the traits of their ancestor. They are all, like him, convinced that the pettiest trivialities with regard to Johnson have an inherent and permanent importance, which ought for all time to command the respectful attention of the wise and the good. Whether, for instance, he remained at Oxford for somewhat more than three years (as stated by Boswell) or for only little more than six months (as suggested by Croker) is a problem which racks the intelligence and divides the judgment of all genuine sons of Boswell. We had hoped, we confess, that Dr. Hill had at last solved this *vexata quæstio*, not because to our minds the matter was worth solving, but because we had vainly hoped that, Dr. Hill having at last extracted from battel books the sought-for confirmation of the Little-Endian hypothesis, we might hear no more of a wearisome controversy. But we greatly underrated the pertinacious pugnacity of true Boswellianism. The Big-Endians have, in the person of Mr. Fitzgerald, vigorously taken up arms in defence of their position. Dr. Hill's supposed triumph is, according to all sound Big-Endians, brought to nothing. His exultation over his success was premature, and the vain belief that Johnson left Oxford within a year after his entrance is to be numbered among Mr. Croker's "mare's-nests and delusions." If everything, however slight, which concerns Johnson is of importance, it naturally follows that everybody who wrote about Johnson, even if he wrote nothing but folly, derives a certain kind of interest from being linked with the idol of Boswellian worshippers. The meannesses of Boswell, his jealousies and his perversions of truth, as also the truculence, the errors, the mare's-nests of Croker, have in the eyes of a fanatic like Mr. Fitzgerald a certain Johnsonian sacredness. To have fallen into a delusion about Johnson is a claim, if not to fame, at any rate to notice. This, at least, is the only principle on which we can account for a good half of Mr. Fitzgerald's book. Nearly 200 pages are taken up with Croker. We have Mr. Croker as "a reviewer of old times," "Mr. Croker's system of editing," "Macaulay and Croker," and "Croker's fallacies, mare's-nests, and delusions." We almost wonder we have not also a list of the "errors which Mr. Croker did not commit." This would make the treatment of the inaccurate old cynic quite complete, and scarcely take us further afield than does Mr. Fitzgerald's actual work.

Now, we do not mean to assert that even this over-elaborate exposure of mistakes which have long since been forgotten is of no interest whatever. If a man had literally nothing else to do, he might perhaps do worse things than fight over again the well-fought battle between Macaulay and the Quarterly Reviewer. A reconsideration of the whole contest, which often degenerated into something little better than a wrangle, brings out two or three facts which are not utterly without value. It is pretty clear, for example, that Macaulay was on almost every point at issue substantially in the right. Here, as elsewhere, his slashing mode of writing really did him injustice, and concealed from critics who disliked his tone of over-assurance the fact that his confidence, excessive as it seemed, was grounded on the possession both of immense knowledge and of sound critical judgment. It is again proved past a doubt in Mr. Fitzgerald's pages both that Croker was subject to something very like actual delusions about Johnson, and that the general tone of reviewing has in every point of view infinitely improved during the last fifty years. But when one grants that an absolutely idle man might have employed his time worse than in reviving the long-forgotten question whether Croker was or was not accurate, one still may be permitted to wonder that any person who knew as much about things in general as Mr. Fitzgerald should have found it worth while to devote time and thought to topics so unimportant as those which fill half his book.

The same remark applies, though in a somewhat less degree, to the portion of the work which is taken up with Boswell. If ever a man was kicked into fame it was the clever, pertinacious, utterly mean Scotch sycophant who, after being snubbed and trodden upon by Johnson and Johnson's friends for the best part of his lifetime, was after death held up both for fame and infamy by the most distinguished author who has occupied himself with the Johnsonian legend. One's first impression is that nothing but the morbid craving for everything touching on Johnson which is the main trait of every modern Boswellian, could have led Mr. Fitzgerald to explore all the details of Boswell's literary labors. But to speak fairly, the study of Boswell is to a certain extent really instructive. Macaulay's moral judgment of the man is amply justified. Mr. Fitzgerald makes it perfectly clear that to overrate the meanness of Boswell's character was perfectly impossible. But it is also clear that Boswell's intellectual powers, though of a very peculiar kind, were as considerable as they were rare. He was, moreover, a man endowed with great ambition and remorseless tenacity in clinging to the attainment of its end. His attachment and loyalty to Johnson are, we suspect, a good deal exaggerated, but the deliberate calmness with which he throughout life pursued literary fame was unrivalled. Instinct or reflection showed him that biography and anecdote were his *forte*, and he seems soon to have perceived that the life of Johnson was just the work suited to his peculiar aptitudes. While engaged upon it he expressed the opinion to a friend that it would be "without exception the most entertaining book you ever read." Every one now knows that this conviction was grounded on a perfectly sound estimate of the book which he was about to produce.

What, however, few persons have, we suspect, realized is the extent to which the immortal life was a work of imagination. That Johnson talked better than he wrote, and that he talked better in Boswell's biography than in real life, has long been common knowledge. Dr. Hill and Mr. Fitzgerald have, however, now established the fact that Boswell's Johnson is to a certain extent a creation of Boswell. He collected together from his own memory or notes, or from the reports of friends, a lot of Johnsonian anecdotes and dicta, and then deliberately "Johnsonized" and improved his materials. He himself tells us that "when my mind was, as it were, *strongly impregnated with the Johnsonian æther*, I could with much more facility and exactness carry in my memory and commit to paper the exuberant variety of his wisdom and wit"; and Mr. Fitzgerald, by one

example after another, shows what this language really means. It signifies nothing less than that Boswell, by slight curtailments or judicious additions, enforced the point of Johnson's discourse. We have, in short, in the Biography the conversation of the best and most vigorous talker of the age, retouched by the best and most imaginative biographer who has existed in any country since the day when Plato recorded, or imagined, the dialogues in which Socrates held up to eternal ridicule all the cleverest talkers to be found in the cleverest and most talkative city of the ancient world.

The assiduous industry with which Boswellians collect together trifling anecdotes of their hero and his flatterers is not a little absurd, but it leads occasionally to results which, though not exactly valuable, are not without interest. Unhappily, the whole race have inherited from their progenitor two characteristics which deserve severe critical condemnation. In common with most fanatics they misunderstand the character of the god whom they adore. In his own eyes, as in those of his contemporaries, Johnson's fame rested upon his writings. He was an impressive writer and a great practical moralist. By the force of his writings he gave the prevailing tone to the moral sentiment of his age. Yet the school who worship at his shrine give no proof whatever of even moderately fair acquaintance with his writings. No doubt they would say and think that they admired 'Rasselas,' the *Rambler*, the 'Modern Poets,' the 'Vanity of Human Wishes,' and the like. But though we do not for a moment hint that Dr. Hill or Mr. Fitzgerald has not read the writings on which Johnson himself would ground his claim to be remembered, we do confidently assert that the Johnson who captivates them is Johnson the talker, not Johnson the writer. In other words, the author whom they really venerate is Boswell; they adore the slave, not the master. This is plain enough when we read that Mr. Fitzgerald has written his pages "with a view to contributing to the further enjoyment of one of the most enjoyable books in our language." Every one loves gossip, and our modern Boswellians, who care little for poetry or ethics, enter heart and soul into the pettiest gossip which can be hung on to the work of the most famous of all gossip-mongers.

Men who are in reality followers of Boswell can scarcely be expected to be fair judges of Johnson, and the time has come for saying that Johnson-worship, like every other kind of fanaticism, runs a great risk of becoming an absurdity and a bore. No one with the least care for literature, or with the slightest appreciation for character, can fail to feel either the charm of Johnson's conversation or the impressiveness of his moral attitude. As long as admirers claim for Johnson only the right to a high place among men of letters and to infinite respect as a practical moralist, no person of sense or feeling would dream of denying the justice of the claim. If it be said further that, as painted in the pages of Boswell, he excels all English talkers in terseness of argument and readiness of repartee, this too will be conceded by every person of taste or of judgment. But when language is used which implies that the great lexicographer ranks among the greatest men whom England has produced, it is impossible to admit an extravagant claim without insisting on the necessity of making several abatements to it. In no field of speculation was Johnson in the first rank. His vigor was immense, but the force of his expressions constantly exceeded both the originality, the accuracy, and the truth of his thought. On subjects of speculation he was considerably behind the most vigorous intellects of his day. To compare him as a thinker with Burke, Gibbon, Hume, Adam Smith, or Bentham would be simply ridiculous. It is not merely that his views were often mistaken: the same thing might be said of many of the opinions held and defended by each of the celebrated men whom we have mentioned. The grave fault in Johnson is not so much that in many respects he fell into error, but that he was constantly wrong in his mode of thinking. If any one will put 'Taxation no Tyranny' or the 'False Alarm' side by side with the wildest passages of the 'Regicide Peace,' he will understand our meaning. Burke's mistakes are the errors of a genius who, in the midst of boiling passion, never loses the divine gift of insight. Johnson's mistakes are the mistakes of a man who does not see below the surface of the matter with which he attempts to deal.

What, it may be said with truth, does it matter that a man of strong capacity and eminent virtues took a mistaken view of the right way of meeting the claims of the American colonists or the agitation excited by the expulsion of Wilkes from Parliament? Our answer is simple. In one point of view, such errors are mere trifles; they detract nothing from the moral dignity of Johnson's character, they leave intact his humor and his humanity. In another point of view, however, these errors are no trifle. A thinker who has failed to grasp the nature of the problems with which he has tried to deal has no right to the fame due to men who have been masters of particular provinces of thought. Add further to this that a teacher's intellectual defects invariably tell, to a certain extent, unfavorably on his moral influence. Johnson was full of prejudices, and fostered many of the prejudices of his age. He gave new vigor to Tory platitudes at a time when it would have been greatly for the benefit of the world that these platitudes should have been seen by every one to be platitudes and not important truths. By his knock-down style of argument he confirmed the prejudice, but too natural to Englishmen, that questions which could only be properly decided by force of reasoning and careful investigation into facts could be determined off-hand by the forcible expression of obvious truisms.

Johnson's most earnest admirers will best serve the solid fame of their hero by laying aside every kind of Boswellianism. He was too great a man to need that his deficiencies should be concealed or extenuated. It is well to admit that the vigor of his conversation arose in part from the habit of pronouncing decisively on matters which do not admit of off-hand decision, and that the teacher who fostered this habit both in himself and others conferred a very dubious benefit on a generation of Englishmen by no means too open to the influence of knowledge and of truth.

A NEW VOLUME OF MÜLLER'S CHIPS.

Chips from a German Workshop. By Max Müller. Vol. v. New York: Charles Scribner's Sons.

PROFESSOR F. M. MÜLLER has lately published in England two volumes of 'Selected Essays,' mostly taken from his four instalments of "Chips," but containing also a few articles not included in the latter collection. These articles, accordingly, five in number, are now added by his American publishers as a fifth volume to the "Chips" series. It is a thin book, of less than half the size of its predecessors.

The five essays are on a considerable variety of subjects. The concluding one is a working-up into *quasi*-popular shape of a matter which can hardly be said to have any real interest except for special students—the prospect, namely, of getting from China and Japan the Sanskrit originals for one and another of the innumerable and interminable scriptures of Buddhism, dry with a dryness compared to which dust almost seems to have a peachy savor. The one next before it deals with the reform of English spelling; Müller boldly casts his immense influence on the side of this movement, thereby rendering it such a service as perhaps no other single man could render—it is fighting one set of English prejudices with another. He does not shrink from adding practice to theory; beginning the essay with the ordinary orthography, he presently introduces (not without warning) a few new phonetic characters, later a few more, and then the whole array of Mr. Pitman's system, as if to draw his readers gradually on, until they become phonographers without knowing it; such a result were much to be desired. Müller adopts this particular system, not as being in his view ideally the best one, but as having in England the most actual usage behind it; in this country, we believe, it is much less known. The matter, indeed, is one of small consequence in the present stage of the reform; that Max Müller approves the movement sufficiently to be willing to clothe his arguments in its favor in one of the new-fangled garbs is a circumstance calculated to make no insignificant impression on public opinion in England and America.

The two next preceding articles are concerned with mythology and religion. The latter of them, entitled "False Analogies in Comparative Theology," calls attention to certain aberrations of students in this department. Practically, the most valuable part of it is its exposure and denunciation (pp. 123–129) of Jacolliot's 'Bible in India,' that worthless work, half-ignorant and half-lying, which in our country also has obtained, in certain circles, a strange popularity and credence, and has to be constantly combated in the interest of sound knowledge.

To the other essay, on the "Philosophy of Mythology," no high praise can be awarded. The author's excursions over the wide field of mythologic lore are always full of interest, by reason of his comprehensive knowledge, his power of poetic combination, and the charms of his style. When he comes to discuss the reasons of things he is far from carrying our judgments with him. He here puts forth and urges anew his well-known solution of the mythologic problem—namely, that the whole thing is chargeable upon language; that mythology is "a disease of language," "an inherent necessity of language," and the rest of it. Now, it may be readily conceded that there would be no mythology without language; but so there would be no culture without language; and the statement of that fact by no means constitutes a philosophy of civilization. To make a mythology there is needed, in the first place, the curiosity that leads men to seek to know something about the forces that lie behind the phenomena of creation; and, in the second place, the anthropomorphic fancy that casts the results of their observation and deduction into human shapes, and conceives and states the phenomena as human acts: these, and these alone, are the fundamental factors. Then

comes in the interference of language, as the instrumentality of tradition; the anthropomorphic statements are passed down from one age to another, all the time losing something of their immediateness of apprehension, until the myths become at last mere stories. Language is the means by which tradition converts myth into legend, and that is all that it has to do with the matter.

We may be allowed to quote in full a single paragraph as a sample of Müller's mode of reasoning on this subject. Speaking of the sun, he says:

"For so prominent an object in the primeval picture-gallery of the human mind a sign or a name must have been wanted at a very early period. But how was this to be achieved? As a mere sign a circle would have been sufficient, such as we find in the hieroglyphics of Egypt, in the graphic system of China, or even in our own astronomical tables. If such a sign was fixed upon, we have a beginning of language in the widest sense of the word, for we have brought the sun under the general concept of roundness, and we have found a sign for this concept, which is made up of a large number of single sensuous impressions. With such definite signs mythology has little chance; yet the mere fact that the sun was represented by a circle would favor the idea that the sun was round; or, as ancient people, who had no adjective as yet for round or *rotundus*, would say, that the sun was a wheel, a *rota*. If, on the contrary, the round sign reminded the people of an eye, then the sign of the sun would soon become the eye of heaven, and germs of mythology would spring up even from the barren soil of such hieroglyphic language."

Here is clearly apparent Müller's utter servitude to the word, the written or uttered sign, and his consequent reversal of the whole process of primitive thought: it would not be easy to find anything more curiously wrong in the whole body of modern reasonings and speculations on mythology. The selection of a circle as symbol of the sun does not, according to him, result from an apprehension of the latter's roundness, but it is an antecedent means to the arriving at that apprehension. And then it is a contemplation of this symbol that suggests the likening of the luminary itself to a wheel or an eye! If a people had not imagination enough to conceive the sun directly as a fiery wheel rolling through the heaven, or a burning eye gazing down upon the earth and searching out every hidden thing, there would be small chance indeed of its having its powers awakened by studying an Egyptian hieroglyphic, or a figure out of a Chinese graphic system.

Now for a single specimen also of the material on which Müller founds his reasonings. One of his best-known mythological identifications on the ground of etymology is that of the nymph Daphne, pursued by Apollo and turned into a laurel-tree, with the dawn, followed and put out of existence by the sun. He himself selects the case here as a typical one, and reports it thus: "Daphne, as I have shown, can be traced back to Sanskrit *ahanâ*, and *ahanâ* in Sanskrit means the dawn. As soon as we know this everything becomes clear." This reads like a demonstration, and it is accepted as such and quoted over and over again by second-hand authorities to whom Müller's word is gospel. In point of fact, however, *ahanâ* does not mean dawn in Sanskrit, and there is also no possible connection between it and *daphnê*. The word occurs in the Sanskrit literature once, and only once: in a Vedic hymn to the dawn, to be sure, but in such a connection that its sense is questionable; it may, at the best, be an adjective appellative of the dawn, perhaps signifying "the day-bright one" (Grassmann), but some of the best authorities (Böhtlingk-Roth, Ludwig) understand it as a nouncase for *ahnâ*, "with the day." As for an identification with *daphnê*, that could only be established by applying the Voltairean law of etymologies ("et les consonnes fort peu de chose") to the latter's initial *d*. Müller elsewhere ('Chips,' ii. 89) manages the affair in this way: "*ahan* . . . is said to stand for *dahan*, like *açru*, 'tear,' for *dâçru*, Greek δάκρυ." By whom this "is said," save by the author himself, it would be interesting to know. Certainly no etymologist of reputation at the present day will suggest it as admissible; Curtius and Fick, for example, regard *açru* and δάκρυ as coming from two different roots and unrelated, and they ignore *ahanâ* altogether. In another connection Müller does what he can to discredit this explanation of *Daphnê*, by tracing (in the midst of a like ominous silence on the part of his fellow-scholars) *Athênê* also to the same luckless *ahanâ*—of which word, indeed, his whole treatment makes the impression of an etymological hocus-pocus, and furnishes a striking commentary on the claim made by him, in the preface to the selected essays, that in re-editing them he had allowed due weight to the criticism of others.

Respecting the first paper in the volume, on Freedom, we have left ourselves only room to say that, notwithstanding its somewhat rambling plan, it contains interesting statements and thoughts on the English systems of education.

RECENT POETRY.

Song Bloom. By George Barlow. London: Remington & Co. 1881.

Farm Festivals. By Will Carleton, Author of 'Farm Ballads,' 'Farm Legends,' etc.' New York: Harper & Brothers. 1881.

The First of May: A Fairy Masque. Presented in a Series of 52 Designs by Walter Crane. Boston: James R. Osgood & Co. 1881.

The Statues in the Block, and Other Poems. By John Boyle O'Reilly. Boston: Roberts Brothers. 1881.

The Princess of Alfred Tennyson. Recast as a Drama. Boston: Lee & Shepard.

MR. BARLOW is undoubtedly the respected tutor of 'Sanford and Merton' metamorphosed by the new British craze of æstheticism into a singer of intense madrigals. His muse is of an invincibly prosaic inclination, bent by main strength to the inspiration of love-songs in imitation of the Rossetti and Swinburne school of poetry. A school of poetry is formed when a number of poets who think the same things concerning their art is large enough to attract attention. Such a number was reached some time ago by the humble followers of the illustrious poets mentioned, and Mr. Barlow appears to be a particularly typical specimen. This excuses notice of his 'Song-Bloom.' Like many of his brethren, he has, as we have intimated, no call whatever to write verses, nor, we believe, to write anything except that amount of epistolary prose necessary to his material well-being. He is one of those poets who make one wish the personal criticism of Jeffrey and Gifford had been reserved for the present generation instead of wasted on Keats. Despite the amenities of modern criticism, a poem like "To My Lady," for example, irresistibly withdraws attention from itself to its author, and the imagination is compelled to busy itself with speculation as to the latter's manner of life from his youth up. He has been long parted from his lady, and is anxious concerning her fate. She is somewhere in the interior, and he asks her if she is content with flowers:

> "Dost thou not yearn for the sea?
> Dost thou dream never of me?"

he sighs plaintively. Presently an unpleasant suspicion seizes him, and he cries:

> "Oh! wonderful body and hands,
> Who kisseth the brown hair-bands?
> Who kisseth body and hair,
> And breast-flowers soft and rare?
> Hath he wonderful tender hands
> To gladden the brown hair-bands?
> Hath he subtle and gentle touch
> To fondle the dear neck much?"

Then he relapses into the most passionate pleading. It is evident that he is perfectly unstrung. He wants her to give him her "wonderful hand," to meet him in "the woods one night," or he says he will wait for her "by the old unaltered sea." When she comes he wants her to give him a kiss, to "cling about him," to touch him "with every nerve; with wonderful bend and curve," to "lean and throb" to him, to take "my neck in thine eager hands" and "smother" him with those "hair-bands," to make of her "white arms" a "tense white ring" to embrace his body "like one multiform flower," to be "compliant and pure," and, in fact,

> "Awful, entire, supreme,
> Great as a great God's dream."

In his dedication he calls such "song-bloom" as this "Flower-buds that chide my hair's unlyric grey." But having once confessed to an unbecoming coltishness, he abandons himself completely to his poetic frenzy, and it is well known that when a poet's hair gets to be an "unlyric grey," unless he mends his ways he loses all control over himself, like any other man. This, however, is only superficial criticism applied to Mr. Barlow. The point to be noticed is that in all probability this emotion is really pumped up. His longings are too vague and his vocabulary too monotonous to permit any other supposition. His epithets are all in one key, which it is impossible for him to leave, having nothing else to say, indeed, than the foregoing lines suggest. He uses "lush" and "utter" and the different colors a good deal, but is, like the rest of his school, particularly attached to "white." We have white shoulders, necks, arms, hands, feet, and so on; white sea-foam, of course; white veils, "May-bloom," meadow-sweet, and various flowers, and so on almost indefinitely. "Swift" is employed unconventionally—*e.g.*, "swift face." Black, brown, and black-brown hair is preferred to blonde, which is an agreeable change. There are, naturally, echoes of the 'Laus Veneris.' One, entitled "Christ and Beauty," is a dialogue between Christians and Greeks, and presents the Greeks in the light familiar to readers of the neo-pagan poetry. This view, it may be remarked parenthetically, is one of the most singular of notions, and one for which Bulwer is probably more responsible than original documents. The same subject is presented in "Voices," a poem consisting of alternate choruses of Christian Elders and Greek Maidens; the prologue is a sonnet upon Christ, and the epilogue one on Beauty. There is no question as to the poet's position in the controversy; he sides with the Greek Maidens, of course. The Elders sing of Christ—

> "As a lion o'er leagues of sand
> He paces, and loud is his roar."

The Maidens in reply exalt Aphrodite and assert—

> "Little she cares for the might
> Of Jesus, his lion-like roar."

Of Mr. Barlow's other poems it will be sufficient to give a few specimen titles merely: "To a Lady with Deep Black Hair," "To the Queen of My

Young Life," "A Hymn of Woman," "To the Greater Woman," "O Death!" "And Art Thou Tender?" "Christ and Venus," "Hold Thou My Hand," "Thou Art Not There!" "L'Envoi: Thou Art Alive!"

The fly-leaves of this volume (which, by the way, is admirably printed and appropriately bound in white, with bevelled boards) contain the views of the English press upon Mr. Barlow, and form, therefore, the significant portion of the book's contents. The *Scotsman* reprobates "his defiant irreverence," but says he "proclaims the worship of the beautiful . . . . with a force, a luxuriance of epithet, and a mastery of form which compel the admiration even of those who most heartily detest his 'cult.'" The *Spectator* says he "has somehow managed to get his head above the crowd of candidates for poetical fame," and observes that "his creed, if we may judge from a poem entitled 'Christ and Woman,' seems to be settling down into something like Comtism." The *Whitehall Review* says he is "never commonplace," and calls his verses "poetry in the true sense of the word." The *Sunday Times* speaks of his love-songs as "more serious than amorous," the truth of which statement the context proves unconscious. Mr. Blanchard Jerrold, in *Lloyd's News*, says his "qualities are great enough to merit care in their culture." The *Westminster Review* divulges the fact that "Mr. Barlow has probably, without knowing it, been influenced by the feeling of the day. . . . . Influences are, as it were, in the air," it continues, which confirms our worst suspicions. The *Literary World* finds in him "an indubitable gift of beautiful and harmonious, if not commonly powerful, expression." The *Standard* discovers his "chief excellence." The *Antiquary* dwells on his "idealistic tendency and tenderness and charm of sentiment." Lord William Lennox, in the *Court Journal*, regrets that "Mr. Barlow does not furnish the stage with one of his works." The *British Quarterly Review* commends his poems for, among other things, "tender, touching insight into the depths of a pure soul," and so on. These observations refer to the previous work of the poet before his hair acquired its "unlyric grey," and it may be left to the reader, sceptical about the lack of humor in much current British criticism, to reconcile them with the fact that in the present volume, at least, there is not a poetic thought or locution except a few stolen felicities of expression, now wearisomely hackneyed.

To such parodies of passionateness Will Carleton's third number of his Farm Series forms a tonic contrast. Every one has read and enjoyed its predecessors, and it is safe to predict for the 'Farm Festivals' "as kind and generous a greeting" as the former received, in which event the author says he will be "more than pleased." A few of the versified tales here included have been published before, but most of them are new, and the perfect sanity and simplicity of them all are extremely agreeable. The unity of the volume is somewhat marred by the introduction of some narratives, such as "The Death-bridge of the Tay" in the "Festival of Anecdote; or, An Evening in a Country Store," which is a stirring ballad, however conventional in treatment; but the loss in form is made up in substantial merit, and generally we do not get far from the farm flavor. "The First Settler's Story" is excellent, and its pathetic motive managed with fine simplicity. Like the rest of Mr. Carleton's stories, its pathos is rendered far more effective to the discerning reader by a candor rare in similar literature. The subject is more commonplace and the contrast of lights and shadows of character less impressive than in the kindred stories in verse of Bret Harte, for example, and yet are entirely without the crying literary unscrupulousness which in the latter offend a sensitive taste quite as much as they surprise it, and will probably prove fatal to their enduring fame. Mr. Carleton gains much, too, by refining upon the ordinarily exaggerated dialogue and rejecting the thoroughly factitious aid of cacography. Neither are his stories versified prose merely; we may even say that, besides the additional pleasure derived from their felicity of movement and enforced epigrammaticism, there is in the diction now and then a genuinely poetic touch of much beauty and excellently adapted to the sentiment it clothes. He has a lyric gift of respectable quality, which is here abundantly exhibited, and that his humor is delightful need hardly be said. To the latter the definition of humor given by an aunt of George Eliot, and recently published by Miss Thackeray, "talking in fun while thinking in earnest," is particularly applicable. For example:

> "That night, while theoretically sleeping,
> I half heard and half felt that she was weeping."

Mr. Carleton's ear, it will be noticed, is not unerring, but he rarely halts, and in writing some thousands of couplets the best ear is sure to fail now and then, unless we except among contemporary poets Dr. Holmes, whom Mr. Carleton occasionally recalls. Holmes would, we are sure, be glad to acknowledge this, for instance:

> "So this meeting joined in conflict; and affairs assumed a shape
> As if sin's unpleasant future had effected an escape."

That is purely American and would make the reputation of a "newspaper poet." Here is another:

> "In the last campus rush we came to strictly business blows,
> And with the eye he left undimmed I viewed his damaged nose."

Nor need we add that nothing is farther from Mr. Carleton's verses than any hint of vulgarity. "Our Travelled Parson" is one of the best of the ballads in respect of kindly humor, but it must be admitted to lack a *fonds* of seriousness, or else of sincerity, which is a defect; magazine readers will readily recall it, and Mr. Abbey's admirable illustration. The rest of the illustrations, by the way, do Mr. Frost's rising reputation no great credit.

The author of 'The First of May' is, we believe, a young English poet, and not, as might be inferred from the title-page, Mr. Walter Crane. Mr. Crane will, however, rightly command most of the reader's attention, though the Masque is a very pretty reflection of the spirit of seventeenth-century madrigals, has a pleasantly entertaining plot of properly insubstantial texture, and is in general of an innocent and agreeable rather than a lively interest. Much the same thing might in strictness be said of Mr. Crane's fifty-two designs which illustrate the poem, but these qualities are rarer in his art than in literature, and are consequently more noticeable. Nor do we mean to depreciate them in either of the contributors to this pretty volume. The Masque is a fairy story, and Mr. Crane has illustrated it with great copiousness, charming grace, and, within the limits imposed by the subject, great variety. Each page contains from two or three to twenty lines only, which are framed in the designs. Almost no criticism is to be made upon them from the point of view of decorative treatment of a light and fanciful fairy-tale. The drawing is very good, and if it were not, the slight conventionality which idealizes to a just perceptible degree the human figures of which the most important part of the decoration is made up, would prevent one's feeling inexactness as a defect. Some of the figures, such as that on page 43, are delightful, and some of the figure arrangements, as that on page 18, not less so. In many the grace of individual movement and attitude is surprising, and justly to be called rhythmic. In others the mere linear scheme, independently of the interest of the figures as figures, is in the highest degree decorative. The copy before us is not too well printed, or if it is faultless in this respect we should have been glad of more distinctness in both the letter-press and designs.

"The Statues in the Block" is the most ambitious of the poems in Mr. O'Reilly's little volume, but we like it nearly the least, not only on account of its apparent effort, but because its author's best vein is dramatic, and his dramatic force here is so misapplied, the poem being of a mystic and fanciful description, as to seem pretentious, which is the last thing we should in general think of calling Mr. O'Reilly's interesting performances. None of these poems equal in interest, however, the first things he published; in his Australian stories he had the field almost to himself, and improved the opportunity which a genuine enthusiasm in his subject and personal knowledge of its local color gave him, but much of this verse has a perfunctory ring compared with the 'Songs from the Southern Seas.' Thus "The Mutiny of the Chains" is the best thing here, to our mind. At the same time the mass of these verses is by no means to be classed with much of the transient verse of the day bearing similar titles and concerned with the same motives. "Love's Secret," "The Well's Secret," "Love's Sacrifice," "Her Refrain" are all seriously conceived and simply uttered. If there is nothing striking in them there is also no blemish to note.

Any one who thinks that a work of Mr. Tennyson's can be improved in form is, of course, at liberty to make the attempt. In regard to 'The Princess' the preface of this anonymous undertaking assures us that "its rich materials admit of more strictly dramatic treatment," and says this "is suggested by the poet himself in terms which might justify the attempt if made in an appreciative spirit, with no purpose of disturbing the original, legitimate impression of the poem." This qualification, of course, begs the whole question; but, that aside, we feel sure the recaster has misunderstood the "suggestion" of Mr. Tennyson, and that the poet would hardly view with equanimity his endeavor "to retain the language and style of Tennyson as far as possible." This is a conclusion from an examination of the recast work, and not based on the *à priori* grounds which, one would say, are nevertheless sufficiently strong. The language is, of course, recognizably retained, but of the "style," as apart from the language, the less said the better. However, the remodeller's real motive is betrayed in his remark that a dramatic rendering of 'The Princess' may "deepen its philosophical interest, as it bears upon many questions of modern social life and culture." How this results it would be difficult to tell but for a note which informs us that "applications for permission to perform this Drama should be addressed to the Publishers." Private theatricals, it is possible, offer a field heretofore neglected for the promulgation of the social views which 'The Princess' was written to enforce. But if there is any correspondence between his ideas

and such presentation of them, Mr. Tennyson, we suspect, would be the last person to admit the fact. It would, on the contrary, be a point in favor of M. Taine.

RUSSIA SINCE NICHOLAS.

Von Nicolaus I. zu Alexander III. Leipzig. 1881.

In the year 1873 a little volume was published in Germany under the unpretending title of 'Society in St. Petersburg.' It was eagerly taken up by many who expected it to yield something to satisfy their taste for gossip and scandal. Those who read it with more serious intentions were surprised to find in this series of sketches of distinguished people a masterly and connected account of contemporary Russian history, without any attempt at personal gossip or sensational writing. The leading characters in the narrative received no more prominence than was necessary to understand the part they took in the great national drama. The book passed quickly through several editions, and was followed by a new series of sketches under the same title, and by a new work, written in the same dignified, statesmanlike style—viz., 'Russia Before and After the War,' which was immediately translated into English, and created a great sensation across the Channel, where the anti-Russian feeling was then at its climax. Then followed 'Berlin and St. Petersburg,' which, from a political point of view, is, perhaps, the most important of all. The relations between regenerated Germany and new Russia are criticised in this volume by a writer who, though he cannot conceal his strong predilection for German institutions as compared with those of Russia, does not allow national or party feeling to lead him into either exaggeration or suppression of facts. The volume before us, 'From Nicholas I. to Alexander III.,' which has just been published, brings this interesting series to the events of our day. The closing chapter gives a graphic sketch of the life of Alexander II., of his terrible death, of his successor, and the men who were the first advisers of the young Czar. The author has preserved his anonymous character throughout. Mr. Fairfax Taylor, in the preface to his translation of 'Russia Before and After the War,' pronounces him to be a Russian, but, as we pointed out in our notice of this work (*Nation*, No. 781), there is no question that the author is Julius Eckardt, the well-known Hamburg publicist, author of numerous other politico-economical works relating to Russia of the highest value and authority.

Everywhere in his criticism of Russian affairs the insolence and corruption of all classes of Government officials are considered a chief cause of the widely-spread discontent among the enlightened classes of the Russian people. But it would be attaching an exaggerated importance to this evil to attribute to it alone the steadily increasing demands for reform, and the origin and growth of Nihilism. There existed until a year ago an institution in Russia which has caused more general indignation among educated people than any act of the Government: we mean the famous, or rather infamous, "Third Section of the Chancery of his Majesty the Emperor." This bureau of secret police was established by Nicholas I. soon after his accession to the throne. It was endowed with extraordinary powers not only to discover and punish political offences, but also to control Government officials of every grade, up to the immediate surroundings of the Emperor. Accusation, inquest, judgment, and execution were all within the power of one office, which was perfectly independent of all control except that of the Czar himself. When, scarcely a year ago, on the 18th of August, 1880, Alexander II. consented to abolish this institution, men in favor of wise and moderate progress, both in Russia and abroad, regarded the reform as second only to the abolition of serfdom in importance. The author devotes the first and longest chapter of his book to the working of this department. He publishes three documents from the archives of the secret police which now for the first time see the light. The first, a report of a common agent, contains accusations against six of the highest dignitaries of the Empire, cabinet ministers and generals. The sharpest attack is made against Prince Galitzin, then Minister of Education and an old personal friend of the Emperor's. The Prince is accused of appointing German professors at the public schools, who teach the young Russians contempt and dislike of Russian institutions and the immense superiority of the foreign political and social order of things. His greatest sin is that he has introduced the "damnable practice of reading the Bible, which, as is well known, was the origin of the terrible reign of the Jacobins in France. Our servants are already beginning to imagine that they are the equals of their masters. All this and many other incalculable evils proceed from this abominable practice." The second document shows the deeds of a certain Major Sgotoff, who was sent to the government of Simbirsk. This man, a simple officer of gendarmes, ruled as an autocrat, not beside but above the governor of the province. At his request the governor himself and several of the highest officers were removed, others appointed and removed again. On his information an aide-de-camp of the Emperor, belonging to one of the noblest families in the Empire, who was on a recruiting mission in Simbirsk, was accused of bribery, degraded from his rank and sent to Siberia. The third document gives a full and distressing account of an incident such as was in those times of daily occurrence. A country gentleman was accused of liberal tendencies, pulled out of his bed in the middle of the night, dragged into prison, and sent to Siberia, whence he has never returned.

The second essay throws light for the first time upon the Petrashevsky conspiracy of 1848, in which more than twenty officers of high rank in the military and civil service of the Empire were engaged, besides several professors of colleges, doctors, engineers, and lawyers. All these unfortunate men were condemned to death. Their real fate has never been discovered; they simply disappeared. A complete list of their names and occupation is given for the first time in this volume. This conspiracy, which was discovered shortly after the outbreak of the French Revolution of 1848, was one of the first secret movements in favor of political reform in Russia. The immense Empire was in those days entirely isolated from its Western neighbors; not a newspaper, scarcely a letter, could pass the frontier from East to West or West to East without close examination. Little was known of the circumstances of this plot, which has lately been much discussed as the precursor of Nihilism. One of the consequences was that 25,000 books, comprising the best English, French, and German classics, were confiscated in St. Petersburg alone; that every bookseller's shop in the Baltic provinces was closed, and the project was seriously discussed of closing every publishing house in the Empire and concentrating the entire book trade in one Government department. Of this and many other instances of the senseless fight against modern ideas the author gives a detailed account, and offers official documents in proof of his statements.

His sketch of the Russian refugees in London is a lifelike representation of the authors and chief actors of Nihilism. Bakunin, the arch-conspirator; Alexander Hertzen, the founder and chief editor of the *Kolokol*, the first revolutionary journal, with his brilliant staff of assistants, are portrayed in bold relief. Other articles contain portions of a private correspondence between Prince Paskevitch and Gortchakoff, and several secret memoranda addressed to Russian diplomatic agents abroad. The concluding chapter is the chronicle of the events of the last two months. The long reign of the late Czar is reviewed with great intelligence and keen insight into the public affairs of the last twenty-five years. The author pays a touching tribute to the many amiable qualities of Alexander II. He speaks in terms of the highest appreciation of the many public acts which mark his reign as the noblest of any in the history of the great Empire. He discovers the mistake and misfortune of Alexander's reign in the circumstance that, having given so much, he did not give enough to satisfy a large portion of the intelligent classes of his people. He views with dismay the first steps of the new Czar, which he considers fatally mistaken. He arrives at the conclusion in which the best thinkers of Europe have found Russia's only prospect for future welfare and safety: a constitution, but, first of all, complete decentralization. Progress is only possible with a perfect autonomy of the different nations of the Empire, which are sharply divided by geographical and historical landmarks. Centralization is despotism and barbarism, even if represented in an imperial parliament.

BURROUGHS'S 'PEPACTON.'

Pepacton. By John Burroughs. Boston: Houghton, Mifflin & Co.

The natural state of man, according to Von Moltke, is a state of warfare, and it is probable that most of the readers of Mr. Burroughs will turn first on opening his new volume to his tilt against his brother-authors in the chapter called "Nature and the Poets." This essay had to run the gauntlet of pretty sharp criticism from scientific men and others after its first appearance in *Scribner's Monthly* for December, 1879. On inspecting the revised issue we find that our author has learned wisdom by experience, and has quietly abandoned some of his untenable positions. He drops out of his indictment against Bryant the charge made in *Scribner's Monthly*, that the poet makes his "Summer Wind" shake down fragrant blossoms from the shrubs, whereas, according to Mr. Burroughs, there are no trees or shrubs that have fragrant blossoms so late as July. He had unluckily forgotten the very fragrant azalea (*A. viscosa*), which flowers profusely through the meadows of New England in just that month; and this error having been pointed out, he wisely now omits that count in the indictment. In the same way he omits the assertion made in the original essay, that the common wild Houstonia blooms earlier in the spring than the yellow violet (*V. ro-*

tundifolia), which he apparently did not at that time distinguish from the later species (*V. palustris*). These omissions show candor, if a man is to have credit for candor when it has become inevitable. Unluckily, they do not show a punctilious habit of accuracy. The assertions which he thus withdraws were made as bluntly as those which he still retains; and some of these, we regret to say, are equally unfounded. Take, for instance, his censure upon Lowell for the passage in his "Al Fresco":

> "The dandelions and buttercups
> Gild all the lawn; the drowsy bee
> Stumbles among the clover-tops,
> And summer sweetens all but me."

This passage is thus criticised by Mr. Burroughs:

"Of course the dandelion blooms occasionally throughout the whole summer, especially where the grass is kept short; but its proper season, when it 'gilds all the lawn,' is, in every part of the country, some weeks earlier than the tall buttercup (*R. acris*) and the clover. These bloom in June in New England and New York, and are contemporaries of the daisy. In the meadows and lawns the dandelion drops its flower and holds aloft its sphere of down, touching the green surface as with a light frost, long before the clover and the buttercup have formed their buds" (p. 120).

"Long before the clover and the buttercup have formed their buds"! And yet any one of the numerous visitors who were drawn to Cambridge by the Greek play, in the last week of May last, might have seen with his own eyes the completeness of Mr. Burroughs's mistake. Any such visitor who happened, as we did, to walk from Harvard Square to Elmwood (Lowell's home) on the very last day of May, would have seen the dandelions and buttercups so nearly balanced in numbers on lawn after lawn that nothing short of a Returning Board could have settled the question between them. As to the white clover (*Trifolium repens*), its blossoms were also visible, though not abundant. Mr. Lowell's botany was thus vindicated by the irresistible testimony of the human eye. The simple fact is that, in the locality which Lowell describes, the buttercup does not, as Mr. Burroughs asserts, follow the dandelion by a distinct interval, but laps over upon it in the same fields and lawns, so that, on a certain day or days of every spring, the two flowers will be equally balanced. What, then, is a poet to do who happens to write on one of these days? Is he to describe what he sees before him, in the precise place where he is; or is he to send to Mr. Burroughs, wherever he may be within that very wide botanical domain which he calls loosely "New England and New York," to ascertain the permissible combinations?

The truth is—and it may as well be told frankly, as the one drawback found by most readers in the very pleasant books of Mr. Burroughs—that he allows himself an amount of dogmatizing, in presence of nature, which is not only unattractive but quite unsafe. He certainly has in him, either by nature or through the influence of Walt Whitman, something of the quality of that good old Scotchman whose petition was "O Lord! we pray thee that we may be right, for thou seest that we are very decided." It is true that Thoreau, who is in some respects Mr. Burroughs's prototype or exemplar, had something of the same gift. But Thoreau had in two respects the advantage: first, in a more exact and thorough habit of mental discipline, and, secondly, in concentrating his observation upon one very limited region. When he made a statement it was very nearly infallible, if it related to a fact in nature; because all his dogmatizing was about Concord, and he knew Concord through and through. He wrote simply a monograph, like White of Selborne; he was, as Henry James, jr., says, "parochial," and hence his strength. But the observations of Mr. Burroughs range throughout the country; he is in New York, in Washington, and sometimes, though rarely, in New England. Gaining thus in width of comparison, he loses in precision. When he says "hereabouts" or "in our latitude" we never know whether he means the Hudson or the Potomac; and if he were spending a winter in Florida, he would, we suspect, undertake to correct the botany of an Alaskan poet.

A good illustration of this is the perseverance with which he follows up the assertion that the early yellow violet has no odor. Bryant says of it:

> "Thy faint perfume
> Alone is in the woodland air."

His critic says, as he said long since in *Scribner*, "I have never been able to detect any perfume in the yellow species (*Viola rotundifolia*). This honor belongs alone to our two white violets, *Viola blanda* and *Viola Canadensis*" (p. 107). Now, the first statement is unexceptionable, for each man has a right to testify according to the perceptions of his own nose. It is the second sentence that is objectionable, in which he elevates that organ into a standard of universal authority. Mr. Burroughs is an excellent observer, and although we have never happened to find any of these early yellow violets that were scentless, or found any one else who pronounced them scentless, we are willing to admit that they are so in the precise localities where he has found them. Why should not he be equally tolerant? By his own showing, the hepatica varies as to odor, in just this way; why not the violet? The white water-lily, perhaps the most fragrant of our Northern flowers, is often wholly without fragrance, as we can personally testify, in South Carolina. In deference to the many people who have smelt precisely that "faint perfume" which Bryant so well describes in the yellow violet, it would be better for Mr. Burroughs to yield the point. It is proverbially difficult to prove a negative. The rural French judge who heard the testimony of three witnesses to the effect that they had seen a certain man commit a homicide, and then allowed it to be outweighed by the evidence of four men who swore that they had never seen him commit one, is not a good model for the scientific observer.

We own to liking Mr. Burroughs best when he is least controversial, and when, on the other hand, he gives us something more than simple narrative. For instance, his voyage down the Pepacton, or east branch of the Delaware, suggests comparison with Thoreau's Concord voyage, and the difference in wealth of material and depth of thought is very observable; the younger writer seems thin and trivial in comparison. But where he takes a little more pains, and gives a more studied result of thought and fancy, brought to bear on a theme of his own selection, he appears at his best. This is the case in "An Idyl of the Honey-Bee," "A Bunch of Herbs," and "Springs." He has done nothing more agreeable and valuable than these three papers. "Footpaths" is of less weight, and is on a theme that has been treated by others; while the "Notes by the Way" are too fragmentary. On the whole, this must be pronounced one of Mr. Burroughs's best books. It shows more depth of thought than some of his writings; more care in execution than others; there is none of that occasional coarseness which marred some of his earlier descriptions; and he only gives two pages to Walt Whitman.

Law relating to Stocks, Bonds, and other Securities in the United States. By Francis A. Lewis, jr., of the Philadelphia Bar. Philadelphia: Rees, Welsh & Co. 1881.

Mr. Lewis's book will be found a valuable collection of decisions upon the law of the stock exchange. Almost all this law is of very recent growth, and is what Bentham would have called judicial law. So far as the legislature has interfered with the development of it, it has generally been for the purpose of preventing transactions in stocks, as, for instance, in the case of Sir John Barnard's act, passed in 1734, for the prevention of the "infamous practice of stock-jobbing." The opinion which led to the passage of this act continued, as Mr. Lewis points out, in England through the last century, during which all dealers in stocks were a very unpopular class. In this country, singularly enough, although the United States is the home and nursery of stock speculation in the modern world, this feeling has continued down to the present day; yet its strength is largely dependent upon the general condition of trade and business, and can hardly be put down as a settled intellectual conviction or prejudice. In times of commercial depression there is no occupation the press more eagerly and constantly devotes itself to than that of warning the public against the doings of the "thieves in Wall Street." With returning prosperity this animosity disappears, and in times like the present hardly a trace of it remains. But so far as we know, in both countries, the influence of public opinion upon legislation with regard to dealings in stocks has always been to treat the occupation as one either criminal in its end, or as at any rate barely to be tolerated by the law-making power. The courts, however, by applying the principles which regulate ordinary commercial dealings as far as possible, have created in the last one hundred and fifty years a body of law relating to stock transactions which is probably far better, more just, more coherent, and more simple than if the legislature had undertaken the matter. They have done this really under the influence of necessity, for speculation is a necessity to the modern world, and the idea of its being treated as outside the pale of law has long since been known by all who have given the subject any attention to be absurd. Take a single instance: it is essential for the security of dealings in stocks that certificates should pass readily from hand to hand very much like negotiable paper, and one hundred and fifty years ago the idea of the negotiability of certificates of stock would not have suggested itself for a moment as within the bounds of possibility to any judge or lawyer in England or America. In fact, there was at common law, as Mr. Lewis points out, no such thing as negotiability, bills of exchange being negotiable only by that convenient body of law known as the Law Merchant. Now, without going into the technical difference between "bills of exchange" and "certificates of stock," Mr. Lewis shows that there has been a steady progress towards the assimilation of the law of the two classes of securities. He does not think that the courts will ever go so far as to put them on the same footing, but he seems to admit that the process of assimilation has gone already pretty far.

The Campaign of Chancellorsville. By Theodore A. Dodge, U.S.A. Boston: J. R. Osgood & Co. 1881.

In the *Nation* of May 23, 1867, in a review of Hotchkiss and Allan's admirable book on Chancellorsville, we attempted to give as clear and complete an account of that series of operations as the information then accessible and the space allowed us permitted. If the book before us had then been in existence we could have made the account more complete, but the general description then given would not have required substantial alteration. For this reason we shall not here fight the battle over again. It is sufficient to bespeak for this handsome volume a cordial welcome, which it thoroughly deserves. With the aid of Hotchkiss and Allan from the Confederate side, and of Dodge from the Federal, the interesting campaign of Chancellorsville may be studied with entire satisfaction. There is no other great battle or series of battles in the war of secession which is so completely and accurately described and explained. As we said before, the story is not pleasant reading for Northern men. The failure at Chancellorsville was not only most discreditable to General Hooker, who then commanded the Army of the Potomac, but it was such a total and extraordinary failure that the story would be incredible if we did not know it to be true. We supposed that we knew the worst when we reviewed the work of Hotchkiss and Allan; but Colonel Dodge has shown us that we were mistaken, and that there was another dismal episode in the disastrous series which we did not then appreciate as it deserved. This was the loss of the golden opportunity which fortune almost forced upon Hooker as a consequence of his ill-judged action in weakening his right, on the false theory that the enemy was flying. When morning dawned on the day after Jackson had found victory and a death-wound on our right, two divisions of our army, Birney's and Whipple's, held a position which practically prevented a junction of the two wings into which Lee had divided his army. From this position Hooker blindly ordered our men to withdraw. Stuart promptly occupied it, placed thirty guns upon it, and these guns "enfiladed our lines with murderous effect during the remainder of the combat of Sunday, and contributed largely to our defeat."

It is not easy to say what part of this book is best, for it is all good; but the matters upon which the most additional light is thrown seem to us to be the movements of our troops which left our lines to attack the rear of the column supposed to be retreating, but proved to be Jackson's turning column, and Sedgwick's movements at and near Fredericksburg. The book is the production of a man with a clear military head, who seems to have possessed himself completely of his subject. The student of military history will find it very valuable, and the general reader will find it interesting in the extreme. It may be added that the contents of this book are an enlargement of papers read by the author before the Military Historical Society of Massachusetts, of which he is a member.

Scotland in Early Christian Times. By Joseph Anderson. Edinburgh: David Douglas. 1881.

This volume comprises the Rhind Lectures in Archæology for 1879. The author is the Keeper of the National Museum of the Antiquaries of Scotland, and he is, therefore, thoroughly conversant with his subject. The lectures throughout combine exhaustive knowledge with a scientific method of treatment. Mr. Anderson does not group his facts round pet theories. He is singularly free from hasty generalizations of the kind illustrated by the A. D. L. L. of Scott's famous antiquary. At the same time he makes the most of his material, deducing all the information possible in the circumstances. His work, so far as it goes, contains a lucid summary of the present state of knowledge regarding the subjects treated. The lectures are restricted in their scope, however. They deal only with those remains of early Scottish history which are strictly ecclesiastical in their nature and use, and belong to the Celtic period of the Scottish Church.

In his introduction the author defends the study of archæology as necessary to an understanding of the complex civilization of the present, into the structure of which the past has been built up; and he protests against the utilitarian vandalism which is rapidly destroying many interesting historical monuments. Two lectures are devoted to a consideration of the structural remains of the early Celtic Church. Taking the twelfth century as his starting-point, "that border-land where the historic and the non-historic meet," the author works his way backwards as far as the light reflected from the present will guide him; and the primitive type of church—"one chamber, one doorway, and one window"—he concludes is an extension into Scotland of the monastic system which prevailed in Ireland from an early period, and of which the most characteristic features are "that they exist as composite groups comprising one or more churches, placed in association with monastic dwellings which consist of dry-built cells of beehive shape, the whole settlement being enclosed within a cashel or rampart of uncemented stones." The three remaining lectures give an interesting account of the existing relics of the Celtic Church—its illuminated MSS., bells, croziers, and reliquaries respectively—in which many side-lights are thrown upon the civilization of the times. These relics, it is maintained, point to a high degree of literary and artistic culture. They also, the author once and again strongly insists, bear evidence to the existence of features in the Celtic Church which give it a character entirely its own. The *Liberi Scottice Scripti*, known over the whole of Europe, of which one library catalogue of the ninth century enumerates thirty-two, and of which some beautiful examples have come down to the present, point to a striking individuality in Celtic art and in Celtic life and civilization as a whole. The volume is tastefully illustrated throughout, thus adding considerably to its interest and value.

The Philosophy of Carlyle. By Edwin D. Mead. Boston: Houghton, Mifflin & Co. 1881. Pp. 140.

There is little in this book to justify the title. Had Carlyle written in any language but the English he would never have passed for a philosopher at all. He was a popular preacher of righteousness to the young men of a particular generation and nationality—none the less preacher because his themes, duties, and sanctions are broadly conceived and interpreted and his rhetoric really effective. Nor is Mr. Mead's discussion of the sources from which Carlyle drew so much of his inspiration philosophic. Something is said about Kant's moral conceptions, and, by reason of his absorption in the ethical aspect of things, Carlyle is said to resemble Fichte, etc.; but writing *about* philosophy is not philosophy. Carlylean cadences, moreover, are unmistakable in Mr. Mead's style throughout, and the incessant change from quotations, often extended and generally very judicious to remarks by the author, is again unfortunate for the latter. This is the more to be regretted because Mr. Mead is brimful of his subject and all the recent literature about it, has long been a student and enthusiastic admirer of Carlyle, and is qualified by years of study in England and Germany, and considerable knowledge of recent social, political, and literary European history, to write comprehensively—as, indeed, he has done. While there is no special pleading, we think his interesting *causerie* will tend to confirm the wavering faith in Carlyle's bottom integrity and in the general effectiveness of his work. The most emphatic dissent is expressed from Mr. Henry James's charge of insincerity, which is declared to be "precisely the dreadfullest of all possible mistakes." The statement so commonly heard in one form or another, that Carlyle saw no divine ends in human nature or in the social sentiment, but only in persons, the author characterizes as "extraordinary vilification." The appendix, it should be added, contains a few judicious paragraphs on Carlyle by Professor C. E. Norton, printed from the advance sheets of the forthcoming annual report of the American Academy of Arts and Sciences.

Fly-fishing in Maine Lakes; or, Camp-Life in the Wilderness. By Chas. W. Stevens. Boston: A. Williams & Co.

It seems strange that so few books on fishing and shooting have been produced in this country that either give valuable information on the subject, or have sufficient literary merit to atone at all for the lack of knowledge which their authors have of the subject. Mr. Stevens's book is, perhaps, slightly above the average, though the elision of one-half to two-thirds of it would be a very manifest improvement. He expends the usual amount of sentiment over the trout he pursues, which on one occasion he terms "the brightest jewel in Undine's crown," and on another "little brooklet"; and the volume teems with exceedingly bad puns, the production of the author and his companions. There is also a "Retrospect" in verse, and a "Supplement" which is free from the objectionable features that pervade the rest of the book, as it is restricted to the subject under discussion and gives such information as Mr. Stevens has to offer about fishing outfits and how to fish. The waters visited by him were among the best in Maine, and he was at Grand Lake Stream when the fishing for land-locked salmon was in its glory. He gives, as a frontispiece to his book, colored pictures of a number of flies, all of which are tied with loops instead of on single pieces of gut. If they are all meant for salmon flies this may do, but if for trout flies it is incorrect, and, besides, we think any one going to Maine in June, when fishing is really the best, would frighten many more trout than he would kill with this assortment. The largest of the Maine trout are taken late in the season, and at that time will rise to the large, gaudy flies; but, earlier, smaller-sized and more sober-colored flies are very much more effective.

Berkeley. By A. Campbell Fraser, LL.D., Professor of Logic and Metaphysics in the University of Edinburgh. Philadelphia: Lippincott; Edinburgh: Blackwood. 1881. Pp. 234.

THIS volume, we are told, is the "first attempt to present Berkeley's philosophic thought in its organic unity." New biographical material, and an original portrait from an oil-painting when Berkeley was in Rome, and thus taken at a much earlier period of his life than those hitherto published, his relations to contemporary scientific and theological interest, etc., are among the attractions of this little book, which makes an admirable introduction to the study of Berkeley's works. Different as are the arguments of the two great idealists, we are struck more forcibly than ever before in reading this book with the analogies in the life and thought of Berkeley and Fichte. The enthusiasm and the genius of both were essentially ethical. Both saw in a new educational departure a means of moral regeneration, one for the state and the other for society. The interest of the one in the plan of the Bermuda university was not much more practical than that of the other in the plan of the new university of Berlin. The essential difference between the two was that the German was so supremely in love with freedom that the ego must posit even the objective world freely, while the Irishman sought, not without success, to make philosophic materialism thenceforth impossible. The value of Professor Fraser's book does not consist in anything new, but in the clearness and attractiveness of his style, and the judiciousness of his selections. Otherwise the author accomplishes all he professes to do, if not more.

Sir William Hamilton. By W. H. S. Monck, M.A., Professor of Moral Philosophy in the University of Dublin. New York: G. P. Putnam's Sons. Pp. 192. 1881.

THIS book, one of the "English Philosophers" series, is a digest of the Hamiltonian metaphysics and logic, and contains nothing whatever that is new except a brief notice of the literature to which Hamilton's opinions gave rise, and a convenient glossary of philosophical terms, of more than twenty pages, at the end. Like so many philosophers, Hamilton's life was by no means fortunate, and the final verdict concerning the value of his thought has not yet been spoken. He was released from the practice of the law and enabled to devote his time to his department only after obtaining his professorship, at the age of forty-eight. Most of his writing, and even reading, was done during the interval of fourteen years between his appointment and the stroke of paralysis in 1844, twelve years before his death. The fullest presentation of his views is to be found, not in his semi-popular and somewhat fragmentary lectures, but in his comments on the system of Reid, who of all philosophers was second only to Aristotle in his esteem; and even his edition of Reid is incomplete. Monck asserts that "his philosophical erudition has never been equalled," and that "no philosophical writer of the present century has had the same influence in cultivating metaphysical speculation." Professor Monck writes in a spirit of ardent discipleship which, if we are not mistaken, few philosophical minds of his own country would now fully share, but which is the best guarantee for both insight and conscientiousness in presenting his master's views.

General Physiology of Muscles and Nerves. By Dr. I. Rosenthal, Professor of Physiology in the University of Erlangen. New York: D. Appleton & Co. Pp. 324.

THE writer attempts to be "intelligible to those who are not specialists," and with this purpose has omitted the more recondite parts of his subject. When this work was written in German, four years ago, it was the only connected account of the general physiology of muscles and nerves, and is now superseded only in German, by Hermann's elaborate text-book. Professor Rosenthal is a pupil of Du Bois-Reymond, and presents only his master's side of the long controversy with Hermann concerning the electrical phenomena of muscles. The work is illustrated with seventy-five woodcuts, and ends with a practical appendix on the graphic method and the idea of mathematical functions. The writer concludes with broad generalizations concerning the specific energy of nerves. Like an increasing number of German physiological writers, he is especially interested in the psychological aspect of his subject. His book contains nothing whatever that is new, but presents the facts of the department clearly and well.

The Liturgy and Ritual of the Celtic Church. By F. E. Warren, B.D. London and New York: Macmillan & Co. 1881.

COMPILED from scattered notices in the works of contemporary writers and in Celtic MSS., from the surviving fragments of the ancient Celtic Liturgy, and from the architectural remains of churches, etc., this volume contains in brief compass an exhaustive and trustworthy summary of the discoveries already made in regard to its obscure subject. In his introductory chapter the author deals with the special characteristics of the Celtic Church. The theory of its Eastern origin, in common with the best authorities, he rejects as no longer tenable, "the most probable hypothesis being that Christianity reached the British Isles through Gaul" about the close of the second century. Though orthodox, the Celtic Church was, he maintains, for centuries absolutely independent of the Roman Church, from which it differed widely on many important points. The facts of history, he argues, "present to our view a vast Celtic communion existing in Great Britain and Ireland, and sending its missions among the Teutonic tribes on the Continent, and to distant islands like Iceland; Catholic in doctrine and practice, and yet with its claims to Catholicity ignored or impugned by the Church of Rome; with a long roll of saints, every name of note on which is either that of one, like St. Columbanus, taking a line wholly independent of Rome, or, like Bishop Colman at the Synod of Whitby, directly in collision with her; having its own Liturgy, its own translation of the Bible, its own mode of chanting, its own monastic rule, its own cycle for the calculation of Easter; and presenting both internal and external evidence of a complete autonomy." The second chapter is devoted to a detailed consideration of the Celtic Ritual, in which much curious and interesting information is communicated. The third and last chapter is wholly composed of *Reliquiæ Celticæ Liturgicæ*, together with certain Missæ and Collects, which, though not portions of the original Celtic Liturgy, were used in the later Celtic Church, or are associated with the names of Celtic saints, or refer to incidents in their lives, or have relicts of the ancient Liturgy interwoven in their structure or contents.

AMONG THE HILLS.

A Novel. By E. Frances Poynter, author of 'My Little Lady.'

HENRY HOLT & CO., New York.

Rural Sanitation.

"Has an exceptional value on account of the timely interest of the topics and the experience and good sense embodied in its pages."—*Christian Union.*

Short, Practical Information on Sanitary Topics—*e. g.*, Care of Cellars; Furnaces; Kitchen Sink-wastes; The Privy; THE CAUSE OF MALARIA AND ITS CURE; How to Cure Wet Cellars; Filtering-cisterns, how to construct them; Ventilation of the House, School, and Church building. 32 illustrations. Price $2.

HARVEY EDW'D FISK, Greensburg, Mercer Co., New Jersey.

The Sunderland Library.

Messrs. PUTTICK & SIMPSON are favored with instructions to SELL by AUCTION (unless previously disposed of by private contract), at their house, 47 Leicester Square, London, W.C., in separate portions, the first portion commencing on THURSDAY, the 1st day of December next, and continuing throughout the nine following days, at ten minutes past one o'clock precisely each day, the CELEBRATED LIBRARY formed by CHARLES, Third EARL of SUNDERLAND, during the reigns of Queen Anne and George I. It consists of some 30,000 volumes, and is celebrated for its large Collection of Early Editions of the Greek and Latin Classics. It includes also the First and Rare Editions of the great Italian Authors; a superb Collection of Early Printed Bibles in various languages (including a copy on vellum of the first Latin Bible with a date); many extremely Rare Works relating to America; a Series of Spanish and Portuguese Chronicles; valuable English County Histories; First and Early Editions of the Chief French Poets and Prose Writers; a Series of French and English Works relating to the Reformation and the political events of the sixteenth and seventeenth centuries; a large number of Early-Printed and Rare French Chronicles and Memoirs; Books of Prints; a few Ancient Manuscripts; Collections of Councils; Histories; Lives of Saints; Bodies of Laws, etc. A number of the books are printed on vellum, and many are extremely fine large-paper copies. They are chiefly in fine old morocco bindings, and the Library is generally in splendid condition.

Catalogues, when ready, may be had, price 5*s.* each portion.

JUST PUBLISHED.

Memoranda Concerning Government Bonds,

A Valuable Hand-book for Investors,

Contains not only all the information about Government Bonds which investors or the public can desire, but also chapters on the Stock Exchange, with directions for buying and selling in the New York market all kinds of securities.

Tables giving the progress of the United States, 1830-80, in population, imports and exports, agriculture, manufactures, railroads, telegraphs, etc., etc., are added; also notes on Gold and Silver, giving—

A. The present monetary standard of the nations of the world.
B. Production of gold and silver in the world from 1492 to date.
C. The consumption of gold and silver.
D. The stock of silver now in the world.
E. The relative value of gold to silver.
F. Minute of the standard of the United States.
G. The value of foreign coins in United States money.

☞ Sent, post-paid, on application.

Investors can obtain Government Bonds at our office, in any sum, at current market rates, without any expense for commissions.

We attend to all the details of registering bonds, and will furnish, at request, the proper blank powers of attorney for assigning and transferring bonds and collecting interest.

Our long experience in handling Government Bonds, and our large and constant dealings, enable us to offer the best and most favorable terms to our customers. Every detail of the business is systematically arranged and has our personal supervision.

FISK & HATCH,
5 Nassau Street, New York.

THE
New York Produce Exchange

Will issue $1,000,000 First Mortgage, 4½ per cent., 5-20 Bonds in sums of $1,000 each, payable in twenty years, redeemable after five at the option of the Exchange, interest payable June and December, viz.: Coupon Bonds, which may be registered upon surrender of the Coupons; and Registered Bonds, not to be redeemed until all outstanding Coupon Bonds have been first called in. These Bonds are secured by a mortgage, to the Central Trust Company of the City of New York, of the plot of land fronting on Bowling Green, Broadway, and extending from Beaver to Stone Streets, together with the building to be erected thereon by the New York Produce Exchange. Proposals, endorsed and addressed to the Chairman of the Finance Committee, for all or any part of $8[illegible] of the above-mentioned Bonds will be received until noon of [illegible]esday, July 20, at the New York Produce Exchange, New York. All bids will be opened in the Managers' Room, No. 33 Pe[illegible]eet, at noon on that day. A check for 5 per cent. of the am[illegible] desired must accompany each proposal. Notice of acceptance will be given by mail July 21. Payment for the Bonds, with accrued interest from June 1 to date of payment, must be made to the Central Trust Company on or before August 1, 1881, when the Company will issue a receipt to be exchanged for the Bonds as soon as engraved and printed (on or about August 15). The right is reserved to reject any bids not deemed for the best interests of the Exchange. Any further information desired will be furnished by either of the undersigned.

The Nation.

NEW YORK, THURSDAY, JULY 14, 1881.

The Week.

THE steady improvement of the President ever since Sunday, in spite of the rather gloomy forebodings of the doctors, is a medical fact which has not been adequately discussed. There has been a great deal of medical opinion collected by the reporters, but it has necessarily been presented to the public in a very confused shape, and, having been reported by laymen, probably contains much inaccuracy. Some doctors, for instance, confidently expected peritonitis, and were reported to anticipate it in company with a rising pulse, while others say that peritonitis is always accompanied by a falling pulse. It seems to be pretty evident, anyhow, that there was a serious but not sad mistake in the diagnosis, and that the bullet has probably not touched any vital part.

The *Pall Mall Gazette* has published an article on the condition and prospects of the American money market, which has been telegraphed to this country and has been giving the Wall Street bears some comfort. It predicts a financial crisis here before long, and thinks the autumn would be the proper time for it, as American exports will then begin to fall off under the influence of European good harvests. The stability of the New York money market, it argues, depends upon its power to continue drawing gold from Europe, and this power must cease to be effective in the presence of a bountiful European harvest, of which there is now a fair prospect. The stability of the New York money market is a phrase standing much in need of definition. There are other places besides Europe from which New York can draw gold in case of need. The interior of the United States is one such place. As regards the question of stability, we can recall many times and seasons when the New York money market remained stable while not only drawing no gold from Europe but exporting large sums thither. If the *Pall Mall Gazette* discerns any reasons why the present time is so peculiar that we must continue to draw $70,000,000 gold per annum from abroad in addition to our own production of the metal, we confess our inability to discover them. It is one of the settled doctrines of political economy that importations of gold beyond the needs of circulation are of no advantage to a country, and while no one can say exactly what those needs are, it is the opinion of good judges that they have been already overpassed in this country, and that the excess of gold lies dormant like other unused capital. The advance in general prices has not been sufficient to account for its presence among us in a state of active circulation. We know that it has come, for it has been counted and weighed at the Assay Office, but it has seemed to sink into the sand rather than remain upon the surface of trade. It has replaced the capital represented by our excess of exports, but has not yet acted upon prices to any great extent. Undoubtedly prices have risen somewhat from their lowest level after the panic of 1873, but the advance is not sufficiently marked as yet to awaken uneasiness.

A bountiful European harvest is not, in our judgment, an event calculated to produce a financial crisis in this country. We cannot conceive how it should cause our people to owe more than they can pay. If we have already contracted debts abroad, or to each other, based upon the expectation that all future European harvests were to be bad and all of our own good, the occurrence of a bountiful crop abroad might put us in the predicament of being unable to pay such obligations; and that would be a financial crisis, greater or less, according to the amount of indebtedness in default. But mere inability to sell our surplus abroad would have no other tendency than to lessen our ability to buy—that is, to make us economical. A year or two of economy and "close rubbing" would perhaps be good for us, although uncomfortable. It would certainly postpone rather than hasten the oncoming of a financial crisis. If the *Pall Mall Gazette* means, by its allusions to the stability of the New York money market, that circumstances may arise which will cause a tumble in American railway stocks for want of money to "carry" them at present prices, we can readily see the drift of its argument; but this is a very different thing from a financial crisis as that phenomenon is known in the financial world. The one certain consequence of the loss of our gold by European drafts on it would be that we should have to drop down on our silver, but there is no other. This would be very unfortunate, but it would not necessarily bring about a financial collapse.

It has been a dull week in Wall Street. The attack on the President at first caused a sharp decline in prices at the Stock Exchange; it also influenced money-lenders to call for the payment of their loans. From the decline in prices there was a quick recovery; but this was only temporary, as other influences of a depressing character soon sent prices downwards. The chief of these was the renewal of rate-cutting by the trunk-line railroads, and this continued up to the close of the week, and extended to westward as well as eastward bound freight, and to passenger traffic. The impression in Wall Street is that this whole trunk-line disturbance has been fostered by Mr. Vanderbilt for his own purposes in the stock market, and that it will suddenly cease when these purposes are accomplished. This may be unjust to Mr. Vanderbilt, but his "operations" in stocks in the last few months have been such that it is by no means incredible, as it would have been if it had been said of his father. Railroad traffic continues heavy. A few roads are not carrying as much as last year, but nearly all show an important gain, and some a most surprising one. The volume of domestic mercantile business continues large; foreign trade, as reflected by the returns of the New York Custom-house, is not so large as a year ago, but much exceeds that of the corresponding season in 1879. The New York money market has not yet returned to the extremely easy condition it was in early in June, but rates for loans have hardly been above 4 per cent. The foreign capital lent here, which was called in on the first and second business days after the attack on the President, is returning to the loan market for employment. There has been a profit neither in importing nor exporting gold during the week, but the tendency is rather to the importing point. The price of silver bullion in London fell from 52¼*d.* to 50⅞*d.* per ounce as the result of the adjournment without results of the International Monetary Conference; here the bullion value of the 412½-grain silver dollar fell to $0.8585.

The discussion as to the Presidential succession makes it important to call attention to the fact that we owe the non-election of a *pro tempore* President of the Senate altogether to Messrs. Conkling and Arthur. At the last session of the Senate, as is well known to all the leading Washington politicians, when in consequence of the resignation of Messrs. Conkling and Platt the Democrats had a majority, it was suggested to Mr. Arthur that he should, in accordance with the practice invariably followed, vacate the chair for the purpose of permitting the election of a President *pro tempore*. He enquired who would be the Senator selected by the Democrats, and on learning that Mr. Bayard was their candidate retained the chair and thus prevented an election. Mr. Conkling at the same time is said to have made the same enquiry and received the same reply. This does not appear to have been the result of a determination to prevent a Democrat from being chosen, for the *Republican*, Mr. Conkling's organ at Washington, suggested that if Mr. Harris, of Tennessee, should be elected the opportunity would be afforded. Mr. Harris had paired against Judge Robertson's confirmation, and was therefore believed to be in sympathy with the anti-Administration cabal. Mr. Conkling, through Mr. Arthur, in fact, deliberately refused to allow the constitutional means to be taken to provide for the Presidential succession, solely in order to keep out of the chair of the Senate anybody who had not favored him in his effort to keep the control of the New York offices, thus giving one more alarming indication of the complete contempt in which he holds all general

considerations of the public interest when these seem to conflict with those of the unscrupulous faction at whose head he stands or stood.

Mr. Conkling wrote a letter to Attorney-General MacVeagh on the 5th, conveying his condolences to the President and Mrs. Garfield, and suggesting a change in the law to increase the certainty and severity of punishment for attacks on "high executive officers." The proposal has been very effectively treated by a correspondent on another page. His expressions of sympathy sound a little stiff and constrained, particularly as they are preceded by a discussion of a poor law point, but it is not easy to seem simple and natural in condoling with a man whom you have a few days previously been savagely denouncing as a liar and cheat, and whose household arrangements you have been ridiculing to the newspaper reporters. Generous or magnanimous talk to or about an enemy, too, is not the least in Mr. Conkling's line. His ideal of a happy retreat in his old age is probably very like Heine's—a pretty cottage embowered in flowers, with a smooth lawn sloping to the water's edge, and a wide-spreading chestnut-tree in front of the door, with about half a dozen of his enemies hanging to the boughs. Mr. Conkling has, on the whole, borne himself well in a trying situation, and so has Mr. Arthur. The attack on the President did the latter the inestimable service of taking him to Washington, where a few days of seclusion and quiet have made people begin to think kindly of him again.

The probabilities are, at this writing, that within a day or two Mr. Conkling's political career will be closed, for the present at least, by the election of successors to him and Platt. The Administration or "Half-Breed" Republicans have succeeded in having a caucus called by a Republican majority, and having it nominate for the Senatorships. The Conklingites refused to take part in it, but on no defensible grounds, and a fatal break in their ranks is now looked for every day. The President's recovery has doubtless done much to hasten this result. It seems a long time since Conkling and Platt were in the zenith of their insolence at Rochester in 1877, but the end has come, and when one thinks that it has been wrought out by themselves, or, in other words, that Conkling has literally ruined his own machine, his late madness has a providential air. The press could probably never have destroyed him.

General Grant has been having another "talk"—this time with a reporter of the *World*—on the attempted assassination and its possible results. Of the possible results he takes the same cheerful view as Mr. Conkling. He says nothing would happen, "that he could see, except to disappoint—seriously disappoint—some men who want office. The places they want will be filled by men equally as competent." This is a thought which, doubtless, during the last ten days has cheered many a Stalwart heart. General Grant, of course, does not share in the widespread foreboding about Mr. Arthur's administration of the Government, in case of the President's death. In fact, he evidently thinks he is just the man for the place. Mr. Arthur's language at the Dorsey dinner does not affect him unfavorably, because he presided at the dinner himself. The popular impression about Mr. Arthur's unfitness he ascribes to the "shameless and villanous manner in which he has been slandered by the bitter newspapers known as the Half-Breed press," which have painted him as "a monster"; whereas he (Grant) knows him to be "a man of common sense and clear-headed, with good associates—a man of integrity."

Nobody of the "Grant crowd," in fact, seems to be at all cast down by the crisis, except the Rev. Dr. Newman, who was General Grant's chaplain in Washington, and afterward his travelling "inspector of consulates." This gentleman delivered a terrible sermon on the Fourth, in which he demanded the disfranchisement of all persons of foreign birth and the suppression of infidel lecturers like Colonel "Bob" Ingersoll. The disfranchisement of all foreign-born citizens would, as it seems to us, be a very harsh measure, and we trust that the Doctor will not insist on it, even if the Stalwarts do come into power. Guiteau is not a foreigner, and, even if he were, why punish whole classes of citizens for the crime of one man? Besides, the foreigners are not as bad as they seem. Wilkes Booth was a native; so was Bill Tweed; so is Jim McDonald, the leading whiskey thief of the West; so was Jim Fisk; and so is his late partner, Jay Gould; and so is Bob Ingersoll, the eminent infidel; and so were Babcock and Casey. Andrew Johnson, who was well known for a while as the "greatest criminal of the age," was a native. The "rebel brigadiers," too, are all natives. In fact, in the matter of wickedness the natives hold their own manfully with the bad fellows who come over in the emigrant ships. We therefore propose as an amendment to Dr. Newman's suggestion that the wicked and atheistic natives be disfranchised along with the foreigners. We shall then be a happy and prosperous people. The "Half-Breed" consuls all over the world must by this time be trembling in their boots lest the Doctor should come round again to "inspect" them.

The London *Times* thought there was some probability that the Paris Monetary Conference might accomplish its objects in part through the help of the Bank of England, which agreed to take and hold a limited quantity of silver against its note circulation as authorized by the Bank Act of 1844. With the co-operation of the Bank to this extent, and the co-operation of Germany to the extent of stopping sales of silver for a certain period, and enlarging her circulation of subsidiary coins, the *Times* thought it would be possible for France and the United States to adopt bi-metallism, and that they would probably do so. Mr. Thurman hastened to disabuse men's minds on this subject, by saying that the United States would not be satisfied with half-way measures on the part of England and Germany, and would not permit the free coinage of silver unless those countries do likewise. There is a further obstacle in the way of bi-metallism which neither the *Times* nor Mr. Thurman, so far as appears, has made mention of—namely, the difficulty of agreeing upon a ratio. The United States are committed to the "dollar of the fathers"—that is, to the ratio of 16 to 1. This commitment is no light fantastic choice based upon the value of the metals, but rests upon solid ancestral grounds. Sixteen to one appeals to the heart; patriotic emotions are stirred by it; it is the only ratio for us. With 15½ or 18½, or any other ratio, bi-metallism will go overboard in a trice, so far as we are concerned. It could not last a year.

Dr. Woolsey, of New Haven, in an interview with a *Herald* reporter, insists upon the desirability of securing uniform laws on the subject of marriage and divorce throughout the country. The statistics on the subject are very meagre, and thus far chiefly go to show the great popularity of divorce as an "institution." In 1878, for instance, there were more divorces granted in Massachusetts and Connecticut than in England and Wales together. Connecticut down to that year permitted divorce for "any such misconduct as permanently destroys the happiness of the petitioner and defeats the purpose of the marriage relation," a provision which practically made the matter one of judicial discretion; but in Massachusetts, where no such law has ever existed, and with a population of 1,783,000, six hundred divorces were granted in 1878, against eight hundred in England and Wales, with a population of 24,000,000. Dr. Woolsey thinks that divorce lawyers are the most bitter opponents of divorce-law reform, and of course they can hardly be expected to favor it; but behind them there is a laxity of public sentiment which makes permanent improvement of the law difficult. In this State, for instance, the sole ground for absolute divorce is adultery; yet the Legislature a year or two since passed an act permitting the guilty party to remarry, on producing satisfactory proof of "good behavior" since his divorce; and this extraordinary statute was got through the Legislature by a divorced husband for the simple purpose of enabling him to contract a new marriage.

The *Maritime Register* calls attention to a phase of railway monopoly which is not altogether new, but which seems to have had a late revival. Two or three years ago the merchants of San Francisco were invited, or rather constrained, by the Pacific railways to abandon the Isthmus route for the transportation of goods from the Atlantic coast. The process by which this monopolizing scheme was enforced was substantially this: The

railways would offer freight contracts to merchants and shippers at very low rates on condition that they would send all their goods by rail, not merely light, costly, and perishable articles requiring promptness of delivery, but heavy and bulky freight as well. If the merchant declined to make such a contract he was required to pay high rates for everything—that is, the railways had two different rates for the same service for two different customers. The man who wished to send pianos by rail and pig-iron by water paid a high rate on pianos; while another who would agree to send both by rail paid a low rate. The duty of the common carrier at common law to carry for all alike was openly disregarded. There was great complaint against these arbitrary proceedings, and the obnoxious rule of the railway companies was finally rescinded, but not until arrangements had been effected with the Pacific Mail Steamship Company which rendered it no longer useful for the purposes for which it was designed.

Now the *Maritime Register* informs us that the practice has been revived and the rule again put in force as against the sailing vessels which go around Cape Horn. An improved method, as we are informed, has been adopted for enforcing it against the commercial public. All shippers are charged the same rates, but after a certain lapse of time, if it is found that a particular merchant has neither received nor handled any goods carried by the way of Cape Horn, he receives back from the railway company a portion of the freight-money already paid. Whether this roundabout proceeding is adopted in order to evade legal penalties, or merely to keep the whip in the hands of the railway companies, is immaterial. It amounts to unlawful and aggravated discrimination, and should be proceeded against as such with all vigor by the parties injured and by the public authorities. These railway companies are still subject to the control of Congress, notwithstanding the partial settlement effected with them under the Thurman bill. One of the provisions of their original charter requires them to operate their roads, as regards the Government, the public, and their connecting lines, "without any discrimination whatever." This provision is perhaps the most important one in their act of incorporation, and it is one which should be promptly enforced whenever departed from.

The accident to the *Britannic*, of the White Star line, is another singular illustration of the good luck of the Cunard line. During the last thirty years the Cunarders have had little if any superiority to boast over some competing lines, except in safety. Every now and then it has seemed as if they were likely to lose this by the prolonged immunity from accident of some of their competitors. People were beginning to think that, after all, one was just as secure on board some other boats, besides being more comfortable, but this confidence has never long shown itself before it was ruined by a wreck or disappearance, followed by another rush of the timid to the Cunard gangways. The theory, too, that "it was all luck," which long helped some rival lines, is being rapidly sapped by time. Good luck never lasts very long, and the people begin to suspect that that of the Cunarders cannot be a genuine article. There is apparently something more behind it, at all events, even than efficiency or watchfulness. There must be extreme caution. It is curious how little is known, after all, by the public about the internal economy of the great steamship lines—that is, how small its materials are for judging of the safety of a line beyond the number of its accidents. Who knows, for instance, whether there is any difference, and, if so, what, between the policy of the different lines in dealing with prolonged fogs? That there is some difference is quite clear, but it is kept very close.

The Irish Land Bill will probably pass the House of Commons during the coming week. Opposition to it has all but completely died out, and there is little expectation that it will even be subjected to severe criticism in the Lords. Attention has been called to the fact that it does nothing directly for a very large and wretched class—the Irish farm-laborers—by the arrival in London of a deputation from them to lay their woes before the Government. Cardinal Manning, whom they went to see, consoled them by saying that the Land Bill once passed, their turn would come next, but that any importunate agitation on their part just now might impede the bill without doing them any good. What can be done for them by legislation it is somewhat difficult to see, beyond giving their children compulsory education or compelling farmers to give them small plots of ground with fixity of tenure, but this would be going much further in interference with freedom of contract than the Land Bill has ventured on. A farmer must be at liberty to discharge his laborers in his discretion, and if he had to give a cottage and plot with a lease to all laborers he employed he would soon be eaten up by them. What bears hardest on the Irish farm-laborers, besides the farmer's poverty and insecurity, is the climate. The number of wet days for which he gets no pay is very great, and if he is hired by the year they count in keeping down his wages.

The question, What will the Land League leaders do when the Land Bill is passed, should the farmers be satisfied with it? of course becomes more interesting as the speedy passage of the bill becomes more certain. Mr. Parnell and his followers say they look forward to a political separation of Ireland from England, either total or partial, and they even have a plan for the resolution of the British Empire into a federal union, with a common parliament for common interests and local parliaments for Ireland and the colonies. There is not the least probability that any such scheme will ever be carried out, or that any of the colonies would like it, or that it would work for five years if tried, or that Englishmen would submit to it, except in despair about the Empire. The colonies want to go alone, and they will be allowed to do so in all but the name. The Irish difficulty will probably be solved by the creation in Ireland, as in England, of elective county governments, and by the gradual surrender of Irish affairs in the Imperial Parliament to Irish members, as those of Scotland have been surrendered to the Scotch members. From this will come inevitably more care in the selection of members by Irish constituencies. As long as the chief duty of an Irish member is to agitate or "stir up" the Ministry and the Englishmen, any sort of blatant, loud-mouthed man, like Biggar or Healy, answers the purpose. If the Irish members were charged with real responsibility, and the Irish Secretary were an Irishman and stood in the same relation to them that the Lord Advocate stands to the Scotch members, Irish constituencies would soon tire of the type of political adventurer now so successful among them.

The English National Liberal Federation Association adopted at its late meeting in Birmingham a very strong circular address to the various associations of which it is composed, severely censuring the conduct of the Liberal members of the House of Commons who, either by absenting themselves or by voting in the affirmative on Mr. Heneage's amendment to the Irish Land Bill a fortnight ago, brought the ministerial majority down to twenty-five. The delinquents in this case are mostly men of Whig antecedents, but they might more properly be called "Society" Liberals—that is, they are men whose social and business relations incline them to highly conservative views of all questions relating to property, and who find it hard work to follow Mr. Gladstone in the teeth of the detestation with which a large portion of London society regards him. The tone of the circular indicates clearly enough that at his death a serious split in the Liberal party, which the Tories have been so long predicting and expecting, will be no longer delayed. The Radicals have set their hearts on getting rid of government by landlords and restoring the old representative or popular government of counties, which would, if carried out, involve something like a reconstruction of English society, and there are not many of the old Whigs or Society Liberals who would be trusted, even if they were willing, to lead in such a movement. In other words, there is probably impending in English politics some such change as has occurred in France since the overthrow of MacMahon, namely, the passage of the Government into the hands of men who do not form part of "Society," and whom Society tries to despise. There are signs of this in the case of the Gladstone Ministry, but still Mr. Gladstone and many of his colleagues are really members of the aristocracy by antecedents, education, or position.

SUMMARY OF THE WEEK'S NEWS.

DOMESTIC.

PRESIDENT GARFIELD has been steadily improving during the week which has now elapsed since the physicians began to entertain strong hopes of his recovery. The excessive heat has been unfortunate, though not seriously retarding, and various devices to cool the air of the sick-chamber have been tried, with some success. The newspapers have interviewed physicians right and left upon every point conceivably connected with the case. Dr. Hamilton, one of the consulting surgeons, now thinks it possible that the ball has no more than grazed the liver. Professor Weisse, of the New York University Medical School, has been making experiments upon a cadaver with a pistol of the same calibre as Guiteau's, and is "very nearly convinced" that the liver has not been touched, and confident that the ball is in the sacral plexus. The papers report details of numerous similar cases all over the country. Telegrams of sympathy and enquiry have continued to pour in from every direction at home and abroad, and resolutions to be adopted by different commercial and political organizations. The most important of the various meetings held was that of the Chamber of Commerce on Thursday last, at which Mr. Cyrus W. Field started a subscription, which speedily reached a very large amount, for a fund, the income to be given to Mrs. Garfield during her life, and the principal to be divided among her children after her death. The attempted outrage is also still a pulpit theme, and was the subject of President Hinsdale, of Hiram College, at Washington on Sunday.

Scraps of Guiteau's history come to light from day to day and witness an unsavory record, social and domestic. The District Attorney has intimated the possibility of procuring his indictment for each "attempt" on the President's life in case of the latter's recovery—for each of the two shots fired, that is—which would permit an imprisonment of sixteen years upon conviction. The Executive Committee of the Board of Transportation of this city call for such amendments to existing laws as will make a similar attempt treason and punishable with death. An escaped lunatic named McNamara, inspired by God to kill Secretary Blaine, or perhaps Vice-President Arthur, appeared in Washington last week and was sent to the insane asylum. Several persons have been reported who expressed gratification at Guiteau's crime; they were hardly used by bystanders, one being fatally beaten. Another was expelled from the Dayton, Ohio, Soldiers' Home.

Wednesday of last week the "feather-head" call for a conference of Republican members of the Legislature had received sixty-five signatures, and a meeting was held at which sixty-three members were present. No Conklingites attended. It resulted in the call for another on Thursday evening. On this occasion a caucus was called for the next afternoon, and when this met, fifteen Senators and fifty Assemblymen responded to their names. A letter was read from Mr. Depew which is described as having had the effect of a great surprise. In it Mr. Depew withdrew his candidacy, and gave as his reasons the advice of trusted friends, "who fully concur that at the present juncture sacrifices and concessions ought to be made on all sides"; the embittered nature of the contest; the propriety, under the present circumstances of national grief, of ending it speedily; and the necessity of electing representatives to Congress in view of "a contingency not contemplated when the State left the Senate." A ballot, taken after the reading of this letter and after Senator Pitts and Mr. Husted had expressed the emotions it excited in them, resulted in Mr. Warner Miller's heading the list. Fifty-four votes were necessary, the Republican membership in the Legislature being 106, and on the fourth ballot Mr. Miller secured this number and was nominated for the long term to succeed Platt. Mr. Elbridge G. Lapham was nominated for the long term to succeed Conkling. The following day the vote in joint session stood: Lapham, 67; Conkling, 31; Wheeler, 1; Potter, 50; and Miller, 68; Wheeler, 19; Kernan, 50; the rest scattering.

The conduct of each side is inconsistent from the point of view of the other. The Administration men censure the Conklingites for not participating in a caucus when it was called, having been at first so anxious to have one called. The latter reply that the thing is as broad as it is long, and that the time for a fair caucus went by long ago. Both the caucus candidates are present Congressmen, and are objected to because their election to the Senate might endanger the Republican majority in the House. Their districts are, however, both strongly Republican. Mr. Miller is from Herkimer County, served in the war, and is now engaged in the manufacture of paper, to which business is ascribed his advocacy of the duty on wood-pulp by which he has been chiefly known in Congress, to which he was elected in 1878 and in 1880. Mr. Lapham is from Ontario, where he was born and studied law, being admitted to the bar in 1844. He was a member of the Constitutional Convention of 1867, and has represented his district in Congress since 1874. On the first day of the balloting Mr. Miller got eight votes. Mr. Lapham's name appeared on the second day with one.

The Senate has occupied itself, in the intervals of balloting, with desultory discussion. The Governor sent in on the 7th his veto of Bill 408, known as the Water Bill, and providing for the construction of an additional aqueduct for conveying water from the Croton Dam to this city. The veto was laid on the table, notwithstanding a speech by Senator Forster in reply to the Governor's objections, which were economical. Last Wednesday and Thursday, the Railroad Commission Bill was attacked by Senators Fowler, Madden, and McCarthy, and defended by Senators Pitts and Forster. Friday, the Governor transmitted a veto of the bill for the relief of John Foley, who claims salary due as supervisor of the County of New York from 1869 to 1874, during which time he rendered valuable services in the Tweed Ring prosecution. The objections to its enactment assigned by the Governor consisted wholly in its unconstitutionality.

The Legislative Committee on the Bradley-Sessions case rendered three reports, Stalwart, Half-Breed, and Democratic, last week, which the indictment of Sessions robs of all but a subjective interest.

The bondholders' suits against the Manhattan Railway Company have been before the courts during the week, but the hearings were postponed to the 21st inst. A counter suit has been brought by the New York Company against the plaintiff in one of the foregoing, charging conspiracy. The election of directors of the Metropolitan road was held on Friday, and the ticket containing the names of Gould, Dillon, Sage, and others received a large majority—a result which is thought to argue friendly relations with the New York Company and a "speculative" future for Manhattan stock. On the same day Judge Blatchford denied the application of the French Cable Company for an injunction against the Western Union consolidation. The commissioners appointed by the Supreme Court to determine whether Broadway should be tunnelled despite the protests of property-owners, held their first meeting on the 6th inst. and heard favorable testimony.

Sir Edward Thornton, for thirteen years British Minister to the United States, and recently transferred to St. Petersburg, sailed for Liverpool on the 6th, and just before his departure a deputation of British residents of New York and representatives of the St. George's, St. Andrew's, St. David's, and Albion societies, the British Provident Association, and the New York Caledonian Club, presented him with an engrossed copy of testimonial resolutions. In replying to the presentation speech of Mr. Archibald, the British Consul-General, Sir Edward expressed his belief that the welfare of his countrymen here was "intimately connected with that of this great country," whose hopes of peace and prosperity, he said, seemed never more promising.

A centennial celebration of the publication of Kant's 'Critique of Pure Reason' was held last week at Saratoga Springs, at which President Seelye, of Amherst, presided. Letters were read from eight other college presidents, and a number of addresses made by different professors of metaphysics. A committee was appointed to arrange for similar meetings at Saratoga. Still another rival to the Concord School opened at Greenwood Lake this week. It owes its origin mainly to the Rev. Dr. Charles F. Deems, the late Commodore Vanderbilt's favorite divine, and is called "The Summer School of Christian Philosophy." Both these undertakings probably differ somewhat in scope from the Concord School (which itself opened on Monday), and may follow more purely practical aims, such as the reconciliation of science and philosophy with the current orthodox theology

—without, however, shrinking from the results of a speculativeness as daring as that of Mr. Alcott and Professor Harris.

Among the later college commencements are those of the University of Alabama, of Bowdoin College, and of Williams, which last the President was to have attended. In an address before the Adelphi Society at Williams ex-Senator Ingalls took occasion to express the opinion that the civil-service reform was "un-American." The remark has attracted some attention to his oration, the circumstances under which this was delivered being unusual.

Bishop Stevens (Protestant Episcopal), of Eastern Pennsylvania, has enjoined the continued use of the authorized version of the New Testament in his diocese. Bishop Stevens is an advanced Low-Churchman.

Ex-Senator Hitchcock, of Nebraska, and the Rt. Rev. Bishop Kerfoot (Protestant Episcopal), of Western Pennsylvania, died last week.

FOREIGN.

Mr. Gladstone announced on Thursday, in reply to a question as to the Paris Silver Conference, that "there was no intention to alter the present currency laws, and the British delegates had no authority to make any other representations." The question as to why Great Britain was represented at all he did not touch upon. The Bank of England had agreed, he said, to the proposal of the Conference that the Bank should keep part of its reserve in silver, provided a union should be formed without the concurrence of England for the unlimited coinage of that metal. The Government had only been the medium of communication between the Conference and the Bank. At the Saturday's session of the Conference Mr. Evarts read a declaration of the French and American delegates' views, which was a mere epitome of the often-stated objects of the Convention. As to the ratio between the metals to be fixed by international agreement, any one "now or lately in use" would do, he declared, but fifteen and one-half to one was the best. The Conference, after arranging for correspondence between the participating states and a Conference April 22, 1882, adjourned on Friday.

A long correspondence between Mr. Gladstone and Mr. Bradlaugh, just published, concludes with a letter from the latter regretting that the Government was either unable or unwilling to enforce the law in his case. He has also written the Speaker of the House of Commons threatening to present himself at the table again to take the oath.

The Land Bill progresses in the British House of Commons, but not so rapidly as to promise adjournment by August 6, as Mr. Gladstone has hoped. Clauses 7 (as amended), 8, 9, 10, and 11 were adopted on the 5th inst. On the following day clause 12 was postponed, and clause 13 adopted after amendment without a division. Clauses 14, 16, 17, and 18 were adopted on Thursday, clause 15 being postponed; and the 20th, 21st, 22d, 23d, and 24th on Friday, the first two with slight amendments. On the same day Mr. Forster received a deputation of Irish farm-laborers accompanied by about eighty members of Parliament, including English and Scotch members and several Conservatives. In reply to their suggestions and criticisms he observed that if the Government could do any more than it was now attempting it would try—"if not this year they would do it as soon as possible." The same deputation called on Cardinal Manning on Sunday and got from the prelate a good deal of sympathy. No outrages are reported, and the efforts of the police have been confined to the seizure of a box of revolvers in Roscommon, and the arrest of seven persons under the Coercion act. The Land League, at its weekly meeting on the 5th, reported £1,587 received since its last meeting, £1,200 of which came from this country.

The largest body of volunteer troops ever assembled from all parts of the kingdom, and composed of 114 regiments of all arms, numbering over 50,000 men, was reviewed by the Queen on Saturday in the Great Park at Windsor.

The London *Sportsman*, which indignantly protested against the treatment of the Cornell crew at Henley, is equally outspoken in condemnation of the scandalous hustling of the American contestants in the athletic sports of the Moseley Harriers' Club at Birmingham on Saturday, where the races were stopped on its becoming evident that an American would win a walking handicap. This is no better than the French sense of fair play exhibited in the Vignaux-Slosson billiard-match.

Lord Dufferin has informed the Turkish authorities unofficially that clemency towards Midhat Pasha will be appreciated by Englishmen, though he has made no formal appeal to the Porte.

Lefroy, the English railway murderer, was arrested in London Friday, and remanded after arraignment the following day. He had made no effort at flight beyond concealing himself in Stepney, and his only disguise was a clean-shaven face. He is said to have been suffering from hunger and felt relieved at his arrest, though he observed that he was not guilty.

A Melbourne despatch of the 10th inst. reports the formation of a new Victorian Ministry with Sir Bryan O'Loghlen as Premier, Colonial Treasurer, and Attorney-General.

The French Compulsory Education Bill has been endangered by the passage in the Senate by a vote of 139 to 126, and in spite of M. Ferry's active opposition, of an amendment offered by M. Jules Simon, providing that elementary schoolmasters shall teach pupils their duties to God and their country. The Chamber will reject the amendment, but will be dissolved, probably, before the bill can pass.

The deaths are announced by cable of the Count Paul de Saint-Victor, journalist and author, and a candidate for the French Academy; M. Henri Sainte-Claire Deville, chemist and member of the Institut; A. D. Jessup, merchant, of this city (in London); Lord Hatherley (Sir William Page Wood), ex-Chancellor of England under the Gladstone Government from 1868 to 1872; James Starley, the inventor of the modern bicycle and tricycle (at Coventry); Dr. Cumming, the Apocalypse interpreter; and Dr. Hillebrandt, the German explorer (at Madagascar), May 29.

What is called "the aggressive policy" of France in North Africa has been carried still further during the week, but from the disturbed condition of the district concerned it is difficult to get at precisely what is happening. Despatches announced early in the week that the French consul at Tripoli had begun "the same kind of agitation" which M. Roustan employed to bring about the Tunisian protectorate. The Porte had already sent troops and men-of-war thither, however, and their operations were severely censured by Gambetta's organs. "Strained relations" between France and the Porte were thought to have ensued, and a tiff between the Sultan and M. Tissot, the French ambassador at Constantinople, was reported. On the 5th inst. the French shelled Sfax, and speedily secured an unopposed landing for their troops. M. Roustan has advised the Government to prepare for a prolonged occupation of Sfax, Gabes, and probably the island of Djerba, points which dominate the Tripolitan frontier. The Mediterranean squadron of ten vessels left Toulon for Sfax Sunday, and the presence of a French iron-clad is said to have had a quieting effect on the excitement in Tripoli. When all these matters are settled, the *Débats* announces, Count de Lesseps "will complete in Algeria and Tunis the task commenced by politics and the army by creating an inland sea" between these countries and the Sahara. Whether the Panama and Corinth canals will have been dug meanwhile is not explained, but the quieting of Algeria seems a work likely to require some time and force. The insurrection there is reported to be increasing, and the mobilization of a large number of troops has been seriously considered.

It is reported from China that an expedition for the definite annexation of Anam, after the Tunisian manner, is planned by the French in Cochin-China, and that the whole country of Tonquin will be brought under French protection.

Of 307 newly-elected Bulgarian deputies 301 have accepted Prince Alexander's proposals. The late Ministers will be charged with malversation, the present Finance Minister having reported various deficits. Some notion of the value of the election is conveyed by the London *Daily News* correspondent, who reports that even Bulgarian newspapers published by American missionaries at Constantinople were prohibited.

The Oberammergau actors have proved a failure in secular drama, to their own exclusive surprise.

The mountaineers of the Bocche di Cattaro have rebelled against the Austrian conscription and set up a provisional government.

The Danish Folkething, having failed to pass the ordinary budget, has been dissolved by the King.

THE MORAL OF IT.

It is very seldom that an event of any kind is accepted by the public as a lesson or source of instruction on any definite point to the degree to which the attempt on President Garfield's life has been. Hardly any one who has spoken or written about it has confined himself to a simple expression of horror or sympathy. Nearly every one finds a moral in it, and the moral is that our system of appointment to office must be changed. We do not think we have taken up a newspaper during the last ten days which has not in some manner made the crime the product of "the spoils system." There has hardly been an allusion to it in the pulpit which has not pointed to the spoils system as the *fons et origo mali*. In fact, the crime seems to have acted on public opinion very like a spark on a powder-magazine. It has fallen on a mass of popular indignation all ready to explode. It did not, we now plainly see, find the public ignorant or indifferent regarding the abuses of the civil service. The attempt on the President's life has not been treated as *proof* that there is something grievously wrong with our mode of appointing to office, because it is nothing of the kind. A crazy fellow might conceive himself aggrieved by the working of the best conceivable mode of appointment to office, and proceed to avenge himself by assassination. He might, for instance, think himself unjustly dismissed for gross incompetency or misconduct, or he might think that promotion had been withheld from him which he had fairly earned, or that in a competitive examination he had been unjustly marked. The act of a madman or a weak-minded man never proves anything except that the man is mad or weak-minded.

Guiteau's offence has, therefore, not been accepted as evidence of something which people doubted or did not know, but as a striking and dreadful illustration of the working of an evil of which they had known for a long time. The extraordinary unanimity of the expressions of opinion about the origin of the crime, and the wideness of the area over which they have been uttered, and the almost complete absence of any counter opinion, show very clearly how small and uninfluential that portion of the public which is interested in the perpetuation of the spoils system really is. Nobody, so far as our observation has gone, has come forward in its defence. No man or newspaper has ventured to deny the connection of Guiteau's crime with the system. All the other inferences from it have been a good deal gainsaid; but nobody has risen up to maintain that as "it was the best civil service on this planet," it was absurd to condemn it because a man who had unsuccessfully tried to enter it had sought to avenge himself by an attempt on the President's life. Nor has any one come forward and declared that, inasmuch as it is "as good as the civil service of any European country," Guiteau's crime no more suggested the need of alteration in it than in that of Great Britain or France. Nor do any of the philosophers who used to declare that the spoils system was a useful, original, and purely American system, peculiarly adapted to the needs of a democratic country, now proclaim that it would be as silly to propose changing it because a disappointed office-seeker had tried to murder the President, as it would be to propose abolishing universal suffrage because there were occasional frauds at the elections. These various classes of defenders of the spoils system undoubtedly exist: we have heard from them frequently within the last five years through one channel or another; but they are now silent. Not one of them has lifted up his voice to protest against the gross perversion of the popular indignation which must to them certainly seem involved in the use now made of Guiteau's crime by the civil-service reformers.

This shows two things: one is that they are conscious of their numerical weakness, and the other is that, though they love the spoils system as much as ever, they will never venture to defend it before an aroused and attentive public. Their speeches and articles on its behalf are all addressed to a public which they suppose to be apathetic or indifferent.

If we are right in assuming that Guiteau's crime has satisfied the American people not that the civil service needs reforming—for that they knew already—but that something must now be done to reform it, the question, "what they are going to do about it," is one that must by this time be suggesting itself to thousands. It is hardly possible that the excitement about the President's condition will be allowed to die out without doing something toward turning away the attention of the whole class to which Guiteau belongs—the class of shiftless, crack-brained adventurers—from the public service as a means of livelihood. It ought to be so organized and administered that the Guiteaus, when "down on their luck," or "clean broke," would no more think of a Government office as a last resource than of the pastorate of an up-town church. But no such change will be effected in it—no change of any kind will be effected in it—if the people content themselves with dolorous denunciation. We must have action that will result in legislation. Those, then, who are most impressed by the bearing of the Washington tragedy on the question of civil-service reform should, now that their minds are beginning to be relieved of anxiety about the President's condition, make action of some sort an expression of their thankfulness for his recovery. To prepare for action they must ask themselves what they seek; and when they have found out, they ought to seek it with all their might.

Two bills were introduced into the last Congress dealing with the whole question of appointments and removals from office and promotions in office, and with the assessments of officeholders. They were carefully drawn. No objection, so far as we know, has been made to their constitutionality or to their practicability. In fact, they have not been opposed by anybody in Congress, but they will never be passed as long as Congressmen do not believe that the public wants them passed. Probably ninety-nine hundredths of those who during the past six weeks have been inveighing against the spoils system have no knowledge whatever either of this or of any other attempt to abolish the spoils system, and have never sought, and are not now seeking, any information on the subject. Had these rules been in force during the last year President Garfield would during the last four months have had all his time for the real duties of his office, as would the members of his Cabinet. The rows within the party about offices would never have occurred. There would have been no "Stalwarts" or "Half-Breeds," and no Guiteau. There would have been no deadlock at Albany. There would have been no Platt and no Conkling such as we now see them. There would have been none of the scandal and disgrace which the crime of July 2 has brought on popular government. The popular interest which has ever since the inauguration been mainly centred on a series of degrading personal quarrels would have been bestowed on the score of questions of the highest national interest which are now vainly awaiting solution.

THE FUND FOR MRS. GARFIELD.

The profound sympathy universally felt for the President and his family makes any criticism of a movement to give that feeling a substantial expression seem at the first blush a little ungracious. Nevertheless, the suggestions as to the proposed fund for the benefit of Mrs. Garfield made in the letter, from a prominent member of the Chamber of Commerce, published in the *Evening Post* last Saturday, contain food for reflection on the part of the gentlemen engaged in promoting the subscription. As the writer says:

"Every man of generous feeling has had his emotions gratefully quickened by the movement started in the Chamber to raise a liberal fund to be given to the wife and children of the President of the United States under the impending danger which threatens them, and no one wishes to say a word that may tend to repress so benevolent a purpose."

But the movement, which appeared a natural and spontaneous outburst as long as the chances seemed to be that the President would die, begins to wear a somewhat different aspect now that his recovery has become probable. The correspondent suggests an objection to the proposed fund, derived from the constitutional prohibition of any increase of the President's salary during the period for which he was elected, and the denial to him of all right to receive "any other emolument from the United States or any of them." He points out that it was the intention of these clauses to secure the President from all sinister exterior influence (and, we may add, from the suspicion of any such influence), and asks whether we may not, under the effect of the generous impulse inspired by the calamity, and by the suffering of the President and his family, be in danger of violating at least the spirit of this law. He suggests that a private agreement ought to have been made between the donors of the money that, in case of a fatal

termination, the proposed sum should be given to the family of the President, and that this intention might have been communicated to him "without giving names that could embarrass him in the future, or impair his official or personal independence." But even this, he thinks, "might give the President serious trouble hereafter, and prove a curse rather than a blessing."

It is, in fact, clear that the President's recovery will make his relation to the fund a very peculiar and delicate one, and on many accounts it is for his interest and that of the public that this should be frankly discussed by the press in advance. In the event of the President's death the whole matter would become one exclusively of taste and sentiment. If Congress should neglect to make a suitable provision for the President's widow, there can be no doubt that a call for a popular subscription would be heartily responded to; and even if it should not neglect to do this, the question of making her a substantial gift, which, in our opinion, could not be too large, would be one entirely between the donors and herself. No public interests of any kind would be affected. The differences between this and the case of the President's recovery have seemed so obvious to one or two of the subscribers that they have made their subscriptions conditional upon his death. In case of his recovery it will, of course, be very difficult to distinguish between a gift to the President and a gift to the President's wife. The plan of putting the money in trust does not remove this difficulty. A substantial addition to the resources of the one is practically a substantial addition to the resources of the other.

The change in its form from a private to a national subscription can have little or no effect upon this. It necessarily remains, as it originated, a fund set on foot by a number of well-known capitalists. That these gentlemen are simply animated by a generous sympathy does not alter this fact; it is just this association that renders it the duty of the President's friends to point out the inferences that will be drawn from it hereafter. Among the subscribers are men interested in the promotion by legislation at Washington of private enterprises of all sorts. This legislation must come before the President for approval or disapproval, and it is of the utmost importance not merely that he should be subject to no private bias in favor of the promoters of such enterprises, but that he should not be open to any suspicion of such bias. The general sympathy with him in his present critical condition should not blind us to the fact that his acts will hereafter be criticised with all the fierceness and ingenuity that party spirit can supply, and that the acceptance of money by his wife at the hands of men who are knocking every year at the doors of Congress for favors will be a handle for his enemies which they will not neglect to use. Human nature being what it is, no matter how high the reputation of a President for integrity may be, it is impossible to prove to the satisfaction of one who doubts it that his signature or veto of a bill is unaffected by the recollection of a pecuniary benefit derived from its promoters; and it is this impossibility which made all the Presidents who had occupied the White House down to General Grant's time so sensitive on the subject of gifts. It is safe to say that the admirers and well-wishers of the President will do well to proceed very cautiously in the matter. While they can afford to disregard all criticism of their own motives in starting the subscription, they certainly cannot afford to disregard the criticisms to which the scheme, if carried out, is sure to subject the President. If he recovers, the necessity and duty of making a pecuniary provision for his family will not seem so obvious as it did when he appeared to be lying at the point of death, and the objections to such a provision by means of a fund such as is now proposed will seem every day more clear and distinct. It would be a very serious embarrassment to him.

END OF THE BI-METALLIC CONFERENCE.

THE Paris Monetary Conference has adjourned *sine die*. So far as accounts have yet reached us it came to no resolution even upon points of abstract doctrine, and was therefore more inconclusive than the Conference of 1878. The latter resolved that bi-metallism was a question for each nation or group of nations to decide for itself, according to its own circumstances. This formula was presented to the Convention by M. Léon Say on behalf of France, and it received the votes of all the countries represented except those of the United States. Two years signalized by bad harvests and the ravages of the phylloxera have caused a heavy drain of gold from France, and left her national bank with a glacier of silver growing on her hands, which had reached, at the latest returns, the sum of twelve hundred and forty millions of francs. The metallic reserve of the bank, which was two-thirds gold and one-third silver in 1878, is now one-third gold and two-thirds silver. Ordinarily the Bank of France holds more gold than the Bank of England and the Imperial Bank of Germany together. It now holds less than either. This important and threatening change has brought with it, if not a change of views on the part of French statesmen, an earnest desire to secure foreign help in dealing with the silver problem. To this is to be attributed the leading part taken by that country in calling the Conference of the present year.

The position of the United States as a holder of gold is much stronger than it was two years ago. If not the strongest of all nations in this regard, we are not much behind Great Britain, and our prospects are favorable for still further gains. We have nothing to fear from the course of international trade. The only danger confronting us arises from our own action in coining great quantities of silver which we do not want and cannot use. We joined France in calling the new Conference simply because we had "put our foot in it" two years ago, and were not willing even yet to acknowledge that we had committed a blunder. Our representation in the Conference had much political and sentimental significance, but no financial aspect, except perhaps that, as we are a silver-producing country, we desire to sell our product at the best possible price. This latter phase of our situation has been somewhat exaggerated abroad. Although silver-mining is one of our national industries, it is not sufficiently important to account for our interest in bi-metallism. A few years ago, when we were in some business perplexity, we were seized with a rage for "cheap money" and made fools of ourselves in a rather conspicuous manner, and we are not willing to confess our error. We would rather pay two million dollars a month than do so.

It is very clear that England and Germany accepted the invitation to the Conference only to avoid the appearance of churlishness. Both governments caused it to be understood at the outset that they would not change their monetary standard, and that they would not send representatives if their presence should be understood as holding out any false hopes in that behalf. They were, however, willing to do some things and abstain from doing other things in the interest of silver—in a friendly way and as a matter of good-neighborhood. The minor governments and the non-specie-paying countries were present rather as spectators than as active participants. Virtually the Conference consisted of France and the United States, the former having a real and the latter an imaginary interest in the question under consideration.

Nothing was accomplished by the sittings, except, perhaps, further to convince people of the futility of attempts to impart by joint resolution a higher value to substances than they actually possess. The Conference never reached the crucial difficulty of fixing a ratio for the universal coinage of the two metals. France with her ratio of 15½, and the United States with their ratio of 16, never confronted each other on that issue, and never confronted the fact that the real ratio between silver and gold is 18 to 1, or thereabouts. The nearest approach to the consideration of this question is embodied in a paragraph of the joint declaration of the French and American delegates that any ratio now or lately in use by any commercial nation, if adopted by "an important group of states," could be maintained, and that the ratio of 15½ would produce less disturbance in existing monetary systems than any other. This postulate a large and probably controlling portion of the civilized world deny *in toto*, and contend that no group of states, by mere governmental action, can make gold, silver, tin, or iron worth one cent more or less than it is worth.

The declaration of the French and American delegates, which is the sole net product of the Conference, sets forth in its first paragraph that "the depreciation and great fluctuations in the value of silver relatively to gold, which of late years have shown themselves and which continue to exist, have been and are injurious to commerce and general prosperity, and the

establishment and maintenance of a fixed relation of value between silver and gold would produce the most important benefits to the commerce of the world." This statement also is denied by most economists and is controverted by the experience of the greater portion of mankind. Taking our own experience as a test, what is there at the present time to indicate that commerce is injured or general prosperity impaired either by the fluctuations of silver or by any other known or unknown agency? All the commercial journals and commercial bodies testify that business is active and prosperous. All the immigrants from foreign countries find speedy and remunerative employment. One of our large corporations has been advertising lately for ten thousand laborers in Great Britain. It is evident that we must seek elsewhere for evidence to support the statement that commerce is in trouble by reason of the fluctuations in silver. What is true here is true also in Great Britain. The mischief exists only where silver is held in large quantities, and even in those countries it is not found universally. Late accounts from India report that the country is prosperous as compared with her condition during several preceding years. A good wheat and wine harvest would put France in a condition of renewed prosperity—if a country which is investing millions of dollars in Panama canals and other foreign enterprises can be said to be otherwise than prosperous.

The undertaking of the Bi-metallic Conference was purely quixotic, and it has ended as such undertakings usually do, with a flavor of ridicule cast upon the chief actors. Assembled together to relieve a suffering world, the world has been stolidly indifferent to its proceedings from the start, and now reads without a pang that nothing has been done. The declaration that commerce is depressed and prosperity is retarded for the want of bi-metallism must be taken as the apology of the delegates for coming together at all. A useful lesson has been imparted to this country, however, if we can humble ourselves sufficiently to take it in. This is the third effort and failure on our part to persuade the world to follow our example in the matter of coining silver—not of using it, for we do not do that, but of stamping it and hiding it away in underground receptacles for our own future perplexity. We have paid two million dollars per month for this diversion for about four years, latterly in the hope that other nations would join us and share the expense. That hope is now utterly dashed, for although the Conference makes the suggestion that something may be done next year, it is evident that the failure resulted from the nature of things and not from adventitious circumstances peculiar to the present year. Mr. Cernuschi cannot be more enthusiastic, or Mr. Horton more discursive, or Mr. Evarts more metaphysical and ornate in 1882 than now, while there is every reason to believe that England will be as unfeeling and Germany as disobliging next year as ever. Our future course as to silver must be taken with reference to our own conditions exclusively.

AN OPPORTUNITY FOR ANGLOMANIACS.

THE rumor that Mr. Oscar Wylde, the London Æsthete, is coming over here to lecture this autumn lends a new interest to the teachings and tendency of the remarkable school to which he belongs. *Punch* is not so generally read in this country that there is a wide familiarity in the United States with either Postlethwaite, Maudle, or Mr. Wylde himself; but there will be a considerable amount of curiosity as to the lecturer as well as to the subject which he will lecture upon. Anglomania has made rapid strides in "society" in the United States within the last few years; but our Anglomaniacs have thus far not been of the æsthete school. Their ingenuity has been chiefly devoted to the imitation in the New World of a number of English sports, and the development of an easy freedom in manners and conversation such as used to be considered peculiarly un-American. Like other reformers, they have exposed themselves to a great deal of ridicule, for in certain portions of their work they have allowed their zeal to outrun their discretion.

In the importation of sports, for example, they have neglected to observe certain differences of circumstances, customs, and social conditions between the two countries which, as innovators having social progress at heart, they should have studied more carefully. The attempt to introduce coaching here, for instance, though it cannot but have the approval of all who desire that the rapidly increasing rich and idle class should have harmless occupations provided for them whenever that is possible, has broken down, owing to the general absence of good roads. This difficulty was by far-sighted social observers foreseen, and it is a nearly insurmountable obstacle. An occasional "parade" and one irregularly sustained coach-route are the principal features of amateur coaching as exhibited in this city, and in contrast with London coaching it can hardly be called more than a sham sport as yet. Of fox-hunting, whether pursued with the aid of the anise-seed bag or even with prepared live foxes, the same must candidly be said. Long Island, where the sport is most actively pursued, is found to be an extremely "difficult country" to hunt, in more senses than one. Fox-hunting is based, of course, upon the right to trespass, which in England immemorial custom and the national love of the sport have created. But on Long Island there has been no such custom and no such love, and the dread of the pitchfork, the weapon which the Long Island farmer is known to resort to against mounted trespassers, introduces a novel element into the sport which robs it of a great part of its charm. The occasional introduction of "hunt-balls" and hunting costumes has not thus far relieved the sport of its air of "unveracity" in our atmosphere.

It is really in dress that the Anglomaniacs have had their greatest success; for as the anatomical structure of the American man is very similar to that of his English congener, and the necessity of wearing clothes is equally recognized in both countries, there is no reason why the manner and fashion in dress prevalent in England should not be generally introduced here, as, in fact, to a great extent it has been. The reformatory movement of the æsthetes, however, is of a very different character and purpose from any which Anglomania has had to work upon hitherto. The attempt to introduce English sports and English clothes and manners have been attempts to introduce real things. The æsthete, however, is even in England an unreality. His object, as far as it can be understood and intelligibly expressed, is to substitute an internal standard of taste for all the external standards of life and conduct now generally in vogue. An æsthete is a person who pretends to derive the same moral satisfaction from a certain pattern or color in china that other people do from the contemplation of an heroic or virtuous action; who declines to have his hair cut by a barber because it is "part of himself"; with whom an ill-assorted marriage does not mean incompatibility of temper, but of complexion, and who orders a restaurant waiter to bring him, not roast-beef and potatoes, but the all-satisfying lily.

It is needless to say that this fantastic view of life is the product of a highly artificial condition of society; it is, in fact, so incredibly absurd that it is difficult to know whether it is a genuine natural growth, or whether it is not in great part a product of the very caricatures which seemed to satirize it. It is as far removed from the sphere of American life and manners as the *Macaroni* or *Merveilleuses* of the last century would be. A leading æsthete on the lecture platform in Chicago or Omaha would probably seem to the rationalistic Western mind a *lusus naturæ*. Whether he would at first, as has happened in the case of so many other reforms, be mobbed, no one can say. As a reformer he cannot but desire it, and the only way to find out is to make the experiment. While it will undoubtedly prove difficult to naturalize the principles of the æsthete here, Anglomaniacs ought not to neglect the new opportunity which is afforded them. In the case of fox-hunting and coaching the difficulties have been mainly external. The æsthetes, of course, have psychological obstacles to overcome. This type is absolutely unknown in this country, and the type cannot be produced without a previous diffusion of the principles of thought and feeling out of which it grows. If Mr. Wylde succeeds in developing an Anglomania of a new order—a mock æstheticism of the Postlethwaite and Maudle kind—he will put to the blush even the veteran Anglomaniacs who have been wasting their time in attempts to naturalize fox-hunting and coaching.

GAMBETTA'S CHECK.

PARIS, June 24, 1881.

THE rejection by the French Senate of the new electoral bill, passed by the Chamber of Deputies, is an event of unusual importance. This bill embodied the principle of what we call the *scrutin de liste*—that is to say, in the system advocated by the Chamber of Deputies each elector had to vote for all the deputies of his department, he had to make or choose a ticket of several names (five or six on the average); while under the present system he votes only for the deputy of the arrondissement (the arrondissement is a section of the department) in which he lives. It is clear that the *scrutin de liste* gives more importance to the wire-pullers, to the politicians who reside in the principal city of the department, and indirectly to the politicians of Paris who are in correspondence with them; while the *scrutin d'arrondissement* gives more importance to local influences. You must never lose sight of the fact that the peasants are by far the most numerous class of electors in France; they are the real motive power in the machinery of universal suffrage. It is always easy to foresee in what direction the efforts of the work-

ingmen of the cities will go; it is not so easy to prophesy what will be the vote of the peasantry. The peasants hold no meetings; they live on the soil; their instincts are deep and mysterious; they seem to be the instruments of an unknown fatality. In 1848 they voted as one man for Prince Louis Napoleon, when everybody expected that they would vote for General Cavaignac; in 1871 they elected a Chamber full of Monarchists, though the Republic had been proclaimed in Paris.

When the peasant has only one deputy to choose he is generally inclined to vote for the most important man of his district; his vote cannot be easily directed or controlled. When he has to make a ticket he votes in ignorance; he sees a name he likes on the list, and he gives the accompanying names the benefit of his indifference or his doubts. Some *big* name in each department acts like the little steamer which, on a river, drags a long series of heavy boats. Each party has a certain number of such steam-tugs, who are expected to transport a large fleet of heavy nullities. The present Chamber was elected under the system of the *scrutin d'arrondissement*, but in very peculiar circumstances. There was no hesitation, no choice, so to speak, for the Republican electors, after the dissolution of May 16. A compact was made in virtue of which the three hundred and sixty-three deputies who formed the majority of the Chamber dismissed by Marshal MacMahon were made the only candidates of the Republican party. As soon as M. Grévy became President of the Republic Gambetta was elected Speaker of the Chamber of Deputies, and he has had complete sway over it during the last few years. His influence, in fact, was so great that he became a sort of new power in the State; he could make and unmake cabinets, the ministers seemed to be his ministers, the administration was his administration. The President of the Republic presided over the Cabinet meetings, but Gambetta sat invisible beside him. It is strange that in such a state of things M. Gambetta should have been moved with a desire to alter the electoral law. Did he find the present Chamber too subservient, too mediocre, too incapable of originating great measures? He certainly cannot complain of the Chamber being unmanageable; he had but to speak and he was obeyed. Perhaps he thought that many of the men who had been elected in virtue of the compact of the 16th of May would not be returned; he feared a Chamber elected under purely local influences, without any crystallizing influence. His enemies say that he urged the "general ticket" because he himself could make it for all the departments, and so become a sort of Great Elector. His flatterers told him that his name at the head of any departmental ticket would guarantee the success of the whole ticket.

In the debates which took place in the Senate it was distinctly asserted that the new electoral law would give to an ambitious leader the means of making a sort of plébiscite. The Republican Senators asked themselves what would be the position of the President of the Republic if Gambetta were elected in thirty, in forty departments, and came back to the new Chamber surrounded by a court of deputies the greater part of whom would have owed their election to him. These fears may have been exaggerated. There is such a natural inclination in France towards a personal government that it would have been difficult for the most modest of men not to be somewhat carried away by the popularity which attended the President of the Chamber of Deputies. His name was in everybody's mouth; his words were sent by the electric wire to every corner of the world. The reporters lived in his ante-rooms, waiting anxiously for the alms of some communication. Kings and princes were almost as anxious to see him. The Greek question arose from a few words which he exchanged at breakfast with King George. "Comment en un plomb vil l'or pur s'est-il changé?" How is it that in a few days all this has been changed? The journey to Cahors was the turning-point. Gambetta made a visit to his native town, less in the character of a private citizen than of the representative of a state. All the authorities came to salute him; the Minister of War ordered that two sentries should remain at the door of his hotel; the school-girls, dressed in white, came to offer him bouquets of flowers. There was a time when Gambetta would have laughed with his friends at such demonstrations; he may have done what he could to prevent them, but it is difficult, in an old centralized country where the ministers have an immense patronage, to prevent the outburst of calculated enthusiasm which begins with a cheer and ends with a petition. Gambetta thought that he had really made for himself a place in the hearts of the people. His southern nature does not abhor noisy demonstrations; he is not a puritan, and his sensational and emotional eloquence has finally alarmed the puritans of the Republican party—I mean men of the Laboulaye type, who would like the French Republic to resemble the American Republic, and to have as little resemblance as possible to the Directory and the Consulate of Napoleon.

The rejection of the new electoral law and of the *scrutin de liste* is a blow aimed directly at Gambetta; nobody denies it and everybody sees it. After the rejection of the *scrutin de liste* the friends of Gambetta proposed that the present Chamber should immediately cease its functions and that new elections should take place. The powers of the Chamber expire this year, and a general election must naturally take place in the autumn. The Chamber did not accept the proposition of an immediate dissolution, and decided by an immense majority that the elections should only take place at the natural end of the session. This was a new blow for Gambetta; he had not the Senate with him, and now his majority in the Chamber of Deputies abandoned him. This majority had voted for the general ticket only with much reluctance. The President of the Chamber had been obliged himself to canvass for this measure; he made many promises, he used his influence with many members individually. The revolt of the Senate gave heart to the most timid, and now Gambetta, though he remains in the chair, cannot be said to command any majority in the Chamber which has followed him so long and cheered him so often.

There never was a more striking illustration of the famous verse,

"La roche Tarpéienne est près du Capitole";

the changing character of popularity was, perhaps, never better illustrated. Gambetta will now be obliged, at the general election, to do like all the other deputies: he will have to choose an arrondissement—he has already chosen it. He has said that, whatever offers are made to him, he will remain faithful to his faithful Belleville; he has already gone there, and has visited a school and sat at a small banquet. He will certainly be re-elected, though the Radicals of Paris are making constant war upon him. Rochefort has undertaken to ruin him in the eyes of the people; he will never forgive Gambetta the publication of a letter which he wrote after the Commune when he appeared before a council of war. How this letter, left with Rochefort's lawyer and addressed to M. Thiers, came into the hands of Gambetta, remains a mystery; but it appeared some time ago in the *République Française*, and Rochefort has declared war to the knife on Gambetta. The editor of the famous *Lanterne* seems to have now but a small following; still, he may be considered a dangerous adversary, as he uses that terrible arm of irony which often becomes fatal in France. He ridicules every day the President of the Chamber, and it is said that in France "le ridicule tue."

Gambetta, however, has great resources: his popularity with the most military part of the nation is still untouched; he is still considered by many as the personification of the national defence and of the future revenge; he has created the word "opportunism," which is a programme in itself, as it is the absence of any programme. Opportunism can bide its time, it can lie low, it can wait for better times, for a happy occasion; it is a sort of force in reserve, an accumulator of political strength. Those who consider the rôle of Gambetta as almost finished underrate too much his great elasticity of mind, his recuperative powers, the persistence of his views, hidden under a constant flow of easy eloquence. At any rate, his rôle must now become a little different from what it has been during the past four years. He is not yet an enemy of M. Grévy, but, in the eyes of M. Grévy's supporters, he is getting to be a rival.

ENGLAND'S OBLIGATIONS UNDER THE TURKISH CONVENTION.

LONDON, June 30, 1881.

IT is a curious instance of the rapid oscillations of public interest in this country, and of the way in which Irish affairs have recently excluded all others, that during the six months of the present session we have had but one regular debate on the Eastern Question, which three years ago was almost the only subject people or Parliament talked about. Of course, if the difficulties of that question had passed away, and the sky were now free from clouds, it would be natural enough that nothing should be said about it. But the state of Turkey shows no signs of improvement. The Asiatic provinces, and especially Armenia; the European provinces, and especially Macedonia, are in a condition of permanent anarchy. None of the promised reforms have been carried out, or even begun; brigands, savage tribes, corrupt officials have it all their own way everywhere. In Constantinople itself, the emptiness of the public treasury and the dangers thence arising; the complaints of the army, which has received no pay for many months; the disorganization of the civil service, become constantly more serious. Such evils must, before long, result in the fall of the Turkish Empire; though whether that catastrophe will be brought about by an insurrection within or by the action of some of the neighboring Powers, it is at present impossible to predict. Such being the state of things, it is plain that England, both as being one of the Powers which signed the Treaty of Berlin and from the general interest which she has for the last century taken in the affairs of the East, will certainly be called upon, and probably at no distant date, to interpose; and it might, therefore, have been ex-

pected that she should keep a watchful eye on the progress of events, so as not to be taken by surprise when a crisis arrives. However, for the moment it is impossible to draw public attention to these matters; the Government might do almost what it pleased, might even withdraw altogether from diplomatic action in the East, without having anything worse to fear than the criticisms of a few political quidnuncs in Parliament and a stray journalist or two.

Under these circumstances the debate which took place in the House of Commons on Friday, the 24th, was a comparatively languid one, although the issues involved were of the highest moment. Some of your readers may remember that in June, 1878, just before the conclusion of the Treaty of Berlin, Lord Beaconsfield's Government (which was then in power) entered into a secret agreement with the Sultan, by which they bound England to defend his whole Asiatic dominion by force of arms in case it should be attacked by any foreign power. By the same instrument the Sultan assigned the island of Cyprus to England, to enable her the better to fulfil her engagement to defend his territories, and also undertook to introduce reforms in the administration of those Asiatic provinces. This was, of course, an engagement of a very bold and large character, involving for England the liability of protecting an immense frontier which it was easy for Russia to invade and very difficult for England, with her small army, to guard. The Liberal party, accordingly, at once protested against it, and Mr. Gladstone in particular denounced it with the utmost vehemence as "an insane covenant." He was then, however, in a minority in Parliament, so the Anglo-Turkish Convention, as it has since been usually called, was approved by the legislature. Even without such approval it would have been binding upon us, for by the constitution of England the sovereign still retains the power of concluding engagements with foreign states by her own sole authority. When the Liberals came into office they could not venture to repudiate this Convention, much as they professed to dislike it, and as a matter of *law* it is unquestionably binding upon us at this moment, although no action has been taken under it, except, of course, the handing over to us of Cyprus and its administration by Englishmen. The Sultan has not introduced any reforms into his Asiatic provinces, and the contingency of their being invaded by Russia has not yet occurred. But questions of much difficulty have arisen as to the true meaning and effect of the Convention. Is the English guaranty of the Sultan's frontier to be taken as conditional on his introducing the stipulated reforms, and, if so, within what time ought he to execute those reforms in order to entitle England to avail herself of their non-execution as a ground for retiring from her engagement? Moreover, since the occupation of Cyprus was granted to her for the purposes of the guaranty, is she not bound, if she withdraws from that guaranty, to withdraw from Cyprus also, and to hand it back to the Sultan? She would find it hard to recover from him any compensation for the improvements she has effected on the island; and, indeed, the idea of restoring it to Turkish rule, after having given the people a taste of better things, is treated here as quite inadmissible. Besides, although the Turks have, by their conduct during the last three years, shown that there is no chance of their making any reforms, it is always an unpleasant thing, even when you have a technically sufficient ground, to repudiate a formal international engagement.

The object of the motion made in the House of Commons was to elicit from the Government some declaration of their intentions. It was easy for the mover, himself a Liberal of the Manchester school, to show the perplexities in which the Convention has involved us, and the extreme difficulty of fulfilling it. The representatives of the Opposition could not suggest any solution, although they endeavored to defend their conduct in concluding the Convention by pointing to the helplessness in which Turkey lay at the end of the Russian war. The Government repeated their original condemnation of the agreement, but declined to say what they would do if required to carry it out, hoping, no doubt, that the case would not arise, and that the progress of events would ultimately make it a dead letter. They stated that no communications had taken place respecting it with the Turkish Government since it was originally concluded; but they would not say that they either considered it already abrogated or that they would give notice to the Turks that they withdrew from it. It was pointed out, however, that there was one contingency under which the question might soon take a practical form. The condition of Armenia has been growing steadily worse. The famine which has been desolating that country during two years past has reduced the inhabitants to unparalleled misery. The outrages of the Kurdish robber tribes continue, and there is too much reason to think that the Turkish Government has used both the famine and the Kurds as means towards the extermination of the Christian inhabitants of the country, hoping that when oppression has further reduced their numbers their complaints will cease to be heard and the Armenian question disappear with the Armenians. In such a state of things an insurrection might naturally be expected, especially as there is a large Armenian population in the Asiatic provinces of Russia which sympathizes with its co-religionists under Turkish rule and would supply them with arms and leaders. An insurrection would probably be followed by massacres similar to those of 1876 in Bulgaria; and, as in the case of Bulgaria, the entrance of Russian troops might follow. Thus the case contemplated by the Anglo-Turkish Convention would arise. Russia would have invaded Asiatic Turkey, and England would have been forced either to recede from the terms of the Convention or else to resist Russia in a cause which the judgment and moral feeling of the people of England would condemn—not to say that the acquisition by Russia of fresh territories in Asia would re-awaken our old jealousy and alarms at the progress of that Power.

In reply to the appeals addressed to him on this point, Mr. Gladstone stated in a very emphatic manner that he regarded the Armenian question as one of the utmost importance, and that Lord Dufferin, who has now gone to Constantinople as English ambassador, has been instructed to press upon the Porte the duty of carrying out with the least possible delay the reforms in Armenia stipulated for by the sixty-first article of the Treaty of Berlin. I have thought it worth while to refer specially to this point, because many of your readers must be interested in the welfare of a country which has owed almost all such progress as it has made of late years to the exertions of American missionaries. They have not only formed a Protestant Armenian Church, which numbers some forty thousand members, but have promoted in many ways the intellectual development of its people, establishing schools, and introducing among them the civilization and ideas of the West. It will be sad if the results of such efforts should be lost, but the prospect at present is far from cheering. England is the only European power which really cares for the Asiatic subjects of Turkey, and her regard for them is more of a philanthropic character than due to any definite material interest which she has in those regions. Germany, Austria, and France look upon Asia Minor and Armenia with distant indifference. Russia probably expects that the dissolution of the Turkish Empire will at some time or other throw them, or a large part of them, into her hands, and is, therefore, not much concerned to retard that dissolution or to remove the justifications for her own advance. However, it is something to know that the present English Government considers itself bound to urge on the action of the other Powers for the benefit of the Christians of the East, and this is the phase of the perpetual Eastern Question which will probably engage the European diplomatists at Constantinople for the next few months. Y.

THE NEW RÉGIME IN EGYPT.

CAIRO, June 2, 1881.

A COUNTERPART of the form of government which the Egypt of to-day offers to the political observer is, I believe, nowhere to be met with in ancient or modern history. To that autocratic foreign rule—the rule of the Ptolemies, Arab Khalifs, Mamelukes, and Turkish Pashas—to which the fellah has been so irrevocably moulded, there has succeeded a nicely-adjusted, delicately-balanced machinery, the component parts of which are solely kept together by strong external pressure. This mechanism has been in operation for over two years, not long enough to furnish a thorough test, but still sufficient to permit conclusions to be drawn as to its immediate utility.

It is a notorious fact that the deposition of the ex-Khedive was directly brought about, not by England nor France, but by Germany, who interfered on the technical ground that her rights, established by the treaty creating the international tribunal, had been trespassed upon. Why Germany should have taken this step, which was at the time a complete surprise both for London and Paris, has never yet been explained. Her action may have arisen from Prince Bismarck's desire to egg on France to assume fresh Oriental responsibilities, an instance of which may to-day be seen in the occupation of Tunis, which in the event of a European war must neutralize at least two *corps d'armée* of the military strength of France. The fall of Ismaïl Pasha made European intervention a necessity. England was reluctant to act at all; yet she could not allow any other Power to assume a forcible solution of the Egyptian question. France, by threatening to act alone, compelled England to join her. Austria and Italy were only too eager to increase their powers already obtained by the treaty establishing the international tribunals. Hence England and France were pressed into an alliance to exclude the interference of other European Powers in Egyptian affairs. The outcome of this alliance is the present triumvirate, composed of the Khedive, the Council of Ministers, and the English and French Controllers. Besides their important administrative functions, the powers of the Controllers are very much the same as those which in England are wielded by

the House of Commons and by the public press. No measure of any importance can be passed until the Controllers have expressed their opinion upon it. They can recommend for appointment any person they please; they can suggest the creation of any office that seems to them useful; they can press for the dismissal of any official or the abolition of any post. Ministers and all public officials of every rank are bound to furnish the Controllers with all documents the latter think fit to require. The Minister of Finance is bound to furnish them weekly with a statement of receipts and expenditure. Other administrations must furnish the same every month. The Controllers can only be removed from their posts by their own Governments, but Egypt has the privilege of paying their salaries. Greater power could hardly have been devised short of military occupation.

The Anglo-French protectorate requires for its successful working a perfect accord of persons as well as of principles. M. de Blignières and Mr. Colvin—the French and English Controllers—have always been able to compromise any differences of opinion, and to act together as one man. Mr. Colvin and the British consul-general also pull well together, but this is not the case with M. de Blignières and the French consul-general. During the past two years France has been represented in Egypt by no less than five consuls-general, and yet both M. Waddington and M. Barthélemy-St.-Hilaire have steadily maintained the Anglo-French alliance and the Control system. The difficulty has been caused by the excessive *individuality* of the French representatives. They have been all able men; but, influenced by Chauvinism, they have each striven to identify themselves with French predominance, and hence have produced temporary confusion only remedied by their recall.

Under the Control system Egyptian finance has been put on a tolerably sure footing. The bondholders feel sure of their coupons, and the price of the stock makes them equally sure of their capital. The land tax in the old days was paid at odd times, whenever the Government wanted money, and the fellaheen had no security that they would not have to pay just as often as they were known to have any money. Now the fellah pays his tax, and no more than his tax, by monthly instalments, the amount of which is regulated by the importance and season of the crops. Formerly the tax-gatherers were paid merely nominal salaries, which had to be made up by a percentage on the collection. They are now paid adequately and regularly, and inspectors are appointed to check error and fraud. The collection of taxes in kind has been abolished, and greater facility is given for the legal recovery of the arrears of taxation.

The public debt of Egypt amounts to-day to $450,000,000. The revenue of Egypt is barely $42,500,000, and out of this $20,000,000 has to be paid away to the creditors, and $3,500,000 goes to the Sultan. Thus a comparatively small sum is left for other purposes. Nevertheless, Egypt seems to prosper in spite of her heavy burdens, and last year she not only paid what she was bound to pay, but she also paid $1,500,000 in *amortissement*. The improved credit has caused universal hopefulness as to the future of Egypt. Capital is pouring into the country; and a great number of companies for sugar-refining, irrigation, land-cultivation, jute-growing, and building purposes have been established. The money rate of interest has fallen from 12 per cent. to about 5 per cent., and land which sold three years ago for $50 per acre is now sought in vain for $150. During three years the value of the unified-debt bonds alone has increased by $75,000,000; and during the year 1880 the value of the consolidated-debt bonds rose from $330,000,000 to $400,000,000.

The fiscal and financial reforms have been most thoroughly and energetically carried out, but beyond this very little has been accomplished. Commissions have been appointed to introduce reforms in the departments of War and Public Instruction. The ex-Khedive left behind him in Egypt an army of nearly 100,000 men. Under the new régime this force was reduced to about 6,000 men; but provision for the supernumerary officers, who consider that they have a vested right to receive bed and board from the Government, still continues to be a serious embarrassment for the authorities. The only present use for an Egyptian army is to create internal commotions and émeutes. The men are of fine physique, well behaved, and uncomplaining. The men from Nubia and the Sudan are warlike, but the pure Egyptians have all the elements of good soldiers *except personal courage*. The experience of the past six thousand years seems to have conclusively proved that the Egyptians are utterly incapable of self-government. They have been successively ruled by Persians, Greeks, Romans, Arabs, and Turks; and if during the present summer any "national feeling" or "constitutional party" raises its head, with or without the aid of the discontented discharged officers, your readers may feel assured that such a state of affairs is a mere phantasmagoria, created by the wire-pulling of some unspeakable Turk or intriguing European.

The educational department in Egypt has suffered more on account of the financial disorder from which we are now emerging than has any other branch of the public service. Public instruction in Egypt has an importance which can scarcely be overrated, for the administration and judicial reforms already instituted must depend for their ultimate success upon the public schools of the land. Egypt, in proportion to her annual expenses, allows less money to public instruction than does any European country except Turkey and Greece. After deducting the amount yearly set apart for the payment of the public debt, Egypt, for every 1,000 francs of the general expenses of the state, only spends 15 francs for purposes of education, while the United States spends 257 francs. Only $400,000 is allowed for public instruction, while nearly $2,000,000 is allowed to the War Department. The number of schools in Egypt is 5,370. If the native population be reckoned at 5,500,000, the result is that there is only one school for 1,000 inhabitants. The total number of pupils is supposed to be 137,553—that is, an average of 25 for each school, or 1 pupil for 40 inhabitants. If the number of male children of school-going age be reckoned at 334,000, it will be seen that 41 per cent. receive some rudiments of instruction, while 59 per cent. are totally deprived of any instruction whatever. It should, however, be remembered that of these 137,500 pupils only 4,000 receive such instruction as is imparted by the primary schools in the United States, and the remainder frequent schools which were established by the Fatemite khalifs, and whose condition has remained unchanged ever since. Verses of the Koran are learnt by heart, and there the instruction ends. A permanent *Conseil Supérieur de l'Instruction Publique* has, however, been established (upon which, by the way, are two Americans), and reforms of a serious nature are about to be undertaken.

The International Commission for Judicial Reform has not been able to accomplish much of anything, owing to the Chauvinism of the ex-consul-general of France, whose strong individuality prevented the proper working of the Control System and threw its nicely-adjusted machinery out of gear. The commission began their sittings last December. They have now adjourned for the summer vacation, and will commence work again in November. There are also two United States representatives upon this Commission—Mr. Consul-General Farman and Mr. Batcheller, Judge of the Egyptian Tribunal of First Instance. The English representatives are striving to introduce, as far as possible, into Egypt the principles of the commercial law of England. The existing system is slavishly copied from the French and Italian codes. The commercial law of the United States and England is the best that the world has produced, and yet the Egyptian courts only know a code compiled in France many years ago, and admitted by French critics themselves to be open to the charge of over-rigidity. England's demand is, to say the least, reasonable, for the majority of cases tried are of a commercial nature, and of the total commerce of Egypt over sixty-one per cent. is with England. Efforts have also been made to establish English as one of the official languages of the tribunals; at present the pleadings, language spoken, and documentary evidence must be in Arabic, French, or Italian.

To sum up, the Dual Control System has worked better than was at first anticipated. All reform necessarily begins with the finances, and this part of the programme has already been brought to a most happy conclusion. Whether equal success shall crown the efforts of the Controllers in other and more difficult tasks, time alone can determine. Under the "pasha system" the best-intentioned labors of individuals were utterly unavailing. The lamentable and ludicrous failure of some forty American officers to "regenerate" Egypt and develop her resources is conspicuously shown by a book recently published by Colonel Dye, who was himself a prominent member of that quixotic band. Things are now otherwise. The real power of the Egyptian Government is no longer with the Khedive nor his ministers, but is with the Controllers, just as the real power of the British Government is with the House of Commons. The "pasha system" is reduced to a minimum; and, in spite of some errors of judgment and misapprehension of facts on the part of the Controllers, I believe that Egypt is better governed to-day than she ever has been since the days of the Pharaohs. Turkish rule has been replaced by European rule as represented by the Control System; but should this Control System break down, international jealousy would leave no alternative but a relapse to the Turkish pashas. Our representatives in Egypt need to be reminded that *any* European rule is better than the best Turkish rule. Our interests in Egypt are at present purely sentimental ones, but as far as they go they coincide with the interests of England—that is, we wish to see our language and our system of law prevail as against those of Latin countries. No matter what the personal prejudices of our representatives in Egypt may be—be those representatives Greek or Ottoman subjects, as at present, or otherwise—they should bear in mind that the true interest of the United States is to *help* rather than *oppose* England

in Egyptian affairs; and that if any European Power is to predominate in the Nile valley it is on the whole better for the United States that that Power should be England rather than France, and either or both rather than the Turkish pashas.

To descend from the regions of *la haute politique*, it may interest many of your readers to learn that M. Maspero, the new Director of the Boulak Museum, leaves by the same steamer which carries this letter for France, where he will publish the texts of the five recently-opened pyramids of the Fifth and Sixth dynasties. M. Maspero tells me that these texts will "revolutionize" many preconceived ideas on the ancient Egyptian religion. By means of pyramids opened last April at Saccara, M. Maspero has found that not only pyramids, but groups of pyramids, in the vast fields of Saccara, Dashur, and Ghizeh, are placed at certain mathematically determined relative positions and distances apart. The pyramid fields represent a vast historical map of Egypt chronologically arranged. This symmetrical arrangement enables the student at once to determine the dynasty of any pyramid as soon as its position be known, and to determine its position if its dynasty be known. This latter is of great importance, for it is often impossible to distinguish some of the older pyramids from mere mastaba, or from natural irregularities or undulations of the desert. If M. Maspero wishes to find *n* pyramid of *n* dynasty, he has only to take a donkey ride with a prismatic compass and the key to the "system" which has been disclosed by the newly opened pyramids. Next winter will probably mark an epoch in Egyptology, for M. Maspero intends to open as quickly as possible all the pyramids at Saccara—some sixty in number—and publish their texts. It is to be hoped that he will come across some pyramid that has not been already opened by the monks of the Roman period or by the Bedouin robbers. All the pyramids hitherto opened in Egypt had been previously ransacked by these ruthless destroyers.

Correspondence.

THE CRIME AGAINST THE PRESIDENT.

To the Editor of The Nation:

Sir: In last week's *Nation* it was mentioned without comment that special legislation, looking towards the better protection of the life of the President, had been proposed; since then Mr. Conkling has written a letter calling the attention of the Attorney-General to the subject. The amendment to the "Criminal Code," as Mr. Conkling suggests, is virtually an amendment to our Constitution, and is, we apprehend, in opposition to its spirit and contrary to the fundamental principles of our Republic. Mr. Conkling mentions with dissatisfaction that "our Criminal Code treats premeditated homicide in all cases alike, irrespective of the victim." That this is true has been the great boast of the American nation; she alone of all the governments of the world has recognized as a self-evident truth "that all men are created equal," and has hitherto shown in theory and in practice that the life of the toiling peasant who lives in the humblest hut among her mountains is as well protected by her laws as that of the man who is great because of wealth, of high position, or of any other of the circumstances of life. This is what it is proposed to amend; and in order to do so a first principle must be destroyed!

The framers of our Constitution had before them the laws of other countries, making an attempt upon the life of the ruler treason, and consequently punishing it more severely than an attack upon a subject, and yet they refused to embody such a provision in our Constitution, and declare positively that "treason against the United States shall consist only in levying war against them, or in adhering to their enemies, giving them aid and comfort." Madison, in adverting to this point, commends the Convention for inserting this definition of treason and for their limiting it, and recognizes the peculiar danger to our Government in having it in any wise extended. Nor can we suppose that by calling this crime something else than treason we shall thus escape doing violence to the Constitution.

Ideal Justice is represented as being blindfolded, so that in civil matters she may not see either the plaintiff or defendant, and in criminal prosecutions may know no difference between persons because of their position—even though the victim be a murdered President himself.

It seems to us, therefore, that this special legislation is objectionable because it is unconstitutional, because it ill accords with justice; and furthermore it is a dangerous precedent to establish, and will be, we can with tolerable safety say, of no practical value. This present proposal may be innocent enough, yet we know not to what ends ambition may use the principle upon which the law would be founded, nor where special legislation, the precedent once established, will stop. The years may be many before any ill effect is seen, but it is a step in the wrong direction, and followed by others we may find one day that in thus fortifying our chief Executive we have unwittingly

"——put a sting in him,
That at his will he may do danger with."

Special legislation would not accomplish the end desired, we think, and the "high executive officers" (Mr. Conkling uses the plural number) would be no safer with it than without it. When Dives wished a special messenger to be sent to his brethren he was told: "They have Moses and the prophets." When he again urged his plea he was answered: "If they hear not Moses and the prophets neither will they be persuaded though one rose from the dead." And so we can say that would-be assassins have the ordinary laws and the ordinary penalties; and if they fear not them neither will they fear though the laws of Russia be enacted in this land. An assassin is desperate and reckless, and takes his life in his hand when he goes to commit the deed. What does he care for the severity of penalties?

What, then, is necessary? *Let the cause be removed;* and in this Mr. Conkling can make himself useful without troubling himself to take up the rôle of legislator again. Let the fierce malignity of faction give place to a dignified and reasonable opposition, and weak-minded persons, admirers of his, will not be inspired to undertake the work of an assassin; and let our legislature turn their attention to remodelling the system of Government patronage, which otherwise may be as fruitful a source of danger to the Executive as it has hitherto been of impurity to politics.—I am your obedient servant, S. B. W.

Charlottesville, Va., July 8.

THE GIFT TO THE PRESIDENT'S WIFE.

To the Editor of The Nation:

Sir: The last clause of Section ix. of Article I. of the Constitution of the United States provides that—

"No title of nobility shall be granted by the United States; and no person holding any office of profit or trust under them shall, without the consent of the Congress, accept of any present, emolument, office, or title of any kind whatever from any king, prince, or foreign state."

Without examining the debates on this clause of the Constitution, it may be inferred that the fathers of the Republic, in the early days of its poverty and simplicity, desired to guard the officials of the nation from any form of bribery or corruption from wealthy foreign powers. The danger which now threatens the country is not from gifts from without, but gifts from within. The present of $250,000 which the wealthy citizens of New York proposed to raise for Mrs. Garfield was no doubt dictated by high motives of patriotism as a touching tribute of the sympathy felt by the persons who subscribed; but are our foremost citizens and soldiers such paupers that they have to live off of the overflowing coffers of the rich? If the President died it is reasonable to suppose that Congress would provide for his family by paying them his salary in full for the remainder of his official term, which would be a sum of money that would raise them far above want, and above many families moving in well-to-do circles of society, and could be received by them with eminent propriety.

The system of railroad corporations presenting members of Congress and members of State legislatures with passes is one of the simplest forms of corruption nowadays, for even such a gratuity enlists to a certain extent the good-will of the receiver. The recipient of any present, even as harmless and disinterested as a milch cow in time of sickness, must feel under certain obligations to the donor.

"Timeo Danaos et dona ferentes."

—Yours truly, Talbot J. Albert.

Baltimore, Md., July 11, 1881.

Notes.

Charles Scribner's Sons announce that Mr. Sidney Lanier will add to his juvenile series of the 'Boy's Froissart' and 'Boy's King Arthur' a Welsh companion to the latter volume—the 'Boy's Mabinogion.'——The thirteenth volume of Mrs. Oliphant's "Foreign Classics for English Readers," 'Madame de Sévigné,' by Miss Thackeray, is in the press of J. B. Lippincott & Co.——'Random Rambles,' by Louise Chandler Moulton (Boston: Roberts Brothers), is certainly, as a prefatory note declares, nothing "so formidable or so dignified as a book of travels," but is rather a series of newspaper letters of a light and gossipy character about different places and social experiences abroad. They make very agreeable "railway reading," and probably the author would agree with the critic who should question the necessity of giving them book-form for any loftier purpose.——'A Journal of a Farmer's Daughter' (New York: G. P. Putnam's Sons) is precisely what would be expected of a prose work with this title by Miss Elaine Goodale. Incidents of farm-life are described with affectionate detail and a manner at times a little sentimental, but in the main in excellent taste. Of course, to give this sort of thing interest, experience of life in general, wide reading, and a distinct seasoning of humor are imperatively required; and what made the Goodale young ladies remarkable was not the

individual character of their qualities but the unusually early development of them. It seems possible now that they reached maturity at once.——Part 3 of Reiss and Stübel's 'Necropolis of Ancon in Peru' (Dodd, Mead & Co.) maintains the beauty and interest of the work in a great variety of elegant colored plates. The one landscape represents the curiously terraced and formerly cultivated hills to the south of Ancon, protecting the roadstead. There are sections of graves of many types; mummy bales unwrapped by degrees to the squatting body within; ornamented skulls and limbs—a ghastly array; charming specimens of painted cotton and other stuffs, also headgear with feathered ornaments of great delicacy; a sunken *chicha* vessel *in situ* (heart-shaped earthenware some five feet high); finally, a highly artistic vase, with an enlargement of the decoration on the belly to show the costumes of the Inca period. The figures resemble wrangling knaves of clubs from different packs, wearing helmets, ponchos, and pouches with straps, and carrying shields and lances.——We have received from Clark & Maynard a series of English "School Classics," edited abroad, and answering well by their cheap and handy form the purposes of flexible instruction. ——The next two numbers of the *Library Journal* will be mainly devoted to a bibliography of the pre-Columbian discovery of America, by P. B. Watson.——No. 10 of the Harvard "Bibliographical Contributions" is Mr. Justin Winsor's "Halliwelliana," largely but by no means exclusively a list of publications relating to Shakspere. ——The *American Architect* has undertaken the useful task of establishing an architectural intelligence office for draughtsmen and employers.—— The Supplement to Stratmann's 'Dictionary of the English Language of the 12th, 13th, 14th, and 15th Centuries,' 3d ed., is now obtainable of the author at 6, Karlsplatz, Krefeld, Germany, for 3*s.* 6*d.*——Nos. 3 and 4 of the current *L'Art de la Mode* (J. W. Bouton) are chiefly remarkable for the illustrated articles on French women artists and the Salon of 1881.

—With singular unanimity the reports of all our libraries for the year 1880 show a falling-off in circulation. Not one, so far as we can remember, can boast of an increase. Sometimes the loss is confined to fiction, as in the library of the Odd Fellows' Association at San Francisco; sometimes it is evenly distributed through all the classes, as at the Peabody Institute at Baltimore. Naturally the minds of librarians are exercised to account for the change, which with the present ideas about circulation is felt to be somewhat disappointing. Library committees had for years regarded with much complacency the steady increase in the number of their readers—a steadiness which seemed to show that the sudden leap taken by the lists of library card-holders in 1873 was not due merely to the panic; and now they cannot see the process reversed without regret, and some anxiety lest city governments which have been cutting down appropriations even below the limit at which efficiency is possible, because times were bad and the people could not afford a library, may cut them down still lower because times are good and the people do not need a library. For the main reason of the decline in circulation is undoubtedly that business has revived. To some their new work is too interesting to allow a thought for anything else; with others it takes up all the time which, when out of work, they tried to while away with reading; others are too tired after their day's work for anything but a newspaper. For it ought not to be forgotten (and yet it is continually overlooked by critics on the supply of books at public libraries) that, to those who are accustomed to study, the reading of very simple books demands serious effort and causes a mental strain to which they are not equal, or at any rate not prone, after ten or twelve hours' muscular exertion, or when subject to the effect of some of the less laborious but more harassing occupations. These are not the only causes of the decline in reading. Plenty of work gives more money to spend in other kinds of amusement; those who want to read buy their books in the Franklin Square, or the Seaside, or some other of the cheap collections, instead of waiting with problematical success till the work they want shall be "in" at the public library; many of the purchasing committees have been intentionally diminishing the supply of fiction; the old novels as they disappear have not been replaced; fewer copies of new ones have been bought, and the selection has been more careful; on account of diminished appropriations fewer books of all sorts have been purchased, and the attendance has not been so good; finally, 1880 was the Presidential year, and though there was the least possible excitement, there was enough to have some slight effect. We do not think that the present tendency will continue long. Business will not be less absorbing, or work less tiring; but, after a time, the people may feel strongly the need of some counterpoise; the very changeableness which leads them to desert the libraries now may lead them back there. If the present phenomenon meant that we are to cease to be a reading people, it would indeed be worthy of serious consideration; if, on the other hand, it only shows a temporary eddy in the current—if it points in some classes to a greater attention to art, in others to a growing inclination toward out-of-door amusements; if it means that our people are buying the books which they read; and if, to some extent, it means that they are reading books which demand more time to be read profitably—then certainly it is no evil.

—The position occupied by the family in the modern world presents many points of interest to science; and anthropologists will therefore not need to have their attention called to the approaching "Reunion of the Palmer Family," which is to take place at Stonington next month, and to which General Grant has received an invitation. The letter sent to him calls his attention to the fact that he is one of the descendants of Walter Palmer, who was one of the "first settlers" at Stonington; that his co-descendants number "many thousands," scattered "from Maine to California"; that they propose to have a "Palmer reunion" on the 10th and 11th of August at Stonington; that the ex-President is therefore specially invited to allow a thousand or more "Palmers" on those days to pay their respects to him as a kinsman; that the palace-car "Palmer" will be placed at his disposal for the occasion; and that "a solicitous and appreciative array" of his co-descendants are longing to have him join them on that day in "the social and fraternal festivities of a real Anglo-American reunion." The invitation bears the well-known Palmer motto: *Palmam qui meruit ferat.* Communal reunions of this kind are peculiar, we believe, to the United States, and have become of late years a noticeable feature of social life here. In older countries, where the family exists as a sort of private corporation, such meetings of the entire body of the descendants of a common ancestor are unknown, and would probably be considered undesirable, as calculated to bring together in an enforced and therefore unpleasant intercourse people widely separated by birth, wealth, social position, and breeding. It might, perhaps, also be urged that these reunions would be chiefly useful and profitable to such members of the family as had been unsuccessful in their struggle with the world, and needed external support and recognition, and would therefore be likely to "run" the reunion in their own interest. None of these objections—to judge by the growing popularity of the custom—seem to be applicable to the circumstances of this country, and such reunions afford interesting proof of the survival of a primitive sentiment which carries us back to the times when the Aryan or Pelasgian ancestors of "the Palmers" and other families gathered together not once in two hundred years, but three times a day, for purposes of commensal enjoyment. Thus far on all like occasions perfect harmony has prevailed, and the rigid exclusion of "politics" has greatly tended to promote this end. General Grant will, we presume, recollect that he is invited simply as a co-descendant "Palmer," and refrain from saying anything of a political nature calculated to eclipse the gayety of the reunion, or to stir up passions which, even in the most closely united families, often produce such unhappy consequences.

—The Albany *Law Journal* and Judge Countryman have been carrying on an ethical controversy, more curious than edifying, we fear, to the laity, on the subject of taking cases on "speculation." The judge says that the practice is perfectly right, and even praiseworthy; that poor suitors, if they could make no arrangements to retain counsel out of the proceeds of the suit, would often find themselves unable to prosecute their rights, and that such arrangements are sanctioned by the courts. The *Law Journal*, on the other hand, strongly reprobates this view; insists that, though the courts may tolerate the practice, that does not settle the matter, since many things are tolerated in courts —such as the use of decoys and informers, pleas of infancy, usury, etc.—which no one thinks are in themselves fine or laudable. But, at the same time, it admits that cases must occasionally be taken on "speculation," and states the difference between the judge and itself to be that "we would take just as few cases of this kind as possible, he would get just as many of them as he could." If this could be taken as a fair statement of the position of the two disputants, we should say that the *Law Journal* was undoubtedly right. The strong feeling which still exists among conservative members of the bar on the subject grows out of the dangerous tendency of the practice, and this is not affected by the fact that now and then it may be for the interest of litigants to resort to it. In new countries, and in countries where the bar has long ceased to be a close corporation, and law is carried on like any other business, the inherited tradition with regard to taking cases on "speculation" is pretty sure to be supplanted in a measure by the feeling that such a practice is often for the mutual advantage of lawyer and client. The story of the eminent Western lawyer who, on being asked to what branches of the profession he had chiefly devoted himself, replied, "Champerty and Maintenance," illustrates a condition of professional sentiment which it would still hardly be possible to imagine existing in New York, but toward which some years ago the bar seemed to be making rapid

progress. Until very recently, will-contests on a speculative basis were positively encouraged by a statute (now, we believe, repealed) permitting large allowances out of the estate to the unsuccessful party's counsel, and it was out of the practice founded upon this that the unscrupulous rapacity and ferocity that used to distinguish such contests in this city chiefly grew.

—The evil tendency of speculative lawsuits is reason enough for discouraging the practice wherever it can be done; but the question of how far it can be done is very like that other question of legal ethics which every few years or so comes up for discussion—how far a lawyer may go in defending a client. Many moralists, from the time of Dr. Johnson down, have undertaken to settle this, but with so little success that Lord Brougham's suggestion, that when a lawyer undertakes his client's case his duty is to throw overboard all moral principles, is still regarded in many quarters as being the prevailing professional view of the subject. The question is one of those which cannot be decided one way or the other abstractly. It is necessary to know the facts in each particular case before deciding whether a breach of professional ethics has been committed; but it is certainly safe to agree with the *Law Journal* that any one who tries to get as many "speculative" cases as he can will not earn the approval of the conservative part of the bar.

—The statistics of the cotton crop in 1879 have been published in outline by the Census Office, accompanied by brief notes regarding the condition of the culture of that staple, by Prof. E. W. Hilgard, formerly of the Louisiana State University. The following table, condensed from the *Bulletin*, presents an abstract of most of the important points:

States in order of production in 1880.	Acres, 1880.	Bales, 1880.	Bales per acre.	Per cent. increase, 1879 to 1880.	Ratio of increase between population and cotton.
Mississippi	3,003,230	955,808	0.46	69.2	1 to 1.89
Georgia	2,615,568	813,065	0.31	71.7	1 to 2.39
Texas	2,168,136	801,090	0.37	128.5	1 to 1.36
Alabama	2,329,577	696,576	0.30	62.9	1 to 2.36
Arkansas	1,040,701	606,980	0.58	144.8	1 to 2.21
South Carolina	1,364,249	522,548	0.38	132.8	1 to 3.23
Louisiana	801,862	506,704	0.69	44.4	1 to 1.52
North Carolina	892,982	369,516	0.44	168.7	1 to 5.48
Tennessee	722,501	330,624	0.46	81.8	1 to 3.62
Florida	245,595	54,997	0.22	38.2	1 to 0.99
Missouri	32,711	19,733	0.60	1,483.7	1 to 57.07
Indian Territory	35,000	17,000	0.49	.....	.....
Virginia	24,000	11,000	0.46	5,010.9	1 to 251.53
Kentucky	2,667	1,367	0.51	26.6	1 to 1.07
Total	14,423,879	5,730,968	0.40	89.7	1 to 2.63

The principal points brought out by a study of the above table are as follows: The production of cotton has nearly doubled during the decade; its increase has outstripped the increase of population, in the cotton States proper, in a ratio approaching that of three to one; the highest specific increase has taken place in the Atlantic States, where the average product per acre has become nearly equal to that of Mississippi. This is due to better tillage and the use of manures. An "area of low production," due to soil-exhaustion, is moving westward, and is now central in Alabama and Florida. Farther westward, in Louisiana, Mississippi, and Arkansas, where the natural fertility of the soil is not yet exhausted, the production is greater. The lesson here indicated, that it *does* pay to manure, is one that cannot be too strongly impressed upon the cotton-planters of the Gulf States.

—Mississippi is, *par excellence*, a cotton State. While only about one-fourth of its product is raised in the Yazoo bottom, which is popularly regarded as the greatest cotton region of the country, one-half is grown on the table-land bordering the Mississippi bluffs and the prairie belts. The remainder is scattered over the sandy pine region. Its high rank as a cotton State is due to the natural fertility of the soil and the fact that cotton-planting is almost the sole industry of the inhabitants. In Georgia, which ranks next, the case is quite different. The soil is much less fertile, and its large product is due in part to its greater area and population, but largely to the extensive use of fertilizers and to careful tillage. Some portions of Alabama possess soils originally extremely rich, and the State would naturally be expected to make even a better showing than it does. The reason which Prof. Hilgard assigns for its comparatively small product per acre is that the natural fertility of its soils has been largely abstracted, and has not been returned by manuring. The case is similar in the northern part of Florida, to which part of the State cotton culture is at present confined. In Tennessee the cultivation of cotton is mainly confined to the western part between the Mississippi and Tennessee rivers. Here the soil is extremely well adapted to the crop and the yield is large. The greater portion of the cotton of Arkansas comes from the eastern and southern counties, where the majority of the land is alluvial. It appears that the alluvial regions of Arkansas and Louisiana produce about twice as much cotton per acre as the uplands. The coast belt of Louisiana is given over to the culture of sugar-cane, little or no cotton being raised there. About two-thirds of the crop of the State is raised in the alluvial regions, the remainder being produced upon the uplands. In Texas the season appears to have been unfavorable, the supply of rain not having been sufficient, which may explain the low average yield. More than half the crop was produced in the northeastern section. The coast counties produced but little, and on the south and west the Nueces River practically limited its culture. In the Carolinas the culture of the staple has been much extended and improved during the past decade, particularly by the application of manures to the worn-out soils, so that the average production is now as great as for the new rich soils of Mississippi. The cotton region of Missouri is limited to the cotton-lands in the extreme southeastern corner, where, apparently, the soils are of great fertility, as shown by the high product per acre. Nearly all the cotton raised in Kentucky comes from the extreme southwest corner adjacent to Tennessee and the Mississippi River.

—The spread of malaria in New England and other parts of the country where it has been hitherto unknown is a subject which possesses much public interest, especially at this time of year, when thousands of persons are leaving the cities to search for places where they can be absolutely guarantied against all danger of this kind during the summer. A letter recently written by President Chadbourne, of Williams College, shows that very little progress has as yet been made in solving the mystery. Dr. Chadbourne refers to the common opinion that malaria is the result of vegetable decomposition, especially the decomposition produced by stirring up soils rich in organic materials, admits that when a lecturer on the subject in New England he shared this opinion, but states that he has since had occasion to modify his views, owing to his "observations in Wisconsin and the Rocky Mountains," and "the increased prevalence of the disease in New England in places where the conditions are quite different from those formerly considered essential for the production of the miasm." He adds that "all the facts now known" cannot be explained consistently with any theory yet advanced. Malaria, it is true, abounds in wet places, but so it also does in places which are dry. It is found in valleys and it is found on the tops of mountains. It appears where it has before been unknown, "without any change of conditions that can be seen." It seems also in New England to "move on" from year to year, like the pear-blight, the potato-rot, the epizootic, or the Texan cattle-fever. As to vegetable decomposition, malaria is to be found in the Rocky Mountains "where the few streams flowing from melting snow are as pure as our New England trout-books, while most of the soil is poor in organic matter." He points out that water of itself does not necessarily favor decomposition, which is produced by alternations of wet and dry, or mere dampness. Of the increased prevalence of malaria in New England, and "what seems to be its yearly progress eastward and northward," he thinks no satisfactory explanation has been brought forward, and all that can be done at present is to collect the facts carefully, in the hope that we may be able to arrive at a solution of the mystery hereafter.

—Mr. Hamerton's art periodical, the *Portfolio* (Bouton), has lately been giving some specially good examples of native English work with the etching-needle, and thus assuming a really important place as patron of an art in which the British school is peculiarly fitted to excel. We do not say that a designer like Mr. Jacomb Hood, who has found in the *Portfolio* a free outlet for his sketches, is a better artist than the ordinary throng who illustrate the *Graphic* with their woodcuts; but he finds in etchings, as ordinarily printed, a better expression of color, through the two mediums of a tinted ground of fine quality and of retroussage. He is therefore tempted to seek higher refinements of technic and dig deeper into the sources of ability that are in him than he would do if drawing for cuts where the whites between the lines are all alike. This artist's Lancashire series has many elements of power: his glass-blowing sketch in the June number shows a fine mastery over difficult light; while, in May, his canal scene was an able reminiscence of Decamps's "Halage"; and, in March, his cotton-mill showed types of character worthy of Fildes. It is a curious and promising experiment, this encouragement of sketchers, who in the usual course of things would be offering their studies to the illustrated newspapers, to pour the contents of their albums upon etching-plates, and bite them out with acid; the process is not necessarily harder than boxwood drawing, while the stimulus to good work is everywhere greater. Mr. Hamerton keeps a monitor always running by the side of these ambitious novices, in the form of a specimen of what the great men of the past have really and practically achieved; these examples or paradigms, repeated with confounding accuracy by the French process of Amand Durand, are never without a sharp lesson, whether for modern practitioners or modern spectators. From Rembrandt's "Burgomaster Six," in the June number, the contemporary etcher can try to learn the judicious use of mystery; from Lucas van Leyden's "Abraham with the Angels," in April, the defining and almost architectural strength of precision. The editor's personal opinions are always valuable

from their catholicity and repose, and the articles signed by him entirely outweigh the collection of others differently originated; his definition of "style," however, in the last number introduces a new and misleading shade into art nomenclature. Style, by a useful ellipsis, now means noble or achieved style, and to define it is to investigate the elements of nobility and supremacy; to represent style as merely idiosyncrasy, and illustrate it by Rubens or Hogarth, is to confuse language and degrade terminology.

—*L'Art* (Paris: J. Rouam; New York: J. W. Bouton) opens its twenty-fourth quarterly volume with a striking selection from the illustrations to the "Tile Club" papers, a little less delicately printed than in the habitual style of *Scribner's*, but gaining some lustre from the advantages of ample margins and tinted paper. The critical text by J. Comyns Carr is timid and indefinite, declining to enter far into the merits of close-line cutting as practised by the modern Americans, but plucking up courage to say that the engravers succeed in reproducing almost every effect which is expressed by the various kinds of art. The etchings of the volume include many test-works. Rajon tries his lance with Waltner in copying Gainsborough's portrait of Master Buttall, known as the Blue Boy. The sense of clearness and color is very perfect, and the triumph over Waltner's larger plate is manifest. Borrowings from the catalogue of the late Wilson sale are: "The Sleeping Servant," etched by Courtry, after Van der Meer of Delft, a specimen in which the singular purity of interior light in a shaded room is caught with the highest felicity; A. Maas's "Infant Eating a Waffle," etched by Milius with much spirit; Holbein's "Bishop Gardiner," very minutely copied by Gaujean, and Diaz's "Under the Trees," a difficult work about half done, by Lalauze. Rembrandt's "Man-at-Arms," by Leenhoff, is heavy with characteristic color and impasto, and his "Crucifixion," from the late San Donato collection, is copied by Gaucherel so as to give a strange and dreamy light of eclipse suitable to the subject and the master. The kneeling donataire and his family of an altar-piece by Sir Anthony More—the artist who was disgraced by Philip II. for daubing the royal hand with carmine—are reproduced with painful and demonstrative fidelity in the largest etching introduced. The details of the Château of Montal, lately picked to pieces and carried stone by stone to Paris, are represented in an interesting series of illustrations, and the lost genius of Jacquemart is perpetuated in some of his sketches, among them a wonderful crayon drawing of a crystal flagon, and a photograph-like sketch of the "Road to Mentone," singular for its impression of near hills, made to look nearer by the sudden shading of a darkening cloud. The publication continues to be the best repository of modern etching extant, and the most valuable art periodical ever produced.

—King George of Greece has recently signed a concession giving permission to General Türr to cut a canal through the Isthmus of Corinth. The work will be undertaken by a company established under the patronage of the indefatigable M. de Lesseps, who, it seems, has long had his eye upon the Isthmus of Corinth as affording him another opportunity of gratifying his passion for great canal enterprises. The company will begin work upon the canal in the spring of 1882, and expects to finish it in five years. M. Violet d'Aoust, who took part in the French expedition of 1826 which was sent to assist in expelling Ibrahim Pasha from the Morea during the Greek War of Independence, and who became at that time very much interested in this canal project, has just read a paper before the Geographical Society of Paris giving an account of the previous attempts to make the canal. A canal across the Isthmus of Corinth was a pet scheme of Demetrius Poliorcetes; Julius Cæsar, Caligula, and Nero all wished to undertake it. In the Middle Ages the Venetians hoped by piercing the isthmus to secure a quicker passage to Syria and the East. The canal is, in conception at least, an old one; but it has remained for modern engineering to make it an accomplished fact. The isthmus of Corinth is about nine miles in width, and the expense of building the canal is estimated at about $12,600,000. The question is where the ships which by passing through the canal are going to make it a profitable undertaking, are coming from. Ships plying between the Adriatic and the Eastern ports situated north of Smyrna would save from about eight to twelve hours by passing through the canal. Ships plying between other ports west of the Grecian peninsula and the shores of Asia Minor would not save enough time to make it worth their while to submit to the canal toll. It is, therefore, extremely improbable that the Corinthian canal can be made a profitable enterprise. However this may be, the undertaking will be watched with considerable interest, both from the historical character of the ground and from the fact that interest in the canal question has been aroused of late in consequence of the success of the Suez Canal and the scheme for cutting the Isthmus of Panama.

—The dialect of the Abruzzi has hitherto been almost completely neglected. No dictionary of it exists, and Dr. Gennaro Finamore, in order to render accessible to others the texts he proposes to publish, was obliged to begin his labors with the compilation of a vocabulary, 'Vocabolario dell' Uso Abruzzese' (Lanciano, 1880). A rapid examination of the grammar and phonology of the dialect is followed by the vocabulary, filling over one hundred and eighty octavo pages, and supplemented by a list of proper names and a selection of the principal etymologies previously given. The literary portion of the work consists of proverbs and popular songs, with parallels from the rest of Italy. The collector intends to issue the popular tales separately, and we trust he may receive sufficient encouragement to continue his arduous labors in a sparsely-worked field. Before long there will be little popular literature left to collect in Italy.

JEFFERSON DAVIS AND THE CONFEDERACY.—II.

The Rise and Fall of the Confederate Government. By Jefferson Davis. New York: D. Appleton & Co. 1881. 2 vols. 8vo, pp. 707, 808.

EXCEPT in the chapter devoted to the finances of the Confederate Government Mr. Davis gives us very little information about its civil affairs. It is well known that the government founded upon the ultra doctrine of State rights felt obliged to resort to absolute centralization as a matter of military necessity. When every able-bodied man was by one legislative act enrolled in the Confederate army, and not only the physicians and mechanics had to be "detailed" by army orders, or "furloughed" to serve the absolute necessities of local communities, but the very officers of state were only exempted by similar exception under Federal law, the autonomy of the separate States was, of course, annihilated. That this, in fact, led to great dissatisfaction and caused serious dissensions and troubles is also generally believed. We can understand that Mr. Davis should avoid this subject, and strive to leave the impression that within the Confederate lines all was harmonious devotion to one settled purpose; but too much is known to make it possible to ignore the facts without making the silence itself more significant than speech. The volumes before us are certainly not the history of the Confederacy in this respect.

In what we are told of military and naval operations there are some very interesting passages, though there is very little proportion of parts. It is made apparent that immediately after the first battle of Bull Run, or Manassas, Mr. Davis and the two leading officers on that field became estranged, and complete confidence was never re-established. We read between the lines that friends of General Beauregard in the Confederate Congress represented the President as jealous of his renown, and showed the usual tendency of men in war-time to exalt a successful general above the civil power. Mr. Davis thought, and with appearance of reason, that Beauregard was more than willing to have it understood that he would have entered Washington triumphantly had he not been held back by the President. The language of formal courtesy in their correspondence does not conceal the fact that Mr. Davis regarded the general's conduct as dishonorable, and formed a resolution, to which he adhered, to give Beauregard as little actual power and responsibility in military affairs as possible. That officer was too well backed by political friends to make it quite practicable even for the President of the Confederacy to ignore him, but his commands were mostly administrative, and the commander-in-chief at Richmond evidently looked with a severely critical eye at his conduct when, by the death of Sidney Johnston, he was temporarily left in actual command of an army.

A similar coldness grew up between Davis and General Joseph E. Johnston, but no personal cause of complaint is indicated. It would seem that General Johnston did not communicate as freely and confidentially with the Executive as the latter deemed due to his position and his own military knowledge and experience. Mr. Davis was himself educated at West Point, and had held a commission for some years in the Army. He had served as colonel of a Mississippi regiment in the Mexican War, as Secretary of War under President Pierce, and as chairman of the Committee on Military Affairs in the Senate. He tells us that his own wish had been to be the actual general in command of the Confederate army, rather than the titular commander-in-chief as President. In this condition of things there was a natural tendency to misunderstanding with the generals at the head of armies. They would object to a too minute enquiry into and criticism of their plans and purposes, and would wish for more freedom than would, perhaps, be accorded. On the other part, the President would chafe at any reticence, and be likely to assume that no plan existed if it was not fully confided to him. Officers in the field would attribute publicity of what ought to be secret to the disposition of a political officer to be careless in his confidences. Something of this sort seems to have occurred, and the relations between Mr.

Davis and General J. E. Johnston evidently became stiff and unsympathetic in the first year of the war. General Gustavus W. Smith seems to have been involved in the same distrust by reason of his connection with Generals Johnston and Beauregard, and in this way may possibly be explained what was often a subject of enquiry among officers of our Army, viz., why General Smith played no more prominent *rôle* in the war. He was one of those officers who resigned to enter the Confederate service, and concerning whom expectation was high.

The references to General J. E. Johnston in Mr. Davis's book seem more plainly tinged with prejudice than his treatment of any other officer. It is impossible to read the narrative without feeling that Johnston's wound at Seven Pines only gave a desired opportunity of relieving him of the command in Virginia. When Mr. Davis comes to tell the story of the Atlanta campaign the reader may look in vain for any indication of serious fighting whilst Johnston was in command. Whoever may form his opinion of that campaign from this book must necessarily believe that Johnston retreated without any collision with our forces except trifling skirmishing, unless it were at New Hope Church. Officers on the side of the Union do not so understand that history. At Tunnel Hill and before Dalton there was severe fighting. Resaca was an important battle. After Resaca nearly every day had its engagement. At Kennesaw Mountain the casualties counted by thousands, and every foot of ground from Pumpkin Vine Creek to Marietta had been won only by fighting. When, therefore, Mr. Davis sums it up by saying (vol. ii. 555): "Thus, from Dalton to Resaca, from Resaca to Adairsville, from Adairsville to Alatoona, from Alatoona to Kennesaw, from Kennesaw to the Chattahoochee, and then to Atlanta, retreat followed retreat during seventy-four days of anxious hope and bitter disappointment, until at last the Army of Tennessee fell back within the fortifications of Atlanta," he is grievously unjust to his subordinate by the complete omission to describe the resistance that was made. One is tempted to contrast this silence with his full description of the defence of a petty fort at another place by a single company of soldiers, where he finds room even for the complete list of the names of the men in the ranks. In Gen. Johnston's case Mr. Davis will be justly judged by the application of the maxim *suppressio veri, suggestio falsi*.

In the description of the seven days' fight before Richmond Mr. Davis writes as an eye-witness, and intimates that he accompanied and assisted General Lee. This is the most valuable part of the military narrative. In other places he has accepted as indubitable the most extravagant claims put forth in Confederate reports, and pays no attention to subsequent criticism or to the facts presented from our own side. There is no pretence of summing up the evidence in a thorough manner, and, with the exception mentioned, the reader will look in vain for any new light upon the military history of the war, save in a few points where controversy had arisen between the Confederate President and his army commanders. His friendship for A. S. Johnston was of long standing and no doubt sincere, and for him and for General Lee his praise is unstinted, and the more noticeable by reason of the contrast with his tone toward J. E. Johnston and Beauregard. He puts upon Hood the responsibility for the great disasters of the Franklin and Nashville campaign, whilst praising him for his courage, energy, and devotion. Subordinates are generally spoken of with warm appreciation, and political differences with Gen. Longstreet have not prevented him from speaking with admiration of that officer's calm intrepidity and great abilities as a corps commander.

When Mr. Davis alludes to Northern officers his tone is similar to that which he systematically uses in regard to Northern statesmen, and, indeed, the Northern people. It is so exact a reproduction of the well-known "plantation style" in vogue among Southern Congressmen before the war that one can hardly repress a smile at seeing how perfectly he has preserved the old fashion. The effect is much like that produced by the appearance in public of an antiquated garb, well preserved, which some one long out of society wears with an air of thinking it is still the *ton*. By far the larger part of the people who were lately in deadly strife with each other have by this time learned that men on the opposite sides of Mason and Dixon's line are not greatly different. The honorable and the knavish, the merciful and the cruel, the refined and the coarse, are not separated by a geographical division; but Mr. Davis has not yet learned this, and in his book the old illusion reappears that civilization or humanity is hardly to be looked for north of the Ohio. General Sherman has distinctly stated in his memoirs not only that he did not direct the burning of Columbia in South Carolina, but that he ordered the protection of the town and the putting out of the cotton-fires, which were in fact burning when the Federal troops entered the city. There might be room for debate over the fact of obedience to these orders, but none for disputing the truth of the statement that they were given. When Mr. Davis, therefore, treats the matter as if so explicit a statement from such a man had no important weight, he will find himself judged in the opinion of men who know the world, everywhere, as being guilty of a very offensive disregard of the *convenances* of life, which will seem greatest to those who are most familiar with what courtesy and refinement are among people of eminence.

The orders in regard to the inhabitants which were issued by General Pope on assuming the command of the Army of Virginia are admitted to have been unexecuted, yet Mr. Davis returns to them again and again as the proof of the barbarity of the Union Army. His method of dealing with them is a fair sample of the candor with which he treats such subjects. He said in a letter of instructions to General Lee, dated July 31, 1862: "The general order issued by Major-General Pope on the 23d of July, the day after the signing of the cartel, directs the murder of our peaceful inhabitants as spies, if found quietly tilling their farms in his rear, even outside of his lines" (vol. ii. 316). This might pass for the sensational exaggeration of facts in time of war, intended to key up the flagging zeal of his people, were it not quoted in full after twenty years as a true statement "of the atrocities which he (Pope) threatened to perpetrate upon our defenceless citizens." What, then, was the order which is thus travestied? It was that, in consequence of the "bushwhacking" and systematic spying which was constantly going on and was notorious, an oath of allegiance and security for its observance should be required of those who desired to remain at home, in rear of our army, and pursue their ordinary avocations: "Those who refuse shall be conducted south beyond the extreme pickets of the army, and be notified that if found again anywhere within our lines or at any point in the rear they will be considered spies and subjected to the extreme rigor of the military law." We will not discuss the policy of the order or the feasibility of enforcing it. Mr. Davis does not pretend that an execution took place under it. Our question is simply as to the fairness of his statement of its contents. When men considered dangerous had been sent beyond the lines with notification that they would be considered spies if again found within them, the case is one clearly within the ordinary power and practice of military commanders within the theatre of operations. Harsh it may be, but war is harsh. To represent this as the "murder of peaceful inhabitants found quietly tilling their farms," is so exactly the contrary of the fact that it was properly ranked, at the time, among the unscrupulous methods by which the Southern Government sought to prevent the growth of feelings in favor of peace; and to repeat it now is to show a significant absence of the essential qualities of a historian. Extravagance generally defeats itself, and the oft-repeated declaration that the conduct of the Northern troops was that of "barbarians," exceeding the wickedness of Alva in the Netherlands or Wallenstein in Germany, and the like, passes for mere sound and fury. A fair examination of facts in detail would show that no war has ever been waged with more humanity and less cruelty. To any one who followed in the track of military operations from Wörth to Sedan and to Paris, or in the more recent campaign in Turkey, Mr. Davis's assertions will seem so reckless as to lose all character except that of rhetorical flourish.

To the younger men of the South, who have learned to rejoice at the extinction of slavery, and who see that the hire of free laborers is more profitable as well as more humane than slavery, Mr. Davis's apotheosis of the obsolete wrong and folly will be curious reading.

"Generally," he says, "they [the bondmen of the South] were born the slaves of barbarian masters, untaught in all the useful arts and occupations, reared in heathen darkness and sold by heathen masters. They were transferred to shores enlightened by the rays of Christianity. There, put to servitude, they were trained in the gentle arts of peace and order and civilization; they increased from a few unprofitable savages to millions of efficient Christian laborers. Their servile instincts rendered them contented with their lot, and their patient toil blessed the land of their abode with unmeasured riches. . . . Never was there happier dependence of labor and capital on each other. The tempter came, like the serpent in Eden, and decoyed them with the magic word of 'freedom.'"

He who can speak thus of the disgrace to civilization which no government of Europe or America now pretends to uphold (Spain and Brazil having entered upon the process of emancipation) is so far behind his time that his opinions will have no weight with any who have learned to take satisfaction in being abreast with the world's progress. What he says will be regarded only as the echo of a former period of illusion and of ignorance, now so far away in the swift current of later events that his words have as little relation to the present as those of the sleepers of Ephesus awaking in those slower times after centuries of oblivion. For his own sake we could wish that his book showed some appreciation of the real meaning of the great crisis in which he was so prominent for a time, and of the better future which awaits the whole country, South and North, now that the only cause of strife has been abolished. It would be far happier for him if he could grasp the truth that, in the Providential development of human institutions, the

great civil war in our country was a purifying storm, terrific in its phenomena, but ensuring a purer air and a better climate for moral and political health. Then he could understand that a man like Lincoln could sternly employ war measures in the service of freedom, and that a people jealous of their liberties could bow to military rule for a while and for the sake of great results, and yet resume their personal independence when the exigency was over. All this he confesses himself incapable of learning, and has taken infinite pains to prove that he must end as he began—the narrow advocate of a false system which for a century barred the path of progress appointed for America.

JOHN DE WITT.

History of the Administration of John De Witt, Grand Pensionary of Holland. By James Geddes. Vol. i. New York: Harper & Brothers. 1880.

A PERIOD of thirty years lies between the fall of Olden Barneveldt, Grand Pensionary of Holland, in his struggle against the encroachments and designs of the House of Orange, and the beginning of the leadership of John de Witt, who, in early manhood, avenged the blood of the hoary Olden by bringing about the abolition of the stadtholdership, but, finally, like him, fell a victim to the Orange party. The intervening period is that of the Thirty Years' War, and embraces, in the history of the United Provinces, the last years of the career of Maurice of Nassau and the stadtholdership of his brother and successor, Frederic Henry—a time of vigorous contests with Spain by land and sea, which secured independence and maritime power, and doomed the political foes of the war-like stadtholders to silence or useless opposition. The general peace of 1648, following closely upon the death of Frederic Henry, opened a new era of Dutch politics, and John de Witt, even before he was chosen Grand Pensionary of Holland, became the direct successor of Barneveldt in leading statesmanship. His English biographer is thus, in a measure, the continuator of the political history of the Dutch Republic, as concluded by Motley with the life of Barneveldt. The war period of 1618–1648 forms a gap between the two biographical histories, but the severance is not complete; and could the American writer see the work of his life thus continued by Mr. Geddes, he would surely rejoice at the thoroughness and ability with which the Englishman has applied himself to his task, though he might view with displeasure his lack of enthusiasm for his subject, and the coldness both of his judgment and diction.

Mr. Geddes himself seems to have felt that he was presenting to the English public comparatively dry and unattractive narratives. He rather modestly says in his preface: "The period comprehended in the following book is not a heroic period, and John de Witt is in no sense a hero. His age has little in common with the noble epoch described with so much graphic force by Mr. Motley, and in studying it we are moving in altogether a lower world of human interest, passion, duty, and activity." What made it the more difficult for him to create a picture both faithful and stirring was "the extreme difficulty, and the ever-recurring impossibility, of getting at the precise measure of De Witt's personal work and influence." The Grand Pensionary's public history lies entombed, beneath mountains of documents, in numberless archives—national, provincial, municipal, and private. "The lifetime of half a dozen men would not suffice to exhaust these, and, until they are sifted and made public, anything like a final history of this period, or a final life of De Witt, is impossible. The man De Witt, as he lived and moved, we do not expect ever to see much of. His contemporaries did not write memoirs, and the social, non-political, non-official side of him—the human side of him, in short—we have no hope of ever discovering." This is expressed still more strongly elsewhere, in reference to a special period in De Witt's life, when he was equally young and prominent:

"The man and his doings, the real biography and life of him, at this time are buried in thick darkness. To get at the man as he lived and walked and worked in that Hague life of his is an impossibility. To ascertain such a thing as how he clothed or fed himself is a vain endeavor; to discover that he relished good beer and drank French wine is, in the barren wilderness, like finding a treasure. What we know of him, in his actual, practical doings, has all to be painfully pieced together out of mountains of letters, printed and unprinted; and when the patchwork is done we find that hardly a lineament of the man and his work has been set forth. We have no Boswell, or homely Dutch gossip, to light up his figure for us; and his letters, while throwing no inconsiderable light on the history of the Republic, throw little upon himself. There is scarcely one single reference to his own personal pursuits or tastes. Even to his father and brother there is the stiffest, stateliest reserve. His letters are the mere notes of a chronicler. He is the baldest, the most meagre, though he is also a clear enough, annalist."

It is by a careful examination of these letters—of which the unprinted fill a large section of the Record Office in the Hague—and of the letters addressed to De Witt that the author, enlightened also by documents in the State Records of England and the unpublished correspondence of the French ambassadors, has been enabled to form an estimate of the great Dutch statesman's real and personal achievement in the Republic, to exhibit the sphere, the scope, and the aims of his activity, and to pass judgment on its methods and character. Thus the book before us is more than a history of an administration, of a period, though it is mainly that, as its title correctly indicates. And both the period and its leading statesman—though neither be heroic compared with the time and the men that brought forth the Dutch Republic—are interesting enough to students of history, and especially to those to whom the various phases of Dutch federal and state life, in alternating ascendency, present instructive analogies to the more recent history of their own country. Parallels between the internal contests of the United Provinces and those of the United States can easily be drawn, though we must never forget that in the United Provinces State sovereignty meant oligarchy, and Federal power the sway of the house of Orange.

Mr. Geddes very impartially sums up the great questions underlying De Witt's political activity, the methods which he applied to his work, and the results obtained. The principles of autonomy in various degrees for which he contended were not established by De Witt. He found them at work around him, confirmed their supremacy, and secured for them a long triumph. "What he did was done with great talent, singular fertility of resource, unshrinking boldness, iron inflexibility, and marvellous reticence; that is, the *manner* of doing the thing was admirable." He moved on the very edge of statesmanlike integrity in working for his cause; though punctiliously honest, strong, and proud, he intrigued, tricked, and deceived for it: was it, at least, the best of causes? The answer is: "We think it was a crime against the future to resplit this little territory into seven cantonal atoms after the work of fusion among them had begun, and to bequeath to posterity perpetually enduring legacies of provincial jealousies and strife." The smaller these cantons were the more needful was real union; the more so as "Jesuit-ridden Spain," which held Brabant and Flanders, and "land-hungry France, which lay beyond, were ever ready to foment internal discords, and rend for their own objects the little confederation into hostile camps." And it was only through the House of Orange that unity, harmony, power, and security could be created and maintained. For this unity, with its natural results, not wise and unselfish but "blind and passionate strivings" were active, and against these De Witt was laboriously fighting. The tide of centuries, which had been creating nations everywhere in Europe, "he was sweeping out with his little broom. His aim was to prop up tiny autonomies, each flaring its parchment in the face of the other, . . . and in the eyes of all Europe." It is "pitiful to contemplate him toiling with all his keen ingenuity, and sharp legal processes of intellect and cunning, to invest every town with inviolable sovereign rights; nay, not so much the town as the small clique of leading families who held the monopoly of administration, looked scornfully down upon the people, and fattened themselves upon the communal revenues. This surely was poor work, even taking it at its best." That it yet agrees with a public character on which there is hardly a blemish lies chiefly in the circumstance that the "House of Orange itself had become false to its traditions, gone a royal marriage-hunting, and had been selling the people for that wretched end. And, further, he was not constructing a new political edifice; he had to deal with one whose foundations lay deeply bedded in an immemorial past. . . . Dutch life and institutions were not plastic." To work a change meant to surrender the provinces to "an ignorant and Orange-worshipping populace," who would have instantly enthroned the dreaded house with rapturous acclaim. De Witt could not but prefer the old order of things, the predominance of Holland—his own province—and the safety of republican institutions under his own virtuous leadership.

OUTWORN MODES OF PUNISHMENT.

Punishments in the Olden Time. By William Andrews, F.R.H.S. London: W. Stewart & Co. 1881.

IT cannot be said that a spirit of humanity tempered conspicuously the wisdom with which so many are wont to credit our progenitors. In bygone centuries much the same disparity no doubt obtained between the high and the low, intellectually and as to material well-being, that is now observable. Yet for a long time the cruelty, even in its grossest phases, of our forefathers seems to have been largely irrespective of social position. Gentle and simple, in past ages, were, in many essentials, alike barbarians. To pass from generalities to particulars, the extent to which, abstraction made of racking, thumbscrewing, and kindred enormities, the hideous practice of legalized torture in its various forms has prevailed in England, is brought into painful relief by Mr. Andrews's instructive little monograph.

Ludicrous though its associations are, the ducking stool was an instrument worthy of very savages; and we hope there is warrant for the author's belief that few offenders have been committed to it since the Elizabethan period. The amiable Vincent Bourne sang, to be sure:

> "Astride it set but a Xanthippe,
> Then twice or thrice virago dip ye;
> And not a lambkin on the lea
> Will leave the stream more meek than she";

and he ought to have blushed at his singing. Besides being employed for the correction of scolds and other unquiet women, it is on record that it was occasionally occupied by brewers of undrinkable beer, bakers of bad bread, and millers who pilfered corn. That its use sometimes proved fatal is not to be wondered at. In 1731 its remedial efficacy was tried, by order of the Mayor of Nottingham, on a courtesan of that place, with the result that she died soon afterward. According to an old chap-book, of uncertain date, another unfortunate woman at Ratcliff Highway was dipped until, on being released from durance, life was found to be extinct. As has been attested by a person still living, Jenny Pipes, in 1809, was carried about Leominster on a ducking-stool, and then immersed in the Lug, near Kenwater Bridge, at the instance of the magistrates. Sarah Leeke, of the same town, would have been served similarly, in 1817, if the river had not just then been too low, luckily for her. Mr. Andrews gives several engravings of ducking-stools, specimens of which are still preserved, as at Sandwich, Leominster, Ipswich, Scarborough, and Leicester. There was one, it is said, at Retford as early as 1279.

Ducking-stools may or may not have been a flower of British inventiveness, but one must needs feel gratified by the probability that the brank was borrowed from the Continent. Though, apparently, this imported abomination first won favor in Scotland, the native land of the boot, it was destined to become disgracefully popular in England. Mr. Llewellynn Jewitt's description of this atrocious piece of mechanism merits transcription, for all its faults of style:

"It consisted of a kind of crown, or framework of iron, which was locked upon the head, and was armed in front with a gag, a plate, or a sharp-cutting knife or point, which was placed in the poor woman's mouth, so as to prevent her moving her tongue; or was so placed that if she moved it, or attempted to speak, the tongue was cut in a most frightful manner. With this cage upon her head, and with the gag firmly pressed and locked against her tongue, the miserable creature, whose sole offence, perhaps, was that she had raised her voice in defence of her social rights against a brutal and besotted husband, or had spoken honest truth of some one high in office in the town, she [*sic*] was paraded through the streets, led by a chain held in the hands of the bellman, the beadle, or the constable; or, chained to the pillory, the whipping-post, or market cross, she was subjected to every conceivable insult and degradation, without even the power left her of asking for mercy, or of promising amendment for the future; and, when the punishment was over, she was turned out from the Town Hall or other place where the brutal punishment had been inflicted, maimed, disfigured, faint, and degraded, to be the subject of comment and jeering amongst her neighbors, and to be reviled by her persecutors."

Among the twelve patterns of branks, differing more or less in construction, depicted in the pages before us, those represented at pages 46 and 48, truly fiendish devices, could hardly have been applied without causing extreme suffering. The second of these, which was still to be seen a few years ago at Forfar, was stamped with the date of 1661. If reserved for a single class of victims, still that class, it should be borne in mind, was deplorably numerous in the benighted days of the seventeenth-century superstition. "The object aimed at, in applying so dreadful a gag to those who were condemned to the stake as guilty of witchcraft and dealing with the devil, was not so much the purposed cruelty which its use necessarily involved as to prevent the supposed possessors of such unearthly gifts from pronouncing the potent formula by means of which it was implicitly believed they could transform themselves at will to other shapes, or transport themselves where they pleased, and thus effectually outwit their tormentors."

The brank, it is stated, was publicly used at Chester, by order of the mayor and justices of that city, as late as 1824. On the assertion that "the use of the instrument was not sanctioned by law, but was altogether illegal," it is obvious to observe that immemorial and uncontested custom, existent at any given time, is, in a practical aspect, as good as undistinguishable from what is expressly authorized by legislation.

The cucking-stool or cuckstool, the tumbrell, gumstool or scolding-cart, the drunkard's cloak and riding the stang, we can only indicate as among the topics which Mr. Andrews includes in the scope of his interesting treatise. It will be news to many to learn, as we do from his pages, that Cardinal Wolsey, in his younger days, when rector of Lymington, was placed in the stocks for tippling by Sir Amias Poulett. He tells also of a man who, being condemned to stand in a certain pillory, proved too heavy for its fragile footboard, and was all but left hanging by the neck, and subsequently recovered damages from the town which had undertaken to punish him, for the untrustworthiness of its penal accommodation.

At page 60, by an odd oversight, the *North Briton* is spoken of as a work in "forty-five *volumes*." Nor is *quean*, in old English, otherwise than very rarely synonymous with "scold," the definition of it given at page 28.

CONWAY'S CARLYLE.

Thomas Carlyle. By Moncure D. Conway. New York: Harper & Brothers. 1881.

MR. CONWAY'S book has been in a measure anticipated by his *Harper* article and his newspaper correspondence, which are included in it, and to a less extent by the various publications that have appeared since Carlyle's death. The 'Reminiscences' especially are calculated to take the edge off whatever follows them in the way of intimate personal gossip. Indeed, judging from the narrative of Mr. Conway, who had unusual advantages in learning all about his subject, one is induced to reflect that the 'Reminiscences,' whatever the circumstances under which they were written, and however superficially distorted the view of Carlyle presented by them may be, leave little to be said concerning him. To many people they were a surprise and to some a shock, unrelieved by the consideration that they were possibly not intended for publication. Mr. Conway declines to "admit that the outcries of a broken heart should be accepted as the man's true voice, or that measurements of men and memories as seen through burning tears should be recorded as characteristic of his heart or judgment." But really he does not himself contribute anything to show that "the man's true voice" was essentially different from the exhibition of it in the 'Reminiscences.' Quite the contrary. He shows, and we take it that any one who gives us authentic *ana* about Carlyle must show, that his "true voice" was thoroughly elusive, and his utterances, to a larger extent than any man we know, of anything like the same parts, dependent upon his own feelings at the time. There is certainly no gainsaying that the 'Reminiscences' themselves prove this; and in the very thing that his apologists plead in extenuation—namely, the effect of his suffering on his judgments—consists the fatality of the blow with which Mr. Froude is said to have stabbed his fame. Mr. Conway only confirms what most of Carlyle's later readers have long felt—that his readiness to say, within certain limits, whatever came into his head, and to color it with his own feeling, of elation or depression, at the moment, fatally impaired his title to the reliance which apostles are fain to place upon the deliverances of a master. To relate, as Mr. Conway does, that he was roused to denunciation that attracted the passer-by upon hearing of some negro outrage; that he sympathized with Bishop Colenso's "wronged African Langahelele"; that he "helped arrest schemes" to obtain English aid for "the unspeakable Turk"; that the Harvard Memorial volumes moved him to say, "even with tears," "I doubt I have been mistaken"; that he was a hater of tyranny, opposed to all the wars England has begun, "from the Crimean to the Afghan"; that he defended Mazzini, and protested against the proposed Westminster memorial to the Prince Imperial—only confirms this. It is merely excellent testimony—not needed, surely, by any one who has read Carlyle with discernment—to the keen and broad nature of his sympathies. It is wholly possible to agree with Mr. Conway when he says that "those who have regarded Carlyle as a mere worshipper of brute force have formed a superficial judgment"—a notion originally promulgated, we believe, by the late Margaret Fuller, in whose presence one can fancy the conversational license which Carlyle, restrained before no one, permitted himself. Whether or no one shares Mr. Henry James's belief that ideas are too divine to derive any authority from the persons who hold them, it is clear that the first step to an appreciation of Carlyle's is to bear in mind that they are, if anything, to be scrutinized somewhat carefully on account of being his.

In this and in other respects the early letters appended to Mr. Conway's narrative confirm the 'Reminiscences.' These letters are the most interesting portion of his book, though we cannot agree with Mr. Conway, who says they contain passages "not surpassed by anything he [Carlyle] has since written"; who, when he got hold of them, "finished them in the early hours of the morning"; and who, to make extracts from them, sat up "through the best part of a couple of nights." They were written to two friends during the days of Carlyle's pedagogy, when he was about twenty years old. They contain no promise of his powers, literary or otherwise; but they disclose with perfect clearness the germs of character afterward developed. The main surprise of the 'Reminiscences'—if not indeed, to many readers, their only surprise—was the revelation of a character far more completely occupied with itself than Carlyle had ever revealed elsewhere. Nothing that is not to be called laudable ambition is to be discovered in the following extract, but it is safe to say that before the 'Reminiscences' appeared it would have sur-

prised people to find it in an early letter by the author of the 'Latter-Day Pamphlets' or of the Edinburgh address:

"Heaven knows that ever since I have been able to form a wish, the wish of being known has been the foremost. O Fortune! thou that givest unto each his portion in this dirty planet, bestow (if it shall please thee) coronets and crowns, and principalities and purses, and pudding and power upon the great and noble and fat ones of the earth; grant me that with a heart of independence, unyielding to thy favors and unbending to thy frowns, I may attain to literary fame."

Such a wish as that in the son of James Carlyle of Ecclefechan is significant. Elsewhere he says, with the contrition of a true native of Ecclefechan: "When I review my past conduct it seems to have been guided by narrow or defective views, and (worst of all) by lurking, deeply lurking, affectation." There is some excellent criticism of Gibbon in a letter of 1818, the writer being then twenty-three, but it is not precocious, and at the end there is a sufficient intimation that Carlyle's unteachability was ingrained: "I wonder what benefit is derived from reading all this stuff. . . . It is vain to tell us that our knowledge of human nature is increased by the operation. Useful knowledge of that sort is acquired not by reading but by experience." He refers often to Epictetus with admiration, saying in one place, evidently after reading Gibbon, that the 'Encheiridion' "may fortify the souls of the latest inhabitants of the earth." Homer pleased him little. "In fact, Mæonides has had his day. . . . Though some of the affections which Homer delineates are coexistent with the race, yet in the progress of refinement (or change) his mode of delineating them will appear trivial or disgusting, and the very twilight of his fame will have an end." In 1824 there was this excellent anticipation of his portraiture of Coleridge: "Coleridge is a steam-engine of a hundred horses' power, with the boiler burst." Ten years later he wrote to Leigh Hunt: "I am writing *nothing*; reading, above all things, my old Homer and Prolegomena enough; the old song itself with a most singular delight." A remark of Emerson's after visiting Carlyle which Mr. Conway gives is worth quoting: "Mirabeau, he said, interested him; and, I suppose, whoever has given himself with all his heart to a leading instinct, and has not *calculated* too much." That is precisely the philosophy of 'Heroes and Hero-Worship.' Mr. Conway gives also several new anecdotes and bits of Carlyle's discourse, of which we can only find room for the following:

"'Those Dutch are a strong people. They raised their land out of a marsh, and went on for a long time breeding cows and making cheese, and might have gone on with their cows and cheese till doomsday. But Spain comes over and says, 'We want you to believe in St. Ignatius.' 'Very sorry,' replied the Dutch, 'but we can't.' 'God! but you *must*,' says Spain; and they went about with swords and guns to make the Dutch believe in St. Ignatius; never made them believe in him, but did succeed in breaking their own vertebral column for ever and raising the Dutch into a great nation.'"

Illustrations of the Earth's Surface. Glaciers. By Nathaniel Southgate Shaler, Professor of Palæontology, and William Morris Davis, Instructor in Geology, in Harvard University. Boston: J. R. Osgood & Co. 1881.

THIS is the first volume of a proposed series designed to illustrate the prominent features of the earth's surface by means of photographs and other pictorial or graphic representation, with the view of conveying to the student a clearer conception of the subject than can be given by words and diagrams only. The plan contemplates a number of volumes, each independent of the others, devoted severally to Glaciers, Mountains, Volcanoes and Earthquakes, Lakes and Plains, Rivers and Valleys, the Sea and its Shores, Structure of Rocks, and the Effects of Life. It is intended that the illustrations shall be accompanied with descriptive text; and, moreover, each of the several volumes will present some statement or discussion of the essential facts and theories that belong to its special subject. In the volume now at hand Professor Shaler, the senior author, discusses, in a series of thirteen chapters, the phenomena of existing glaciers, the distribution of existing and ancient glaciers, the origin and nature of glacial periods, their climatal conditions, the evidences of ancient glacial periods, the effect of glaciers on the altitude of the lands, the effect of glaciation on the life of the earth and its relation to the history of man, and the movement and certain effects of glaciers.

The phenomena of glaciation are deeply interesting to the student of the earth's structure and history. Ice, as a geological agent, has played a most important part in modifying the past or shaping the present features of the earth, and in producing a large portion of the deposits which form its surface. But in considering the relations of glaciation to the history of organic life on the earth and to the early development of man, and in contemplating its possible relations to the career of the human race in the distant future, Prof. Shaler finds the subject invested with an interest greater than that belonging to any other branch of geology. In the light of recently-acquired evidence it is certain that man existed before the last glacial period and survived its trials; and it is equally certain that the earth has been repeatedly subjected to cold periods, which have covered the continents again and again with sheets of ice such as now only occupy a small space of lowlands about the pole and the uppermost levels of the higher mountains. Prof. Shaler believes that there is no reason to expect an early recurrence of such a cold period; nevertheless, one might need such a reassuring belief in considering the peculiarly delicate adjustment which, in his introductory chapter, he points out as existing between the conditions of temperature and moisture and life on our planet. Life here would be impossible if the temperature of the whole earth's surface should, for a considerable period of time, rise above 160 degrees or fall below 32 degrees Fahrenheit, a range of only 128 degrees; yet the range of temperature in the universe around and near us is said to be enormous beyond conception. The surface of the sun cannot have a temperature of less than 100,000 degrees Fahrenheit, while the temperature of some portion of the space between the earth and the sun is probably not less than 250 degrees below zero. It is the vapor of water in the atmosphere which, acting like a blanket, prevents the escape into space of the heat essential to terrestrial life. If a line one hundred feet long be taken to represent the total range of temperature in the solar system, a length of little more than one inch will represent the utmost limits of the range of temperature at which organic life, such as now exists on the earth, can possibly maintain its existence. Under these circumstances one might fear that a fatal change of temperature at the surface of the earth might be too easily brought about by some slight "accident," liable to occur in a much better regulated universe than ours sometimes appears to be.

Professor Shaler's collaborator, Mr. Davis, has contributed what appears to be a very full and valuable chapter on the bibliography of the subject; has prepared the diagrams necessary for the illustration of the text, and has selected and described the plates. The latter, twenty-five in number, make an interesting collection of photographic representations of glaciers and glacial scenery. The larger portion are Swiss, naturally enough, but there are others from Norway, India (by Bourne & Shepard, Calcutta), and the Rocky Mountains (by Jackson, United States Geological Survey of the Territories), besides glacial striæ, slickensides, and drift-sections from New York and Massachusetts. The purpose and arrangement of the collection are such as to show, first, a general view of glacial form; second, detail of structure from greater to lesser altitudes; and, third, effect of glacial action. The subjects are well chosen and adapted to the purpose intended, and the general effect of the pictorial series is very pleasing. The volume is a handsome quarto, containing about two hundred pages of letter-press, followed by the plates, which are generally so arranged that each opens opposite its page of descriptive text.

The Library. By Andrew Lang. With a chapter on Modern English Illustrated Books, by Austin Dobson. London and New York: Macmillan & Co. 1881.

MR. LANG'S share in this little volume of the "Art at Home" Series consists of three chapters, of which the first and third are entitled respectively "An Apology for the Book-Hunter" and "The Books of the Collector." The second alone treats of the Library, and in a manner neither exhaustive nor particularly regardful of the "home." In fact, there is nothing domestic in the pursuit of the book-hunter and collector, and Mr. Lang's subheading in the second chapter—"Women the natural foes of books"—is but half a jest, considering the class for whom his work is really intended. "The amateur, then," he says (p. 33), "is the person we have in our eye, and especially the bibliophile who has but lately been bitten with this pleasant mania of collecting." And this person "loves to have his study, like Montaigne's, remote from the interruption of servants, wife, and children." We must not look, then, for any dissertation on the family uses of a library, or its essential place in a cultivated household, or its relation in the plan to the other living-rooms, or for much practical advice on library conveniences, as to which five minutes spent at the rooms of the Readers and Writers' Economy Company will be worth vastly more than Mr. Lang's forty pages. In short, what he has written must not be taken seriously, but as something with which he amused himself and hopes to amuse others possessed of a like passion; and in view of the collaboration of Mr. Loftie, who supplies the technical information as to early printed books and illuminated MSS., and of Mr. Dobson, Mr. Lang's part appears to have been mainly to give the literary flavor to the pot-pourri. He does this successfully, albeit with a humor not always kept south of Tweed. Among his book-hunting anecdotes is the first-rate one of M. Tenant de Latour's finding among the leaves of an 'Imitatio Christi' belonging to Rousseau the immortal

periwinkle of the 'Confessions'; and a good one of his own luck in extracting from the vellum covers of an old 'Odyssey' "parts of two copies of a very scarce and curious French dictionary of slang," handy for interpreting the slang *ballades* of the poet Villon. Before taking leave of Mr. Lang we should not omit remarking on the careless and unscholarly proof-reading of the chapters for which he is immediately responsible.

Mr. Dobson's account of illustrated books is of a truly helpful sort for the collector, and is enhanced in value by liberal examples of designs by Bewick, Stothard, Blake, Cruikshank, Doyle, Tenniel, and many other English artists. In some instances we think he might have employed facsimiles to advantage. He praises and defends the American school of engraving associated with *Scribner's Monthly*, from which he borrows the cut of "Infant Joy" after Blake.

BOOKS OF THE WEEK.

Arnold, M. Poetry of Byron, chosen and arranged. London and New York: Macmillan & Co. $1 25.
Black, W. The Beautiful Wretch: a Tale. New York: Harper & Bros. 20 cents.
Dorchester, Rev. D. Problem of Religious Progress. New York: Phillips & Hunt. $2.
Helper, H. R. The Three Americas Railway. St. Louis: W. S. Bryan & Co. $1 50.
Howells, W. D. A Fearful Responsibility, and Other Stories. Boston: J. R. Osgood & Co. $1 50.
Lillie, A. Buddha and Early Buddhism. London: Trübner & Co.
Merrill, Rev. G. E. Story of the Manuscripts. Boston: D. Lothrop & Co.
Murphy, Prof. J. G. Commentary on the Book of Exodus. New York: I. K. Funk & Co.
O'Hanlon, Alice. A Costly Heritage: a Tale. New York: Harper & Bros. 20 cents.
Pardoe, H. C. Byrne Ransom's Building: a Tale. New York: Phillips & Hunt. 90 cents.
Perry, Nora. A Book of Love Stories. Boston: J. R. Osgood & Co.
Pomeroy, J. N. Treaty on Equity Jurisprudence in U. S. Vol. i. San Francisco: A. L. Bancroft & Co. 1881.
Poynter, E. Frances. Among the Hills: a Tale. New York: Henry Holt & Co. $1.
Qualtrough, E. F. Sailor's Handy Book and Yachtsman's Manual. New York: Chas. Scribner's Sons. $3 50.
Reiss, W., and Stübel, A. Necropolis of Ancon in Peru. Part 3. New York: Dodd & Mead. $7 50.
Rémusat, P. de. Lettres de Mme. de Rémusat, 2 vols., swd. New York: F. W. Christern.
Rhys Davids, T. W. Buddhist Suttas. London and New York: Macmillan & Co. $2 75.
Russell, W. C. An Ocean Free-Lance: a Tale. New York: Harper & Bros. 20 cents.
Scudder, S. H. Butterflies. New York: Henry Holt & Co. $3.
Schopenhauer, A. Select Essays, translated by G. Droppers and C. A. P. Dachsel. Milwaukee.
Serpa Pinto, Major A. de. How I Crossed Africa. 2 vols. Philadelphia: J. B. Lippincott & Co. $7.
Sherwood, Mary Neal. Barberine: a Tale. Chicago: Henry A. Sumner & Co. $1.
Sirven, A., and Leverdier, H. Nana's Daughter. Philadelphia: T. B. Peterson & Bros. $1.
Smyth and Chambers. Cycle of Celestial Objects. 2d ed. London and New York: Macmillan & Co. $5 25.
Taine, H. The French Revolution. Vol. ii. The Jacobin Conquest. New York: Henry Holt & Co. $2 50.
The Georgians: a Tale. Boston: J. R. Osgood & Co. $1.
Thompson, J. To the Central African Lakes and Back, 2 vols. Boston: Houghton, Mifflin & Co. $6.

TAINE'S

French Revolution, Vol. II.

THE JACOBIN CONQUEST. Being the third volume of 'The Origins of Contemporary France.' Translated by John Durand. Large 12mo, $2 50.

HELIOTYPE.

PERMANENT PHOTOGRAPHIC BOOK ILLUSTRATIONS.

THE HELIOTYPE PRINTING COMPANY

Are producers of illustrations by the most approved Photo-Mechanical, Photo-Lithographic, and Photo-Engraving Processes. Employed by the United States Government in illustrating Scientific and Medical reports; by Scientific, Historical, and other learned Societies; by the leading Publishers, and for illustrating Town and Family Histories, Trade Catalogues, Show-Cards, etc. Fac-similes of Medals and Coins, Ancient Manuscripts, Paintings, Drawings, Sketches, and Autograph Circulars, Views and Portraits from Nature, Medical and Scientific Objects, Antiquities, etc.

Estimates and specimens furnished on application.

THE HELIOTYPE PRINTING COMPANY,
Near Boylston Street. 211 Tremont Street, Boston.

Book-Lovers, Attention!

A choice Collection of Miscellaneous and Standard Books is offered for sale by the undersigned. It includes many rare and valuable works, having lately composed part of the library of a gentleman of wealth and culture. Among them is a large-paper copy of 'Baronial Halls'; a rare edition of Chesterfield (only complete edition); original editions of 'The Shakespeare Novels,' 9 vols., and 'The Picnic Papers' by Dickens, 3 vols.; a Selection from Zimmerman (not mentioned by Lowndes), and a "rara avis" in an India-paper edition of 'Vicar of Wakefield,' Thompson woodcuts and Mulready's engravings' proofs added, with 65 illustrations, etc. Send for catalogue.

M. H. DICKINSON, Kansas City, Mo.

The Critic,

"The fairest representative of broad culture in America." No. XIV. (Midsummer number), with extra illustration, to-day. Pen-and-ink portrait of Anthony Trollope, by Blum. Contributions from Walt Whitman, John Burroughs, R. H. Stoddard, Charles de Kay, F. M. Potter, J. H. Morse, Alice Wellington Rollins, and Leopold Lindau. Special advertisements of summer reading. Persons leaving the city should have the *Critic* sent to them while away. Sold everywhere. 10 cents a copy; $2 a year. Office, 757 Broadway.

Good Books, Old and New,

AT LOW PRICES.

Send address on postal-card for BRIEF LIST NO. 2 OF RECENT ADDITIONS TO THE MISCELLANEOUS STOCK OF

G. P. PUTNAM'S SONS,
27 and 29 West Twenty-third Street, New York.

DAVID G. FRANCIS,

17 Astor Place, Eighth Street, New York,
DEALER IN NEW AND OLD BOOKS.

PRICED CATALOGUES, containing valuable standard literature, as well as rare, curious, and out-of-the-way books, are issued from time to time, and will be forwarded to any address.

THE

New York Produce Exchange

Will Issue $1,000,000 First Mortgage, 4½ per cent., 5-20 Bonds in sums of $1,000 each, payable in twenty years, redeemable after five at the option of the Exchange, interest payable June and December, viz.: Coupon Bonds, which may be registered upon surrender of the Coupons; and Registered Bonds, not to be redeemed until all outstanding Coupon Bonds have been first called in. These Bonds are secured by a mortgage, to the Central Trust Company of the City of New York, of the plot of land fronting on Bowling Green, Broadway, and extending from Beaver to Stone Streets, together with the building to be erected thereon by the New York Produce Exchange. Proposals, endorsed and addressed to the Chairman of the Finance Committee, for all or any part of $600,000 of the above-mentioned Bonds will be received until noon of Wednesday, July 20, at the New York Produce Exchange, New York. All bids will be opened in the Managers' Room, No. 33 Pearl Street, at noon on that day. A check for 5 per cent. of the amount desired must accompany each proposal. Notice of accepted bids will be given by mail July 21. Payment for the Bonds, with accrued interest from June 1 to date of payment, must be made at the Central Trust Company on or before August 1, 1881, which Company will issue a receipt to be exchanged for the Bonds as soon as engraved and printed (on or about August 15). The right is reserved to reject any bids not deemed for the best interests of the Exchange. Any further information desired will be furnished by either of the undersigned.

BENJ. F. STEVENS, President.
JOS. M. GIBBENS, Secretary.

Schopenhauer Translated.

The five masterpieces of Schopenhauer, "Misery of Life," "Metaphysics of Love," "Æsthetics of Poetry," "Genius," "Education," translated into English, with a biographical sketch, by Garritt Droppers and C. A. P. Dachsel. In one volume, price $1 25.

For sale by all booksellers, or sent, post-paid, on receipt of price. Address *Sentinel* Office, Milwaukee.

The Portable Bookcase manufactured solely by Lockwood, Brooks & Co., 381 Washington Street, Boston, Mass., is the most perfect thing of the kind, it being easily moved, and adjustable for books of all sizes. Send for circular or call and see it.

BROWN BROTHERS & CO.,
59 WALL STREET,

ISSUE COMMERCIAL AND TRAVELLERS' CREDITS
For use in
THIS COUNTRY AND ABROAD.

AGENCY OF THE
NEVADA BANK OF SAN FRANCISCO,
62 Wall Street, New York.

Capital, paid up $3,000,000
Surplus (Reserve), U. S. Bonds 4,000,000

Issues Commercial and Travellers' Credits, and deals in Foreign Exchange. Offers special facilities for business with the Pacific Coast.

KIDDER, PEABODY & CO.,
1 Nassau St., New York; 40 State St., Boston.

EXCHANGE AND LETTERS OF CREDIT ON GREAT BRITAIN AND THE CONTINENT.
Correspondents:
BARING BROTHERS & Co., London;
FERIER FRERES & Co., Paris;
MENDELSSOHN & Co., Berlin.

KNAUTH, NACHOD & KÜHNE,
BANKERS,
17 WILLIAM STREET, NEW YORK CITY.

Circular Letters of Credit and Circular Notes for Travellers in Europe.

Sight Drafts on, and Cable Transfers to, all the larger cities in Europe.

Correspondents in London: THE ALLIANCE BANK, Limited.
Correspondents in Paris: CREDIT LYONNAIS.

A. P. TURNER & CO.,
207 WALNUT PLACE, PHILADELPHIA,
DEALERS IN RAILWAY BONDS.
Orders executed at all the exchanges. Correspondence solicited.

Antiques.

A new, large, and rapidly-changing collection of Antique Furniture, etc., restored, when required, with intelligence and skill.

New York is the best and the worst market for such. It buys liberally, but sells dearly.

Our prices are not more than two-thirds.

JOHN WANAMAKER.
1313 Chestnut Street, Philadelphia.

H. J. HEWITT, Printer, 27 Rose St., New York.

The Nation.

NEW YORK, THURSDAY, JULY 21, 1881.

The Week.

THE President has continued to gain during the past week, and it is now almost certain that, unless some unexpected accident occurs, he will entirely recover, and that within a much shorter time than at first seemed possible. The proposal of Governor Foster, of Ohio, that there shall be a national thanksgiving over his recovery has met with general approval. The governors of a large number of States have signified their desire to do what they can to further it. The suggestion that it is to be used to affect the fall elections was sure to be made, but if the President recovers rapidly, as now appears probable, so that the thanksgiving can be held early before the autumn, we shall probably hear no more of it. As the President's complete restoration to health grows more and more certain the subscriptions to the fund for the relief of his wife and family fall off—a pretty clear indication that the public take precisely the same view of the donation that we have expressed in these columns, namely, that with the President restored to health it would be an inappropriate and embarrassing gift.

Mr. Cyrus W. Field has written a letter to the morning papers explaining the origin of the fund which he is raising for the benefit of the President's wife and children. To show the need of it he cites the case of Mrs. Lincoln, for whom Congress, after long delays, only voted a paltry pension of $3,000 a year. As we have already said, we do not think any example or warning is necessary to establish the propriety of a provision by public subscription for Mrs. Garfield and her children in case of the President's death. It could hardly be too large, and rich and poor could hardly make a better use of their money than in contributing to it. But Mr. Field does not make the payment of the money dependent on Mrs. Garfield's being left a widow. He proposes to pay it in any case, and anticipates as the effect of it, in case the President should recover, that he will be "animated to new zeal to serve a country which had remembered him in his hour of sorrow, and anticipated events in caring for him and his." Consequently the fund is really intended to be a gift to the President. Provision for a man's wife and children in his lifetime is of course necessarily provision for him, as it takes the place of drafts he would otherwise have to make on his own income.

Mr. Field further adds that "as it is simply a matter of feeling, of course we do not expect those who do not feel as we do to join." This seems to be an intimation that those who do not subscribe or are not asked to subscribe, do not sympathize with his aims and should not criticise them. But this view of the matter will hardly bear examination. We do sympathize cordially with his undertaking, but the President is the President of the whole people. Those who do not subscribe to the fund, and who disapprove of it, are as much interested in his fame and in his efficiency as those who do, and for our part, it is because we are deeply interested in his fame and efficiency that we object to the shape which Mr. Field's testimonial is taking. We object to it because it will put the President at the very beginning of his term of office under pecuniary obligations to a considerable number of rich men, whose names and the exact amount of whose contributions will be known to him. If it be said that the circumstances of the gift will prevent his feeling this obligation, we answer that it is not enough that he should not feel it; that he ought not to be placed in a position in which he would even be suspected by his enemies of feeling it, and that the existence of grounds for suspecting him, which would justify the suspicion of ordinary men under like circumstances, must inevitably diminish his influence by exposing him to injurious criticism. This is not the time, it seems to us, when it is well to weaken the sensitiveness of American officials about imputations on their official integrity, or to familiarize the public mind more than it has been familiarized already with the practice of gift-taking as a reward for public services. We have gone some distance in that direction already. Is it not time to stop or retrace our steps? We anticipate for President Garfield, after his recovery, a position of remarkable if not unprecedented authority and influence, of which we hope and believe he will make the best use. It is more than likely that he will be nominated for a second term. Is it wise, then, to furnish his opponents with the ready instrument of detraction which they will use against him with more or less effect, and which, in so far as it is effective against him, will be effective against all the good causes he is expected to promote?

On Saturday of last week Mr. Warner Miller was elected Senator in place of Mr. Thomas C. Platt for the "long term," which ends in 1887. This success of one of the caucus nominees was largely due to the desertion of the Conklingites by Mr. Sharpe, whose speech on the occasion caused a profound sensation among the politicians at Albany. According to his own account, he felt "bound by the action of the caucus," and this seems such a simple explanation that we are sorry to see some of our esteemed contemporaries throwing doubts upon it, and suggesting that the Speaker's action is the result of a "deal." Mr. Sharpe now figures in the Conklingite vocabulary as a "Judas," but the election of Mr. Miller has made many politicians indifferent to the odium of this once-dreaded term, and the list of Judases has been swelled every day since by the addition of important names. As we go to press it looks as if the election of Mr. Miller must be followed by that of Mr. Lapham, although Mr. Conkling is still trying to keep "his forces" together.

No one can be expected to feel anything like a fanatical enthusiasm over the election of Mr. Miller, who is an ordinary politician enough; but the news was received by most people with a distinct sense of relief and even positive satisfaction. Among persons connected with politics the galling tyranny and oppression of the Machine, as Mr. Conkling worked it, made the election of any anti-Conkling man seem like a guarantee of the right to a decent independence and freedom of action, while among the rest of the community the disgust produced by the recent performances of the "Boss" was so great that the choice of a poorer candidate than Mr. Miller would have been hailed with pleasure. The principal point of objection to him is that while a member of the House he lobbied a committee on behalf of the "wood-pulp" men, he himself being a "wood-pulp" man, and therefore pecuniarily interested in any measure relating to the industry. He is also charged with having deserted from the army, but his friends have had much more success in dealing with the second accusation than the first, for it appears to have been made out of the whole cloth.

There is something very peculiar about the case of Mr. Silas B. Dutcher. If any one has been instrumental in maintaining the deadlock at Albany it is he. He has, according to the New York *Times*, devoted almost the whole of his time since Platt was elected in January to "political work around the hotels in Albany," and never more actively than during the pending contest. What makes this extraordinary is, not that Dutcher is drawing $6,000 a year as Superintendent of Public Works, but that "the understanding was"—we quote the *Times* correspondence again—"when the Constitution was amended to provide for a Superintendent of Public Works, that this officer, to be appointed by the Governor, was to attend strictly to his business, and not to employ his power at all to control political affairs." In justice to Dutcher, we must say that we do not believe that he shared in this understanding even remotely, and that six thousand dollars would be with him a very paltry consideration for taking office in the spirit of President Hayes's famous executive order, so effectively ridiculed by the Superintendent's friend Conkling. The *Times* also takes Governor Cornell to task for not heeding the intent of the law, and packing Dutcher off about his business of inspection; but the reply must be that such was not the object of his appointment, and that it would be a great hardship to begin civil-service reform with Dutcher, when it is far from being a uni-

versally accepted doctrine that a public servant is chosen simply to discharge the duties of his office. The nominal responsibility of the Superintendent of Public Works to the Governor accordingly avails the public nothing in the presence of such a scandal, for both take exactly the same view of a functionary's obligation to the taxpayers.

During the week the New York banks gained largely in reserve, so that the surplus reserve was increased by $4,650,000 and brought up to about $11,250,000. There was no change meantime in the rates for foreign exchange, although the tone of this market was rather heavy. At the Stock Exchange it was a week of liquidation of "bull accounts" in stocks, induced (1) by a continuance of the railroad war between the trunk-lines, the rates for passenger fares from New York to Chicago having fallen to $8 50, and those for freights to nominal figures; (2) by the reports of the Agricultural Department that the wheat crop would be only about 83 per cent. of last year's yield; and (3), by the reports that the wheat harvests on the Continent would be above the average, and that throughout Great Britain about the average. The condition of the President has ceased to be an important element in Stock Exchange speculation, his recovery being deemed merely a question of time. The improved condition of the New York banks, the heaviness of foreign exchange, and the decline in the price of stocks (which has ranged from 2 to 17½ per cent.—the latter, Milwaukee & St. Paul common stock), have all tended to make the loan market very easy and to depress rates. This condition of the money market is likely to extend further into the autumn than usual because of the proposed redemption of between $30,000,000 and $40,000,000 of bonds called for payment by the Treasury October 1, but which may be prepaid with interest up to the date of presentation. The volume of mercantile transactions, as shown by Clearing-house returns, continues much larger than a year ago; the traffic of the railroads is also, in most cases, larger than a year ago; and the present war of rates, for which Mr. Vanderbilt is largely responsible, is attributed not so much to a deficiency of tonnage on the trunk-lines as to his wish to defeat schemes for rival roads, such as that proposed by the Continental Construction Company, and to promote stock-market interests. The price of silver bullion during the week has been comparatively steady at the recent decline. The closing price in London was 51*d.* per ounce. The bullion value here of the 412½-grain silver dollar was about 85⅝ cents.

On Thursday, thirty-five candidates for clerkships were examined at the Custom-house in this city under the supervision of Mr. N. G. Williams of the Collector's Office, Mr. John M. Comstock of the Naval Office, and Mr. John L. Livingston of the Surveyor's Office, being a commission appointed for that purpose. The detractors of the movement for civil-service reform, who pretend that the spoils system is furnishing "the best service in the world," have been in the habit of ridiculing competitive examinations as an outlandish contrivance by which it is to be ascertained what candidates know about the substance of the moon, or the velocity of light, or the inner chambers of the pyramids, or other things having nothing to do with the practical duties of a public servant. What is the truth? The candidates were first tested as to their ability to write from dictation, their penmanship, orthography, and punctuation. Then they had to write out various sums in numerals, to solve several problems in common and decimal fractions, and to answer some questions in applied arithmetic; next a number of simple questions in geography, history, and the science of government. Then followed an examination in grammar, the candidates being required to correct some examples of false syntax. Finally, they were asked to write a letter of their own composition upon a subject of general interest. It will be seen that all the subjects on which the candidates were examined were of immediate importance in the discharge of clerical duties except, perhaps, those connected with history and governmental science, an examination in which is had only for the purpose of testing the general intelligence and information of the candidate.

Every candid man will admit that this method of ascertaining, before appointments are made, those qualifications of candidates for clerkships which a man should possess in order to be an efficient clerk, is eminently sensible and practical. According to the rule, those who win the best ratings in the examination are to have the appointments. It is frequently objected that, after all, the result of such examinations cannot be depended upon; that some men who are able to pass an examination successfully show little practical ability afterward, and that others who possess considerable practical ability cannot pass an examination. But no intelligent advocate of the system of competitive examinations pretends that it can be depended upon to determine with absolute certainty in every case the practical ability of a candidate for office. They assert, however, that a man who has demonstrated his superiority to his competitors in penmanship, orthography, syntax, arithmetic, composition, and in general intelligence and information, is preferable, when clerkships are to be filled, to a man who is deficient in those things, and that a sufficient opportunity to test the purely practical ability of the man is furnished by the probationary period of six months, which, according to the rules, follows the successful passage of the examination. They further contend that the competitive system, supplemented by the period of probation, furnishes an infinitely more trustworthy test of the business qualifications of applicants for place than is furnished by recommendations from "Jake" Patterson, "Mike" Cregan, Mr. John F. Smyth, or even gentlemen of far more pretentious and potential names. They finally insist that the competitive system is the best, and in fact, as far as known, the only method that can be depended upon to exclude from the subordinate places in the Government the demoralizing element of favoritism and political serfdom, and to lift the service into a higher moral atmosphere. If there is a better method we shall be glad to accept it. But so far we have heard of none.

The proverbial hollowness of party platforms does not interfere with their usefulness as signs of the times. In fact, the greater the inconsistency between their professions and the selfish interests of political managers, the surer we may be that a public sentiment exists which the managers think must be propitiated. There was, accordingly, among the resolutions of the Ohio Democratic Convention at Columbus on Wednesday week none more significant than the very well worded one which committed the party to "a civil-service reform whereby offices shall be held to be a public trust to be administered for the public good, not spoils to be enjoyed as the reward of partisan zeal or service." This reads oddly, no doubt, in connection with the report that the convention was packed by the successful candidate for governor; but even so, it is the homage which political corruption pays to a real or supposed popular conviction on this vital question. Moreover, the more frequent the iteration of such doctrine by such bodies—and it grows more frequent from month to month—the more the edge is insensibly dulled of the reproach that a non-partisan civil service is unpractical and utopian. The more, too, the mind of the common man is made familiar with the mere phraseology of reform, the more his objections to it as a strange invention must be sapped. Let any one consider how many insincere declarations as to woman's suffrage and prohibition have found their way into party platforms, and come to nothing so far as concerned any attempt to carry them out, and yet have undoubtedly fostered both movements by depriving them at least of absurdity in the eyes of the public.

The robbers who "went through" the Chicago, Rock Island, and Pacific train, near Winston, Missouri, on Friday, seem to have accomplished their work with little difficulty. The cars were boarded at Winston about half-past nine in the evening, the conductor and a passenger shot dead, the express car robbed of several thousand dollars, and the train left by the gang, all in the space of a very few minutes, and without any effectual resistance, or, indeed, the apparent possibility of any. According to the statements of a Topeka policeman, who was on the train and seems to have been prepared to defend himself, one of the brakemen was far more alarmed at the sight of his revolver than at the presence of the robbers, no doubt considering the rifling of the express car a more satisfactory alternative than a general fight. It is hard to see how such descents upon trains containing treasure can be prevented unless the money is protected by a guard. Express messengers can hardly be expected to

do much in the way of protecting money unless they have at least some chance of saving their lives at the same time. A gang of determined desperadoes, who are ready to shoot down two or three people in charge of the train if necessary, can always count upon the general non-resistance of the passengers, and of course one successful raid of this kind will always lead to others. The robbers in the present case are believed to have been members of a well-known gang, who have committed many crimes against property and life already.

The King of the Sandwich Islands started some time ago on a tour round the world, the exact purpose of which does not as yet seem to be fully understood. According to the first account, his intention was to sell his kingdom to England or France. The story is, however, now denied as "frivolous and utterly false," and at the same time another explanation is brought forward as having been obtained from "a number of the most prominent planters and merchants from the Sandwich Islands." This explanation is that the King was "at one time induced" to agree to import a million Chinamen to the Sandwich Islands, on whom a capitation tax of $7 a head was to be levied. The Chinamen were then to be made citizens, and the kingdom "to be turned over to the Chinese Empire for this consideration." The scheme was, however, "balked" by the action of "foreign residents and officials." Upon this, "chagrined at the issue and his resulting unpopularity, the King went off on a tour of the world." This would rob the King's trip of all mercantile significance, and would imply a speculative spirit on the part of China which would be a surprise to most people. On the other hand, it is obvious that an intelligent monarch who wanted to sell his kingdom would hardly set off on a tour round the world to "place" it himself. Such a proceeding could not fail to have a bad influence on the market. The employment of a capable and active broker in New York or London, who could bring the property "out" in the regular way, see that it was "stocked" properly, and, if necessary, "wash" it a little, would lead to far more satisfactory results. We could point out a dozen or more well-known operators on Broad Street who would work off the Sandwich or any other available islands if the owners cared to put a price on them.

The Irish Land Bill has passed through another crisis in its course, by the adoption of the emigration clause by a vote of 126 to 23. This clause simply enables the Government to assist emigration with money. It has been strongly opposed by a small set of the Parnellites, now dwindled down to twenty-three, whom Mr. Gladstone denounced bitterly for their obstructiveness. The motive ascribed to them for opposing this clause is a desire to defeat the bill altogether by making it more obnoxious to the Lords, who, like most Englishmen of all parties, attach great importance to emigration as a remedy for Irish woes. In fact, we have very little doubt that, were it possible to carry it out, most Englishmen who have no special connection with Ireland, and take no special interest in Irish questions, would confine themselves to this remedy alone for Irish distress. From the time of Elizabeth down, the idea that the greatest obstacle to the peace and prosperity of Ireland has been the presence on her soil of the native Irish population, has had a firm hold on the English mind. It was the animating idea of King James's Plantations and of the Cromwellian Settlement, and has more or less influenced nearly all recent English opinion about Irish troubles. Lord Lyndhurst's desire that the island might be laid under water for twenty-four hours was simply a grotesque expression of it. It must be admitted, too, that it has been tried on a great scale. The emigration from Ireland since 1846 is probably, all things considered, the greatest exodus which has taken place in the world since the great movements of population which overthrew the Roman Empire. Of the gain to those who have emigrated there is no question. But of the gain to the remaining population of the island there is much reason for doubt. The emigrants have been for the most part hardy, energetic, enterprising, and thrifty, and generally in the prime of life, and their steady outflow during the last forty years cannot but have lowered the average power, both mental and physical, of those who have stayed at home. Moreover, the emigration does not seem to have had the smallest effect, in spite of the scale on which it has been tried, in diminishing Irish discontent, or in reconciling the bulk of the population to the existing political order.

Prince Alexander of Bulgaria has returned from Sistova, where his improvised new National Assembly was held last week, to his capital, Sophia. He was "enthusiastically" received by immense crowds, the city was decked with flags and brilliantly illuminated. Much of this enthusiasm was undoubtedly manufactured by his tools, native and foreign, judging from similar demonstrations during the Prince's late tour, of which fuller accounts have reached the newspapers of western Europe, and from the circumstance that Sophia was considered so hostile to the Prince's *coup d'état* that he did not dare convene his Assembly there, but at a comparatively insignificant border town on the Danube. On the other hand, it is now learned on good authority that the changes in the government of the Principality submitted to a *plébiscite* by the Prince and adopted by acclamation at Sistova, though distasteful to all patriotic Bulgarians as a violation of the constitution, are yet favorably regarded by the Conservative party, or the party of the former notables, for their promise of relief from the intrigues, political and personal, and demagogic agitations with which the Liberals, or former revolutionary party, have so long disgusted the quiet-loving and industrious portions of the people. The Zankoffs, Karaveloffs, and Soloveikoffs had certainly the legal right on their side in vehemently opposing the clothing of the Prince with dictatorial powers, and the latter has, it is known, carried his points by processes of intimidation and bribery, military violence and political jugglery, which make the elections and the Sistova Assembly appear like a farce worthy of Hayti under Soulouque, or of Louisiana under Kellogg. Still, a radical change in the constitution of Bulgaria seems to have been demanded by the necessities both of the Government and of the people; and even the abrogation of the constitution is probably applauded by those with whose private interests it agrees, and to whom it opens chances of influence and emolument formerly monopolized by men of an opposite party. Russian officers and Russian subsidies have finally placed Alexander I. of Bulgaria on a throne almost as autocratic as that of Alexander III. of Russia. It remains to be seen whether his is safer than that of his mighty cousin.

The result of the elections to the Hungarian Diet, held at the close of last month and the beginning of this, is a victory for the Liberal party and the Cabinet presided over, since 1875, by Coloman Tisza. The number of representatives to be elected was 414, and 398 had been elected on or before July 1. Of these, 226 were Liberals; 82 members of the Extreme Left, or Independence party; 66 members of the Moderate Opposition, or Conservatives; 13 Independents, or no-party men; and 11 Nationalists, or Slav and Ruman opposition men. The Liberals gained a number of seats, chiefly from the Extreme Left and the Moderate Opposition. Tisza himself was elected by acclamation in a Transylvanian district, and so was Pauler, the Minister of Justice, in Buda. Some of the Conservative leaders, among them Apponyi, suffered surprising defeats; others, like Paul Somssich, a famous leader in years past, and the editor, Urvári, achieved signal victories. Contrary to its practice three years ago, the Cabinet cast its influence in favor of the Conservative candidates, against those of the Left, wherever it felt too weak to have candidates of its own, and the consequence was an increased loss to the Left, which began the contest with buoyant hopes and carried it on with great activity. The latter party triumphed, among other places, in Klausenburg, where its candidates, two editors, had been made exceedingly popular by insults suffered at the hands of Austrian army officers, and at St. Gothard, where Helfy, an indefatigable parliamentary interpellator, profited by the present unpopularity of his antagonist, the ex-Minister of Finance Széll. Miletics, the stanch and impetuous Serb Nationalist, and Istóczy, notorious as an imitator of the German anti-Semites, are both re-elected. Among those elected without opposition is a son of Francis Pulszky, whom many Americans still remember as the companion of Kossuth on his tour through this country.

SUMMARY OF THE WEEK'S NEWS.

DOMESTIC.

THE President's convalescence continues very slow but uninterrupted. The "danger line," whatever that may precisely mean, is said to have been passed on the 13th. He has begun a diet of solid food, and the increase of fever has been slighter every day. The judgment of his physicians is, as it was last week, that unless something unforeseen, or, more accurately speaking, unexpected, should occur, his substantial recovery is to be counted upon with confidence. The President's mother has suddenly been taken critically ill.

The Albany deadlock was broken on Saturday by the election of Mr. Warner Miller, nominated by the Administration caucus, to fill the unexpired term of ex-Senator Platt. Mr. Miller had three votes to spare, and would have been elected without the defection from the Stalwart ranks of Speaker Sharpe. The latter, however, voted for him and for Mr. Lapham in place of Conkling, explaining in a speech that he regarded the action of the caucus as binding upon him, since he had at first been in favor of just such action. He had, he said, waited after the caucus nominations to see if the objection urged against Messrs. Miller and Lapham—namely, that they were members of the present House of Representatives—would not, as in his opinion it should, influence a reconsideration of the caucus's action. Inasmuch as it had not, he felt bound to follow the lead of the majority of the Republican members of the Legislature—a position he had always maintained. Before this speech in joint session Mr. Sharpe had divulged his intention of abandoning Conkling at a meeting of the Stalwart faction, and received very severe rebukes from his former associates. Assemblyman Armstrong charged him with ingratitude to his chief, and, it is reported, "emphasized his words by marching across the room with both hands raised, giving Mr. Sharpe a look that made the latter draw himself down in his seat." Great excitement naturally followed, but the Speaker stoutly maintained that there "was nothing more between" Mr. Conkling and himself "than personal friendship." Mr. Conkling is said to have referred to Mr. Sharpe's defection "in emphatic language." On Monday's ballot Lapham lacked but five votes of an election, and on Tuesday's but four. Tuesday, ex-Marshal Payn, who is one of Mr. Conkling's principal managers, received a letter from his chief requesting that his wavering supporters should hold on another forty-eight hours, during which something wholly unexpected might happen. So far nothing has occurred to justify the request.

Governor Cornell occupies the time afforded by the prolonged legislative session in vetoing bills which are not to his satisfaction. On Thursday he returned to the Senate without approval Senator Braman's bill appropriating an additional $500,000 to complete the exterior walls of the new Capitol; Senator Forster's bill to improve Riverside Park in this city; and Senator Rockwell's, to protect trees and shrubbery on Lake George. The vetoes were all laid on the table. The Governor's objection to the new Capitol appropriation, like others of his objections to bills requiring appropriations, was founded on public economy. He says: "It cannot be supposed that the new Capitol would have been authorized had the people had any realizing sense of its ultimate cost."

The Ohio Democratic Convention which met at Columbus on the 13th inst. nominated the following ticket: Governor, John W. Bookwalter; Lieut.-Governor, Edgar M. Johnson; Supreme Judge, E. F. Bingham; State Treasurer, A. F. Winslow; Attorney-General, Frank C. Dougherty; Commissioner of Public Works, John Crowe. The proceedings were boisterous and characterized by much eloquence. From the first the triumph of what is called in Ohio the Young Democracy was assured, and every allusion to their candidate, Mr. Bookwalter, was received with applause as vociferous as it was prearranged. The platform contained resolutions advocating the "equality of all people before the law," equal taxation, and other preliminaries of State conventions; objecting to criminal labor, condemning the last Legislature (Republican) for its "incompetency, hypocrisy, unnecessary and heavy increase in the burdens of taxation," and for other more particularly local atrocities; advocating civil-service reform; announcing the conviction that "a tariff should be for revenue" without "creating monopolies," and recommending a commission of revision on the subject. Bookwalter is said to have "no record," and this is believed to be unsalutary to a Democratic candidate in Ohio.

The Universal Life Insurance Company of this city, which has been in a known shaky condition for several years, was officially declared bankrupt on Saturday. The stockholders have been called upon for the important deficiencies of the company, and are now sufficiently warned that the intimation to the same effect some years ago was not purely perfunctory. The deficiency is nearly a million of dollars. Litigation is threatened owing to the position which the late Superintendent of Insurance, John F. Smyth, took in reference to the company; which circumstance is, of course, an unneeded commentary upon the character of Smyth's incumbency.

Ex-Judge John F. Dillon and Mr. A. L. Hopkins were on Friday appointed by Judge Westbrook joint receivers of all the property, assets, and franchises of the Manhattan Elevated Railway Company, on application of Attorney-General Ward in the suit of the People against the Company begun at Kingston, N. Y. Later in the day Mr. Hopkins was put in possession of the Company's offices and property. The suit will, of course, continue as if no receiver had been appointed.

The tribunal provided for by the Minnesota Legislature last winter to decide the constitutionality of the act to pay the State's railroad indebtedness, after a delay which seemed to promise ill for the success of the measure, was finally decided upon last week by Governor Pillsbury, and acceptances were received by him from the five prospective members of the court. They are Judges Young, of Minneapolis; Crosby, of Hastings; Brown, of Montevideo; Brill, of St. Paul; and (probably) Severance, of Mankato, all of whom are said to command the universal respect of the people of the State.

At the last session of the Vermont Legislature a new tax law was passed, the assessment under which has just been completed and announced by the Secretary of State. Last year the total valuation of the State was $100,350,000, which is this year increased over $63,000,000—to $163,391,893. The increase of the real-estate appraisal is from $71,114,747 in 1880 to $102,178,514, and of personal property from $15,037,262 to $46,804,079. The increase has come almost wholly from the larger and more prosperous cities and towns, Burlington, Rutland, St. Johnsbury, and others. In what are termed "the hill towns" the decline of property has continued. It should be said in explanation of the enormous general increase throughout the State (50 per cent. on real estate and 200 per cent. on personal property) that the new law for fixing valuations is extremely rigid, and persons can only escape making honest returns to the assessors by running the risk of having a reappraisal made and the assessor's arbitrary appraisement, which is based on a full valuation, doubled.

Central Iowa has been visited during the week with the heaviest rains known in the history of the State, and the crops are believed to have been seriously damaged. The Des Moines and Raccoon rivers were turned into torrents, and the streets of Des Moines were flooded so that navigation by boats was rendered necessary. In various places through the Northwest the heat has been intense, and in Cincinnati on the 12th inst. business had to be stopped entirely. The newspapers of that very "journalistic" city have accordingly made the most of the sensation, and report that "a grocer on Pendleton Street" discovered that his eggs had hatched, and that "several of the chicks are as robust as though hatched by the natural process."

The latest cyclone struck the town of New Ulm, Minnesota, the afternoon of the 15th inst., and demolished more than one hundred buildings, and killed and wounded thirty or more persons. The meteorological phenomena of the storm were remarkable, and its incidents also. Its duration was but twelve minutes.

Friday night a company of highwaymen, led, it is believed, by one or more of the notorious James Brothers, boarded and robbed a train of the Rock Island Railway, killing the conductor and one passenger, and badly frightening the rest, but robbing the express safe of less than $2,000.

Frederick Douglass, now Recorder of Deeds of the District of Columbia, has written a letter expressing his conviction that the colored voters of Virginia, "in view of all the circumstances"—a now hackneyed phrase in advice to this effect—"will do well to give their voice and vote to the Readjuster Party." He, of course, desires not to be understood as, in any degree or fashion, "adopting any theory or justification of repudiation."

Secretary Windom, who has been "accused" of expressing anticipations of a financial crash in a recent speech at Chicago, has written a letter to "a complaining friend" in which he affirms that he made no such prediction and furthermore sees "no indications of such an event."

The new Commissioner of Pensions, Col. Dudley, has signalized his replacement of Commissioner Bentley by an heroic effort to cut down the clerical force in his office to fit the appropriation for the same. To accomplish this he has recommended to Secretary Kirkwood the dismissal of about 100 clerks and the reduction of the salaries of about 60 others. It is explained that he has been governed in this decision by charitable motives, as the dismissal outright of 150 clerks would have served the purpose equally well.

Ex-Senator Howe, one of the American delegates to the Paris International Monetary Conference, has returned, and was interviewed on his arrival. He declares that "while the Conference proved unproductive from the American standpoint," nevertheless "the cause of bi-metallism has gained ground among European economists and statesmen from the debates" which took place during its sessions. Though there is no "immediate prospect" that "the idea" will be adopted by European governments, it will now "obtain a hearing on its merits." England, he further said, is the chief obstacle to the success of "the idea," and her attitude is explained by the fact that, having so much Irish legislation on her hands now, she does not "care to trouble herself with a silver question also"—a view which has not heretofore been taken, so far as we know.

The taking of evidence in the case of the Alumni of Dartmouth College against President Bartlett, charged with conduct unbecoming his position towards the students under his charge and his associates in the faculty, was finished on the 13th inst., when the accused himself appeared on the stand and, as de-

scribed by a reporter presumably accustomed to the artificial restraints of courts of justice, "delivered his address more like an advocate than a witness." He was cross-examined upon the points of his address by ex-Judge Fullerton, of this city, who is experienced in such cases, and after the introduction of other testimony in his favor the committee of investigation reserved its decision, promising to render it within a fortnight.

General John C. Pemberton, best known as the Confederate defender of Vicksburg against Grant's famous siege, died on the 13th at Penllyn, Penn.

The abolition by the Chinese Government of the Chinese Educational Commission, and the recall of the students now in this country, are explained from Hartford to be due to the conviction of the home authorities that "the progress made by the students in matters outside of strictly educational work in the schools is not to be of advantage to the Chinese of the future." In other words, Yung Wing is altogether too advanced for his countrymen, and the present difficulty illustrates the justice of the common conception of the latter as contradistinguished from the romantic view, for which Mr. Burlingame was mainly responsible.

FOREIGN.

Mr. Gladstone announced on Monday, in the House of Commons, the Commissioners under the Land Bill. They are Sergeant O'Hagan, Mr. Edward Falconer Litton (now a Liberal member of Parliament for the County of Tyrone), and Mr. John E. Vernon, who is the agent of Lord Pembroke, and whose name was greeted with groans from the Home-Rulers. After the Land Bill gets through the Committee, which is its present stage, clauses 12, 15, 27, and 34, to which there are voluminous amendments, will remain for consideration. Up to Tuesday, with these exceptions, 45 clauses had been passed. Mr. Gladstone has announced that the Scotch Endowment Bill would be insisted on, but the Bankruptcy Bill abandoned. The condition of Ireland is difficult to learn, because it is nearly impossible to know precisely how much credence to place in reports of outrages. "A land bailiff has been nearly beaten to death near Limerick. One arrest has been made in connection with the outrage," say Tuesday's despatches, for example. In a few days it may appear that this information was as unfounded as it is indefinite. Two hundred people are now under arrest in accordance with the terms of the Coercion Act.

The Windsor Park review of the British reserves has given great encouragement to the German advocates of the substitution of two for three years' army service. The Crown Prince has declared the review highly successful, and some of the battalions indistinguishable from regulars.

The sale of Lord Beaconsfield's effects, including plate, china, pictures, stereotype plates, and manuscripts, lasted three days of last week. The main attractions were the manuscripts of six of the Disraeli novels. That of 'The Young Duke' sold for 230 guineas; 'Contarini Fleming' for 220, to Sir Theodore Martin, who is said to have purchased it for the Queen; 'Venetia' for 90; 'Alroy' for 140; 'The Rise of Iskander' for 90, and 'Ixion in Heaven' for 90. The sums obtained were much larger than were expected.

A dinner was given on the 16th by the Lord Mayor to the British colonial representatives in London. King Kalakaua and the Prince of Wales, Lord Rosebery, Mr. Forster, Lord Napier, Sir George Strahan, Governor of Tasmania, Sir Bartle Frere, Sir Charles Gavan Duffy, Sir John Macdonald, Sir John Rose, Sir W. V. Whiteway, Premier of Newfoundland, Sir Julius Vogel, Hon. Saul Samuel, Agent-General for New South Wales, Sir P. Cunliffe Owen, Mr. Mowatt, Premier of Ontario, Mr. Bethune, of the same province, and others were among the guests, and speeches in keeping with the character of the banquet were made.

A "revolutionary Congress" is in session in London, and has held some enthusiastic meetings. At one of them "Citoyenne" Lecourt moved a resolution declaring that "the time for agitation by means of the press and the platform has ceased" and the time for force arrived. The resolution was seconded by the celebrated Louise Michel, and of course carried unanimously.

Dean Stanley died at London on Monday, of erysipelas.

The French courts have just sentenced to twenty years' imprisonment at hard labor, and ten years' police surveillance, an analogue of Jesse Pomeroy, who "could not explain" his motive for killing and cutting up a child whom "chance brought in his way." The case is one of peculiar atrocity.

The French Chambers are expected to adjourn on the 29th inst., ten days early, on account of the extreme heat. The heat is also reported intense in Madrid, and the summer residence of the Spanish Court, La Granja, is for the same reason "almost unbearable." The weather has been very favorable to the crops, however. Reports from Hungary, Russia, and France indicate that the yield will be excellent. The Rumanian crop has been badly damaged by storms and excessive spring rains.

M. Pierre Berthelot, an eminent chemist and a member of the Institute, has been chosen to the life-secretaryship left vacant by the death of M. Dufaure. He was the candidate of the Pure Left.

The bill granting the liberty of the press has passed the French Senate.

Don Carlos, the Spanish Pretender, has been requested by the Government to leave France, the rumored reason being his active, though occult, opposition to the Republic. He has accordingly proceeded to London. It is also said that France is particularly desirous of doing something to please Spain, to her relations with which Power the African complications have recently imparted some degree of "tension."

The French troubles in North Africa continue. Sfax was successfully occupied on Saturday after a bombardment of several days, and not, as the reports first stated, without resistance. Specific accounts of operations and events in the neighborhood are rare. The Europeans residing in Gabes have taken to the shipping in that port, alarmed at the menacing attitude of the Arabs. Turkish fanatics are said to have been preaching a "holy war," which, however, is nowadays talked of far oftener than it happens. The French press nevertheless displays sensitiveness on the subject, and Gambetta's paper is fiercely anti-Turkish. Governor Grévy, of Algeria, has written in cordial terms to General Saussier, the military commandant there, which, apparently, spoils a sensation, as it is taken as proof that M. Grévy has no intention of resigning. The insurgent chief, Bou Amena, has been badly routed, and, it is reported, was afterwards deserted by his troops, of which he had at the outset some three thousand only. Trouble is anticipated in other provinces, however. M. Barthélemy-St-Hilaire, the French Foreign Secretary, has assured "a correspondent" that the Government has no intention of retaining Tunis, or of conquering Tripoli.

Despite the Government success in the elections, the events of the week in Bulgaria decidedly point to non-popular action by Prince Alexander, who concentrated 7,000 troops with twenty-four pieces of artillery at Sistova to ensure the orderly conduct of the National Assembly sittings, and who has exhibited a strong preference for residing on board of a Danube gunboat to living in the town. The former ministers have taken refuge at Giurgevo, on the Rumanian side of the river. Nevertheless the Prince has issued a manifesto announcing a Liberal policy and expressing confidence in the popular support of the new administration. No Liberals, however, attended the session of the National Assembly on the 13th.

The cases of Midhat Pasha and his associates have been referred by the Sultan to the Sheik-ul-Islam and forty ulemas, who are engaged in examining the documents of the trial, to determine if the sentences are in accord with religious law. The decision of the Sultan is accordingly withheld for the present. Meantime he has been uncommonly civil to Midhat, sending him his own physician and displaying anxiety concerning his health. It is also asserted that Midhat, in appealing for pardon, confessed that he was accessory to the murder of Abdul Aziz.

Murders in the Russian provinces are believed to argue that the Nihilists have transferred their activities thither from the capital.

The funeral procession of the late Pope, Pius the Ninth, on the 12th inst., was assaulted by Roman roughs, and the sentence of six men to fine and imprisonment was greeted with a storm of hisses when announced in the court-room. A crowd of two thousand or more cheered the prisoners as they came out, and shouted "Down with the clericals" with enough gusto to give the disturbance the air of a miniature revolt. The actual Pope has, of course, told all the ambassadors accredited to the Vatican that "henceforth he shall consider himself more than ever a prisoner," and "prevented from attending any religious service in the basilicas of Rome." Had the funeral procession escaped insult it is probable that His Holiness "would have found an early occasion for leaving the doors of the Vatican," according to statements made in "clerical circles." A purely temporal monarch would not be justified in regarding an event of this sort as fresh evidence of tyranny on the part of the government which suppressed it and punished the participators in it. The Pope is said to have written privately to King Humbert, complaining, with much bitterness and indignation, of the conduct of the Government in not preventing the disturbance at the funeral.

The Boers are reported unlikely to pay the assessment of £1,200,000 fixed by the Royal Commission for the old debt of their country and the expenditure since its annexation. They have already rejected a proffered compromise, and issued a call for one of their mass meetings on September 10.

A good deal of excitement exists in Afghanistan, owing to the impending collision between the forces of Ayub Khan and those of the Ameer. There is no news of an engagement as yet, but the defeat of the rebels is predicted.

The news from Peru reports that vanquished country to be in a pitiable condition. At no time since the Chilian conquest, as it may fairly be called, has there been a Peruvian government in any strict sense, and the main difficulty in the way of restoring peace and tranquillity has been the lack of any authority with whom the Chilians might treat. Pierola, the ex-Dictator, has made a trip to Bolivia, but has accomplished nothing. Order is preserved by the invaders themselves. The Peruvian Church obstinately adheres to the fortunes of Pierola. Congress has not yet the quorum necessary to begin its readjusting labors. Bolivia, the original cause of the war, appears to have fared much better than her unhappy ally, and her business is reported to be good and increasing.

PRESIDENT GARFIELD'S OPPORTUNITY.

THE election of Mr. Miller to the seat in the Senate vacated by Mr. Platt, and the probable election of Mr. Lapham in place of Mr. Conkling, will have important consequences in national as well as in State politics. In the first place, it effectually disposes of the third term for General Grant in 1884, if that were not already disposed of by the greatly enhanced popularity of General Garfield. It also breaks the "Machine" in New York, and opens the way for a reorganization of the party in this city on a popular basis. More than all, it removes the chief obstacle to a reform of the civil service. There has not been so much ground cleared for political regeneration since the resumption of specie payments—perhaps not since the surrender of the rebel armies.

It must not be supposed, however, that Mr. Conkling is the author and creator of the "Machine," or that his disappearance from politics is necessarily fatal to it. The significance of his defeat is that the "Machine" had identified itself with him and had staked everything upon him. The "Machine" was in good working order before he became prominent in politics. During several changes of Administration it has been going from bad to worse, and if it should by any means survive the shock it has now received, and merely change masters, it would probably be more pernicious than it ever was under Conkling. Fortunately, there is nobody in sight who possesses Conkling's talent and experience to put its dislocated parts together, while, on the other hand, President Garfield has every motive to complete its destruction and send it to the junk-heap for good and all. His strength needs no artificial backing. Custom-houses and post-offices are of no value to him as aids to popularity. On the contrary, it would seem that the only thing he could do which would weaken the hold he now has on the hearts of his countrymen would be to make any compromise with the spoils system, or omit any step which may help to give it the *coup de grâce*.

The opportunity open to the President to render a great and enduring service to his generation is such as seldom comes to a statesman. The act of Guiteau has given a sudden drift and push to public sentiment in the right direction, and the downfall of Conkling, happening simultaneously, has taken out of the way the most serious obstacle to reform, leaving, as it were, a *tabula rasa* to write a new political system upon. Few persons are aware to what an extent patronage has perverted free institutions and created a governing class or caste exercising irresponsible power under republican forms. Patronage controls conventions, conventions make nominations, the nominees control patronage, and so the circle is complete. It is this which goes by the name of the "Machine." The system is subversive of free government in the sense that free government implies the unbiassed rule of the majority. Where it prevails the majority can be said to govern only in those intervals when, as in the recent struggle at Albany, the "Machine" is turned against itself, and the patronage wielded by one faction offsets the patronage of another. In these cases the will of the people becomes available as a makeweight or balance of power, and has some chance to make itself felt.

There is some reason to believe that President Garfield, whose discourses on the subject of the civil service have been among the most wholesome utterances to be found in our public records or magazine literature, was discouraged by the small success which attended President Hayes's attempts at reform, and especially by the political isolation in which the latter found himself placed after he had cut off the patronage of Senators and Representatives. There is evidence in President Garfield's acts that he desired to avoid the chance of being left without personal support in Congress, and that he believed that the best, perhaps the only, way to secure such support was to restore in part the system which Mr. Hayes had in part broken down. No sooner was this plan understood than a horde of office-seekers (including Guiteau) swooped down upon Washington, filling the corridors and waiting-rooms of the departments, besieging Cabinet ministers in their offices, at their homes, and in the public streets, and well-nigh putting an end to the transaction of business by their importunities. How much longer this swinish strife would have been tolerated, had it not been brought to an end by the lamentable act which lately startled the civilized world, we can only conjecture; but information which reached us prior to the attempted murder of the President was to the effect that a majority of the Cabinet were convinced that the Government could not be carried on under the spoils system much longer—that the civil service must be made self-regulating or it would eventually stop the wheels of government, since the Administration, from the President downward, would have no time for anything except to listen to the conflicting claims of applicants for office. For, be it known, these applicants cannot be kept out of the White House and the departments by the bayonet. Each one has a Congressman for or against him, and Congressmen have the right of access to all public officers and public places. The only remedy for such a chronic state of riot is the total obliteration of the spoils system.

The attempted assassination of the President brought everything to a standstill, and fixed the gaze of the country and of the world upon the cancer which has been so long preying upon us; and the verdict has been pronounced with a near approach to unanimity that the policy heretofore pursued in the distribution of offices must be radically amended. Whether Guiteau be sane or insane, it is clear that a system which makes the President the ultimate sole arbiter of the fate of thousands of men in office, and of thousands more desiring to be there, must expose him to peculiar perils. When we consider how many weak-minded and desperate men have had their doom pronounced without thorough enquiry and without any reason which they can understand, we should wonder rather that so many Presidents have escaped deadly assault than that one has been nearly murdered by an exasperated office-seeker. It will be President Garfield's great opportunity, upon his full restoration to health, to initiate and carry forward a reform which shall at once restore to the people the power which the Machine has in large part wrested from them, elevate the civil service by making the qualifications for appointment to office dependent solely upon merit, deliver the higher officers of the Government from their chronic state of siege, and emancipate the Presidency itself from a dangerous because arbitrary control over the destinies of a multitude of men.

THE FRENCH TROUBLES IN AFRICA.

THE French have apparently overreached themselves in entering on their new policy of adventure in Africa. It was undertaken as a sort of appeal to the national pride on the part of the Republic, and as an attempt to associate the new Government in the popular mind with military triumphs, without which few Frenchmen, even the most pacific, believe any French government can be considered stable. It was, however, not only intended to show that a republican government can win victories and extend French territory, but to show the superiority of the civil to the military *régime* in the management of the African colony. That Algeria ought to be governed by a civilian, and by civilian methods, has long been a favorite contention of the Republicans. One of their chief reproaches against the Empire was that it made the African province a military satrapy; and the numerous attempts made during the twenty years before Sedan to explain why it did not succeed as a colony, almost all put the military government in the foreground. They said that it was impossible to look for immigration on a great scale or for the growth of industrial enterprise in a country virtually ruled by martial law, and in which the chief man was a field-marshal. When the Republicans at last came into power, therefore, after the overthrow of MacMahon, one of their first acts was to inaugurate the civil régime by making M. Albert Grévy, the brother of the President, Governor-General of Algeria, and there was a good deal of trumpeting in the Republican papers over the happy effects which might be expected to flow from the appearance of a man in a black coat as the chief executive officer of the colony. There is only too much reason now to believe that it was a desire to show that the civil régime was after all not a tame or over-pacific régime, and that it could produce the steel hand whenever necessary, that led to the pursuit of the Kroumirs and the subsequent attack on the Bey.

The result has certainly been very unfortunate. There is probably not one of the Powers, except Germany, which has not been annoyed by the seizure of Tunis. England was estopped from objecting to it by the declarations of Lord Salisbury to M. Waddington at Berlin, but neither the English papers nor the English

ministers have been able to conceal their disgust with the argumentation by which M. Barthélemy-St.-Hilaire tried to justify it. He made the great mistake of putting the Kroumirs in the front, after it had been fully revealed that there were, militarily speaking, no Kroumirs; that the French generals had searched for them in vain, and that the only serious business undertaken by the troops was the advance on Tunis itself. Diplomatists occasionally submit to be duped with a good grace, but they always insist that the deception shall not be too transparent. The transaction, too, was aggravated, and, indeed, made to wear the air of a deliberate attempt to irritate the Italians, by the rôle which M. Roustan was allowed to play in it. This gentleman is, and has long been, the French Consul-General in Tunis, and has during the last two or three years been engaged in a bitter contest with the Italian Consul-General for ascendency over the Bey. The expedition against the Kroumirs, and the appearance of the French troops before the Bey's palace, of course, sealed M. Roustan's triumph; and all that is reported of him shows that he is not a man to bear his triumphs meekly. We believe the ordinary usage of diplomacy requires that an agent who has been anywhere engaged in a quarrel or conflict with the representative of another Power should, when it is over—even if he has been in the right and has been supported by his own Government—be removed, in the interest of peace and harmony, to some other post. In this case M. Roustan was not only not removed after the Bey had been reduced to dependence, but he was converted into the Bey's Minister of Foreign Affairs, and was allowed to announce this fact by circular himself, and in somewhat arrogant terms. All this has been galling in the highest degree to the Italians, who have reached the conclusion, indeed, that the attack on Tunis has been really intended to show them how little France cares about wounding their susceptibilities, and how ready she would be to enter into a quarrel with them. In this case, too, France to the Italians does not mean the Government at Paris, but the French people. The riots at Marseilles seem to them to reveal deep-seated hatred of the Italian name and race, for they originated in an attack on the Italian Club, which a Frenchman in good standing, who was present with one or two others in the house when it began, declares was absolutely unprovoked.

Since the riots and the subjugation of the Bey of Tunis, however, things have assumed a still more serious aspect. The Tripolitans, who are undoubtedly subjects of the Porte, which the Tunisians were not, apparently think their time is coming next, and have appealed to the Porte for protection, and the Porte has responded by sending ironclads and troops to Tripoli, in spite of the angry protests of the French ambassador, M. Tissot, who has left Constantinople in high dudgeon. For military demonstrations by the Porte, however, France need care little. The Sultan has other means of offence for which France may have to care a great deal, for he has apparently passed the word along the whole African coast that France means a general subjugation of the Mussulmans in that region. The Tunisians at Sfax, near the Tripolitan border, have accordingly risen in an insurrection which has terminated in the capture of the place after a stubborn resistance. On the other side of Algeria, the province of Oran—a French province, too—is in a flame, and the insurgents find safety and support along the frontier of Morocco and in the southern desert, where at this season it is impossible for European troops to march or fight. The leader in this movement, Bou Amena, has raised a band just in the style in which our Indian chiefs raise theirs, by getting the young men to believe that he is a bold leader and means fighting and robbing on a large scale. Thus far he has in every way justified the confidence of his followers. He has made a raid into the settled district, in which the raising of esparto grass by Spanish colonists is largely carried on, has killed or carried off seventeen hundred of them, and has driven the others down to the sea-coast in wild alarm, and has burnt houses and factories right and left. Hundreds of fugitives, too, are reported to have perished in the hills from hunger and thirst. The French columns in pursuit of him are too small and too poorly provided with cavalry to be effective. It is only cavalry which can engage Bou Amena. The French have little of it, except their native troops, who are not reliable and do not charge home. They easily fill a day with shouting and firing at long range, and for this the raiding forces care little. These have more than once penetrated to the settlements, and laid everything waste, by passing between the French columns, and in their retreat they retire into the desert, at great speed, making pursuit by infantry useless. The loss has thus far fallen mainly on Spanish colonists, who are loudly calling on their Government for protection or compensation. Their Government can, of course, do nothing as yet but appeal to that of France, and it is half expected that France will make answer that order cannot be restored without the occupation of Morocco, and that if Spain likes to undertake this she is welcome to do so.

There is now a general expectation of a Mussulman rising along the whole southern border from Morocco down to Tripoli, which probably can under no circumstances be quenched speedily, and will under any circumstances give active employment to one hundred thousand men, and which the Sultan is pretty sure to instigate freely. He has, ever since his reverses in 1877, been threatened by the Arabs with the loss of his Caliphate—a spiritual power which the Sultan seized in 1517, and has held ever since, after carrying the last Arab Caliph to Constantinople and shutting him up in a fortress. The rapid decline of the Ottoman power during the last few years has been reminding the Arabs that they invented the Caliphate and held it for nearly a thousand years, and that the Mussulman faith has not prospered under Ottoman ascendency. Temporal power is not necessary to make a good caliph any more than to make a good pope, and the more the Sultan feels his temporal power ebbing away, the more tenaciously, as is natural, he clings to the spiritual headship of Islam. It has of late been seriously threatened by the Arabs, both of central Arabia and of northern Africa, and the troubles of the French are very likely to be increased by his desire to figure in a contest with them as the defender of the faith in the darkest day Islam has yet known.

A GREAT LONGITUDINAL ENTERPRISE.

Almost every one who is familiar with the railroad system of this hemisphere is aware of the fact that there is no railroad or telegraph line connecting Behring Strait with Cape Horn; comparatively few persons, however, know that such a highway has for some years been under consideration, and that if it has not yet been actually built, it is not for want of generous and public-spirited promoters. It is now two years since Mr. Hilton Rowan Helper, of St. Louis, addressed to the Hon. Thomas Allen, president of the Iron Mountain and Southern Railway, Mr. Carlos S. Greeley, receiver of the Kansas Pacific Railway, and Dr. William T. Harris, Superintendent of Public Instruction, a communication on the subject of "a longitudinal midland double-track steel railway from a point high north in North America, running more or less southwardly through Mexico and Central America, to a point far south in South America, looking ultimately to such necessary and gradual extensions at either end, from time to time, as will eventually place Behring Strait and Cape Horn, and all the intermediate localities in uninterrupted and continuous overland communication by steam and by telegraph." Stating that he had long regarded this as a "perfectly practical enterprise," he gave a most convincing proof of his sincerity by enclosing to his correspondents a check for five thousand dollars, to be expended by them as a Committee of Award "in obtaining five of the most convincing and meritorious essays which may be offered," "three in prose and two in poetry, in truthful and vigorous and effective advocacy of the undertaking."

If the scheme of the Three Americas Intercontinental Railway had proceeded no farther than this we should have thought it open to a good deal of criticism; it would have been merely the idea—a grand and original idea no doubt, but still merely the idea—of a single advanced thinker, who ran great risk of being thought to have a mind too longitudinal and intercontinental for his age. But it by no means stopped here, for the gentlemen selected by Mr. Helper as his committee all accepted the commission, and wrote a letter to the promoter of the Three Americas Railway in which they gave expression to their "ardent hopes, braced by a high degree of confidence," that the road might be completed by the 14th of October, 1892, the four hundredth anniversary of the discovery of America. Dr. Harris did indeed subsequently resign from the committee, but this was merely on account of enforced absence in Europe, and Professor Horace H. Morgan, principal of the St. Louis High-School, immediately accepted a position on the committee as his successor.

The committee now proceeded to engage in what they refer to as "the somewhat fatiguing and responsible but peculiar and interesting labors" of their task. They received in all forty-

nine essays and poems from forty-seven contestants, and awarded five prizes—three for prose and two for poetry; and in communicating the result to Mr. Helper say explicitly that, as the result of some six months' consideration of the subject, "we incline to the opinion that there are but few, if any, clear-headed thinkers in this or any other country who will arise from a careful perusal of the five successful papers which you have thus elicited without giving a hearty assent to the general correctness of your own views in relation to this stupendous enterprise."

Mr. Helper has now collected all these essays and the correspondence and other papers relating to the subject into a volume, under the attractive title of 'The Three Americas Railway: An international and intercontinental enterprise, outlined in numerous formal disquisitions and five elaborate essays; all strongly advocating free and fast and full and friendly intercommunication between the sixteen adjunctive and concordant republics of the New World"; and few, if any, clear headed thinkers will question the propriety of his doing so. Of course, Professor Morgan, being chiefly devoted to educational work, might be suspected of approaching a project of this sort in an unpractical way, of being carried away by a sudden enthusiasm for longitudinal enterprises—though even this does not seem probable of a man who has recently received, as we are informed by Mr. Helper himself, a notable literary prize in "Brain-abounding Boston." But the other two members of the committee are practical men; one is president of an important and somewhat longitudinal railroad, the other is a railroad receiver, and all clear-headed thinkers who know anything about receivers know that they are seldom or never doctrinaires or idealists. Why these two gentlemen should encourage Mr. Helper to believe that his railroad from Behring Strait to Cape Horn can be built, unless it actually can be built, we cannot conceive.

As to the manner of executing the work, it is as yet evidently too early to go into details. "Shall the work be done," the projector asks, "by a nationally and internationally incorporated private company, or by the concerted and concentrated action of the governments of an unbroken series of sixteen of the most stately republics that the wisdom and virtues of the noblest specimens of mankind have ever yet framed upon the earth?" So we might ask, shall the capital stock be all paid in, or shall the road, like so many latitudinal highways, be built on bonds with the aid of a construction company? These are, after all, matters of detail. The important thing now is to arouse public sentiment in its favor by convincing clear-headed thinkers that it can be done, and this is the object of Mr. Helper's book.

Among other interesting features of the enterprise is the determination of the promoter that this shall be a republican as well as a longitudinal highway. He says that he has "not forgotten" Brazil, and such would seem to be the case from his casual reference to that Empire as "bigoted and benighted Brazil," "priest-ridden and prelate-polluted Brazil," "slavery-sustaining and progress-retarding Brazil," "negro-cursed and hybrid-blasted Brazil," "besotted and begrimed Brazil." The toleration by Brazil of monarchy, slavery, and Catholicism combined early led Mr. Helper to form an unfavorable opinion of the Empire, but he says that he was not absolutely decided about what stand he should take with regard to it until the claim of Mrs. Helen M. Fiedler, "a worthy and widowed citizen of the United States," against the Brazilian Government, entrusted to him for collection, was rejected. As we understand it, if the Fiedler claim—it was only $31,800—had been paid, it was Mr. Helper's intention to have a lateral road constructed to Rio Janeiro; and he prepared a letter for the perusal of Dom Pedro very frankly stating the connection between the Three Americas Railway and the claim; and calling his Majesty's attention to the fact that, if the claim was paid, he would probably, inside of fourteen years, be able to go by special train from Rio to New York in a week. He pointed out also the undeniable fact that by a land-route between these points "a long voyage, sea-sickness, storms at sea, and all the other discomforts and perils incident to ocean travel" would be avoided. The letter was never sent, however, the Fiedler claim was never paid, and the besotted, priest-ridden old bigot will have to go to New York just as he used to do.

It would be pleasant to let the imagination dwell upon the future of this great international highway, but we have little space for further quotations. A perusal of Mr. Carpenter's prize poem will convince any impartial person that the subject is one quite as well fitted for verse as for prose. Anticipating the objection that the scheme will be called Utopian, the poet meets it in this way:

> "Utopia's great plan
> Is more than realized in our completeness.
> For through Utopia no railway ran;
> No steamship sailed its seas in strength and fleetness;
> No telegraph embraced it in its span."

He calls attention to the fact that railroads running east and west have "found a limit by the wide Pacific," while longitudinally the whole hemisphere is open, and in three beautiful lines tersely states the great economical truth which anybody inclined to "bear" the future stock of the Three Americas Railway will do well to notice, that

> "the Railroad paves the way
> Of its advance, and smooths the ground before it
> *With profits that are earned from day to day.*"

It is, in short, a grand scheme, and ought to interest every native of America from Patagonia to "brain-abounding" Boston itself. The Brazilians will be sorry yet for the part they have played in the matter.

Correspondence.

GIVING NOTORIETY TO GUITEAU.

To the Editor of The Nation:

Sir: Can you tell me what possible justification the prison officials at Washington have to offer for allowing Guiteau's photograph to be taken, and copies thereof to be sold far and wide? I know the theory of the Rogues' Gallery. It is very well for the police to have a likeness of every criminal, that if he escape or offend again, and his capture be desired, the photographs may be distributed with an offer of reward, and thus every newsboy, every railway or hotel employee, be put on the *qui vive* for that face. But Guiteau is in custody, and even if his photograph should be taken why should it not be kept private? Why should we be compelled to see at every corner the face of the would-be assassin?

If the people are anxious to see what this man looks like, he himself is still more anxious to be seen. If the tales one hears are true, Guiteau is about as conceited and vain a fool as one can imagine. What he has done he has done largely with a view to the effect. His idea was not merely to kill the President: he put off shooting at him so as to kill him in a *more public place*. He was to be famous. Fame and notoriety have this in common, that those upon whom they rest are much talked about. What notorious character but thinks himself famous? Are there not masses who cannot distinguish fame and notoriety at all; with whom to be great is to be on every man's tongue, to have acts recorded and sayings repeated, to be photographed, to be in the illustrated papers? Just as men will live and die for fame, so men who know not fame from notoriety will live and die for notoriety. Ridicule is the only weapon against vanity. Persecution, threats are but new cause for exultation. Does Guiteau care because some one proposes that he should be made a target to test the power of the "bull dog"; or some one else, that he should be compelled to eat himself, two ounces each day; or some one else, that he should receive thirty-nine lashes every day till he dies; or some one else, that all whom he has swindled should now have him prosecuted; or the district-attorney, that he should be tried for each shot; or Mr. Conkling, that new and special laws should be passed to protect high executive officers? Probably not. Guiteau started out *to kill*, and thus defied the severest punishment known to civilized law. He never contemplated failure—what would-be murderer does? Had the law punishing an attempt to kill been ever so stringent it could have had no terrors for him. As a preventive, therefore, no new law could be of any avail.

To write the lives of men like Guiteau, to photograph them, to persecute them, is to give them what they have worked for. Their greatest punishment is to leave them, unnoticed, to ordinary punishments. Apart from its other qualities, Guiteau's act was as *foolish* as Griscom's fast, or that other's six thousand quarters of a mile run. What will pain him most, and make his example least likely to be followed, is the recognition of the truth that he is nothing more nor less than a "bore" and an "unmitigated ass." D. S.

Baltimore, July 16, 1881.

THE CRIME AGAINST THE PRESIDENT.

To the Editor of The Nation:

Sir: Since the attempt to assassinate the President several methods of preventing such offences in the future have been suggested. In your paper for July 7 there is mentioned a suggestion to amend the Constitution "so as to increase the penalty for any attempt on the life of the President." From the context it appears that the "increase of penalty" was to be a law of the District of Columbia. Why an amendment of the Constitution should precede such a law is not stated. The seventeenth clause of section viii. article 1 of the Constitution declares, that "Congress shall have power . . . to exercise exclusive legislation *in all cases whatsoever* over such District (not exceeding ten miles square) as may by the cession of particular States," etc. Does not this give express authority to pass such a law? It may be objected that a species of treason not authorized by the Constitution would be created. But this is not at all certain. No offence can be punished *as treason* except those specified in the Constitution; but it does not follow that no offence which other countries have declared treason can be punished, when authority is given by another clause of that instrument. Treason in

England was a very vague and uncertain offence: By one statute, if a woman whitewashed a farthing she was guilty of treason. In Maryland an assault on a policeman is punished more severely than a common assault. No one ever dreamed that this offence was treason against the State of Maryland. What difference can it make in the eye of a law that considers all men equal, if the person specially protected be a police officer or a president?

Much has been said about the "removal of the cause" of such crimes, meaning that the only effective remedy is a reform of our civil service. I grant that perhaps we should never have heard of Guiteau if the death of Mr. Garfield would not have given the Federal patronage to the wing of the dominant party to which he belongs or fancies he belongs. But is it not apt to lead to a confusion of ideas to speak in the same breath of legislative preventives of assassination and the reformation of the civil service? They are not coextensive terms. Animosity engendered by squabbling over public plunder is only one of the things which might lead to such an attempt. Difference in political faith, as in the case of Lincoln, or the depression of trade, or a thousand other things might be the motive. If Congress is to pass an act removing all inducements to kill presidents, they will have to legislate all human passions and follies out of existence. The most provident task for them would be to devise a law which, without conflicting with the spirit of our Government, should deter men having an inducement from murdering our rulers. Would not a law making assault with intent to kill upon *any person whatsoever* within the District of Columbia punishable with death, imprisonment for life, or for a term of years at the discretion of the court, be a move in the right direction? If so, it would not be open to the objection of drawing class distinctions.

—Respectfully yours, W. S. B., Jr.

Baltimore, Md., July 18.

DIVORCE LEGISLATION.

To the Editor of The Nation:

Sir: I call attention to a clause in the divorce laws of Maine—viz.: "A divorce may be decreed when the judge deems it reasonable and proper, conducive to domestic harmony, and consistent with the peace and morality of society." This is judicial discretion with a vengeance. Its effect is seen in the fact that there were granted in 1880 five hundred and ten divorces in Maine in a population of 648,945.

The following is the table of divorces in New England for the year 1878:

Maine	478
New Hampshire	241
Vermont	197
Massachusetts	600
Rhode Island	196
Connecticut	401
Total	2,113

What you say of the occasion of the passage of the "extraordinary statute" of New York is essentially true, probably, of many other States. Some person, often a third-class lawyer, has a personal grievance, either of his own or of a client, and secures a general law to cover a specific case. The law is made, and perhaps it is the entering wedge by which the State is in time completely changed in its divorce system. Massachusetts is a case in point. That State, until recently, allowed divorces for two or three causes only. But in fifteen years she made the number *nine*, outdoing even Connecticut; and the significant fact about the whole change is that it was made without the notice of the press or of her best citizens. The lawyers and a few sentimentalists effected the changes in successive steps in a very few years, and now the better class of citizens are slowly leading the State back. A lax public sentiment, which the New England Divorce Reform League aims to correct, is, as you intimate, the great obstacle to reform.

On the other hand, I have been informed, by one who ought to know, that when a law was sought making adultery a crime in New York, for the purpose of reaching the Oneida corruption, the movement was found utterly impracticable on account of the licentious lives of certain men of great influence at Albany. Some recent events certainly tend to confirm that view of the case.—Yours,

W. S. D.

THE CAMPBELLITE SECT.

To the Editor of The Nation:

Sir: Notwithstanding Mr. Vernon's objections to this name, in the *Nation* of July 7, intelligent people, who are also Christians, will never consent to call a sect originating as an organization fifty-three years ago by a name which gives the impression that they alone are Christian, or followers of Christ. Could they go back as an organized body to the day of Pentecost there would be some reason in their claim. Let us have the facts, whether "objectionable" or not.—Respectfully yours,

W. H. Tomlins.

Rantoul, Ill., July 11, 1881.

PATRICK HENRY AS A PROPHET.

To the Editor of The Nation:

Sir: Having occasion the other day to look up a point in the debates of the Virginia Convention of 1781 I stumbled, by pure chance, upon what seems to me a very noteworthy piece of political prophecy.

At the opening of the session of June 24 Mr. Wythe submitted a resolution for the ratification of the Federal Constitution. Mr. Patrick Henry then took the floor and, among other things, said this:

"It has been repeatedly said here that the great object of a national government was national defence. That power which is said to be intended for security and safety may be rendered detestable and oppressive. If they give power to the general Government to provide for the *general defence*, the means must be commensurate to the end. All the means in the possession of the people must be given to the Government which is entrusted with the public defence. In this State there are two hundred and thirty-six thousand blacks, and there are many in several other States. But there are few or none in the Northern States; and yet, if the Northern States shall be of opinion that our slaves are numberless, they may call forth every national resource. May Congress not say *that every black man must fight?* Did we not see a little of this, last war? We were not so hard pushed as to make emancipation general; but acts of Assembly passed that every slave who would go to the army should be free. Another thing will contribute to bring this event about. Slavery is detested. We feel its fatal effects; we deplore it with all the pity of humanity. Let all these considerations at some future period press with full force on the minds of Congress. Let that urbanity which I trust will distinguish America, and the necessity of national defence—let all these things operate on their minds; they will search that paper [the Constitution] and see if they have power of manumission. And have they not, sir? Have they not power to provide for the general defence and welfare? May they not think that these call for the abolition of slavery? May they not pronounce all slaves free, and will they not be warranted by that power? This is no ambiguous implication or logical deduction. The paper [the Constitution] speaks to the point; they have the power in clear, unequivocal terms, and will clearly and certainly exercise it."

That so remarkable an utterance should have escaped the notice of the public men who took part in the debates preceding the emancipation of the slaves and the formation of the negro regiments would seem hardly possible. Yet I followed those discussions pretty closely at the time and I do not now recall any reference to it. H. A.

New York, July 12, 1881.

"PARALLEL LIVES" AT YALE.

To the Editor of The Nation:

Sir: The solemn and laboriously analytic treatment of a subject upon which nothing worth saying can possibly be said, is a phenomenon which is only too familiar to any one who ever reads or goes to church. The person who is responsible for the treatment is generally responsible also for the choice of subject. College professors, however, are a peculiar class, whose literary efforts are chiefly confined to the propounding of subjects. It is, therefore, perhaps all the more proper that unusual brilliancy in this somewhat circumscribed field should receive prompt recognition. I desire to call the attention of the readers of the *Nation* to a recent achievement in this line, which shows a fine sense of proportion and an acute perception of the qualities of human greatness. One of the subjects offered this year for the essays to be written by the Yale Seniors in competition for the Townsend Prizes was "Goethe and Bushnell." Probably a word of oral explanation, or possibly a marginal note on the printed list of subjects, indicated that the Bushnell referred to was the late Rev. Horace Bushnell, D.D., of Hartford, Conn. One young man devoted himself to the task of profane comparison to which he had been invited by his instructors, and, having dutifully discovered in Goethe and the Rev. Horace Bushnell three "points of resemblance" and three "points of difference," was rewarded with one of the six prizes. No "points" either "of resemblance" or "of difference," which are worth talking about, would occur to an ordinary mind, except, perhaps, this "point" of decided "difference," that Goethe was a great man and the Rev. Horace Bushnell was not. It is extremely gratifying to the few admirers of Goethe to know that the young writer "claimed for each [that is, for Goethe as well as for the Rev. Horace Bushnell] a permanent influence on the world of thought." Truly the parallels of Plutarch have been put in the shade! Were it not that it would savor too much of servile imitation, I would respectfully suggest to the Yale faculty that a good subject to put on their list for next year would be "Shakspere and Cook"—meaning, of course, the "Rev." Joseph Cook.

Seriously, is it not right, in the interest of sound literary training, to enter a protest against the mischievous and far too prevalent practice of asking college students to think and to write on subjects which are barren or worse than barren? If a man is sent to dig gold where it cannot possibly be found, he will either come back empty-handed and disgusted, or he will bring home a lot of worthless stuff which he will try to palm off for gold.

Yale, '71.

Hartford, Conn., July 13, 1881.

Notes.

ROBERT CLARKE & Co. publish this month a new edition of Hassaurek's entertaining 'Four Years in Spanish America'; 'Prose Miscellanies,' by Judge Horace P. Biddle, of the Indiana Supreme Court; and 'Book of the Black Bass,' by Dr. James A. Henshall. In August, the following works: 'The Discovery of the Northwest in 1634 by John Nicollet,' by C. W. Butterfield; 'The St. Clair Papers,' edited by Wm. Henry Smith; 'Thomas Corwin,' by A. P. Russell; 'Miami Woods, and Other Poems,' by W. D. Gallagher; and 'The Shaksperean Myth,' by Appleton Morgan.——John D. Billings, Cambridgeport, Mass., announces a 'History of Sleeper's Tenth Mass. Battery.'——'Aryo-Semitic Speech: a Study of Linguistic Archæology,' by Prof. James F. McCurdy, is in the press of Warren F. Draper, Andover, Mass.——The Orange Judd Co. will publish 'Riding and Training Saddle-horses,' by Geo. E. Waring, jr., and Edward L. Anderson.——G. P. Putnam's Sons send us 'Wolfert's Roost' in their beautiful "Geoffrey Crayon" edition of Irving's works.——A new edition of Mr. R. B. Kimball's 'Saint Leger' has been brought out by Mr. Carleton.——I. K. Funk & Co. are publishing a collection of works to which they give the name of 'Librairie de luxe.' Why a set of novels uniformly bound should be called "The luxurious bookstore" is not revealed. Could they have intended "Bibliothèque de luxe"?——A memorial sketch of the late Thomas Donaldson, Baltimore's mayor at the outbreak of the rebellion, has been prepared by his friend Judge Geo. Wm. Brown, and published by Cushings & Bailey. Mr. Donaldson was a pupil at Round Hill school of George Bancroft and Joseph Coggswell; he afterwards graduated at Harvard, and finally became a distinguished advocate. He married a granddaughter of Timothy Pickering. His sympathies were more Northern than Southern during the civil war, and cost him temporary imprisonment. He is honorably remembered for his part in rescuing his State from repudiation.——From the New Jersey Geological Survey will issue in September a topographical map of the north-eastern part of the State, including all of Essex and Hudson, and much of Union, Morris, Passaic, and Bergen counties. It is being engraved on a scale of one inch to the mile, and will show the elevation of the surface at all points.——Mr. Bouton has received the current volume (the third) of M. Victor Champier's 'L'Année Artistique,' which is without a rival in the extent and accuracy of its information concerning the organization and personnel of national art (particularly that of France), the exhibitions and sales of the year, the bibliography, necrology, etc. A chapter is consecrated this year to the United States, and may be pardoned some disproportion, considering the writer's distance from the sources of information. One is perplexed, for instance, to find in the same category with New York and Brooklyn, and under a heading of equal typographic significance, "Le Roy," and then to read about the College of Fine Arts in Ingham University.——In the Berlin Geographical Society's *Journal*, No. 92, Dr. O. F. von Möllendorff has valuable maps of the mountain region to the north and west of Peking, and of his travels in that district and in the tract between Peking and Tientsin.——With Parts 25, 26 the new edition of 'Stieler's Hand-Atlas' (New York: Westermann) approaches completion. These contain maps of the solar system; of S. E. Australia, of South America (the first plate of six, viz., the north-western portion), of the United States (the belt west from Santa Fé), of Cape Colony and the adjacent States, and of the Balkan Peninsula. Hardly any maps of this issue have possessed greater timeliness or freshness.——Mr. Riordan concludes his series of three papers on "American Stained Glass" in the *American Art Review* for June. In the same number is printed an etching by Mr. J. A. Mitchell which is full of technical reflections of Brunet-Debaines, Mr. Mitchell's master, but in conception is clearly enough Mr. Mitchell's own, and of an original charm that is unusual. It dodges definition rather timidly, but in breadth of effect it is very successful and in character it is delightful. Mrs. Van Rensselaer's article on Bridgman's exhibition, and Mr. Benjamin's on that of the Society of American Artists, are belated, and appear to show consciousness of the fact.——It is reported by cable, we hope correctly, that the remarkable Franklin collection offered for sale by Mr. Henry Stevens was withdrawn in favor of the United States as a purchaser.

—The members of the Brown University class of 1880, the last which completed its studies in the college under the instruction of the late Professor Diman, have begun a movement for a memorial to that distinguished scholar, in which they have been joined by members of other classes, and which has been commended by President Robinson and Professors Lincoln, Harkness, and Greene. It is proposed to establish a fund of at least $10,000, the annual income of which is to be applied, under the direction of a committee consisting of the President and the Librarian of the University, and the Professor of History as chairman, to the purchase of works on mediæval and modern history. This fund is to be called the "Diman Memorial Fund," and the works purchased are to be suitably marked and placed in an alcove of the library specially set apart for the purpose, and known as the "Diman Memorial Alcove."

—Mr. Howells opens the August *Atlantic* with the first three chapters of a new story, called "Dr. Breen's Practice." The "Doctor" is Miss Grace Breen, and she has in her charge an invalid friend who is in process of obtaining a divorce from her husband, and whose flirtations with Mr. Libby, who knows well and frequently refers to the lady's husband, seem outrageous to the little watering-place circle at "Jocelyn's." Mrs. Maynard is, nevertheless, a young woman of excellent heart, and the whole situation is such as exactly suits Mr. Howells's disposition. We do not distrust his ability to reduce it to matter-of fact, though the attempt, it must be admitted, would be hazardous for any one else. Mr. James's "The Portrait of a Lady" reaches this month a climax of merit, and the reader finds himself hoping, a trifle nervously, that it will be finished before it can be spoiled. Mrs. Mary Hallock Foote completes the fiction of the number with the first part of a short story to be concluded next month. Mrs. Van Rensselaer writes very satisfactorily of "The New York Art Season"; Mr. Richard Grant White describes his notion of the character of *Iago*, and how it ought to be acted; Dr. James Freeman Clarke takes Parton's volume as a text for an essay on Voltaire, which is good reading, but of course no one quite agrees with what any one else says of Voltaire; and Mr. E. P. Whipple gives some "Recollections of James T. Fields," which, we are bound to say, are less entertaining than the similar ones Mr. Fields used to furnish concerning others. The really noteworthy papers are the conclusion of "Octave Thanet's" study of indoor paupers, and Mr. John Durand's "French Domestic Life and its Lessons," both of which have the excellence of suggestiveness. Mr. Stedman's "Corda Concordia," read at the opening of the Concord Summer School of Philosophy, can hardly be too highly praised, we should say, considering the difficulties of the "occasion." That its form should be its chief merit was doubtless involved in its conditions, and perhaps a slight excess of mysticism was similarly predestined. There is probably one thing which the Concord School is not, whatever else it may be—poetic, namely. Mr. F. H. Underwood provides the only review, if we except Dr. Clarke's; his running commentary on Ward's 'English Poets' has the interest of curiosity, and is an odd reminder of the kind of literary criticism that once abounded with us. "The Contributors' Club" is still engaged in discussing, among other subjects, "German Wives."

—One always reads with pleasure and profit Mr. H. P. Johnston's historical narratives of the Revolutionary epoch. Such a one, on the surrender of Cornwallis, opens the August *Harper*, in season for the approaching monumental festival at Yorktown, of which town the lot seems to be, as Mr. Johnston remarks, "that the more it becomes an historical spot, the less it becomes anything else." This paper is liberally illustrated with portraits and maps. Mr. Aldrich concludes his "Day in Africa" with the same light touch with which he began. Speaking of the characteristic monotony of Oriental street architecture—"an inhospitable massive wall, set with a door of the exact pattern of its neighbor"—"no wonder," he says, "the robber chief, in the 'Forty Thieves,' put a chalk-mark on the door of Ali Baba's house in order to find it again; and no wonder the slave girl, Morgiana, completely frustrated the device by marking half a dozen doors in a similar manner." On the whole, we think the text of Mr. Samuel Adams Drake's "White Mountains," which concludes with Part III. in this number, will not be missed; the theme is hackneyed, even if unexhausted and practically inexhaustible, and Mr. Drake's fine writing is no better than his predecessors'. In fact, it becomes a little insufferable when applied to the defenceless Old Man of the Mountain. Some of the most admirably engraved landscapes of the series, however, are here given. Mrs. Champney, as a Portuguese guide, we are, on the other hand, sorry to part with, for her "Neglected Corner of Europe," too, comes to an end. Her latest excursions ranged from Cintra to Coimbra. We have been puzzled by a single one of her allusions: "Froissart gives in his delicious obsolete English," etc. The weighty paper of the number is Mr. Frederic G. Mather's "Water Routes from the Great Northwest." It is far from being dull, though well charged with facts and figures, and it contains information which any one may be thankful to get so compactly and lucidly. It is a sort of discussion of the eventual competition, when the enlarged Welland Canal is opened, between the Canadian and American systems of artificial waterways, both existing and projected. Mr. Mather does not fear the enterprise of our neighbors, and thinks their Pacific road when completed will be fatal to the usefulness of the Welland Canal. One cannot help reflecting how much of this costly rivalry in the St. Lawrence basin grows out of an

ungeographical political division; but this subject is treated at length by Mr. Mather in the current *North American Review*.

—By act of Congress, approved March 3, 1879, it is provided that the Superintendent of the Census shall require and obtain from the officers of all life-insurance companies the statistics requisite for showing, in the aggregate, the financial transactions of this class of corporations for the year, and also for the decennium, ending December 31, 1879. While for many years past several of the States have, through their respective insurance departments, obtained similar statistics from the companies within their jurisdiction, the reports of no one department have contained the results of the business of all the companies, inasmuch as there was no State in which all were transacting business. The enquiry made under the above act is the first attempt on the part of the United States Government to obtain and tabulate the facts in regard to this great and growing business. The result is before us in advance sheets of the "Census Bulletin," containing eight tables, of which the first five show respectively the capital stock, income, disbursements, assets, and liabilities of fifty-nine companies for the year 1879; Tables VI. and VII. show respectively the number of policies and amount and kind of insurance written, and terminated, in each year of the decennium ending December 31, 1879; Table VIII. shows the number and amount terminated and mode of termination during each of the years from 1871 to 1879 inclusive. The Superintendent of the Census promises at a later date a "summary of the statute laws regulating life insurance in the several States and Territories, together with such information concerning extinct companies as it may be found practicable to obtain." Fully double the number of companies now reporting to the Government have gone out of business by failure or voluntary retirement during the last fifteen years, nearly all of which came into existence during the decade of inflation that culminated with the panic of 1873. Born in an atmosphere of financial disease, ignorantly cared for or wickedly abused by their guardians, no wonder that their lives did not average more than those of human beings begun under similarly unfavorable conditions.

—A glance at the summary of Tables I. to V. will give some idea of the magnitude of the business. The total income of the fifty-nine companies for the year 1879 was, in round numbers, eighty-three millions; total disbursements, seventy-six millions; total assets, four hundred and forty-two millions; total liabilities, three hundred and sixty-five millions; total surplus, seventy-six millions. Of the disbursements, more than sixty-two millions were paid to policy-holders or their families for death-claims, matured endowments, annuities, dividends, surrenders, etc. The significance to the beneficiaries of the annual distribution of these vast sums among more than twenty thousand families, its significance to the community in alleviating misery and in preventing pauperism and crime, can hardly be comprehended.

—The death of Dean Stanley removes the most beloved, the most liberal, and the most influential of Anglican prelates. He was the son of the Bishop of Norwich, and the pupil at Rugby of Dr. Arnold, whose biography he produced in 1844, and of whom he was peculiarly the disciple, both intellectually—to the extent of sharing his historical theories—and morally and religiously, as a leading advocate of the Broad-Church idea. The literary activity of Dean Stanley has been very great, and has resulted in several works of great charm and permanent value. His historical writings are dominated by a distinct even if unconscious *Tendenz*—namely, to establish a foundation for the doctrines of the Broad Church—and the sermonizing quality often gets the better of the narrative and critical. They are, nevertheless, striking for the imaginative power which invests with reality scenes, times, and personages that have become almost mythical either by reason of too great familiarity, as in the case of Bible history, or too little. This is accomplished by the aid of abundant suggestive illustrations in the shape of parallels between ancient and modern men and epochs. Perhaps his most important work was 'Lectures on the History of the Jewish Church,' begun in 1863, and ending in a third series in 1876. Dean Stanley's visit to this country in 1878 is well remembered. Since his return he has participated in the revision of the New Testament, and in the defence of the Revised Version. His unfortunate zeal in seeking to commemorate the late Prince Imperial by a monument in Westminster Abbey, which only the displeasure of the House of Commons could check, showed that his heart was capable of imposing upon his head; but it will readily be forgotten, despite the shock which it gave his admirers in both hemispheres, in view of the sweetness and amiability of his character and his liberalizing modification of Anglican theology.

—Burton reminds us that "Pancrates in Lucian, wanting a servant as he went from Memphis to Coptus in Egypt, took a door-bar and after some superstitious words pronounced (Eucrates, the relator, was then present) made it stand like a serving-man, fetch him water, turn the spit, serve in supper, and what work he would beside; and when he had done that service he desired, turned his man to a stick again." A recent edition of this fable, however (Albany, 1881), represents that while turning "his man to a stick again" Pancrates was so unfortunate as to metamorphose himself in the same way, and that his friends and companions, despite their most earnest efforts, were unable to restore him to his former condition, his magic having lost its potency at this unlucky instant. It will perhaps prove a valuable lesson to many who are inclined to juggle with unlawful necromancies, and will doubtless afford the material for an interesting note to subsequent commentators on the works of Ovid.

—Six issues of the *Palatine Note-book*, an English monthly which began with the current year, lead us to augur very favorably of the new publication. As is indicated by its title, it is specially concerned with the counties of Lancaster, Chester, and Durham. Its pages have already made noteworthy contributions to biography and bibliography, with reference to Nathan Walworth, Peter de Wetenhale, William de Northwell, Henry Newcome, the Rev. John Watson, Colonel John Townley, Dr. Samuel Hibbert-Ware, Mr. De Quincey, Bishop George Downame, the Rev. John Whitaker, the Chetham Society, the Manchester Collegiate Church, etc., etc. Such as are curious about Mother Shipton, of whom "no one can prove that she ever really existed," will find in it a good deal touching her so-called prophecies. The *Palatine Note-book*, of which the typography is as elegant as its contents are scholarly, is edited by a gentleman who has distinguished himself by an admirable life of Dr. Thomas Fuller, Mr. John E. Bailey, of Stretford, near Manchester.

—The "Allgemeiner Deutscher Schriftstellerverband" have presented a petition to Bismarck, praying that he would found an Imperial Library, which should receive and preserve all the literary productions of the Empire—an analogue of the British Museum, in fact. They complain that the great German libraries at present are too learned in their aims; what is needed is a library which shall contain "not merely the books which we desire to read for the sake of their contents, but also those which we desire to become acquainted with because they have been published." They should be the register of the mental product of the whole people. In the five great English libraries, continue the petitioners, one can follow in its smallest details the scientific, political, social, commercial life of the people, and this is as it should be; but the German scholar finds no such repository in his country. He must search at Paris or at London for many a German work not to be met with at home. The committee call upon the Chancellor to fill this gap; to found a library that shall be in its way what the Archæological Institute at Rome, the Monumenta Germaniæ Historica, the excavations at Olympia, are in theirs. They remind him that in France and the United States every publisher must give the Government two copies of each of his publications, in Italy three, in Austria four, and in Great Britain five; and they see no reason why a similar provision should not build up a great national library at Berlin.

FITZGERALD'S GEORGE THE FOURTH.

The Life of George the Fourth. By Percy Fitzgerald, M.A., F.S.A. 2 vols. London: Tinsley Brothers; New York: Harper & Bros.

"I ALWAYS admire the huge amount of husks which industrious men will let run through the sieve of their minds." This remark, with which a lady met the statement that we had read through the whole of Fitzgerald's 'Life of George IV.,' set us on thinking. Is there any really valid justification for filling one's mind, even for a moment, with the huge lot of literary "husks" contained in the 800 closely-printed pages wherein Mr. Fitzgerald has narrated the life of the last of the Georges, "including his letters and opinions, with a view of the men, manners, and politics of his reign"? It were vain to pretend that more than an infinitesimally small part of the food provided by our author nourishes either soul, mind, or spirit. Of the ordinary pleas which may be urged in favor of idle reading, few (if any) are in this case available. We cannot say that this biography of George IV. is entertaining. Here and there you may pick up an anecdote which may raise a smile. The picture of the Prince of Wales racing a flock of turkeys against a set of geese may perhaps amuse those who have never before heard the story. The sketches of Sir John Lade, of the Barrys, of the old Duke of Norfolk, and of a whole gang of "bloods" who pursued what were called their pleasures towards the close of the last century, with a dull monotony absolutely unredeemed by wit or humor, may have some slight interest for any one who has never read 'Vanity Fair.' But any student of Thackeray's masterpiece will feel that the living picture drawn of the Regency by the greatest of modern satirists makes it a waste of time even to glance at Mr. Fitzgerald's lifeless sketch. If there is anything in his book which, from a literary point of view, is

worth preserving, it is a verse here and there of now-forgotten satire which throws a gleam of real light on the group of witless revellers who found in the Prince of Wales their appropriate leader:

"What can Bobby Onslow do?
He can drive a coach and two;
Can Bobby Onslow do no more?
Yes, he can drive a coach and four."

Here we have in its briefest form a summary of the merits not only of Bobby Onslow, but also of the whole set of noble blackguards, who never appeared to greater advantage than when they proved that under happier circumstances they might have been useful members of society as grooms or coachmen.

But the book, it may be thought, perhaps puts a maligned or misunderstood character in a new and more favorable light. We admit that we took up Mr. Fitzgerald's work with a faint expectation that George might turn out a trifle less odious and contemptible than in the picture drawn of him by Thackeray. We have, further, not the remotest doubt that Mr. Fitzgerald, when he began his work, intended to try his hand at a little bit of historical whitewashing. Throughout the book he makes spasmodic and strenuous efforts to act up to the conventional duties of a biographer, and to show that his hero had about him traits which, if not heroic, yet might excite some slight sentiment of affection or of respect. There is something really pathetic in our author's last desperate rally at the conclusion of the second volume on behalf of George.

"Many instances," we are told, "could be given of his kindly feeling and good heart. His charities were often magnificent. . . . His name, too, is pleasingly associated with that of Beethoven. . . . At the dismal conferences with the Recorder of London, where the fates of prisoners were finally determined, the King was invariably on the side of mercy. . . . In his relations with certain remarkable men of mark and judgment he really shone. . . . Walter Scott became quite fascinated by his advances. On one occasion he wept and went down on his knees to a bishop when reproved for desecrating the Sabbath."

But, in the long run, facts and honesty are too strong for biographical partiality, and if any human being at this time of day entertains a lingering belief that George IV. possessed we do not say virtues, but at least manly vices, this faith must be shattered by Mr. Fitzgerald's pages. There have doubtless existed men more wicked than George, but one may fairly doubt whether modern European society has ever produced a monarch so thoroughly contemptible. He is hardly man enough to be an object of hatred. You might almost as easily hate a wax figure at Mme. Tussaud's as hate the miserable, maudlin, drunken, lying old man who not much more than fifty years ago sat on the throne of England and impeded to the best of his power every measure which men of sense and energy (whatever their politics) knew to be for the benefit of the country. If it were an historian's duty, which happily it is not, to estimate the moral responsibility of human beings for their vices and errors, he would have a good deal to urge in extenuation of George IV.'s culpability. The eldest son of George III. received from his father as unfortunate a training as any child ever received from a well-meaning parent. He inherited none of that father's virtues, but he did inherit from George III. a taint of madness which was, both in father and son, closely connected with that turn for intrigue which in the son took the form of impudent mendacity. The moral responsibility of such a man for his vices was, one may charitably hope, slight. His Majesty was endowed, to borrow an expression from Carlyle, "with nothing but a stomach and the effrontery to fill it." The curiosity, if not the interest, of his life lies in the singular fatality by which a voluptuary who was heir to the throne of England, and was, either in reality or in name, King of England for nineteen years, never succeeded in enjoying a single year of the pleasures for which he sighed. Such a life may certainly be useful to point a moral, but, except for any one bent on writing a new satire on the vanity of human wishes, it hardly affords a subject, from a biographical point of view, for interesting or profitable study.

Though the life of George IV. is not as amusing as a second-rate novel, though it adds little to the knowledge of English history which is possessed by any well-educated man, though it sheds scarcely any new light on the character of a man so contemptible that his idiosyncrasies would hardly under any circumstances be worth careful analysis, we are convinced that intelligent students of history are fully justified in reading such works as Mr. Fitzgerald's last production. The reasons for this conviction, which vindicate a good deal of apparently useless reading, may easily be stated, and are, we think, worth stating.

The details of biography afford the only means of really entering into the spirit of past generations. As one ponders upon the details of George's life one comes to understand several matters as to the condition of England during at least forty years which can hardly be learnt from the solemn pages of professed historians. Any one, for example, who wishes to realize what was the effect produced in England by the recoil from French revolutionary excesses can measure the force of the conservative reaction by the fact that a king like George IV. was tolerated, one might almost say respected. He had every defect which renders a human being contemptible. He was a voluptuary, a liar, a poltroon. Throughout life he was in debt, and had to practise all the meannesses of a debtor. The Queen's trial opened to the popular view the most disgusting and degrading view of royalty which has ever been presented to the English public. Yet, in spite of all this, the King was borne with. If he was hissed by the London mob he was received with rapturous applause in Dublin and in Edinburgh. That he should, till his death, have found bishops to flatter him is nothing; though that a man so respectable as Bishop Sumner should have been the admirer of George IV. tells us a good deal about the condition of the Church of England between 1820 and 1830. What seems almost incredible is, that Sir Walter Scott should have been found among the King's admirers. Toryism must, indeed, have been a living force when a Tory so manly and upright as the author of 'Waverley' could feel that a glass was sacred because it had touched George's lips.

Nor is George IV. valuable solely as providing for future times a means by which to measure the strength of the reaction from Jacobinism. His whole career is a singular and convincing proof of the immense influence which, down to a time within the memory of living men, was possessed by the Crown of England. George had not a single quality which enables a man to rule his fellows, but politicians of all classes clearly took it for granted that George, whether as regent or king, could, if he chose, exert a decisive influence on the course of English politics. The Whigs, once and again, staked everything on the expectation of the Prince of Wales becoming regent and bringing the Whigs into power. The very means taken by Pitt to tie the Regent's hands seem to prove that he himself agreed with his opponents in assuming that a political party backed up by the Crown could retain power even against the will of the nation. That this assumption was well founded it is a little difficult to believe. Possibly both Whigs and Tories overrated the effect of Crown influence. But even supposing that the ablest statesmen of the day forgot that the Prince Regent would never have wielded the authority due to the personal character of George III., their error, if error it was, is most instructive. One may feel assured that the power of the Crown was something quite unknown to modern Englishmen, if experienced politicians could believe, rightly or not, that a change in the occupant of the throne would be sufficient to alter the relative position of the two great historical parties which divided the nation.

Nor is it only with regard to the machinery of the English constitution that the life of George IV. gives very valuable information. His relation to the politicians of his time goes further than any one fact we know of to explain the deep discredit into which the Whigs fell under the guidance of Fox and, for that matter, of Burke. The plain fact which every student of English politics should bear in mind is that, in the long run, English opinion has invariably been found to support statesmen and parties who, whether truly or not, were supposed in their day to represent and share the national sympathy with sound public morality and decent private respectability. The respectable party is the party which is sure in the end to command the suffrages of Englishmen. With this value for humdrum respectability neither Fox nor Burke had any real sympathy. The alliance between the Whigs and the Prince of Wales shocked some of the strongest of English feelings. It was taken to be (not, we admit, quite fairly) an alliance concocted by men who either did not or would not see the Prince's glaring faults, and who, in their eagerness to grasp at power, were prepared to set a son in unseemly opposition to his father, and, by the aid of court influence, carry out a policy opposed to the wish of the nation. Nothing was ever more truly a blessing in disguise than the treachery with which George deserted his former associates. He kept them out of office, and by the severe process of exclusion from power restored to them the virtues and the high character of Liberal statesmen.

Reflection, further, on the life of the most worthless, though not probably the wickedest, of English monarchs, gives rise to several reflections on the future as well as on the past of English constitutional government. Is it certain, for example, that the English constitution as we now know it could work and prosper under the weight of such an incubus as the last of the Georges? One may well doubt it. It is difficult to imagine that Mr. Gladstone, Lord Hartington, or Sir Stafford Northcote could undertake to perform the work of modern ministers if they were compelled at the same time to soothe the querulous fears, to listen to the childish fallacies, or to guard against the treacherous intrigues of a sovereign for whom every one, from his prime minister down to his valet, felt and expressed the most unlimited contempt. But is it, on the other hand, at all certain that the chances of hereditary succession may not bring to the throne of England kings not, perhaps, as contemptible but as unfitted for their post as was George IV.? It

were easy to point to causes which make such a catastrophe at any rate possible. It were difficult to show that the English constitution provides means for averting this possible calamity. But there is no need, for our purpose, to trouble our readers with constitutional speculations. All that we are concerned to prove is that the 'Life of George IV.' and works of a like kind afford valuable material for interesting reflection. It is worth while to let a mass of husks pass through the sieve of one's mind if the sieve can retain some pieces of useful, rare, and solid nutriment which is not to be found anywhere but in the midst of biographical husks.

HOW I CROSSED AFRICA.

How I Crossed Africa: From the Atlantic to the Indian Ocean. By Major Serpa Pinto. Translated from the manuscript by Alfred Elwes. Philadelphia: J. B. Lippincott & Co. 1881. 2 vols.

OUR earliest authorities upon the subject of Africa, after the classical writers, are the Portuguese. Early in the sixteenth century they established factories on both coasts; their traders crossed the interior from east to west and from west to east, whilst their missionaries founded large and prosperous stations with cathedrals, churches, and stone houses. But when the lake regions of Central Africa were again opened by European explorers, about twenty-five years ago, Portuguese exploration was degraded to the iniquitous exploits of mulatto slave-dealers. De Lacerda's famous last expedition, which started from Lisbon in 1798, closed the series of brilliant Portuguese exploits in African discovery. Since then Portugal's geographical work has been chiefly of a literary character. In 1876, however, a geographical society was founded in Lisbon simultaneously with a "Permanent Commission of African Exploration." This revival was partly due to the reproaches levelled at the Portuguese from all sides, because, while claiming at least a nominal authority over more than one-half of southern tropical Africa, they had done less, in this century certainly, than any other European nation to civilize that vast country; and it was due still more to the misdirected zeal of English missionaries of the Protestant faith, whose antipathies were against the Moslems and all Christians not of their own sect, and who openly advocated the annexation of Portuguese territory.

The first important result of this new impetus in Portugal is described in Major Serpa Pinto's 'How I Crossed Africa.' The author divides his work into two parts, with separate titles: "The King's Rifle" and "The Coillard Family." In a tediously long preface, or rather series of prefaces and prologues, full of very uninteresting personal matters, he tells us that he chose these names out of gratitude to the supposed saviours of the expedition. The first title refers to a splendid double-barrelled breech-loader which his Majesty Dom Louis I. presented to him, and with which he killed divers lions, tigers, and other wild beasts, blood-thirsty savages and mutinous porters; the second, to the kind-hearted French couple who nursed him through a long and dangerous illness. Major Serpa Pinto arrived at Loanda in August, 1877, and left Benguella for the interior on November 12 of the same year. The journey from that point until he reached Durban, in Natal, seventeen months later, may be divided into three parts. The first comprises the well-known track from the Atlantic to Bihé, over ground often described by European travellers. By a serious literary mistake, too much stress has been laid upon this portion of the route, as well as upon the last part, stretching from Daca to Durban. Here our author might well have been sparing of particulars, husbanding his space for the passage from Bihé to Daca, which led through the heart of the great watershed of South Africa, now for the first time described.

Accompanied by two of his countrymen, Lieutenant Capello and Lieutenant Ivens, both of the Royal Portuguese Navy, and about fifty porters, the explorer started for Bihé. The beautiful valley of the Dombe Grande, which they left behind on December 4, led them to Quillengues (Kwilenges; we give the Portuguese spelling of geographical names, which the translator has thought fit to preserve), where the sentimental major mourns over "the first great trouble during a journey so fruitful in mishaps"—the loss of a pet sheep. They left Quillengues on New Year's Day, 1878, and met at Caconda the naturalist José d'Anchieta. At Caconda the first real trouble began. For some reason, which Serpa Pinto, who is the very soul of frankness, does not give, the two officers left him, to meet him once more among the orange-groves of Belmonte and then to fade out of sight. There evidently had been some unpleasantness between them. The twenty days before reaching Bihé, "days of profound anxiety," were certainly fraught with danger—prospects of famine, mutiny among the carriers, and last, but by no means least, the petty intrigues and rascalities of his own countrymen, "expatriated wretches," settled along the route, who did their best to bring about an utter collapse of the expedition. Before reaching Bihé sickness and fever overcame the leader, and after several days of unconsciousness he found himself in Silva Porto's station at Belmonte in the Bihé, in a comfortable bed, with fine linen sheets and even pink curtains with a snowy white fringe—luxuries for which he is, as usual, gushingly grateful.

On the 14th of June he broke up his camp at Belmonte and began his journey through a virgin country, hitherto only vaguely known from oral descriptions of Portuguese traders and never before delineated upon any map. This portion, until Lialui is reached on the Upper Zambesi, is the pith of the book. In spite of sickness, hostile attacks, and innumerable difficulties, the plucky explorer kept a detailed geographical journal, took astronomical and hypsometrical observations at every important point, and was thus enabled to lay down the exact topography of his journey, including for the first time the true courses of the upper tributaries of the Zambesi. The first country to the east of Bihé is the unexplored land of the Quimbandes, watered by some of the head streams of the Cuanza River. These people are described as a clan of the great Ganguella family, and a lazy, useless race, with a somewhat Jewish physiognomy. East of the Quimbandes inhabit the Luchazes, belonging to the same family. In their very attractive country Serpa Pinto climbs a lofty mountain, the Cassara Caiéra, 5,298 feet above the sea-level, from which he enjoys a magnificent panorama, exhibiting in full view the entire course of the River Cuango, with the watersheds of the Cuito, Cuime, and Cuiba. The description of these hitherto entirely unexplored rivers forms one of the most interesting chapters in the book.

From the Luchaze country the route lay toward the southeast, to the country of the Ambuellas, where the same species of immoral hospitality prevails which Holub encountered in Sepopo's domains, and was the cause of much embarrassment to Serpa Pinto, two black princesses having been sent by their father, Cahu-heú-úe, King of the Ambuellas, to place themselves at his disposal, in spite of his virtuous obduracy. He was most kindly treated by the King, and indeed by every one of this amiable and industrious tribe, who in agriculture surpass any visited by our traveller. On the 4th of August he left the capital, and following again a southeasterly direction, after twenty days' march, not marked by any particular incident, reached on the 24th of August, at ten o'clock in the morning, what was really the goal of his journey, the great Zambesi River. At five o'clock in the afternoon of the same day he reached Lialui, the capital of the Barôze or Lui, thus concluding the second part of his journey, and with it his real exploration.

At Lialui the most serious accident of the whole journey befell the party. At the instigation of Gambella, the Prime Minister of King Lobossi, the major's camp was attacked at night and set on fire. The scene, which resembles one from Dante's 'Inferno,' is described with almost Dantesque vigor. At this juncture the "King's Rifle," loaded at the last extremity with explosive balls for elephant-shooting, did wonders. Before leaving the treacherous King, Serpa Pinto had the satisfaction of calling him to his face "a liar, a thief, a murderer, and a perjurer," and it does not appear that these epithets gave any offence. The worst result of this fearful night assault was the desertion of all his negro followers, with the exception of the few faithful ones who had attended him all the way from Benguella. Broken down completely with fever, anxiety, and fatigue, he fell in with a French missionary family, consisting of the Rev. François Coillard and "two guardian angels," Mme. and Mlle. Élise Coillard, "who poured hot tears over cheeks that were parched and cracked with fever" It is characteristic of his impulsive nature, whether in health or in sickness, that even among these good friends, the saviours of his life, his quick temper got the better of his judgment. It was on Christmas eve—"A miserable Christmas eve indeed! My ill-humor, that had been pent up all day, wanted only the slightest provocation to break out." The rain was falling in torrents, and the whole party had taken shelter in one of the wagons. There was a lively and cheerful conversation going on, but the major, huddled up in a corner, was morosely silent, nursing his spleen. Madame Coillard spoke about George Eliot, whom she ranked among the greatest novelists that ever lived. This utterance fell like a spark upon gunpowder. The invalid turned savagely upon her, told her that her George Eliot wrote nothing but nonsense, that her George Eliot was only a woman, and that women when they took up the pen could only write nonsense. Women's true vocation was to attend to household duties and not to write nonsense. Yet when he observed in Mme. Coillard's kind and placid face an expression of pain and vexation, he got up and rushed out into the darkness and pouring rain. By way of showing his offence in a still more heinous light, Major Serpa Pinto confesses that he has read and re-read George Eliot's works, and considers 'Romola' and 'Adam Bede' the "noblest productions of one of the finest English romance-writers."

The remainder of the journey to Shoshong, Livingstone's old station, and thence to Pretoria, is

devoid of interest and comparatively uneventful, but when the Transvaal is entered we meet with names made familiar by the late war against the Boers, and are upon ground just traversed by Dr. Holub's readers. These two young explorers have much in common—courage, warmth of heart, and unreserve. But the greater admiration is due for power of endurance to the Portuguese cavalry dandy, who groans when he cannot sleep between sheets, who carries his bath and perfumery and all the paraphernalia of his toilet from the Atlantic to the Indian Ocean, and looks after them with as much care and anxiety as after his ammunition and instruments, and whose emotional nature finds vent in tears on the slightest provocation. He writes, too, in a style of great *naïveté*, resembling in abruptness of transition, effusiveness of sentiment, richness of coloring and boldness of metaphors Victor Hugo in his most characteristic mood. There is in his book a delightful mixture of almost boyish vanity with scientific devotion which is by no means ungraceful. One who has done so much for science and faced so many dangers, and come out of it all so well, has a right to speak of himself with a little more self-gratulation than is ordinarily becoming in historical narration.

We have only space to add that Major Serpa Pinto's astronomical observations generally agree with those of former explorers, except on the middle Zambesi, where they differ from those made by Livingstone to the extent of from six to ten miles; and in the Bechuana countries along the Limpopo. The position of Shoshong, the residence of King Khame, differs in Serpa Pinto's calculations more than sixty miles from that given by any previous traveller, including the latest explorer in those regions, the conscientious and learned Edward Mohr, of the Berlin Geographical Society.

RECENT NOVELS.

A Fearful Responsibility, and other Stories. By W. D. Howells. Boston: J. R. Osgood & Co. 1881.

Madame Delphine. By George W. Cable. New York: Charles Scribner's Sons. 1881.

A Lesson in Love. [Round Robin Series.] Boston: James R. Osgood & Co. 1881.

A Matter-of-Fact Girl. By Theo. Gift. [Leisure-Hour Series.] New York: Henry Holt & Co. 1881.

Synnöve Solbakken. By Björnstjerne Björnson. Translated from the Norse by Rasmus B. Anderson. Boston: Houghton, Mifflin & Co. 1881.

Histoire d'une Parisienne. By Octave Feuillet. Paris: Calmann Lévy; New York: F. W. Christern. 1881.

Mary Marston. By George Macdonald. New York: D. Appleton & Co. 1881.

THE second of the two "other stories" printed with Mr. Howells's latest novelette must seem even to the sympathetic reader almost the reduction to absurdity of Mr. Howells's characteristic method of story-telling. It is not, as he himself says, "any story at all," but rather a delicate tracing of several indigenous Venetian personages, one of whom finally drifts into an event which permits the sketch to be entitled "Tonelli's Marriage." The suspicion occurs to one that it is really the result of an attempt on the author's part to dispense completely with even the slight structural substantiality that usually suffices him, and entertain his readers with a Barmecide feast of pure manner. This has been successfully done heretofore, of course, and of course Mr. Howells's manner is in general very captivating, but he fails here partly because of a kind of rectitude which eschews the necessary artfulness too absolutely, and partly, perhaps, because of an artistic sensitiveness that dictates too perfect a correspondence between his material—or rather the absence of it—and its treatment. The latter is accordingly robbed of all distinctive quality in order to agree with the insubstantiality of the former. The attempt doubtless had its attractions for so subtle a literary disposition as Mr. Howells's, but, if not the entire failure which any one else would have made of it, it can only attain the success of exciting curiosity of a rather abstruse order, and for that its importance is hardly sufficient.

The second story, "At the Sign of the Savage," will be remembered by *Atlantic* readers as in Mr. Howells's best vein. Unlike "Tonelli's Marriage," it is not refined into nothingness, but its utterly unromantic and trivial plot is "padded round" with all the humorous felicity and refined geniality in which Mr. Howells is absolutely unique. Colonel Kenton and his wife arrive in Vienna at 3 A.M., and order the cabman to drive them to the Kaiserin Elizabeth. They sleep late into the day, have breakfast in their room, and then the colonel goes out to see his friend the American consul. The latter persuades him to spend the afternoon with him, and a note is despatched to Mrs. Kenton warning her not to expect him till dinner. On repairing finally to the Kaiserin Elizabeth, Kenton does not recognize it, finds there his note to his wife, and discovers that he had been driven to the wrong hotel by a knavish cabman. Where "he is stopping" he doesn't in the least know, and the two set out on a tour of the hotels. At last some one reminds the consul that the arrivals are necessarily reported to the police, and they find out at once where the presumably agonized Mrs. Kenton is awaiting her husband, and repair thither post haste. "Why, how heated and tired you look!" is her serene greeting, and nothing is said about the blunder. The colonel is silent for obvious reasons, and the consul because he stupidly walked the other's "legs off" before going to the police-station in the first place. In other words, "I say, Davis," says the former, "this is about an even thing between us." The truth was told Mrs. Kenton long afterward, and "she did not see much to laugh at." But the reader must be equally bereft of humor if he be not highly amused from the outset of the story; and yet this is all there is of it.

Similarly slight is the texture of "A Fearful Responsibility," which every one must have been reading lately in *Scribner's Magazine*, so that we need make no abstract of it. There are, to be sure, events of importance in it; Miss Mayhew, whose care is the fearful responsibility of an American professor temporarily residing in Venice, having several offers of marriage which she declines, and so causes a good deal of distress. But these events are deprived of all tragic tincture by the wariness of the narrator, who always steers his way amid such with unerring security, and never loses sight of his true course of every-day matter-of-fact life. This is another quality in which Mr. Howells is unique. Every other novelist who has ever written, however much he may have avoided ideality and imaginativeness, and however closely he may have copied reality, has always betrayed some consciousness that this was, in fact, what he was doing, and that in general it is not done by others. Mr. Howells, however, both in matter and in manner, is so successfully real as to provoke the question, Why in the world does he select this group of persons and this set of circumstances to celebrate instead of any of the other myriads precisely like them? They are, indeed, the perfection of commonplace humanity and of ordinary happenings, but they are so charming to read about as Mr. Howells exhibits them because in the first place his art in photographing such types is so subtle, and in the second place because he sets them forth with so much kindly and genial humor. On the former point it is late in the day to say anything, but the latter may be illustrated by the fact that Mr. Howells numbers among his admirers quite as many women as men, we suspect, and yet his humor is at its best when it is hugging itself, so to speak, at the expense of the foibles of the sex. The last paragraph on page 85, for example, is a stiletto-thrust. Mrs. Elmore in this story is capitally depicted; and if her creator's shyness in presenting the *fonds* of seriousness to be found in a feminine nature of this sort is inveterate, it is only on reflection that this is felt; even then it is only a drawback to Mr. Howells's completeness as a novelist, and not at all to the pure comedy which it is clearly his mission to produce. From the point of view of pure comedy, indeed, most of the characters are excellent. The very American Hoskins and the Professor are nearly as good as Mrs. Elmore. The first third of the book is rather flat and discursive, it must be admitted, and the marionette dance of the very real personages is too long postponed; but after Mr. Howells begins to pull the strings in earnest—if we may use this adjective—the spectacle becomes an entertainment of the first class.

We yield to none of Mr. Howells's admirers in admiring him so much that we would not have him different, and it may be said without invidiousness that the reading of 'Madame Delphine' after his stories has the effect of deepening one's impression of Mr. Cable's warmth and color. In the degree in which Mr. Cable possesses them these are properly Southern qualities, and it is agreeable to find that they lose nothing in intensity from the high literary standard to which their exhibition is made to conform. 'Madame Delphine' is by no means the work that 'The Grandissimes' is, but it does not lay the least claim to be so considered, though it deals with the same subject. The study of the social results of slavery offers a large field to the romancer, as Mr. Cable has already shown us, and it may continue his special subject for some time yet, we should say, before it becomes exhausted. In 'Madame Delphine,' as in 'The Grandissimes,' we have a mother and daughter for heroines, only here "dey's quadroons," and the dramatic centre of the story is the falsehood of the mother, who denies her child that the latter may wed a white without offence to the laws prohibiting the intermarriage of races. Olive is apparently a pure Caucasian, and Madame Delphine's perjury is credited; but her own sacrifice has cost her so much that she expires at the confessional after admitting her guilt to the kind Père Jerome. The scene of the perjury is very dramatically set forth, gaining much from Mr. Cable's eminent faculty for subdued intensity; and that of the confession is deeply affecting. Short and even episodical as the story is, it contains some of the remarkable portraiture of 'The Grandissimes'—portraiture which owes its success to the power of intuitive

sympathy rather than to experience and close observation, and which, therefore, though it may be a trifle less graphic, is wonderfully true and real. Père Jerome is a prize portrait, and the keynote of sweetness and gentleness set by his character seems to have governed the narrative, which is throughout related with charmingly poetic feeling. Besides being less comprehensive it is also less powerful than 'The Grandissimes,' but it is even more winning in the sustained warmth and color, as we say, of its diction than our memory at least of the more important work. One criticism suggests itself, though we are in two minds about offering it. The Creole patois is introduced with an ingenuity perhaps a little evident. It is difficult to see how it could be better managed, and to consent to the loss of any of it is quite out of the question, but the problem is one for Mr. Cable's own solution. Possibly he would do well on occasion to disregard the proprieties altogether, and make his Creoles speak as he chooses; it would be a very literal taste that this would offend, whereas at present only a literal taste can be quite satisfied with the apologetic makeshifts resorted to to compass the natural introduction of the dialect. Finally, we may remark of 'Madame Delphine' that its pathetic interest is broadly human, and would be felt with equal keenness by readers who thoroughly believe in the peculiar institution as well as by those who have never reflected upon its inherent enormities, and are surprised into indignation by accounts of them. 'The Grandissimes' was a tractate as well as a romance, and so too is 'Madame Delphine,' but its interest as a romance does not at all depend upon its tractarian character, and would be as great if the tragic element of it proceeded from any law, just or unjust, instead of from the Louisiana statute against miscegenation.

The second of the Round Robin series is a very good story. It is, besides, an American novel in the strictest sense of the term, as commonly understood—that is to say, not only are its characters, incidents, and situation American, but it is direct, without color, hardly romantic, and almost bleak. The writer justifies her departure from the course pursued by most of the anonymous novelists of her sex, who follow the injunction originally addressed to another class of writers, we believe, and "look into their own hearts and write." Accordingly, in the fruits of her observation we have a very natural and credible story. The hero, John Truax, is a busy lawyer, whose distinguished abilities are abundantly recognized and make him a good catch. His industry, however, has had the effect of making him a good deal of a bear, and he is rarely seen in society. Engaged as counsel by the family attorney of Mrs. Katherine Warrington, he nevertheless finds his imagination touched by his fair client, and before he really knows it he is engaged to her. This is very well managed by the author, who contrives the main complication of her story in this incident without allowing it to appear strained. Truax has seen little of women, and is opposed to matrimony by disposition, and systematically as well, so that most of the courtship falls upon the lady. The latter is a widow, having married very young a sexagenarian, and, though without the proverbial artfulness of widowhood, has well-developed instincts and falls readily in love with the masterful lawyer. On his side there is little sentiment, and he has to ask himself whether he is really in love or not, until he meets the plaintiff in the suit to break his fiancée's late husband's will, when he promptly falls in love with her in earnest. It perfectly fits in with his character that he should not perceive this, and, without much thought of infidelity, he continues to discharge his duties to Katherine while he enjoys himself with little Doris, who is considerably under twenty and exactly cut out for him. His engagement is kept a secret through his fear of ridicule, and he has, therefore, plenty of opportunity for highly reprehensible conduct, which he indulges with the serene, or at least only vaguely troubled, conscience of an absolutely selfish, healthy, active-minded man. Doris reciprocates his feeling at once. This state of things finally collapses through its discovery by Katherine, who bestows herself upon Dr. Allan Ford, a cousin, who has worshipped her for years, and Truax hies him to Doris and probably has made her a rather miserable woman ever since. The reader addicted to reading old-fashioned novels, and finding in them images of the ideal life, will be incensed at 'A Lesson in Love,' and, from the imperfect abstract we have been able to make of it, such a feeling might not be esteemed fantastic. But we can vouch for the reasonableness of the book, which is only cynical—or, as many novel-readers say, "disappointing"—if to describe a very natural situation in actual life be evidence of cynicism. There are countless Truaxes. What a man who meets the woman he loves after he has engaged himself to one whom he only admires needs, to make him behave with consideration, not to say chivalry, is some degree of sensibility. This quality is lacking in Truax, and his character is, in its way, a triumph, particularly as his defect is allowed to disclose itself, and, as is the entire book in fact, is presented dramatically. Mrs. Warrington's demeanor and conduct are also real and simple. She is the most charming figure of the novel, and the absence of the heroic quality in her is, considering the provocation of the situation to the average novelist, something for the reader who likes a sense of actuality in novels to be grateful for. Perhaps we are hasty in assuming the sex of the writer, for Katherine seems as masculine a creation as Truax appears due to an acute feminine intuitiveness. But several minor indications point in the direction we have supposed, and the fact is of no consequence, and would need no allusion but for the want of a common personal pronoun, and the deep interest which readers of these anonymous series take in the authorship of successive volumes.

'A Matter-of-Fact Girl' is the kind of book that we said 'A Lesson in Love' was not. It is a work of purely imaginative fiction by an author who could turn out a score like it, and probably will if her life be spared. It differs from the novel of our fathers only in the introduction of landscape and the use of the present tense, both employed in a way which betrays the unhappy influence of Mr. William Black in the one case and of Miss Rhoda Broughton in the other. Barbara, or "Berrie," Brown is with her grandmother—a cross old lady, who supports her and makes her life a burden by reminding her of the fact—at a Lancashire resort where Captain Randal Comyn comes to spend a day or two. He has a large income, an aristocratic father, and a past which has embittered his life. He is a scoffer and is set down by "Berrie" as an "agnostic." This has been brought about by his having been jilted by a young girl into whose keeping he had entrusted his entire being. Since that event he has been wandering over the face of the earth, taking but a listless interest in anything but misogyny. "Berrie" is very bright and "matter-of-fact," and consoles him. After a very short interval he offers himself to her, whereat she is distressed and informs him that she is already engaged. Then he goes away, exceeding sorrowful, to London, where he finds his old love a widow. He soon writes her a proposal, but is called away before receiving her answer. Before his return he meets "Berrie," who has become free herself. Then he experiences acute anguish and is in a fair way to become bitter again. But Vivian refuses him, and then he hastens back to "Berrie," who this time has had smallpox and won't think of marrying anybody. The conclusion may be withheld, and may also be readily divined, since it is perfectly clear that Theo. Gift can do what she likes with her *dramatis personæ*, for aught they can do to thwart her, and that she is at bottom a very kind-hearted author.

Every one is familiar with the charm of the Norse novel, especially when it is written with a touch of genius, as, perhaps, a work by the author of 'Arne' is sure to be. 'Synnöve Solbakken' is Björnson's first work and far inferior to the more famous novel, but it possesses the marks of its author's individuality and has the national flavor, and agreeably introduces the series of Björnson's romances which Professor Anderson has undertaken to translate. It is difficult to analyze the pleasing impression one derives from it and kindred Scandinavian romances, but the distinct charm of them may be said to proceed immediately from several obvious characteristics. In the first place, peasant-life is the subject of Björnson and his school, and it is treated with thorough sympathy. Their romances thus have the interest inseparable from homely lives and interiors realistically and feelingly depicted, because they stand directly upon the basis of a broad humanity and appeal to what is most essential and universal in the reader's sensibility. They are, moreover, the perfection of simplicity, which is pushed to the limits of ingenuous artlessness; anything approaching the factitiousness underlying the various forms of sensationalism is quite foreign to their tenor: a man is killed or a heart broken in them without more to-do than becomes the literary succession of the Gothic sagas. Still further, they are poetically conceived and executed, and attack one's emotions without in general employing the medium of the intellect to any degree worth mentioning. And, finally, they possess novelty. This last is probably not the least of the sources of their attractiveness, and by the time Professor Anderson has finished his series Björnson's admirers will be less enthusiastic than they are at present, we are inclined to believe. For nothing palls upon the nineteenth-century palate so quickly as sustained artlessness, and in 'Synnöve Solbakken,' as indeed in 'Arne' and in the Norse novel generally, a great part of the book has no tendency whatever, and many details are not in the least organic. A still more serious and analogous defect is the profound platitude that always lies near the surface and forms the basis of the main substance of each novel's emotional appeal. One can see why Hans Andersen is so attractive in his stories for children. But after a certain amount of simple poetizing on familiar and homely themes, one turns to the romance which displays more purely intellectual qualities, and whose material is composed of a more complicated warp and woof.

M. Octave Feuillet, however, demonstrates the possibility of being tiresome in the opposite way from Björnson, certainly. If the humdrum life and rudimentary passion of 'Synnöve Solbakken'

are not stimulating, the exclusiveness with which passion—and the particular passion exploited most frequently by M. Feuillet—dominates the scene in the "Histoire d'une Parisienne' is equally unexciting, owing, no doubt, in great part to its having become so unblushingly hackneyed. The plot is what is called the regular French plot, varied by M. Feuillet's ingenuity in inventing the innocence of the relations which provoke the husband to kill the lover, and in transforming the heroine after the slaughter of the latter into "un monstre," who contrives a duel between her husband and an expert swordsman, in which the former is nearly slain. The story is short, rapidly told, and full of events, as well as of the social preachment which Feuillet and Dumas are fond of employing as a conservator, or perhaps as a disinfectant. It is written, of course, with the elegance which made M. Feuillet an Academician, and in a way which would tend to confirm Mr. Charles Reade's statement that every French novel is composed with a view to dramatization. But it supplies no answer to the query which must always occur to M. Feuillet's foreign readers: How much, namely, of a transcript of social life and manners is, after all, the romance he is so fond of writing? M. Zola affirms loudly that it is not even a caricature; and though he has recently been told that he himself has no means of judging, we suspect that instinct has here served him so far as to make his statement more than half true. Like many other popular romancers, M. Feuillet affects exceptions rather than types, which would be all very well if he did not protest, in the tone of another Bossuet, that they are types.

Few things of the kind are more curious than the complete ruin which has apparently befallen Mr. George Macdonald's faculty for writing novels. His early stories were certainly unusual, and it is equally certain that if he had written only his later ones he would scarcely be known as a novelist. Persons who have read his remarkable 'Paul Faber' will not expect to find that work outdone in various respects, but with this exception the statement is perhaps a safe one that 'Mary Marston' is the worst of its author's books. Like all the rest, it is a combination of the novel and the sermon, but it is mainly sermon. The story is disjointed, improbable, long, and not very interesting; the sermon sets forth the democracy of true Christianity. Mary Marston is the daughter of a worthy dissenting shopkeeper, who has a wicked partner who is, naturally, a churchman. In the neighborhood is the family of Lady M. Alice Mortimer ("her friends called her Lady Malice"), the daughter of an impoverished earl; her husband, whom she married for money; her daughter Hesper, whom her mother is about to force into a marriage with a dissipated old man; and her very brunette niece Sepia, who has a doubtful past. This family forms the aristocratic element. There are two other families, composed of Geoffrey Wardour, his widowed mother and her orphan niece Letty; and Mrs Helmer, also a widow, and her son Tom, who is fast. These are the personages, and the most dreadful events happen to them; but the action of the story is the attempted "conversion" of each, directly and indirectly, by Mary Marston. Lady Malice is already beyond the power of the most assiduous dissent to recover her; Hesper opposes a native frivolity until her second marriage, when the good seed suddenly takes root; Hesper's first husband dies with a fair prospect of future happiness, though he has been atrociously wicked; Sepia, who is the Tisiphone of the tale, and is not even a churchwoman, retires into the murky gloom whence she came; Wardour is influenced by Mary, but precisely how much does not appear, and he retains his stiff-neckedness to the last; Letty and Tom are converted beyond cavil, and Tom is made sure of by being killed of consumption at once. Mary marries a blacksmith.

THE BODEN SEE.

The Shores and Cities of the Boden See. Rambles in 1879 and 1880. With maps of the district, and numerous original etchings on stone by H. Schmidt-Pecht. By Samuel James Capper. London: T. De la Rue & Co. 8vo, pp. xxxvi.-452.

Mr. Capper has had this great advantage over many who have written of Switzerland, that he is not a mere holiday traveller, but a resident among the scenes of which he writes so pleasantly. His book is full of little touches of local color which show long familiarity with the places and people described. It has the added interest that the country is pictured not only in its ordinary summer, but in its less-known winter aspect, when the ice-bound lakes are covered with skaters, and the "toboggin" (the word as well as the sled has been imported from Canada) shoots down the snowy slopes of the mountain villages. The historical matter accompanying the descriptions of the places visited is judiciously chosen, and especially well told are the stories of the martyrdom of Huss, the siege of Constance, and the sufferings of the people during the Thirty Years' War, while all who desire to travel cheaply and enjoyably can profitably read the introductory chapter on the hotels and *pensions* of Switzerland. A few pages are devoted to the lake-dwellers of prehistoric times, who appear to have been very numerous in this region. "In the little Unter See, with an area of only twenty-one English square miles, the remains of no fewer than twenty-two settlements of these interesting people have been discovered, and one of these settlements at Wangen, on the Baden side, rested upon no less than forty thousand piles and covered twenty-five acres." Not without interest, also, is the short résumé of the earliest references to the lake, in which the very fanciful and highly-wrought description of Ammianus is quoted, ending with the time, A.D. 609, when the fourteen missionaries from Ireland, under the lead of Columban and Gallus, settled upon its shores.

At Rorschach, which is in the canton named after the second of these two mediæval apostles and is "the most important Swiss town on the Boden See," Mr. Capper begins his tour of the lake. We have no space to dwell upon his lively sketch of the town in its holiday attire on the feast of Corpus Christi and the pleasant walks in its neighborhood. The canton of Thurgau, adjoining St. Gall on the north, is depicted as one great orchard of fruit-trees. "The dowry of a Thurgau maiden often consists, or did consist until recently, of four or five great apple or pear trees, which here attain the size of oaks or elms in a less favored clime." While staying at Heiden, a little village connected by a mountain railway with Rorschach, three miles distant, and a favorite summer resort of the South Germans, our author attended the Landsgemeinde at Trogen. This is the general assembly of one of the half-cantons into which Appenzell is divided, and all the male inhabitants under sixty years of age are expected to, and actually do, with few exceptions, attend it once in the year. This custom is still observed by the cantons of Uri, Glarus, the two half-cantons of Unterwalden, as well as those of Appenzell. "Every male Appenzeller unconvicted of crime receives a detailed programme of all the business six weeks before the Landsgemeinde. It consists of more than one hundred and fifty octavo pages." On the last Sunday in April, the day of the meeting, the road to Trogen was "thronged with the law-makers, all in their best 'go-to-meeting' clothes, almost all in cylinder hats ('toppers'), brought out once a year for this great occasion, and all, without exception, with side-arms, mostly old sabres or cutlasses." The place in which the assembly is held is an open square in front of the Rathhaus, and on this occasion there were eight thousand voters present. The assembly is opened with the singing by the whole multitude of an old Appenzeller hymn, beginning "Alles Leben strömt aus Dir." (This half-canton is Protestant, the other is Catholic.) Then, after the passing of the accounts for the year just expired, the retiring chief magistrate, the Landammann, delivered his valedictory address. He had already been chosen five times to the office, but the constitution does not permit a sixth term.

"He then handed back the great seal which he had held for five years to his sovereign, the people, and doffed the mantle of office. And now every head in the great company is uncovered, and a solemn hush pervades the throng. It is the moment set apart for silent prayer. And now the selection and voting-in of members of the Government begins, to which nominations may be given by any one in the assembly, and, accordingly, name after name is called out from the body of the square, all of which the white-haired Rathschreiber notes down, and in turn they are voted upon. The voting is all by show of hand, and is repeated until all on the platform are satisfied on which side is the majority."

Occasionally, when the voting is very close, the assembly has to be divided at the church-door and the people counted. This was actually the case at the assembly in the other half-canton held on the same day at Appenzell. The number of voters at this latter place was 2,409. The following business consisted of the election of judges, the acceptance of a revision of the laws, the adoption of an article which forbids dancing on Sundays (this by a very small majority), and the adoption of a proposal to establish a workhouse. "The crowning solemnity of the day" was the taking the oath of allegiance by the newly-elected Landammann, who then administered it to the people. "The spectacle of the eight thousand men of Appenzell-Ausserrhoden, with bared heads and outstretched right arms, taking the oath of fealty to their fatherland was one never to be forgotten."

St. Gall, the Manchester of Switzerland, is but a short ride from Heiden. The chief interest to the visitor, however, is not in the beautiful embroidery manufactured here, but in the historic abbey, to which Scheffel by his 'Ekkehard' has given the added charm of romance. Though the abbey church only dates from the last century, yet the library still contains four hundred of the manuscripts (among them a copy of Virgil said to be the oldest extant) which the poet-monk studied now ten centuries ago. Still earlier than Ekkehard was Notker, the author of the "Media vita in morte sumus," an inmate of the monastery. This monk, we are told—

"was one day walking in the direction of Ror-

schach, when he reached the deep and gloomy gorge of the Martinstobel. Workmen were at the time busy throwing a bridge over the abyss, and, as he saw them hanging, as it were, between heaven and earth, the peril they were in so impressed him as to become the motive of the hymn. Words and melody were written together, the latter being indicated by a species of accentuation above the words, which, in process of time, developed into our musical notation. The 'Media vita' was sung all over Christendom; it became a favorite battle-song among the Crusaders in far-away Palestine, until, in the fifteenth and sixteenth centuries, the inhabitants of the shores of the Rhine attributing magical virtues to it, its use was forbidden by the Church."

Here it is well to notice that the author of the famous hymn "Salve Regina" was a monk of the neighboring monastery on the island of Reichenau.

From St. Gall and Charlemagne (who for a short time was an inmate here) we are taken across the lake to Lindau and the Emperor William, who chanced that day (July 16, 1879) to be passing through after a visit to his daughter on the island of Mainau. Here our author was fortunate enough to fall in with an old Prussian colonel who was walking through Switzerland accompanied by his six-year-old son. The story which the soldier tells of the white rose sent by another son when lying wounded on the battle-field of Gravelotte to the Emperor, and the manner in which the latter, years after, rewarded this act of devotion, is well worth reading. The places on the German shore before Constance is reached are not of special interest, though they are full of old associations from the time of Frederic Barbarossa to that of Joseph II., of whom a characteristic anecdote is related in connection with a visit to Meersburg. Sipplingen was formerly famous, we are told, for its sour wine. "It belonged to the sort called 'Lachrymæ Petri,' because whoever drank of it went out and wept bitterly." A large part of the book is naturally devoted to Constance and its past. The story "'of the pale, thin man in mean attire,' who witnessed a good confession outside the walls of the city," receives fresh interest at the author's hands. A chapter also is given to a recent great benefactor of the city, the Freiherr von Wessenberg, a forerunner of the Old Catholics. Among the interesting excursions in the neighborhood is one to the château of Arenenberg, the home of Queen Hortense and, from 1818 to 1837, the date of her death, of Louis Napoleon. Later still it has been the residence for a part of each year of the Empress Eugénie and the Prince Imperial up to the eve of the latter's departure for Africa. It was also from his ancestral home, the castle of Meersburg, on the opposite shore of the lake, that Conradin, the last of the Hohenstaufens, a boy of sixteen, started, six centuries ago, upon the ill-starred expedition which brought him to the block at Naples.

Most readers, however, will find their chief satisfaction in the descriptions of winter scenes and sports. The Unter See, which is an arm of the lake to the north of Constance, is frozen over nearly every year, and the traffic between the opposite shores and the island of Reichenau is carried on wholly across the ice. This is under charge of an official named the Fischermeister, and any who venture upon the ice before he has pronounced it safe are liable to punishment. Accidents are accordingly very infrequent. Being an experienced skater, Mr. Capper was enabled to explore every part of the Unter See during a winter spent in Constance. A greater enjoyment than this, however, was in store for him. For "from the 5th to the 10th of February [1880] the whole of the vast expanse of the Boden See was frozen over, and to such a thickness as to make it everywhere passable." Since the year 895 the lake has been frozen over thirty-three times (if we may trust the note on page 281 and not the statement in the text), nine times in the fifteenth and seven times in the sixteenth centuries, but only twice since 1695, in 1830 and in 1880. On this last occasion "the maximum thickness of the ice was nearly five inches"; in 1830 it was at least eight, and a canal was cut to open communication between Switzerland and Germany. In the winter of 1880 "roads across the ice were staked out by the authorities; for it must not be forgotten that to the inhabitants of many of the towns and villages it is not a mere question of amusement, but the ice was, in fact, the only means of communication with their neighbors." Some of the narrated adventures of those who, in crossing, were overtaken by snow or fog remind one of the tales of Arctic travellers. Loss of life resulted in some cases.

Very different was the author's experience in the village of Seewis, a few miles to the south of the lake, where he spent a part of the winter. There tobogganing and sledge-riding take the place of skating, and a roll in the snow is the principal danger to which one is exposed. This place was the home of Salis, the poet, whose 'Das stille Land' Longfellow has translated in his 'Hyperion.' Many interesting particulars are given of the life of the villagers, as of the meetings of the commune after church, where, it may be mentioned, the women partake of the communion first, "as a recognition of their valor in the attack on the Austrian soldiery two hundred and fifty years since." In their "open-air parliaments" all questions of public interest, such as the time of sending the cows to pasture on the Alps, or of bringing them back, are discussed and decided by show of hands. The schools are free, with the exception that each child brings a stick of wood every day for warming the school-room. Though a village of nine hundred inhabitants, there were in 1879 only two persons, a married couple, who received aid from the poor fund. Delightful as our author's descriptions are of this place and the mountains about, and especially of the "Lüner See," a lake lying sixty-five hundred feet above the sea, one almost regrets to have these secluded villages brought to the notice of the common run of tourists.

The lack of an index detracts from the permanent value of this book. On the other hand, a word of praise should be given to the etchings, some of which appear to us particularly good.

THEISTIC ARGUMENTS.

The Theistic Argument as affected by Recent Theories. A course of lectures delivered at the Lowell Institute, in Boston, by J. Lewis Diman, D.D. Boston: Houghton, Mifflin & Co. 1881.

THEISTIC writers are under a strong temptation to assume the tone of champions, defending the cause of the Creator against the assaults of a wicked and malevolent enemy. Perhaps the most noteworthy feature of the book before us is its perfect freedom from this tone, and the calm impartiality with which all the arguments on both sides are weighed. Its effect will be to increase the regret that the voice of its gifted author is no longer to be heard among us, and to wonder why he was so little known while he lived. Its principal claim upon our attention arises from its treating the subject in the light of modern scientific theories, and especially the doctrine of evolution. The question whether this doctrine does really support atheism is one on which theologians themselves are not yet agreed, and on which it is quite natural that they should hesitate about taking decided ground. But our author takes decided ground in favor of the view that the theistic argument is not weakened in the least by any theory which brings facts under the domain of natural law; and though he has no occasion to take ground on either side, he preserves his consistency by making no attacks upon the generalizations of the most advanced evolutionists.

To analyze his argument critically we must recognize two distinct grounds of belief in an intelligent first cause, which are apt to be confounded. The first argument is founded on the necessity of an intelligent first cause to explain the origin of the laws and arrangements of nature, especially those which have reference to the existence and propagation of life and mind. In ancient times the propounders of this argument were met by the claim that, for aught we know, all these laws and arrangements might have existed from eternity, and therefore have had no need of a cause. We cannot be asked to explain that which may have existed from eternity; with equal reason might we demand an explanation of the eternal first cause itself. But modern science has done away with this particular objection, by showing that the present form of the universe is not eternal, but was assumed within a calculable number of years, and, still more, by making it probable that the laws of nature are such that their eternal action will not result in sustaining an eternal universe, but one having a beginning and an end. Moreover, notwithstanding the supposed materialistic tendencies of modern science, it has scarcely taken the first step toward showing that any cause capable of producing intelligence can exist in a cloud of fiery vapor, such as that from which the universe is supposed to be evolved.

The other argument seeks for evidence of an ever-active Deity in supposed deviations of nature from the course marked out by inexorable law, akin to those deviations produced by men when they employ natural forces to bring about their own ends. It recognizes a broad distinction between the operations of nature, proceeding from antecedent to consequent with such certainty that the ultimate result can be foreseen from the beginning, and human volition, in which strict law is subordinated to a desired end. From this point of view the Deity is looked upon as managing nature much as an engineer manages his engine, and as giving evidence of his presence as an invisible man might close a valve or throw water upon a fire. The fundamental postulate of this argument is, that we see effects produced in nature for which invariable and eternal law cannot account, and which evince the action of a directing power above nature in the same way that the sight of dwellings evinces the presence of mankind. To this class must, we conceive, be assigned all theistic arguments founded on design in nature, or, more explicitly, on supposed adaptations of means to ends. With whatever elements of generality they may be conceived in the mind of the philosopher, they are presented to the common people as analogies between the works of God and of men, both making use of nature on the same plan. To take one favorite illustration, a child is shown a flower-bed in which the plants are so arranged as to form the initials of

his name. He knows at once that some one did that intentionally, knowing what his initials were and planting the seed accordingly. He is then shown the similar adaptations in nature, pointing in the same way to intention on the part of an adapting mind.

Like all advanced theologians who are prepared to accept the doctrine of evolution, our author contends that the argument from design is in no way weakened by that doctrine; we only substitute a slow process, extending through many ages, and operating under the forms of natural law, for a sudden act of the divine power. In thus defining the mutual relations of the two theories, we think he fails to grasp the real significance of the evolutionary theory. What is most far-reaching and essential in it is not the substitution of a process for an act, nor the length of time it requires for the process, but the reduction of the supposed acts of a power without nature to results of ever-existing and ever-operating natural laws. That we thus annul the force of the argument as it is meant to be understood, will be seen by returning to the illustration of the letters of the flower-bed. If, upon going out into the world, the boy should find it a law of nature that beds of plants should assume the form of his initials; if he should find the same forms in flower-beds planted long years before he was born, and in Europe and in Asia as well as in America, he would regard the argument addressed him by his preceptor as entirely deceptive. In the same way, what the advocates of evolution claim, rightfully or wrongfully, to have done (and what they must claim, to give their doctrine the slightest consideration as a scientific theory), is that they have shown the adaptation of the human hand to the purposes it has to perform to be the result of certain general laws of nature, operating everywhere that life exists, and through all time, the present as well as the past; exactly the same laws, in fact, as those by which the muscles, thews, and sinews of a breed of race-horses have been, in recent times, adapting themselves to speed. If the work of mankind should be so altered that an entirely different hand would be required for his use, the old hand would still be perpetuated in the race, notwithstanding its lack of adaptation to the new condition. But as hundreds of generations came upon the earth it would be found that the muscles required for the new activities would enlarge and develop, while those not used would slowly waste away and at length disappear. Then, after perhaps a hundred thousand years, we should have a new kind of hand adapted to the changed conditions.

To this Prof. Diman would, no doubt, reply that the very existence of this adaptive power in nature affords the strongest ground for the theistic argument. But it is none the less true that the argument would not be that of Paley, but would be reduced to the general argument founded on the necessity of a first cause. The difference of position will become clear by observing how much the argument is neglected in cases better known and more familiar than those of the evolution of the human hand or eye. We all know that when men move into an insalubrious climate, if they survive the effects for a few years, a change comes over their constitutions by which they are enabled to resist the noxious influences by which they are surrounded. The scientist cannot give any other account of this change than that it occurs in pursuance of a general law of adaptation, pervading all life and necessary to its continuance. The theist sees in it the beneficent intentions of the Creator. There is no necessary conflict between these views, nor between the theist and the evolutionist. What the latter claims is that the growth of the hand and eye, and their adaptation to the wants of the race, the development of the muscles of the race-horse, the process of acclimatization, the tendency of wounds to heal, and the growth of a ligament over an opening in the skull, are all results of one general law pervading all life—the law of adaptation. The point which he can make against the theist is not that by thus reducing the effects to one law he has done away with creative intelligence, but that this intelligence is not evinced in one of these several manifestations more than in another. The theist must admit this, or give up his claim that the doctrine of evolution does not weaken his argument. But we very much doubt whether even Prof. Diman would be ready to admit that the process of acclimatization afforded as strong a basis for his argument as those adaptations which have been made familiar to us by Paley and his followers.

Biographical Sketches of Graduates of Harvard University. By John Langdon Sibley, M.A. Vol. II. 1659–1677. Cambridge: Charles William Sever. 1881.

It is eight years since the first volume of these Sketches, embracing the graduates from 1642 to 1658 inclusive, was published, and the venerable author is to be congratulated on the happy completion of the second, which is still but the beginning of his arduous task. A few more classes are here disposed of in somewhat less space than in the preceding instalment, and there are fewer distinguished names than in the list which contained George Downing, William Stoughton, Michael Wigglesworth, Increase Mather, John Cotton, and many others of no mean note. By far the most considerable figure is Joseph Dudley, of the class of 1665, son of Governor Thomas Dudley in the latter's old age (he was seventy when Joseph was born), and a most active and disturbing element in the politics of New England and New York; who also became governor of his native State, and by reviving the college charter of 1650 proved himself one of the greatest benefactors of his alma mater. To him are allotted twenty-three pages of Mr. Sibley's text, while Samuel Sewall (class of 1671), the next name in importance but a greater in human interest, fills twenty. Sewall's posterity has ever distinguished itself. Of his father's descendants, four held judgeships in the Massachusetts Supreme Court, covering a period in the court's life of 84 years out of 148. The Rev. Samuel Willard (class of 1659), himself steadfast against the witchcraft mania, received and read in Old South meeting Sewall's *peccavi* for his part in shedding innocent blood. This pastor also baptized the infant Benjamin Franklin, born just across the way from the church. As a prolific author he was second only to Cotton Mather: Mr. Sibley, following his practice in all these biographies, enumerates 49 of his published works. His offspring were nearly as numerous, for he had twenty children, yet his name has been preserved in only one line. In Sewall's class, which was remarkable for its quality, were the Rev. John Norton, ancestor of Mrs. John Adams and of Professors Andrews and Charles Eliot Norton; and the Rev. Edward Taylor, ancestor of Ezra Stiles, the future president of Yale College. In these years, by the way, Harvard raised up several of the founders of Yale, and in 1668 graduated Abraham Pierson, the rector of that institution. In the next class was the Rev. James Bayley, whose parish quarrels in Salem Village were visited upon his successor, the Rev. George Burroughs (class of 1670), a conspicuous victim of that superstitious persecution the chief responsibility for which is ascribed to the Rev. Nicholas Noyes (class of 1667).

Nathaniel Saltonstall, with whose life the volume opens, was the first of seven successive generations, reaching to the present year, who have graduated at Harvard, bearing the same name. No other family has had this distinction. To the examples already given of "hereditary genius" we may add the Rev. Samuel Man (class of 1665), ancestor of Horace Mann; and the Rev. Samuel Angier (class of 1673), ancestor of Chief-Justice Lemuel Shaw—evidence by contraries that the Puritan dread of an "illiterate ministry" was well founded. We should also mention the Rev. Jeremiah Shepard (class of 1669), who was the first clergyman in the British colonies chosen to be a representative in the popular legislature; and the Rev. John Wise, of Chebacco (class of 1673), who is said to have been the "first man in America ever known to oppose the idea of taxation without representation." His independence was further witnessed by his opposition to anti-witchcraft and his advocacy of congregational singing and inoculation. Among other "first men" were John Foster (class of 1667), the first printer in Boston, and publisher of the first engraved map in America; Caleb Cheeshahteaumuck (class of 1665), the first and only Indian graduate at Harvard, in spite of the special building called the Indian College, afterwards used as a printing-office; and Benj. Tompson (class of 1662), the first American poet, capable of good lines like the following:

> "My Loyalty is still the same,
> Whether I win or loose the game,
> True as a Dial to the Sun,
> Altho it bee not shin'd upon."

Finally, the nearest analogue to Downing is Nathaniel Higginson (class of 1670), the vigorous governor of Madras.

The recent appearance in the heavens and subsequent semi-tragedy at Washington justify an allusion to Alexander Nowell (class of 1664), a compiler of several almanacs, in one of which we read:

"Comets (say Naturalists) proceed from natural causes, but they oft preceed preternatural effects. That they have been Antecedents to strange consequents is an universal truth, and proved by particulars, viz. That which hung over Hierusalem before its extirpation by Vespatian, that vertical to Germany, before those bloudy Wars, &c. So that experience Attests, and reason Assents, that they have served for sad Prologues to Tragical Epilogues. For the future, preludiums to what events they'l prove, may be proved by consequence, if they han't suffered a privation of their powerful Energie."

This is in the spirit of the true weather-prophet. The comet of 1680 is described in John Foster's Almanac for 1681 as being visible to the naked eye in Boston from Nov. 19 to Feb. 10, 1681, when it faded out of sight:

"And thus is this prodigious Spectacle removed, leaving the world in a fearful expectation of what may follow: sure it is that these things are not sent for nothing, though man cannot say particularly for what: They are by most thought to be Fore-runners of evil coming upon the *World* (though some think otherwise), as was long since observed by *Cicero, ab ultima antiquitatis memoria notatum est Cometas semper calamitatum prænuntios esse.*"

Rugby, Tennessee. By Thomas Hughes. London and New York: Macmillan & Co. 1881.

MR. HUGHES writes this book for Englishmen in the main, and Englishmen mainly will be interested in it. It is "the best answer which the founders of Rugby, Tennessee, can at present make to the large and rapidly increasing number of questions which reach them from all parts of the United Kingdom about that settlement." It describes the class of persons for whom Rugby was intended, the place itself (in a series of letters to the London *Spectator* here republished), and its prospects. But other readers will be interested in it too, and whether they have any design of joining the community or not—partly on account of the subject, and partly also because of the particular point of view taken by the writer concerning the matter of which he treats. The last has indeed the interest of a type, and a type of a fine and wholesome kind and not especially common in America, perhaps. Nothing is further from the social experiment which Rugby is trying, as Mr. Hughes here sketches it, than the notions that have been at the bottom of some of our own kindred attempts. There has been more or less imaginativeness in the origin of most of these, and the practical man has always viewed them with suspicion. The practical man would be enchanted with Rugby, the backbone of whose scheme seems sheer common-sense. The situation and character of the soil do not in the least smack of Eldorado, and no speculative person will be attracted by the frank report by the State Commissioner of Agriculture which Mr. Hughes appends. Every settler will be free to enjoy as much or as little of the communal advantages as he chooses; and he can do whatever he likes "on his own hook" except sell whiskey. The attractions are the prospect of making a comfortable living by farming, and at the same time enjoying the material advantages of limited co-operation and the pleasures of such "rational society" as the community possesses or may come to possess. One may go to church or stay away, and if he goes he may hear the Episcopal liturgy, or any other he affects if there are enough of his way of thinking to conduct a service. There is a library and a cricket-ground, and lawn-tennis is popular and shooting is good, though fishing is dubious as yet. Doubtless there is a "tremendous lot" of young Englishmen to whom such a life as may be led here will seem almost the ideal life. It involves the abnegation only of ambition and of a share, active or passive, in the spectacle of human life and the world's movement—difficult for an imaginative mind to forego or even patiently to contemplate permanent withdrawal from, no doubt, except under the stress of something in its turn imaginative, such as any of the varieties of Fourierism. Mr. Hughes permits himself to poetize a little about putting one's self into direct relations with nature, and quotes Emerson a good deal in support of the nobility of farming; but there is, of course, no question about the practicability of farming, and the sentiment connected with it is of the wholesomest. Hawthorne's criticism of Blithedale and the viciousness of manual labor presupposed a kind of mental activity in some degree kindred to his own, and a temperament presumably unlike that of the prospective Rugbeians. The tameness of Rugby life, the monotony inseparable from Arcadian simplicity, is equally characteristic of the country in general, and Sydney Smith's conviction that "rational conversation in sufficient quantities is only to be had from the congregation of a million of people in one spot," is not shared by the ingenuous youth whom Mr. Hughes chiefly addresses. Then there is the shooting and the lawn-tennis.

The first part of the book is entitled "Our Will Wimbles," and declares that in the upper and middle classes of English society there are many analogies of that "handy and genial friend of Sir Roger de Coverley." Among the gentlefolk they form, indeed, almost a class, "the sons of the squirearchy for the most part, with no lack of capacity for study, but full of various energies and tastes which were intended to be useful to their fellow-creatures." They can do nothing that they will consent to do at home. "We may reckon that for something like half the number of those who leave our public schools, and for whom the public service, the learned professions, or the press would be the natural career, those careers are blocked and practically closed." There is certainly trade, the American reader will at once suggest, but it seems that trade is impossible, not because of any social prejudice against it, but on account of the impossibility of succeeding in it and keeping honest. Moreover, since Carlyle described the Englishman's hell as "the terror of not succeeding," mammon-worship, according to Mr. Hughes, has been declining, owing to "a revival" which was "in the air." The result of this on the trading class is "scrupulousness—a scorn of anything like sharpness or meanness—in money matters." The son of the farmer and retail tradesman is, for this reason, "finding the atmosphere of the shop more and more distasteful." So he "turns his back on the counter" and becomes another of the already numerous Will Wimbles. Moreover, the spirit of co-operation is also "in the air," and middlemen are disappearing, which, though a good thing in the long run, causes much temporary distress. As for the artisan class, they are all right as they are. For the many others, "the vigorous communities in every quarter of the globe" which have English customs, laws, manners, and language are the best resource. And in regard to Rugby, Mr. Hughes proceeds to give special details and directions to intending settlers. The *Spectator* letters follow, and are pleasant reading, but we have no space for any of the observations or anecdotes. Part third contains the author's speech at the opening of Rugby, which was noticed in these pages at the time; a magazine article by Mr. Hughes; his address at Rugby school; and the report of Colonel Killigrew above mentioned. One of the reasons given for the selection of East Tennessee as the site of the new settlement is very characteristic of the founder's thorough good feeling and simplicity of sentiment. Speaking for himself only, he says the selection of a Southern State was particularly welcome, because "what we English want, looking to the future, is not only that England and America should be fast friends, but that the feeling of union in the States themselves should be developed as soundly and rapidly as possible," and he is "convinced that a good stream of Englishmen into the Southern States may, and will materially, help on the good cause." It should be added, by the way, that the "Board of Aid" is anxious to have it understood that the colony is English only in origin, and is open to every comer.

Beauty in Dress. By Miss Oakey. New York: Harper & Bros. 1881.

THIS little book cannot fail of the purpose so modestly stated by its author—"to set people thinking in the right direction." "Studies in color" would have been an appropriate sub-title, for suggestions as to colors and combinations of colors suited to the various types of feminine face and figure make up the principal part of the book. The costumes described are so artistic and so surely becoming that we are impatient for some fashionable coterie to adopt them for a fancy ball. It would have none of the incongruity of which Miss Oakey so justly complains as spoiling our ordinary attempts at such parties, and unless some one blundered as to her own special type, we should for once enjoy the sight of a room filled with perfectly-dressed women. Good sense, no less than good taste, has dictated the rules laid down as to other matters in dress. The writer sees, as few do, that the crotchets of dress-reformers are as wide of the mark as the foibles of fashion. Something has been said before of the more graceful effect of long skirts (in their right place), but we believe Miss Oakey is the first to expose the fallacy of the current arguments about the adjustment of the weight of the dress. The simplicity of the style is the more striking from the obvious temptations in the writer's path. Such sentences as "This is an unnecessary display of force—nothing better than a mere gymnastic, that has no value after we have given it the recognition of surprise," carry their full weight only to the initiated; but they are not meaningless, and they do give a legitimate emphasis.

My College Days. By Robert Tomes. New York: Harper & Brothers. 1880.

THIS is one of the books which prove the truth of the remark that autobiography is never dull. Mr. Tomes's collegiate experience was not remarkable, and his narrative of it gains no factitious aid from imaginative color, but seems rather almost bald in its directness. For this reason, however, it possesses a verisimilitude which, together with the writer's candor, makes it very agreeable and at times amusing reading. Apparently Mr. Tomes was a child among his unconscious preceptors taking notes, which he has here written out merely for the love of the thing. The first portion of the volume is the most interesting. Mr. Tomes attended the grammar-school of Columbia College, then in Murray street, of which the late Dr. Charles Anthon was the rector. Dr. Anthon is felicitously described. He never whipped the boys himself, but "established a Draconian code—one law of which, I recollect, though not from personal experience of the penalty, was that the last four boys of each class should be daily whipped." Washington College, now Trinity, had lately been established as an advance fortress of Episcopacy in the hostile Congregational country of Connecticut, and young Tomes was sent thither. The affection he entertains for his alma mater is very slight. He stood at the head of his class all through the four years, but it was not a great feat, he seems to think, and the perfunctoriness and pretence of the instruction made a deep impression on him. One of the tutors was so inefficient that the class went to him in a body, previous to an annual examination, and insisted upon his telling each member what proposition he would be asked to demonstrate; and "Sleepy David" (which is as much of this able instructor's name as Mr. Tomes remembers) complied. This is perhaps unique, but probably the instruction in the smaller colleges forty or fifty years ago bore some resemblance to the general course

it ran at Washington College. After graduation Mr. Tomes studied medicine for a year at Philadelphia, where eight months of study made a doctor, and then went to Edinburgh, where he continued his medical education, taking, unwisely, as he now sees, four years in three. He met or saw many of the celebrities of the day, and has something characteristic to say of each of them. Quite as much space, however, is devoted to accounts of persons not celebrated at all, following Mr. Tomes's practice of impartial outline sketching, without light and shade or perspective.

BOOKS OF THE WEEK.

Bigelow, M. M. Punctuation, and Other Typographical Matters. Boston: Lee & Shepard. 50 cents.

Butterworth, H. Young Folks' History of America. Boston: Estes & Lauriat. $1 50.

Champier, V. L'Année Artistique. New York: J. W. Bouton. $1 50.

Comfort for the Mothers of Angels. New York: A. D. F. Randolph & Co. 50 cents.

Commercial and Financial Chronicle. Vol. 32. New York: Wm. B. Dana & Co.

Gaboriau, E. The Count's Secret: a Tale. Boston: Estes & Lauriat. 50 cents.

Gray, J. C. The Biblical Museum. Vol. 6. Psalms. Vol. 7. Proverbs, Ecclesiastes, Song of Solomon. New York: A. D. F. Randolph & Co. $1 25 per vol.

Hamilton, Alice K. Mildred's Cadet: a Tale. Philadelphia: T. B. Peterson & Bros. 75 cents.

Hatton, J. To-day in America. New York: Harper & Bros. 20 cents.

Irving, W. Wolfert's Roost. New York: G. P. Putnam's Sons. $2 50.

TAINE'S

French Revolution, Vol. II.

THE JACOBIN CONQUEST. Being the third volume of 'The Origins of Contemporary France.' Translated by John Durand. Large 12mo, $2 50.

HENRY HOLT & CO., New York.

A Romance

OF THE

19th Century.

By WILLIAM H. MALLOCK,

Author of 'A New Republic,' 'Is Life Worth Living?' etc., etc.

16mo, cloth (Trans-Atlantic Series), cloth, $1; paper, 60 cents.

"Open his book where you will, and you will find in it a pearl either of thought or of expression."—*The Critic.*

"Mr. Mallock's essay in novel-writing betrays the same fascinations in style and in habit of thought which distinguished his earlier and more philosophical writings. Up to a certain point he commands our unqualified praise by the acuteness of his philosophy, the essential purity and dignity of his thought, and the pictorial charm which enhances the beauty of dialogue, of incident, of meditation, and even of prayer, with the most exquisite accompaniments of landscape, moonlight, marble terraces, plashing waters, brilliant women, and all the sensuous apparatus of luxury and refinement in a villa on the Mediterranean."—*N. Y. Tribune.*

"The literary treatment is admirable, the scene and figure painting eloquent and sparkling without apparent effort."—*N. Y. Herald.*

"His mind is at once brilliant and versatile, his range of thought wide, his sympathies genuine and all-embracing. . . . He is fervent, passionate, and mystical, and his mysticism is tempered with poetry and relieved by sarcasm."—*Evening Telegram.*

DEALER IN NEW AND OLD BOOKS.

PRICED CATALOGUES, containing valuable standard literature, as well as rare, curious, and out-of-the-way books, are issued from time to time, and will be forwarded to any address.

BOOKS PURCHASED.

"The literary and artistic event of the summer."

The Midsummer Holiday Scribner

Contains the opening chapters of two short Stories, A SEASIDE NOVELETTE, by the author of "An Earnest Trifler," entitled "The Daughter of Henry Sage Rittenhouse," and "QUEEN TITANIA," by H. H. BOYESEN, one of his best stories.

These Novelettes complete a series, which has included Mrs. BURNETT'S "A Fair Barbarian"; W. D. HOWELLS'S "A Fearful Responsibility"; G. W. CABLE'S "Madame Delphine," etc.

Among other features of special interest are: ETRETAT, NORMANDY, a brilliantly illustrated article descriptive of the watering-place made famous by recent painters. The frontispiece, Butin's "Sailor's Wife," and a wonderful full-page engraving, by Cole, of LEPAGE'S "First Communion," are among the many accompanying illustrations.

NEWPORT, "The Isle of Peace," by SUSAN COOLIDGE, with pictures by SANDHAM, INNESS, Jr., BLUM, LUNGREN, and others.

"ICE-YACHTING ON THE HUDSON." Describing this exciting sport, with spirited pictures by Burns.

ROBERT FULTON'S Experiments in Submarine Gunnery, printed from Fulton's hitherto unpublished manuscript.

"THE PEOPLE'S PROBLEM" Suggesting a practical way to alter the government of this country into the system originally planned by its founders—"a government *by the people*" instead of by a machine.

E. C. STEDMAN contributes the first of two papers on "Poetry in America."

A CAPITAL SHORT STORY, "The Village Convict," by a new writer; Poems by Dr. HOLLAND and others; the last of the "Uncle Remus" series, by JOEL CHANDLER HARRIS, etc., etc.

Ready July 20. Sold everywhere. 35 cents.

THE CENTURY CO.
(Formerly Scribner & Co.),
743 Broadway, N. Y.

THE ÆNEID in MODERN AMERICAN. First and Fourth Books. Translated by T. F. Vaill. Illustrated by Thomas Worth. Price 25 cents, post-paid (six copies, $1). Address Winsted *Herald* Office, West Winsted, Conn.

Binder for the Nation

(RUSSELL'S PATENT),

To receive the current numbers in a convenient form. Substantially made, bound in cloth, with *The Nation* stamped on in gold. Holds one volume. Papers easily and neatly adjusted. Sent, post-paid, on receipt of $1.

Address Publisher of the *Nation*, Box 25, New York

IN any family, whether large or small, but especially where the number of children is large, a record of the constitutional peculiarities of each one, and the whole course of its physical development in sickness and in health, is certain to be instructive and may prove invaluable. Such a record is Professor J. B. Fonsagrives's 'Mother's Register,' consisting of a series of tables scientifically arranged for brief and convenient entries. A separate volume for boys and for girls. Price, post-paid, 75 cents per volume, or $1 25 for two volumes. Address PUBLISHER OF THE NATION.

The Nation.

NEW YORK, THURSDAY, JULY 28, 1881.

The Week.

THE general alarm spread through the country on Saturday at the news of the President's relapse, though greatly diminished by the despatches and bulletins received since, has by no means altogether disappeared. The chill which occurred on Saturday at half-past seven in the morning was followed by another four hours later, and this by a high fever. There was a third chill just before midnight. The consulting physicians from New York and Philadelphia reached the White House early Saturday evening, when a consultation was held, which showed that a pus-cavity or abscess had formed two or three inches below the point where the bullet had entered the President's body. This rendered an operation necessary, and an incision was made resulting in a complete discharge and a relief from the distressing symptoms which had been caused by the obstruction. No indications of pyæmia, or blood-poisoning, have appeared, and the later despatches all go to show that the operation has substantially restored the President to the condition in which he was before the relapse. The courage and endurance displayed by the President throughout his sufferings have been so remarkable as to deepen greatly the public interest and sympathy. A new danger in the malaria of the Potomac has been called to the attention of the physicians by the sudden development of fever and ague among some of the persons in attendance. The summer climate and atmosphere of Washington are not at all what one would choose for a severely wounded man, who has been in constant fever for nearly a month, to be exposed to; but of course this is unavoidable until he recovers sufficient strength to be moved. The public ought to understand, meanwhile, that in his present condition relapses may occur from time to time, and that the best guaranty we have that they may not prove fatal is the fact that the case is now thoroughly understood by the physicians, and that the President has a moral and physical capacity to resist suffering of the most extraordinary and encouraging character.

The election of Mr. Warner Miller in Mr. Platt's place was followed last week by the election of Mr. E. G. Lapham as Mr. Conkling's successor. The small band of Stalwarts which had resolved to stand by Conkling to the last, found that their responsibility for detaining the Legislature at Albany and preventing "harmony" in the party was rapidly becoming too much for them, and signs of a tendency to "weaken" showed themselves in their ranks. The difficulty was to know how they could all become "Judases" gracefully, and at the same time effectively. They could not go into a "caucus," because they had all along refused to do so, but there seemed to be no reason why they should not go into a conference first and afterward into a caucus; and this course it was which they accordingly adopted. After negotiations between some of the most eminent "Half-Breeds" and "Stalwarts" at Albany the Conklingites agreed to go into a conference and abide by its result. When the conference had got into working order some one made the suggestion that they might as well have a "full caucus" at once, on which a "full caucus" immediately developed itself out of the conference, and in this a vote which was promptly taken showed that Mr. Lapham had 61 votes, while Mr. Conkling had 28 as usual. The Conklingites having thus got themselves into a position in which it was necessary for them all to become "Judases" together, cheerfully went into the joint convention, and all voted for Mr. Lapham, thus completing the "vindication" of Mr. Conkling, to secure which he has gone through so much.

Yet the effect produced on Mr. Conkling's mind by the final abandonment of his fortunes by this little band of Stalwarts was one not of scorn and hate, but of profound gratitude. He called none of them "Judas," but sent a despatch expressing his gratitude and admiration for "the heroic constancy of the Spartan band which so long had stood for principle and truth," recognizing the fact that they had been "borne down by forbidden and abhorrent forces and agencies," and predicting that "the memory of their courage and manhood will long live in highest honor." In the evening there was a serenade and a general jubilee, which called out two speeches from the Senators elect. Mr. Miller's speech was mainly historical; he pointed out to his hearers that the Republican party had emancipated 4,000,000 slaves, had crushed a rebellion and preserved a glorious Republic, had restored "a Union," had paid "a nation's debt." Mr. Lapham said that his colleague was no better an Administration man than he was himself—which is queer if true—and predicted that the mission of the party would not be ended "until the time shall arrive when the laws will be self-executing within all our borders." The Legislature adjourned the next day, to the profound satisfaction of every man, woman, and child in the State.

The uninfluential position in the Government occupied by the Vice-President has of late been the subject of extensive newspaper discussion. It has been suggested that the Vice-President be made by law a member of the President's Cabinet. Those who advocate this proposition forget that the Cabinet is not, and never has been, in our governmental system the creature of law. The law provides for a Secretary of State, of War, of the Treasury, and so on, but not for a cabinet as an executive council. The President may call the heads of departments together as a cabinet council and consult with them if he pleases, or he may not call them together as a cabinet at all. No law compels him to do so. He may also, if he pleases, call in any person of his choice to take part in the meetings and deliberations of the Cabinet, and no law stands in his way. If, therefore, the President sees fit to invite the Vice-President to meet with the Cabinet as one of its members, there is absolutely nothing to prevent it. No law is required for that purpose. But so far no President seems to have been favorably struck with the idea, and there is scarcely any prospect that President Garfield will form an exception to the rule.

Postmaster-General James is reported to be considering the question whether it would not be wise in making appointments in the executive departments to permit members of Congress to nominate candidates, and then to subject the candidates so nominated to an examination. This plan, which is not entirely new, having been discussed and rejected in the Interior Department a few years ago, has some plausible features. It is said that it would secure a proper distribution of offices among persons from different parts of the country, and in a measure satisfy members of Congress. It would, indeed, tend to secure an "equal" distribution of places on geographical principles, whatever that may be worth, but the same object can be attained in another manner much more consistent with the interests of the service—by the appointment of a commission to conduct open competitive examinations, whenever required, in different parts of the country. As to the second point, the ordinary member of Congress will not really be satisfied unless he can use the offices as patronage for his own political benefit. On the other hand, constituents do not want merely to be examined, they want to be appointed, and the member of Congress will use his whole influence to that end. In the first place, he will oppose competitive examinations with all his might, and endeavor to substitute for them mere pass examinations. Notoriously, such examinations in our service soon degenerate into a hollow semblance of the thing—into an illustration of the art of how not to do it. But that is exactly what the ordinary member of Congress desires, and, having reached that point, his right to nominate for examination will in nine cases out of ten be equivalent to a right to nominate for appointment. This will be the result; it will be reached by more or less slow approaches, but it will be inevitable. If we are to have civil-service reform with a little patronage in it, we shall soon have, as heretofore, a good deal of patronage with very little or no civil service reform in it.

Another arrest of Star-route conspirators was made last week in Philadelphia, the prin-

cipals being secured, but their tool—the nominal "lowest bidder" in the transactions—being still at large. The latter is an impecunious laboring man, named Wiley, whose employment as a figure-head in proposals to carry the mails "between Tucson and Tombstone, Arizona," was part of the humor of the frauds connived at by Brady. Wiley's rôle of course was "to fail," whereupon the contract was awarded anew at reduplicated figures to the members of the ring. The Postmaster-General has made public some of the evidence against them, including a letter from Mr. William E. Chandler. This statesman, happening to be in Nevada in July, 1879, in pursuit of mining property, was surprised to learn that a mail was to be put on between Osceola and Frisco. He accordingly wrote "my dear Brady," whom the N. Y. *Times* had been exposing for upwards of a year, his opinion of the utter needlessness of it, saying that it would be a sheer waste of the public money, and that he was sure Brady would countermand it "unless the star-service money is appropriated to be squandered." Mr. Chandler may never have enquired whether Brady heeded him, as of course he did not; and if the Congressional investigation of last year did not make him suspect the integrity of his political friend and fellow-"worker," he must have been greatly shocked by the revelations which have cost Brady his place and his reputation, and ultimately, it is to be hoped, his liberty.

Judge Clifford of the Supreme Court died on Monday in the seventy-eighth year of his age. His mental faculties had been impaired for some time previous to his death, and his place on the bench has been practically vacant in consequence. He refused to resign, however, in the hope that the election of a Democratic President might render certain the appointment of a Democratic successor; but he will now, of course, be succeeded by a Republican. As a judge his industry and conscientious accuracy were remarkable, as well as the rigidity of his political convictions. His appointment to the bench was one of the results of the Dred Scott decision, and he took the place of Judge Curtis, with whom it would be unfair to compare him. His partisanship, however, was chiefly the result of the narrow legal view of the relation of the States to the general Government which the old-fashioned New-England Democrat always took, and bore no resemblance to that bitter and unscrupulous spirit of faction with which the politics of our day threatens to taint the judiciary.

Judge McCrary has recently made a decision in the Eastern District of Arkansas which contains some suggestions that will, we fancy, be both novel and interesting to railroad men. The case was one brought by the Southern Express Company against the Memphis and Little Rock Railroad, to prevent the latter's excluding the former from the transaction of business on its line. The judge decided that the railroad was bound to carry for the express company, and must not discriminate against it either in favor of itself or of other express companies; but he added the following significant remarks: "I am not prepared now to fix the maximum rates to be charged for the transportation of express matter; but I have no doubt of the power of the court after investigation to do so. An order for this purpose should not, as a rule, be made until after a reference to a master, and a report by him after a hearing." But why should the report be only on maximum rates? or why should it be confined to express companies? It is obvious that it could not be so confined in practice, for Judge McCrary's decision goes upon the ground that express companies stand upon the same footing with other customers of the road. If the courts' aid were once called in to fix maximum rates for them, it must soon be used for the purpose of fixing all rates, for freight and for passengers as well. In fact, the judge would have to run the railroad, see that the crops were "carried to tidewater," "cut rates" when necessary, exterminate "scalpers," "consolidate" and "pool earnings" with other judges. Probably some of the courts would develop greater talent in railroad management than others, and this would produce judicial Jay Goulds and Vanderbilts, after which we should have to begin over again with new remedies.

The *Herald* publishes in fac-simile a letter written by the California "Tichborne," which shows that the art of personating that gentleman has made a considerable advance since the failure of Arthur Orton to recover the family estates. One of the chief mistakes that Orton made was through displaying a want of familiarity with French and Latin, with both which languages the missing baronet had been familiar. The translation of "Laus deo semper" by "The laws of God for ever" made no impression on his immediate circle of friends, perhaps because they thought it correct, but with most people this and some similar slips in French made the improbability of his story seem very strong. The new Tichborne has taken a lesson from these little mishaps of his predecessor, and shows his familiarity with French, at least, at every turn. In the *Herald's* letter, which is addressed to his friend Colonel Barnes, of San Francisco, he drops into French in a way bewildering enough to confuse his oldest friends. Not only does he sign himself "Votre très-humble et très-obéissant serviteur," but he spells many English words in a way that would seem almost to betray a French birth rather than a French education. Mr. Barnes has addressed a letter to him telling him plainly that he regards his story as "very remarkable, and worthy of notice as an effort of imagination if nothing more," but that if he wants to have it looked into he must come from San Diego to San Francisco and have it properly investigated, and offers to advance money for the purpose. He is now understood to be making an effort to "sell out" at San Diego before taking his departure for England—an attempt which may be regarded by "a friendly mind," says the *Herald* correspondent, as "in perfect harmony with the whole course of this much wronged or sadly erratic wanderer."

The Coles homicide will probably do something to call attention not only to the practice of carrying concealed weapons, which is at the bottom of so many crimes of violence, but also to the abnormal position which female homicides evidently feel has been established for them. According to the account given by Mrs. Coleman of her proceedings, she had been in the habit of carrying a pistol to "protect" herself, and as soon as she discovered that her husband knew of her intimacy with Coles she immediately got this pistol and killed him. By this means, it seems, she has greatly endeared herself to her husband, and the latter is now engaged in warmly promoting her defence, and a very affecting interview has taken place between the two in jail. Now, how did it happen that Mrs. Coleman was in possession of a pistol, and why had she been in the habit of carrying it to "protect" herself? Clearly because she was in the habit of going about in a way that respectable women do not generally go about, so that the taking of life had become to her not an altogether unfamiliar or unattractive idea. She goes to a theatre with a female friend, and accepts a private box from an unknown man in the ticket-office, and then goes off and drinks with him. It is absurd to suppose that a married woman does not know to what such adventures as this lead, and if he takes an improper advantage of her, her killing him with a pistol she "happened to have in the house" is none the less a case of deliberate, premeditated murder. As a defence, this statement of the case, put forward by the woman herself, is a curious illustration of the state of mind which women like Mrs. Coleman—and there are multitudes of them in every large city—must believe the community to have reached on the subject of homicide originating in improper relations.

At the Stock Exchange, speculative shares declined during the week from 1 to 9 per cent. This was partly brought about by the President's relapse, and partly by the further cutting of rates by the trunk-line railroads, the lowest figures yet recorded having been made in the last few days. The decline, which now ranges for the month from 5 to 20 per cent., many leading stocks having fallen over 10 per cent., has forced a great many sales of stocks that have been carried on "margins"; and these, with the "short sales" of professional speculators, have made the downward current at times seem irresistible. Mr. Vanderbilt is quoted as saying that the trunk-line war will continue, for anything he can see, until winter, and as expressing bitter hostility to the new rival lines projected or in process of construction. The money market continues easy. Foreign exchange has declined, and is steadily drifting towards the gold-importing point. General trade continues large in volume. Railroad traffic shows no falling off, and it is

clear that the present railroad war is waged less on account of deficient tonnage than for other reasons. Silver bullion in London advanced to 51½*d.* per ounce. The bullion value here of the 412½-grain silver dollar closed at $0.8643.

The statement made on Monday in the House of Commons by Sir William Harcourt shows that ten infernal machines have been discovered on board two vessels at Liverpool just arrived from this country; that each machine contained eleven cartridges of nitro-glycerine and a compound in the nature of gun-cotton. The machines were shipped in barrels as cement, and the British Government were informed of the consignment, and even of the names of the vessels in which they were to come, three weeks in advance. The Home Secretary is also reported to have stated his belief that the shipment was connected with "the avowed projects of the Fenian press in America," and expressed the conviction that the United States will give efficient aid to Great Britain in its efforts to destroy "these associations of assassins." In the absence of further facts it is impossible to tell whether these machines were intended to be put to active use or whether the shipment was merely designed as a new Fenian scare. In either case the shippers, if they can be found, have made themselves liable to fine and imprisonment under the laws of the United States. The Revised Statutes require all dangerous articles, such as nitro-glycerine or gun-cotton, to be distinctly marked on the outside "with the name or description of the article contained therein," and make an infringement of this requirement a misdemeanor, punishable by a fine not exceeding two thousand dollars or imprisonment not exceeding eighteen months, or both. There is also a penalty of five hundred dollars for shipping such articles on board a passenger vessel. These provisions, however, were not designed to meet the case of the shipment of explosive machines, expressly constructed for the destruction of life on a large scale, and are ridiculously inadequate for such a purpose. What punishment should be provided for such an offence is a question which requires careful consideration. Modern science and modern facility of transportation have brought within the reach of criminals stupendous agencies for the destruction of life, and criminal laws have by no means kept pace with the rapid advance in the machinery and means of crime.

The Home Secretary thinks that the shipment of these machines can be connected with the agitation in favor of the "skirmishing fund" in the Irish press of this country, as to which representations were made some time ago by the British Government to ours. If anything of this kind can be shown, there can be no doubt that the Government would do all in its power to bring the criminals to justice. The misfortune is that in the present state of the law so little could be done. A prosecution for shipping infernal machines is one thing; a prosecution for inciting people generally to subscribe to a fund for the purpose of carrying on outrages in behalf of Ireland, which leads some one to ship infernal machines to Liverpool, is something more difficult to deal with. Sir William Harcourt says that our Government has returned no reply to the representations of the British Government with regard to the articles published by the Irish press here.

It is clear from the utterances of their own press that the French begin to feel that in Africa they have sown the wind to reap the whirlwind. The *promenade* to Tunis, with the theatrical speedy return, before the deadly heats of midsummer, turns out a very serious affair in its consequences. A little sharp fighting after a very sonorous bombardment, as last week at Sfax—whether it cost a score or a hundred of men, or even more—is certainly not distasteful to the nation that has been for ten years panting for a little fresh military glory. But to have to fight when complete victory has been triumphantly announced; to have to order the naval squadrons just returning to sail back again; to see the power of the African prince declared a *protégé* crumble away in a day before the fanaticism of his subjects; to have to threaten the Porte on account of its doings in Tripoli, and at the same time solemnly to declare to England that Tripoli is the Porte's inviolable possession; to see the country occupied east of Algeria menaced with a general insurrection at the moment when the south of Western Algeria is devastated by tribes of the desert, and abandoned by its French defenders; to have provoked both England and Italy, and to hear all the world sneeringly declare that France has sunk her chances of revenge on the Rhine in the desert bottoms of Africa, and feel that there is much truth in this view—all this cannot be but galling in the extreme to the patriotism and vanity of France. Difficulties and dangers have been unnecessarily created, the glory achieved is at best questionable, and, as a French paper stingingly remarks, Bismarck alone applauds.

The news from Russia continues to be very unsatisfactory. Nothing as yet has been done towards the creation of a *modus vivendi* between the Government and the more or less revolutionary elements of society which would render even a brief period of tranquillity and recuperation possible—not to speak of normal, healthy activity above and below. The Government has as yet apparently no other thought than that of momentary peril, of averting new catastrophes. Every day—almost literally so—new and startling evidences of deadly conspiracy against Alexander II. or Alexander III. are brought to light. All St. Petersburg seems to be undermined. No department of the Government itself is free from the secret intrusion of Nihilism. Officers of the admiralty supply explosives; boats selected to transfer the Court from Gatchina to Peterhof—which has been done—are found to hide instruments of destruction; princes of the blood, the Grand Duke Constantine Nikolayevitch and his son are treated as if they were plotters against the Czar. No new policy is enunciated or distinctly foreshadowed. Ignatieff, formerly a free-spoken diplomatist, is more reticent than was his cunning Armenian predecessor in power, Loris-Melikoff, now virtually an exile. There is talk of transferring the seat of government to Moscow, and the Slavophils of that old capital are now undoubtedly more in favor at the Court than the *Zapadniki*, or friends of western institutions; but, although the new Czar evinces some courage in now and then exposing himself in public, the courage to act, to initiate a measure, or to declare an important intention seems to be completely wanting.

Interviewing kings is a branch of journalism which has been hitherto comparatively neglected, and we are glad to see that a beginning has been made by a correspondent of the London *Standard* upon Prince Alexander of Bulgaria. The correspondent was well received by the Prince, who "expressed his pleasure at meeting a representative of the *Standard*," and proceeded to make a very frank statement of his position and intentions. He is anxious to have these understood in England, not by "Mr. Labouchere and those who think with him" (for, he says, "I know well enough what kind of people they are"), but by the English people. He did not, it seems, wish to become Prince of Bulgaria, because he had read the "half-republican constitution" and "knew the man who drew it up," but he gave his consent merely to oblige the late Czar. He then goes on to give an account of the difficulties with which he has had to contend as a ruler, which seem to have been very serious. In two years he had to "dismiss seven cabinets and two Chambers," and "to oppose a large number of useless bills." In fact, "no really useful law has been proposed in the Chamber." They are all "childish and selfish; not meant for the good of the people, but only to benefit the governing clique"—which he elsewhere refers to as the "ring." The Bulgarian "ring" is headed, it seems, as is usually the case with rings, by ten or a dozen "ruling men" living in the "great towns" and in the "lowest society." The Prince soon found that they had all the power, while he had all the responsibility. "There was no justice to be found in the whole country. Judges who declined to obey their commands were dismissed or otherwise got rid of." Meantime the Prince had "learned to like" the Bulgarian people, who were thus misgoverned, and was puzzled to know what to do. Finally he took the Emperors of Austria, Russia, and Germany into his confidence, and asked them what course he had better pursue. They all said, "Do what you please, but do not leave Bulgaria." Finding that this was the view taken of his constitutional duties in the quarters where they were best understood, he proclaimed a dictatorship in order to secure "future freedom and the constitutional rights of the people." He thinks this can be done in seven years, but it may take longer.

SUMMARY OF THE WEEK'S NEWS.

DOMESTIC.

On Friday afternoon the President had a serious relapse, the main symptom of which was a chill, which it was at first thought might indicate pyæmia, or blood-poisoning, although the danger from this had been regarded as nearly if not quite over. Drs. Agnew and Hamilton, the consulting surgeons, were telegraphed for on Saturday. The bulletins admitted the gravity of the check to the President's convalescence, and despatches announcing it were sent by Secretary Blaine to Minister Lowell. It was discovered upon examination on Sunday, however, that the cause of the unfavorable change was the obstruction of the natural discharge of the wound by the deflection of part of the wounded rib, which had caused the formation of a cavity of pus in the fleshy part of the back. This being lanced, the President experienced immediate relief, and it is maintained that the two apertures thus secured afford additional opportunities for satisfactory treatment. Nevertheless, Drs. Hamilton and Agnew now relieve each other at the bedside of the patient.

Nothing occurred to explain the mysteriousness of Mr. Conkling's request last week that his followers should remain "solid for another twenty-four hours." On the contrary, the "current" set so strongly in favor of the Administration nominations that the Stalwarts concluded on Thursday that all that remained for them to contend for was decent terms of capitulation. Different measures to this end were discussed, and finally, on Friday, the Conklingites determined that, if a conference could be held, they would attend it, endeavor to get a caucus called, and be bound by its action; if unsuccessful, they would be bound by the decision of the conference. The success of the first alternative, it needs to be pointed out for the benefit of distant observers of the controversy, involved the discrediting of the "caucus" which nominated Messrs. Miller and Lapham. The conference, however, was called by Senator Robertson in joint session, distinctly on his own responsibility, as he said, and, before it could be exactly determined whether or no it was a conference or a caucus, or what its effect would be upon the "record" of the Stalwarts for consistency and firmness, and, in general, their title to be called the "Old Guard," enthusiasm was insidiously introduced and Mr. Lapham was nominated in a trice. Later in the day he was formally elected by a vote of 92 to 42 for Mr. Clarkson N. Potter. Great applause greeted this result. Cheers were given for the two Senators-elect, for President Garfield, for Roscoe Conkling (given with great zest), and then, to console the Democrats for this exhibition of party harmony, for Mr. Potter.

In the evening a serenade was given to the newly-elected Senators by the 1880 Club, which is composed of Half-Breeds, and the Grant Club, a Stalwart organization. Both Senators made speeches. That of Senator Miller was almost exclusively patriotic, but Mr. Lapham's has excited some remark on account of several of its observations. He declared that he and his colleague had not been elected "for the poor purpose of dispensing the Federal patronage in this great State of New York," and continued: "That is an inferior portion of the high duty devolving upon a Senator from the Imperial State. It is a duty which my honorable colleague and myself, I trust, will be able to discharge with malice to none, with hatred to none, with charity to all. There are other and higher duties," etc., etc. These sentiments were greeted with applause at the time, but have since awakened censure as indicating a misconception of the main objection to the notions of the Senator whose term Mr. Lapham is chosen to fill out. Mr. Lapham was received at his home, Canandaigua, on Saturday, with the ringing of church-bells and general popular acclamations, but the rejoicings were naturally affected by the serious news from Washington. As Mr. Lapham observed at Auburn, en route, he had only time to hope that "the dastardly effort to add the name of President Garfield to the roll of martyrs may prove abortive."

The Democrats, after the senatorial contest was definitively settled, issued, through their joint caucus committee, a sonorous and lofty address to the people of the State "without distinction of party." In this document they speak of the expense to the State of the enforced duration of the session and of the cause of the same, which they characterize as "a question of official patronage or the spoils of office." The removal of Collector Merritt was made, they say, "in total disregard of every announced principle of civil-service reform, and was not called for by any principle of political duty nor in the interest of the public service." They are equally severe upon "the useless resignation" of the Senators, which "has cost the State not only a large amount of money, but, what is more valuable, its honor, dignity, and self-respect." They also allude derisively to the "vulgar but expressive" names of Stalwarts and Half-Breeds, and say that the only bond of union between them has been opposition to the Democrats. They pay their respects to "a man named Warner Miller," refer to the bribery charges, and charge Guiteau's crime upon "that personal fanaticism which was and is the fruit of a greed for public office, and of a false and dangerous political education." Finally, they appeal to well-recognized popular sentiments "against this enormous and aggressive personal power."

The Legislature adjourned on Saturday with uncharacteristic quiet, considering the turmoil of the last seven or eight weeks of its session, which in all lasted six months. The customary speeches were made, marked by the customary candor and felicity. In response to a Senate resolution of thanks for his discharge of the duties of presiding officer, Senator, now Collector, Robertson congratulated the Senators "on the unqualified approval by your constituencies of the manner in which your senatorial duties have been discharged." In the Assembly Speaker Sharpe congratulated his colleagues "that in legislation you have responded to the desires of a great constituency, and if measures of public interest which were uppermost in the minds of the people have failed, in whole or in part, the failure will not be laid at your doors." Among these measures the Citizens' Street-Cleaning Bill is perhaps the most important; and this and the election of Senators in the place of Messrs. Conkling and Platt, as well as of Platt in the first place, have been the distinguishing marks of the Legislature of 1881.

The case of Jenkins Van Schaick against the Western Union Telegraph Company, already before the courts, was before Judge Barnard, at Poughkeepsie, last week, on motion of the plaintiff's counsel to set aside an order granted the week before, vacating the injunction previously granted against distributing the $15,000,000 of so-called watered stock. After argument, the Court denied the motion on the ground that there was no great public benefit to be obtained, and the matter had already been tried (before Judge Truax) on its merits, and therefore the parties considering themselves aggrieved would have to submit.

A sudden decline in Metropolitan Elevated Railway stock on Monday brought out the fact that on Saturday Mr. Cyrus W. Field, on behalf of the New York Company, had brought suit in Kingston before Judge Westbrook to obtain possession of the Company's property now held by the Manhattan Company. The allegations of the affidavits on which the petition was based have already become familiar to the public through the recent similar litigation, of which there has been so much begun. Judge Westbrook granted an order requiring the defendants to show cause why the petition should not be allowed.

The Warren Court of Enquiry, adjourned some months ago after the taking of the testimony in the case, resumed its sessions on Monday for the summing up of counsel. It was arranged that each side should have two days for argument, and Mr. Stickney at once began on behalf of General Warren, who was present. General Sheridan was detained in the West and will leave the conclusion of his case wholly in the hands of Major Gardner, his counsel.

The committee appointed by Bishop Potter (Protestant Episcopal) of this diocese to "enquire whether the rumors and allegations which had been current for some time were of a sufficiently serious character and sufficiently well founded to present the Rev. Edward Cowley for [ecclesiastical] trial," rendered their report on Friday. The "Rev. Mr." is better known as "Shepherd" Cowley, and has been, it will be remembered, indicted, convicted, sentenced, and imprisoned for uncommon inhumanity. The committee, which consists of Rev. J. H. Rylance, Rev. Jas. Mulcahey, Rev. C. C. Tiffany, D. B. Whitlock, and E. H. Cushman, "after a very long, laborious, and conscientiously-prosecuted investigation," as they say, "are compelled to refrain from presenting the Rev. Edward Cowley for trial in a court of the Church for crime." That is to say, they do not regard indictments and convictions, by grand and petit juries respectively, as "rumors and allegations" of a "sufficiently serious character and sufficiently well grounded" to have any weight, *per se*, with an ecclesiastical examining tribunal. This decision has given rise to considerable unfavorable criticism on the part of "Churchmen" who are also lawyers.

One of the most singular murders that have occurred for a long time in this city was the shooting last week, in the Bowery, of a man named Coles by a woman named Coleman, the alleged motive being indignation that the victim had truthfully told the murderess's husband that he had been intimate with her.

The custodians of the cemetery containing the bones of William Penn, which the Pennsylvania Legislature have expressed a desire to procure and bury in the land that bears his name, are unalterably opposed to the removal of them, and the opinion as to the project on the other side of the Atlantic is probably expressed by the London *Times*, which says: "It is little better than mockery to think of doing honor to such a man as Penn by the grotesque proposal to disturb his remains." Meantime, the Philadelphia *Ledger* explains that it is a great mistake to regard any resolution of the State Legislature as the opinion of the people of Pennsylvania, particularly in this matter, which has every appearance of the proverbial teapot tempest.

The Ohio State Temperance Reform Convention met at Cincinnati on the 20th inst., and, after adopting resolutions of characteristic import, nominated a ticket of which the candidates for governor and lieutenant-governor, respectively, are Abram R. Ludlow and Jason McVeigh.

So much has been said about the anti-temperance views and action of Governor Foster, of Ohio, who is a candidate for re-election, that he has written a letter to the "Ohio Anti-Liquor League," which held a convention at Loveland on the 20th inst. In this communication the Governor asserts that the many charges against him are untrue and out-

rageous; that he has been accused, for example, of saying that "the Methodist preachers ought to be snubbed," whereas "such a thought never occurred to" him; that he has been charged with refusing to deliver a temperance address on a certain occasion, the fact being that he had not been asked to deliver one; that similar accusations as to his holding a reception in a Sandusky liquor-saloon, "meeting saloon-keepers in conference," and so on, are all, so far as he has heard of them, absolutely without foundation. "Nevertheless," he does not believe that "either local option or prohibition or a tax-law is constitutional," and therefore supports the liquor plank adopted by the late Republican convention which nominated him, and which calls for the submission of the question to the people with a view to legislation hereafter, when possibly it will be necessary to take sides decidedly as to the essence of the point really at issue.

A statue of the late General McPherson, marking his grave, was unveiled at Clyde, Ohio, on Friday, in the presence of twenty-one posts of the Grand Army of the Republic. Ex-President Hayes was president of the day; there was a procession a mile long, and an estimated audience of 18,000 persons present. General Sherman unveiled the statue and made the most noteworthy of the several speeches delivered on the occasion.

The latest news from the crop-raising region of the Northwest is not more favorable than heretofore, so far as wheat in particular is concerned. That cereal is said to be in a critical condition. Corn, however, and oats and barley are reported as doing very well. The army-worm is a pest in Illinois, but has not appeared elsewhere, except in Iowa, where its ravages have been comparatively slight.

Senator Dawes, of Massachusetts, has just written a letter upon the subject of civil-service reform, in which he objects to the diffuseness of the discussions upon the topic, and endeavors to concentrate attention upon what seems to him the most pressing evil—namely, "Congressional participation in appointments to office." In support of this he contributes instructive incidents within his own experience, but, he remarks, it is idle to fix the question of blame since the evil "stares the most earnest and thoughtful statesmanship in the face," "eats out the soul and consumes the life-blood of the legislator, and must be ended." His way of ending it is a short and easy method of dealing with applicants by "two brief orders" to be issued by the President, announcing first that no man will be appointed to any office while he is in the City of Washington, and, second, that no man will be rewarded who brings, unasked by the President, the recommendation of any member of Congress.

Judge Nathan Clifford, of the United States Supreme Court, who has been ill and demented for many months, died at his residence in Cornish, Me., on Monday. Judge Clifford was appointed by President Buchanan, January 28, 1858. His last prominence was as a member of the Electoral Commission of 1877.

The death is also announced of George Payn Quackenbos, LL.D., well known as the author of popular school-books and for other services to education.

Sitting Bull has at last "come in" and reported to Major Brotherton. A speech which he made upon his reception amounted to very little. His frame of mind, however, is conveyed by the remark, "I now wish you white people to help me to whatever I am to have."

FOREIGN.

The House of Commons was on Monday mainly occupied with the subject of Irish outrages, of which distinctly so-called, by the way, there have been few or none to speak of during the week. Sir William Harcourt began the discussion by announcing that the Government of the United States had not yet replied to the representations of the British Government as to incitement to outrage, but admitted that no "representations" had been made in regard to dynamite plots. However, ten "skirmishing machines" had been seized at Liverpool on their arrival from this country, having been discovered by detectives. Intelligence of these had been received, Sir William said, more than three weeks ago, and investigations were in progress both in England and America to ascertain the authors of the diabolism. He added that for more than nine months subscriptions looking to this result had been open in America, and that the Irish-American Fenian press had made during that time constant threats of outrages. He quoted the example set by Great Britain in dealing with the *Freiheit*, and expressed confidence that Americans would find it to their interest to be similarly vigilant with regard to associations of assassins. The incident has, of course, aroused more openly-expressed indignation in the British press.

The Land Bill got through its committee stage on Friday, and the order to report it to the House was greeted with "loud and prolonged cheers." The last committee action upon it was the rejection of a clause moved by Mr. Chaplin, Conservative, supported by the Home-Rulers, requiring a yearly return to be made to Parliament of the judicial rents fixed by the court. Mr. Gladstone's objection was that such a return would give rise to "invidious remarks without conferring any corresponding benefit." The Land League demonstration at Dublin on Sunday is described as a doleful failure. "There were only twenty horsemen," the cable says.

Mr. Bradlaugh has obtained some additional notoriety during the week. Last Wednesday, in an interview with the House of Commons Inspector of Police, he declared that he did not intend to bring a mob to Westminster when he came to present himself at the table of the House to take the oath on August 3, but frankly admitted his inability to prevent a crowd from gathering. He has, however, summoned for the preceding evening a meeting for an orderly protest in Trafalgar Square against his exclusion. Friday, the jury in the suit in which he was a defendant for having sat and voted in the House of Commons without taking the oath returned a verdict of £500 against him.

The funeral of the late Dean Stanley took place at Westminster Abbey on Monday, and was, of course, attended by an eminent gathering. At the rear of the procession were deputations from the American Educational Aid Association and the American Exchange in Europe.

It is unofficially reported from the Transvaal that the Boer triumvirate have rejected sixteen out of the thirty-six articles drafted by the royal commission, and that Sir Evelyn Wood will shortly leave Pretoria for Zululand. The terms, as settled by the royal commission, give the Boers the right to elect the Volksraad and the President; the whole of the Transvaal is to be retroceded, and the suzerain given the right of declaring war.

The heat in London and Paris continues, though it has somewhat abated in the former city.

The *Pall Mall Gazette*, following its unpleasant vaticinations regarding American financial prosperity, displays even greater anxiety about the Paris money market, which, it says, "thoughtful men" consider "the weakest great money market in the world at the present time."

Lord Colin Campbell and Miss Gertrude Blood, an Irish heiress, were married on Thursday, and the presence in England of Mrs. Victoria C. Woodhull Blood has caused several of the esteemed contemporaries to report that the bride is a daughter of that odorous lineage. Upon contradiction, the credulity given to the report is explained on the ground that the British aristocracy are capable of anything.

Lefroy, the supposed railway murderer, has been committed for trial.

French affairs in North Africa have experienced no substantial change during the week, though considerable activity is reported. It is not yet known whether Bou-Amena, who was at first heralded as the successor of Abd-el Kader, has succeeded in raising a fanatical revolt of large importance, though the quasi-subordinate tribes are clearly in a state of much commotion. An engagement near Sfax, which resulted very favorably for the French, is reported, and the announcement is made that the French commander in that region has ordered the immediate disarmament of the natives and the payment of a war indemnity of 15,000,000 francs, a sum which, even if collected, will possibly fall short of satisfying the demands of foreign residents for damages incurred during the shelling of Sfax. The holy city of Kairouan is said to be a refuge of Arabs from Sfax and to have revolted. The Bey's troops are reported to be deserting him by hundreds, and the Tunis aqueduct has now to be constantly guarded. Tripolitan tribes are raiding in the neighborhood of the capital and are as hostile to the Bey as they are to the French. The French press is more hostile than ever to Turkey, and attributes to the Porte a desire to stir up dissensions in Tunis as well as to disaffect Tripoli. Meantime the Sultan of Morocco has appealed to the Porte to stop the North African agitation, with what result it does not yet appear. It is announced that the expedition to proceed against Bou-Amena in the fall will consist of three columns of twelve hundred men each.

General Cialdini has left Paris and gone to a bathing resort, and Baron Marochetti, the Italian Chargé d'Affaires, has been appointed a commander of the Legion of Honor, and the result is announced to augur a conciliatory feeling on the part of France towards Italy.

Despite some opposition on the Republican side, the French Chamber of Deputies on Friday granted 2,500,000 francs to reinforce the naval strength of the Republic in the Gulf of Tonquin, "owing to piracy there."

Twenty-five pupils of the military school of Saint-Cyr have been sent to a regiment to serve for five years as second-class soldiers for attending Mass on the birthday of the Comte de Chambord.

Don Carlos has issued a protest against his expulsion from French territory, the cause of which can only have been, he says, his presence at the Mass celebrated for his uncle on St. Henry's Day. He also refers to the French treatment of Spanish settlers in Algeria in terms of sorrow, but explains, with true Bourbon charity, that "France is not responsible for the acts of her Government."

A London report announces the laying of an independent cable from Germany to Valentia and thence to this country by arrangement between the German Telegraph Company of Berlin and the German Union Telegraph Company. The cost is said to be fixed at £165,000, for which preference-shares bearing 5½ per cent. interest are to be issued.

A rumor that Midhat Pasha had opened his veins with scissors to prove his theory that Abdul-Aziz could have committed suicide in that way was telegraphed last week, and was even contradicted. Midhat's fate is now said to have been placed in the hands of the late Sultan's children, from whom it is believed he can expect more justice if not more mercy than from the Turkish tribunal which lately tried him.

MR. CONKLING'S EXIT.

THE defeat of Mr. Conkling forms an instructive chapter in our political history. It is a clear case of "greatness" mania with a fatal result. Mr. Conkling had evidently become the victim of singular hallucinations in consequence of circumstances for which he was not altogether accountable. When a man who is naturally inclined to inordinate self-esteem finds himself constantly surrounded by flatterers, who never cease to speak to him of his superiority over all other men, and bow to his will in all things, he will finally himself believe in his own sublimity, and mistake his relation to the universe. He will gradually begin to look upon himself as the centre of creation, and regard the gratification of his selfishness as an inborn right, which everybody else is bound to respect. That Mr. Conkling's mind gradually drifted into this morbid condition was undoubtedly, in a measure, owing to the obsequiousness of his friends. They must, to a great extent, be held responsible for the follies of his course and his final downfall.

Mr. Conkling was led to forget that in a republican country a public man, however able, must persuade in order to exercise power. He has always been naturally disposed to despise those who did not agree with him. He was so overweening in his consciousness of grandeur that it gave him no concern when he made enemies: it was rather a pleasure to him to offend; it became natural to him to hate. So he made one enemy after another. They could not injure him as long as they were few, but he managed to increase their number until they exceeded the number of his friends.

But more than that. Here was a man of ability whose self-conceit, stimulated by the reckless flattery of his followers, made it appear superfluous to him to learn. He was constantly told that he was a very great statesman, and he readily believed it, without feeling the necessity of studying those great questions of public concern a thorough understanding and wise treatment of which are the first requisites of true statesmanship. And so it happened that with regard to the most important problems of our day the opinions of this prominent party leader, assuming him to have had any, had no weight whatever. Such as he had, or seemed to have, were the crude impressions of ignorance or at best of half-knowledge. He put forth his "great efforts" almost exclusively on questions in which personal or party power was involved. Power was his object; not power for the purpose of accomplishing statesmanlike ends, but power for its own sake, to be employed only for the purpose of acquiring more power. It is questionable whether in using this it gave him more pleasure to reward his friends or to punish his opponents.

One of his great boasts was his unswerving party fidelity. Every independent movement he treated with a sneer. And yet it is well known that he contemplated with cheerful composure the defeat of his party when its victory would have given an advantage to his opponents within it. He had become so accustomed to look upon his own predominance as the supreme interest of his party, that without it the party appeared to him unworthy of consideration. It is perhaps just to Mr. Conkling to say that in this conceit he was perfectly honest. Any opposition to his authority in the party appeared to him like an act of rebellion against a legitimate ruler, and in this State the well-organized and disciplined force of his retainers was for a considerable time strong enough to execute the political death-warrants decreed by him. He was easily led to believe that on the national field he was as strong as for a long time he had been at home, but in this he overreached himself. He failed at the Chicago Convention in imposing his will upon the Republican party, and when he tried to subdue President Garfield's Administration, and found that his opponents were as much regarded as himself, he had to resort to what he thought a terrific *coup d'état*. Many have speculated profoundly upon his motives in resigning. He simply expected that the whole American people would stand aghast at the thought of losing him from the political stage; that the Senate would not dare to think for a moment of confirming Mr. Robertson in his absence; that the Legislature of New York would at once be on their knees begging him to go back to the Senate, and that public opinion would wrathfully condemn an Administration which had recklessly exposed the country to the danger of losing Roscoe Conkling's services.

We know how absurdly mistaken he was. Instead of the Legislature imploring him to go back to the Senate, he had to beg the Legislature to send him back. The sternly faithful partisan even went so far as to plan a coalition with the Democrats for his benefit. All in vain. The greatness built upon the power to grant favors and to punish opposition began at once to crumble. It was at last discovered that he was not genuine—not genuine as a statesman, for he had not been a leader of opinion; not genuine even as a partisan, for he had not hesitated to sacrifice the ascendency of his party in order to serve his own interests. All that remained was the pomp of an impressive personality, the reminiscence of former power, and perhaps in the minds of timid persons the apprehension of a possibility that this power might be regained. But the gilt was off—the inferior metal had appeared; and even if the gilt could be put on again, it would deceive nobody, for the substance beneath was known. For this reason Mr. Conkling's defeat is one from which he can never entirely recover. As the downfall of ungenuine greatness it is an instructive spectacle, especially to young men in public life. They see a man of ability, who but a short time ago appeared to be one of the most powerful in the country, not only defeated but utterly shattered. He still deludes himself by ascribing his defeat to "forbidden and abhorrent forces," whatever that may mean. But the force that defeated him was not corruption in the Legislature, although there may have been much of it; it was the almost unanimous judgment of the people, who not only condemned his conduct but, which is worse, had actually grown tired of him.

We do not mean to say that Mr. Conkling will never return to public life. If he tried to do so at once it would only be a fruitless prolongation of the agony. But if he should now devote himself to an earnest enquiry into the great problems of public concern which hitherto he has neglected, he might at some future time easily make himself more useful than he has been in the past. He can, of course, never be again what he was, and still less what he tried to be.

RESTORING "HARMONY."

No candid man can deny that there is a great deal of truth in the review of the recent Senatorial struggle put forward in the shape of an address to the people of the State by the Democratic members of the Legislature. No one can deny, for instance, that the source of the long detention of the Legislature at Albany was "a question of official patronage or the spoils of office." No one can deny that the Collector of this port was removed "in the midst of his term of service from a place where he was serving with general acceptance to the public and appointed to a place abroad—uncalled for by his friends or by the public—in which he has no experience," nor that the change was made "in total disregard of every announced principle of civil-service reform." It is true that this quarrel over the offices between the "Stalwarts" and "Half-Breeds" first resulted in the election of a "third-class man" to the Senate, and that the subsequent resignation of Mr. Platt and Mr. Conkling not only was "useless," but has cost the State a great deal of money and of self-respect as well. It is true, also, that these resignations were simply due to the displeasure produced in the mind of Mr. Conkling by his apprehension that the Custom-house might be used to reward his enemies and punish his friends. The address gives, too, a fair enough account of the objections which may be urged against Mr. Warner Miller and Mr. Lapham as representatives of New York in the Senate. Without any further examination of the various counts of the indictment, we may sum it up by saying that the Democrats treat the whole contest as a mere squabble over the offices, which has been carried on in such a way, and has produced such results, as to show that the Republican party is wholly unfit to continue in power.

The Democrats evidently feel that it is unnecessary for them to do more at present than to "arraign" their opponents, and call the attention of the public to the exhibition they have been making of themselves, to carry the State this fall. They will, of course, in the fall hold a convention and put forward some very fine principles in a platform that will contain a resolution loudly calling for civil-service reform; but their main reliance will be upon the split between the "Stalwarts" and the "Half-Breeds," and the paralyzing effect

which such a split may be expected to have upon their adversaries. The quarrel has already furnished the Democrats with a good deal of valuable political capital, and one of the most important questions in politics at the present moment is how their attack is to be met.

It can be met in only one of two ways—either by the unsparing use of patronage for the formation of an Administration Machine to take the place of the Conkling Machine, or by an appeal to popular sentiment through the adoption of such a course as will show the public that the day of Machines is over. The supporters of Mr. Conkling must be filled with alarm and despondency at the result of their struggle and their present position, and their most serious interest just now must be connected with the patronage on which they are so fast losing their hold. Now, with politicians who are in this frame of mind the offices may be undoubtedly used so as to heal the breach which has been opened. Some may be placated by being given an opportunity to help in the management of a new Machine, in which they shall exercise their old power and influence, but for the benefit of the Administration rather than of its enemies; others may be driven into obscurity by having their places in the Machine taken away from them, and so on. This is one way to restore "harmony" in this State, and it is the one which commends itself to some of the most skilful managers of the "Half-Breed" and the "Stalwart" persuasion. This method, however, while it eliminates or crushes out discontent among the conspicuous officeholders who manage the Machine, has no necessary effect upon the body of the party at all; and if it be conceivable that the public at large has become thoroughly disgusted with this old-fashioned way of restoring "harmony," it ceases to answer its end. You may make a Speaker of the Assembly, and even a Commissioner of Public Works, thoroughly "harmonious" in this way, so that the Machine which they manage will run without a creak; but if the spectacle of a Machine run in this way excites public disgust, their "harmony" will be of no practical use whatever. Now this, we believe, is just what has happened. The public disgust aroused by the proceedings at Albany has not been merely with one particular kind of Machine, but with the institution itself, and any further use of it now by the Administration to offset its preceding use by the Conklingites will only excite further dissatisfaction.

This throws us back on the other method, which is the abandonment of the Machine altogether, and an appeal to popular sentiment on the subject by a determined effort to sever once for all the connection between the conduct of the business of the Government and the conduct of the business of ward meetings and conventions. There is no State where the experiment could be made with more safety than in New York, where the existence of a considerable floating vote, undetermined and undeterminable by any amount of "harmony" among the managers, is admitted.

A third method, that of producing "harmony" in the party by dividing the offices between the two factions, has been already tried, but has failed so completely that it will probably never be resorted to again. There cannot be two "Machines" of the same party at one time in any State, and the attempt to make an equal distribution of offices between "Stalwarts" and "Half-Breeds" can only embitter their differences. In fact, it was the attempt to do this which led in a great measure to the ferocity of the late conflict.

TAXATION IN VERMONT.

THE citizens of Vermont are, it seems, very much pleased with the practical results of the new tax-law of that State. This enactment requires every taxpayer to make a sworn return of all his property to the assessors, and authorizes the assessors, in case this is not done, to ascertain the amount of his property and double his assessment, and provides that all property shall be assessed at its full value. Simple as these provisions appear, says a correspondent of the *Times*, their effect has been to add $63,000,000 to the tax-lists.

The requirement of a full list of property is said to have at first "created considerable feeling, particularly among business men"; but it was complied with by all but a hundred of the seventy-three thousand taxpayers of the State. Those who refused obedience, however, were some of the wealthiest men in Vermont, and one of them, "to the shame of the judiciary, be it said," was a judge of the Supreme Court. Another judge of the same court, however, has given expression to the general public sentiment on the subject in a charge to the Grand Jury, in the course of which he said: "If the enforcement of this tax-law should fill our prisons, or drive off people not willing to bear their equal share of public burdens, the better it will be for the State. Better a small population of honest men than a large one of perjurers and shirks."

The provisions of the Vermont law seem to have been copied from that of New Hampshire, and also closely resemble those of the Massachusetts law, which gives the assessors power to "doom" any taxpayer who fails to make a return by an arbitrary valuation of his property. In other respects the tax-laws of New England do not differ much from those of New York, but these penal features constitute an innovation which originated with, and, we believe, is still confined to, that part of the country.

Economists and people who allow themselves to be misled by economists will perhaps find it hard to understand why the Vermonters should be so hugely delighted with their new law. This, however, is because the New England view of taxation is very different from that taken by economists. According to the latter, taxation, being an impost levied upon the profits of industry, is a burden which ought to be made to weigh as lightly as possible upon the community, and hence they have generally agreed in regarding it as an essential feature of a good system of taxation that it should be levied upon as few articles as possible, that the machinery for its collection should be simple, and above all not inquisitorial.

In New England the view taken of the whole subject is quite the opposite of this. The New England theory of taxation is not only that a tax ought to be collected on everything, but that the machinery for collecting it should be so oppressive and inquisitorial that the taxpayers must either "pay up" or leave the State. Indeed, with many persons in New England the old notion that the primary object of taxation is the collection of revenue, has been supplanted by the idea that the principal use of a tax-law is to ascertain the moral character of the community, and, as Judge Veazey says, to drive away "perjurers and shirks." This theory of taxation has, perhaps, been most completely developed in Massachusetts, where the most interesting discussions have been carried on in the Legislature as to whether the simple device of taxing both land and the mortgages on land really adds to the taxable wealth of the State.

It seems to be admitted that the New England system of taxation does lead to evasion, and in Boston it has long been the custom of wealthy taxpayers to lighten their burdens by moving out of town early in the year, so as to have a legal residence in a town where the rate of taxation is low. Of course this diminishes the tax-list of Boston, and would in some communities probably lead to a suspicion that the law was not altogether what it ought to be. But in New England the view of taxation we have been considering, while it leads to severe condemnation of the "tax-dodger," makes any examination of the causes which produce "tax-dodging" unnecessary. Of course if the Vermonters like their new law no one outside of Vermont need object to it, but it is founded on a view of taxation the spread of which deserves the thoughtful attention of all property-owners.

GERMAN RAILWAYS.

ONE of the most important of recent contributions to the literature of the "Railway Problem" is embodied in the official correspondence of the State Department for 1880, being a sketch of the railway history of Germany made by Dr. R. T. Ely, a fellow of Columbia College, at the request of Mr. Andrew D. White, our late Minister at Berlin, and by the latter transmitted to our Government. Dr. Ely, it appears, had spent some three years in studying this and similar questions in Germany. His observations and conclusions are given in the space of fourteen pages of the volume of diplomatic correspondence. Every point relating to the political, military, and economic bearings of the Prussian railways is elucidated in this painstaking and admirable dissertation.

Railway-building commenced in Germany in the year 1835. In 1838 the Prussian monarchy (which was not then allowed to contract debts unless with the consent of the "estates

of the realm," which could not readily be obtained and without which it was impossible to raise money for constructing state-railways) passed what might be called a "general railroad law," which is still in force, fixing the conditions upon which such undertakings might be confided to private enterprise. Some of these conditions might have been adopted with advantage in this country. For instance, all shares subscribed for must be paid in full in cash and the money applied to the work before any borrowing can be done. No loan for construction purposes can be effected without the consent of the Government, which has a right to require a sinking-fund to be established for the liquidation of the debt. Railway tariffs must be conspicuously published, and no change which increases rates can go into effect until six weeks after publication, and no discrimination can be made between persons. When the profits of a railway exceed ten per cent. upon the actual cost the tariff must be reduced. (This provision, by the way, has always been evaded.) At the expiration of thirty years after the opening of any railway the state has the right of purchasing it at a maximum price equal to twenty-five times its average annual dividend during the five preceding years.

Under this law rather more than one-half of the Prussian railways have been built. With the adoption of the Constitution of 1850 the Government acquired the means of constructing railways with its own resources, and it built several roads which were deemed too expensive or too little remunerative for private enterprise, the most important of which was the one extending from Berlin northeastwardly to the Russian frontier. No definite railway policy was adopted by the state, and the two systems —that of private ownership and that of state control—grew side by side until the year 1866, when there were 3,600 kilometres in the former category and 3,300 in the latter. About one-half of the roads operated by the state were held under lease, the other half being owned by the Government. By the political annexations of 1866 the Government came into possession of all the railways owned by the annexed kingdoms and duchies. Nevertheless private enterprise outran the Government until the beginning of 1873, when private companies operated 7,000 kilometres against 5,750 operated by the state. In this year Dr. Lasker made his famous attack upon the Minister of Commerce, Count Itzenplitz, charging corruption in the administration of the general railroad law, whereby "concessions" or charters were granted to certain favorites of the Minister, and especially to Dr. Strousberg, and withheld from others. A protracted investigation was had which substantially sustained Dr. Lasker's charges and led to Count Itzenplitz's resignation. The committee of investigation were charged among other things to enquire how far the intentions of the Government in granting charters to private companies had been fulfilled. Under this head they reported that "railways are public highways resembling in essence and purpose other highways. The only means of justifying the Government in relinquishing them to private industry and speculation is financial necessity. It appears desirable to transfer to the Empire a controlling power over all German railways."

Nothing was done to carry this recommendation into effect until 1876, when Prince Bismarck brought in a bill in the Prussian Parliament to authorize the Government, if it should desire to do so, to sell all the Prussian state railways, together with the Government's right to acquire the private railways, to the Empire. Inasmuch as the Prussian system is the preponderating railway force in Germany, its acquisition by the Imperial Government would give to the latter a great access of power as against the "Particularists" or State-rights party, who constitute the dominant faction in Bavaria, Würtemberg, and Saxony. Prince Bismarck, in advocating the measure, made a speech which would have delighted our Anti-Monopoly League.

The bill was passed by the Prussian Parliament. It remained for the Empire to complete the bargain by purchasing the Prussian railways. The "Particularists" rallied against it in such force that it was never brought before the Reichstag at all. But Bismarck was not deterred by adverse public opinion; he seldom is. He redoubled the exertions of the Government to gain possession of the private railways of the Kingdom, in order to bring against the non-Prussian state railways the powerful competition which the united Prussian system, under a single control, is able to compass. By measures adopted in 1879, partly by purchase and partly by building new lines, the Government became possessed of fifteen thousand kilometres (about ten thousand miles) of railway, or three-fourths of the entire mileage of the Kingdom. It is now in a position to secure the remaining Prussian railways on its own terms, since it can destroy the value of their property by competition.

Prince Bismarck's railroad policy is bottomed upon political and military, rather than upon economic, considerations. His leading idea in this, as in all his other large undertakings, is to consolidate the Empire and extinguish the power of the separate states. He has no objection to the existence of courts and thrones at Dresden, Carlsruhe, Munich, and Stuttgart, provided they confine themselves chiefly to parade and dumb show, and leave the essentials of government to Berlin. But railways are a source of réal power, and so long as the local governments of Saxony, Bavaria, and Würtemberg own the lines within their borders they are of separate consequence in the councils of Europe. Bavaria, for instance, lying between France and Austria, holds a very important key of communication in Central Europe, and one which she is by no means disposed to surrender. Nevertheless, Bismarck's policy, in the opinion of Dr. Ely, will eventually prevail, and the Empire will come into possession of all the German railways it desires to own, though not perhaps in Bismarck's lifetime. The destiny of all French railways, by the terms of their charters, is to fall into the Government's possession, without money and without price, at the expiration of ninety-nine years after their completion. This contingency operates as a powerful aid to Bismarck's plan for controlling the German railways, since it is deemed necessary to put the Empire on a footing of equality with her most dangerous neighbor.

While economic considerations are not of prime importance in bringing about this great change, they will be by far the most important when it is once effected. The advocates of state-ownership point to many advantages of the system which it is reasonable to suppose may be realized—namely, uniformity of tariffs, non-discrimination as between individuals and localities, the assurance that tariffs shall not be higher than necessary, and shall not be changed without good cause or without sufficient notice, the public satisfaction that must result from knowing that all surplus receipts go into the common treasury, etc. All these things may be realized in a country which has a civil service as rigid and business-like and free from political interference as the New York Clearing-house, and without which the system of government ownership would be as much worse than that of private corporations as the Star-route system of mail transportation is inferior to that of Wells, Fargo & Co.

THE REVISED NEW TESTAMENT AND ITS RECEPTION IN ENGLAND.

LONDON, July 12, 1881.

NEARLY two months have passed since the Revised Version of the New Testament appeared, yet there has been comparatively little criticism of it in the press and less appearance of public interest than might have been expected. The sale was, of course, enormous and still continues. In the long run a very considerable effect will be produced upon the religious ideas of ordinary persons. But our people are a slowly moving people; they are sound sleepers; they usually take a long time in rubbing their eyes before they get them well open, and do not for some time see objects clearly. Even when they have read a book and some criticism on it they do not at once make up their minds about it, still less draw all the conclusions which it suggests; and of course those who are most interested in theological questions are not usually those who can give a sound opinion on questions of translation from the Greek. Though every man who pretends to cultivation has learned classics at school or college, few indeed are those (except, of course, members of the teaching profession) who keep up their classical studies in middle life. Not one man out of fifty who takes his degree at our universities (teachers again excepted) reads any Latin once a year; not one in two hundred takes up a Greek book. Even among the clergy, whether Anglican or Nonconformist, the level of scholarship is not high. Hence in discussing the reception which the Revised Version has met with here one must remember that the opinion of scholars is the opinion of a very select body, on which the opinion of the public partly depends, and for the rest is formed entirely from comparing the former or, as we call it, the Authorized Version with this new one.

Scholars are a good deal divided in their judgment. The majority hold that the revisers have done well in taking as the basis of their translation a better Greek text, and are disposed to doubt whether they might not have been even somewhat bolder in their deviations from the received text. There is, indeed, an opposed view—that the *textus receptus* ought to have been adhered to, so that no corrections should be made except in the English version; and the desirability of having one uniform Greek text for all the Protestant world is urged, even though that text should not be the best. But this notion, which would have perpetuated false readings that have been long admitted and obelized, finds little favor. As to the details of the new translation there is, of course, an infinite diversity of view. Some think that renderings have been changed which were substantially right in the old version; others, that passages which needed improvement have been left untouched. For instance, one of our most illustrious public men maintains that if anything ought to have been mended, it was surely the translation of ψυχικός ἄνθρωπος by "natural man" in 1 Cor. ii. 14. A warm controversy rages over the question of "evil," or "the Evil One," in the Lord's Prayer —*i.e.*, whether τοῦ πονηροῦ is to be taken as neuter or as masculine. Agreement on such matters was not to be looked for; and no one will deny that the revisers have, as might be expected from the great advances which Greek scholarship has made since King James's days, presented a far more exact expression in English of the meaning of the Greek original than the Authorized Version contains. Probably no translation of any Greek or Latin author can be pointed out in which so much attention has been paid to every shade of sense and turn of phrase. There is really nothing in this new version which can be called an error; even those who disapprove of the decisions at which the translators have arrived in particular passages must admit that there is always much to be said for their view, and that it would be impossible to imagine any work done with more scrupulous care or a more competent skill in the usages of Hellenistic Greek. The question rather is, whether they have not thought too much of accuracy and too little of the effect to be produced on ordinary readers; whether in their anxiety to convey every shade of meaning they have not put too fine a point upon their English and, so to speak, whittled away some of the strength and broad simplicity of the original.

This brings one to consider the sentiments with which the general public has received the translation. Though, as has been already said, England has not yet finally expressed its mind, still the general feeling can hardly be mistaken. It is a feeling not precisely of displeasure, but of discomfort. The traditional phrases which familiarity and the associations of childhood had hallowed have been so modified as to lose their charm. The cadence of the sentences to which the ear had grown so accustomed that they were always read with particular inflexions of the voice has been broken, so that much practice will be needed to get new inflexions that will give equal pleasure. People who have tried the new version by reading it aloud at family worship complain that they are constantly being pulled up and stumbling over small changes in expression which do not seem to them to make any perceptible difference to the meaning. And many individual passages have been indicated where words of Latin origin have been substituted for the Teutonic words of the Authorized Version, giving a sort of flatness and commonplaceness as well as modernism. The new version, in short, is accused of being less picturesque and more prosaic than the earlier one. Taste is extremely sensitive in these matters, and it cannot be denied that the occasional archaisms of King James's version had the effect of enhancing the dignity of the Bible. They removed it from modern associations; they made people feel the better that it belongs to a remote time; their very peculiarity caused the memory to be more tenacious of them.

It is not altogether easy to estimate the worth of such criticisms, because a great deal must be allowed for the mere aversion to change which all men feel in matters that touch their inmost emotions and most settled habits. Even undoubted improvements are not at first welcome. The Scotch, for instance, regard their metrical version of the Psalms, which seems harsh and bald to Englishmen, with an affection incomprehensible to those who have not learnt it by heart in childhood. When the new version has been in use for fifty years it may well be that many of the alterations which now excite dislike will have been approved of, and that the new cadences will be thought as perfect as the old ones. Still, after making every allowance for these feelings, it may be admitted that the revisers have to some extent misconceived the nature of their task. They have been too much Greek scholars and too little English writers. They have proceeded as if the main thing to be done was to weigh out with precision every ounce of meaning that the Greek text contains. They have not sufficiently remembered, in the first place, that they were dealing with an existing version, which ought not to be altered unless where some distinct and substantial improvement was to be obtained; and, secondly, that the most literal rendering is not necessarily that which best conveys the sense to a reader in another tongue. It is not for professed theologians that a revised version was needed, since they must in any case go to the original and conduct their discussions with reference to its words, comparing the use of the Greek term in one passage with its use in another. The accuracy needed for ordinary readers is different. It is only such an accuracy as may keep them from misconstruing the Scriptures, and drawing from them unwarranted conclusions either of dogma or moral precept. What is wanted is that the meaning should be presented in a broad, plain way, with such simplicity of language as will make it comprehensible to common intelligences, and such force as will enable it to touch the heart and dwell in the memory. The ordinary reader reads to be edified and interested; if the alternative is between a rendering which will impress and stimulate him and another which will best carry to a subtle mind all the finer tinges of thought in the original, the former is rather to be preferred, and certainly the more so if it has already established itself in the affections of the people. Truth, of course, comes first; and if one were forced to choose between the Authorized Version with its occasional serious errors and the Revised Version with those errors removed, but some of the purity and raciness of the style also gone, perhaps it would be necessary to choose the Revised. But would it not, men ask, have been possible for the revisers to expunge those errors while leaving the rest of the translation almost unaltered? Yielding to the natural temptation to make their work as complete and finished as possible, may it not have been that they were not content to stop when the errors had been struck out? Is not the consequence to be felt in a considerable disturbance of association and an apparent loss of strength in the English New Testament as a whole? It is no secret that the Old Testament revisers, whose labors will not be finished for some three years more, have gone on a different theory, and are altering the phraseology of the English Old Testament as little as possible; in fact, only where it is plain that the present translation is wrong. They have both an easier and a more difficult task: easier, in that the text of the old Hebrew books is better settled than that of the Gospels and Epistles; more difficult, in that it is in many places almost unintelligible, whereas in the New Testament one can always make at least a probable conjecture as to the sense, and has only to choose between more or less plausible renderings.

In the state of public opinion which I have endeavored to describe, it need hardly be said that there is little likelihood of the Revised Version finding its way into official use. So far as I know, none of the more important Nonconformist bodies has adopted it for public worship. Whether a clergyman of the Church of England could now use it in the regular services of his church or not, is a question as to which high legal authorities are not agreed, though the better opinion seems to be that he could not, and that some formal legal authorization by the Crown or by Parliament would be necessary. This will not be given; it is not even talked of as possible. Further reflection and study of the new translation may modify men's views, but at present the proposal to substitute it officially for the old one would encounter the greatest opposition from the general public, and find little support even among scholars. But it would be a great mistake to suppose that the work is therefore a failure and barren of results. Even those who do not like it admit that it is a more valuable contribution to a more perfect translation than any which has yet appeared; that it supplies a basis on which a permanently satisfactory structure may be erected. To the large and increasing class of persons who desire to read the Bible intelligently and teach it in Sunday-schools, but have no knowledge of the original tongues, it is of the utmost service as throwing light on the old version, giving a better idea of the meaning of difficult passages, emancipating them from conventional phrases, and showing them how to apply their minds to make out the connection of a writer's thoughts. It is, so to speak, like a critical edition of the New Testament, prepared by an unprecedentedly capable set of editors, to use and apply which is of itself no small education in critical methods. And in this way it may be expected to give a considerable stimulus to biblical studies among us.

One, more remote, result of the appearance of this new version ought not to be forgotten, though it cannot show itself for some time to come, and has never, that I know, been referred to on this side the Atlantic. It can hardly fail to set men thinking more and more about the origin and authority of the books of which the Bible is made up. Hitherto a great part of our people have practically treated the Authorized Version as if it was an inspired English book. They have known nothing about the variations in the Greek text, nor about the different claims to authority which different books possess. All has been alike to them God's word, and so much God's word that they have constantly founded arguments on words which a reference to the Greek upsets in a moment. This

new translation, which brands as spurious or doubtful passages that stood in the old version; which in many places departs from its rendering and puts a different sense on the Greek; which admits not only that the text is in parts uncertain, but that the true meaning of the text is uncertain, can hardly fail to affect the unquestioning reverence with which the New Testament has been heretofore regarded. Protestants have thought they had no need of an infallible visible church speaking through councils or a pope when they had an infallible book. But what if it be necessary to enquire into the credentials of the book itself, into its date and its claims to bear the name under which it passes, as well as into the purity of its text? All these questions point, as so many other new controversies here point, to a reconstruction of the basis of Protestantism; a process which may not be an easy or a speedy one, and during which some temporary advantages may be gained by other forms of religion, not to speak of the advocates of negation. Yet the willingness which the Presbyterians of Scotland have recently shown, in the case of Prof. Robertson Smith, to consider all questions regarding the origin and history of the Scriptures as fair matter for discussion, shows with how little alarm even ultra Protestants are prepared to enter on this new range of enquiry.

Y.

A FRENCH VIEW OF THE TUNISIAN CONQUEST.

PARIS, July 8, 1881.

UNDER the Second Empire of Napoleon III. the whole web of diplomacy was spread round the Emperor. He was in the midst of it, like a gigantic spider, ever watching *quem devoret*. The *Kladderradatsch* of Berlin never spoke of him except as *Er*. After every comment upon the questions of the day it used to add, "What thinks *Er?*" Europe has another *Er*. There is not much done without *His* permission; and it must be confessed that the new primate of European politics has more statesmanlike views than his predecessor. The Tunisian affair, which now occupies all Europe, can be traced back to a few conversations held in Berlin during the late Conference and the Congress which had to settle the Eastern Question. Prince Bismarck gave an intimation that, in the general breaking down of the Ottoman Empire, he should have no objection if France seized the Tunisian portion, and thus aggrandized her African empire. Lord Salisbury seems to have viewed this eventuality with the same philosophy, though he has since attempted to add shades and reserves to the formal expression of his opinion.

It is clear that the Tunisian question is not an invention of the day. It has been prepared, and it is no mystery that Germany has given France a sort of *carte blanche* in Africa. There are, of course, many people who think and say that Prince Bismarck, in encouraging the efforts of France in Africa, has no other object than to weaken her—to oblige her to maintain a large army in districts always ready for revolt; that he wishes, also, to create between France and Italy a permanent cause of irritation; that he is not displeased at making the *entente cordiale* between England and France less cordial. In fact, those who pretend themselves the wisest repeat, in melancholy tones,

"Timeo Danaos et dona ferentes."

The Tunisian expedition took everybody by surprise, even the French nation. Nobody was prepared for it. We knew very well that there are always on the frontiers of Algeria some unruly tribes which live by plunder, but the Kroumirs were not, it was felt, the real cause of the war. France had entered on a course which must, sooner or later, conduct her to the annexation of Tunis; but it was not felt necessary to go immediately to Tunis. A railway built between Guelma and Tunis, on Tunisian territory for the greater part, had received, a few years before, the guarantee of a minimum of interest; the Chambers voted this guarantee, and nobody in Europe remonstrated, though such a vote indicated an evident desire to give to French enterprise in Tunis all the help of the French state. France has now great interests in Tunis, and the rivalry between the French and the Italian consuls precipitated matters. The Orientals believe in nothing but force, and when a French general, with his staff, brought to the Bey of Tunis a treaty prepared by M. Roustan, and gave him only a few hours for meditation, the old Bey recognized the necessity of siding with France. He accepted the protectorate which was offered him, and his favorite minister, Mustapha, who was previously so much inclined towards Italy, is now at the Grand Hôtel in Paris, and we can see him every night at some theatre, surrounded by his followers in black coat and fez.

There has been in this Tunisian affair something artificial, which produces on the mind the conviction that the details of it had been arranged beforehand between the parties most interested. Those who were not in the secret are not satisfied; but the silence of the two great Continental empires, Germany and Austria, and the assent of Russia, can make France somewhat indifferent to the daily interrogations which are put in the House of Commons on Tunisian affairs. It can even make France indifferent to the irritation of Italy. The French people have their doubts as to the propriety of indirectly annexing Tunis, they are far from enthusiastic in this matter; they know that the occupation of some parts of Tunis and the introduction of civilization in that part of Africa will involve great difficulties—the history of the Algerian colony is before their eyes. But certainly they cannot be much moved by the protests of a nation which, without having spent a soldier or a shilling in the late Eastern war, took for its share in the final settlement the beautiful island of Cyprus. The safety of the road to India is an argument with which we are all familiar; the safety of our Algerian colony is also an argument: we must protect Algiers, as well as we can, just as England must guard the access to India. In the general disruption of the Ottoman Empire (and England herself has quite sacrificed the cherished Palmerstonian integrity of the Ottoman Empire) we see Bosnia and Herzegovina falling into the hands of Austria, who is already allowed to turn her eyes on Adrianople; Greece, without having made any effort, receives a large territory; Bulgaria becomes an independent state; Cyprus is one pearl more in the necklace which begins at Gibraltar and ends in Egypt. It is not very absurd if France, and, I will add, if Italy, have some share in the redistribution of the territories which once belonged to the Porte.

Italy has only to say a word and she will certainly have the part to which she is entitled by her situation on the Mediterranean Sea. Napoleon I. once said: "I want the Mediterranean to be a French lake." We want it now to be a Spanish, French, Italian, and Greek lake. Tripoli, which is now in a state of absolute barbarism, would very naturally fall into the hands of Italy. The struggle which took place at Marseilles between the Italian population of the town and the French, on the occasion of the return of some troops from Algiers, is an incident of the perpetual struggle for life and the competition for labor. Piedmontese laborers are frugal, hardy, contented with small pay; they constructed not only all the new forts of our eastern frontier, but also the new forts which surround Strassburg. They are very good navvies, and our contractors employ them everywhere on the new railway lines. The workmen of the port of Marseilles took the first opportunity to vent their bad humor on the industrious Italians who live among them, and who compete with them. I cannot attach much importance to the demonstrations which took place at Palermo, at Turin, at Rome. They were the work of the "Italia irredenta" party, which has no great importance. The Irredentists spoke some time ago very loudly of the province of Trent, but as soon as the Austrian Government desired it they remained perfectly mute on the subject. Italy has become too great a nation to be the instrument of the ambition of a few politicians; she cannot be so unwise as to compromise her situation in Europe without any adequate cause. She is just now making a great loan in order to return to specie payment; in order to destroy the paper which has been her only circulating medium she must find six hundred millions of lire in gold, and lock that gold up in Italy for two years. This gold would have been found in Paris, and a loan was already arranged with the house of Rothschild when the anti-French agitation in Italy prevented the success of the negotiation. The loan is now issued in London, but London must come to the Bank of France in order to get gold; at any rate, if the Bank of France raised the rate of discount the gold would flow to its vaults, and London would find it difficult to provide Italy with gold without much inconvenience to herself. The European markets have been so overloaded with all sorts of new values that a small cause might create a terrible crisis. It is highly probable that the Italians will not choose now to pick a quarrel with France on account of this Tunisian affair; it is more likely that they will enter into negotiations with France on the question of Africa in general, and discuss with her the various eventualities which may arise from the gradual and fatal decomposition of what was once called the Ottoman Empire.

England's anger against France is probably more deep-seated than the anger of Italy. It is the fate of England to be condemned herself to perpetual annexations; and it is her nature not to like in others what she must do herself. However, there are many reasons why England should not follow blindly the dictates of the instinct which makes her look with distrust on all the movements of France. The trade which has sprung up between the two countries has created moral as well as material ties. It seems at times as if England were only too fond of us, and as if her love of France were becoming a sort of mania. French novels seem to her better than English novels, French artists better than English artists; French politics console her advanced Liberals for the defects of her old *parlementarisme*, and where are these advanced Liberals not to be found? It seems at times as if a new spirit had possessed England, and as if she were becoming sick at heart of all the things which once made her so proud. Young

England has not yet destroyed Old England ; still, Young England has become so important that it is now a political factor, and Young England, contented with settling the affairs of Egypt in harmony with France, with negotiating with France for a new treaty of commerce, will not play into the hands of Old England for the sake of an old Bey of Tunis, of the port of Biserta, or of Sfax. "Leben und leben lassen" is its motto, as it is the motto of the Viennese. Besides, even Old England will not take any important move so long as the great Fürst von Bismarck keeps his masterly silence, so long as *Er* does not remonstrate with France, and gives her African efforts the support of his sympathy, or even of his indifference.

We must, therefore, expect to see the Tunisian question follow its natural course. The fanaticism of the Ottoman world, which was crushed at Plevna by the Russians, has found an eccentric theatre in the regions which lie at the south of our colony. When autumn comes our troops will have to hunt the insurgents from oasis to oasis. At the present moment war is next to impossible on the frontiers of the great African desert, but the year will not end before a great campaign will be made in Algeria and in Tunis. Such campaigns have always been necessities from time to time ; each of them creates new fields for the work of colonization, which is not only a large field for the French, but also for the Spaniards and Italians.

GERMAN SYMPATHY FOR PRESIDENT GARFIELD.

BERLIN, July 9, 1881.

IT can easily be imagined that the news of the assassination of President Garfield created a most painful sensation all over Germany. It reached the public on Sunday morning, and provoked the utmost consternation in all classes of society. In Berlin there was one cry of indignation. The dangerous condition of the Empress, whose recovery from an operation for hernia was just then very doubtful, fell entirely into the background before the President's cruel fate. The offices of the popular newspapers, such as the *Tageblatt*, *Tribune*, *Volkszeitung*, were besieged by a crowd eager for news, and every symptom of decreasing danger was joyfully hailed.

It is a consoling fact, and a strong proof of the innate goodness of human nature, that in such moments of public disaster all national and party differences fade away, and that for a time, at least, all men form a common brotherhood. So it was on this occasion. Sunday being a fine day I went to a public garden in the afternoon, where President Garfield, of course, formed the engrossing subject of conversation. A great many people did not understand how it could happen that the President of a republic who had been elected by the people should be fired at. Others said that they had had too high an idea of the public spirit of a republic to believe it possible that murder could be resorted to by a dissatisfied office-seeker. The people present all seemed to labor under the impression that the moral standards of a democracy were higher than those of a monarchy. I here again observed that among the lower, as among all half-educated classes, the notion prevails that a republic and absence of oppression are synonymous. The form of government in their eyes is more than the substance. "I thought better of the United States," said an intelligent-looking man in full earnest. "I had intended sending two of my boys over there, but that fellow Guiteau is no better than Nobiling [the German assassin], and the American people is no better either." I took my seat at a table where several mechanics, in a quite modest and unassuming way, discussed the same all-absorbing question, and came to the conclusion that the spoils system lay at the bottom of the Washington tragedy. "If the Americans do not do away with this infernal principle," said a bright little tailor to his neighbor, "they will go down the more rapidly as their resources develop themselves. In every walk of life," he continued, "man is his own master, and of course chooses whom he considers most competent to help him or to do his business ; but in the United States the Government for the benefit of the politicians chooses men as its clerks and officers who have failed in other spheres of life, and are merely rewarded for services rendered in politics, or who have at least not proved that they understand what they are bidden to do." When I asked the man how he could judge so positively of American public matters he replied that he had worked five years in the United States, in New York as well as in Chicago and Dubuque, but that on account of hard times in 1877 he had returned home.

What the tailor knew from his own experience the newspapers almost unanimously stated in their articles commenting on the murder of the President. On the whole, their reasoning was sound and much more to the point than in matters which require solid knowledge of American constitutional law. The journals, however, would perhaps not have been able to judge rightly of the causes lying at the bottom of the attempt, if for the last three months the manœuvres of Boss Conkling and the question of public patronage had not been so largely dwelt on in the American press. Of the Berlin liberal papers the *Tribune*, the organ of our secessionists, had the best comments upon the attempt—indeed equal to any in the best New York papers. The American editor of that journal, Mr. Loewenthal, was for more than ten years a resident of the city of New York. The *Provincial Correspondence*, on the other hand, the well-known Government organ, tries to make capital out of the crime for its small party purposes.

"This attempt," it says, "proves even to the infatuated of all nations that the so-called liberal and free institutions, even after having found their expression in a republican form of government, form neither a defence nor a shield against any atrocity ; and it further proves that similar crimes which have been perpetrated in the monarchical states of Europe cannot be cured by a change of principles underlying the government, nor by granting greater liberties."

As an offset to this it may be said that all over Germany not a single voice has been heard which ventured to excuse the crime, nor has any one expressed the opinion that the form of government can afford protection against wickedness or violence.

Little or nothing can be said of our home politics, since we have entered on the dead season of the summer. The different parties are concentrating their activity on the preparations for the coming elections. Bismarck expects to carry the campaign with the cry, "Help for the poor man!" but the Social-Democrats have rather lost their confidence, if they ever had any, in the uprightness of his aims, for, on the strength of the so-called Socialistic law of 1878, the state of siege has been declared for Leipzig and its neighborhood, and as a consequence thereof eighteen Social-Democratic leaders have been driven out of that city. Another defeat has been prepared for the Chancellor by his own son, who, in one of the Berlin wards, has made so impertinent and childish a speech that the Liberals instantly ordered half a million copies of the stenographic report to be distributed throughout the country. Young Bismarck, although lately appointed to the position of assistant to his father, is little of a diplomatist. His speech teemed with ignorance of the most notorious facts, and abounded in rough attacks on the character of prominent opponents and of the city government, which, without a shadow of proof, he denominated as corrupt. The young man is a mixture of the overbearing ensign and the ill-educated student.

If you have perhaps heard that the German delegates to the Monetary Conference at Paris had changed their mind in favor of bi-metallism, I can positively inform you that this assertion of Wolff's Telegraphic Bureau is utterly destitute of foundation. People here for a moment were alarmed by this unforeseen news, which, however, by the succeeding mail was discovered to be a manœuvre of money-brokers and exchange-dealers. On the contrary, Messrs. Von Thielemann and Schraut—the former a very able diplomatist, the latter a thorough master of the subject—in the sessions of the conference of July 2 and 4 referred to their old views without any remark which could be interpreted as being favorable to bi-metallism. Mr. Schraut coincided only in one point with Mr. Dumas, the French delegate's, position—namely, that in order to extend the circulation of silver it was necessary to substitute this metal for the paper denominations below twenty francs. It is very characteristic that the tenor of the official documents is very often just the reverse of the statements of the bi-metallists, who in every way try to distort and confound the real proceedings. Bismarck being indifferent to the whole subject, his subordinates will have their own way in this matter, all the more because, apart from other economical and scientific considerations, about fifty millions of marks have been spent in readjusting our monetary system on the gold basis.

Mr. Evarts's speech before the adjournment of the Conference has reached us through the New York *Herald*, and makes a rather hilarious impression. When a prominent lawyer and experienced statesman like your late Secretary of State makes a sentimental address to the heart and good-will of sober people, he cannot have business reasons for the position he has taken, and rests his case in the conviction that he will be beaten. Mr. Evarts, having gone among the financiers, had in future better follow the advice of Mr. Hansemann, a former very able Prussian Secretary of the Treasury, which is more in keeping with financial transactions and has become a favorite German quotation : "In money matters tenderness of mind ceases" (*In Geldsachen hört die Gemüthlichkeit auf*). And for this reason we Germans will also stick to the gold standard. †††

Correspondence.

THE INHARMONIOUS VICE-PRESIDENT.

TO THE EDITOR OF THE NATION :

SIR : Allow me to call attention to the following paragraph, to which the near future may perhaps give still more pertinency. It is from Mr. Gar-

field's preface to the Marquis de Chambrun's 'Executive Power' (written in 1874):

"In discussing the relation of the office of the Vice-President to our system the author notices the fact, which I think has not been elsewhere discussed, that while the office of Vice-President is valuable for the purposes of an election—the candidate being usually selected with a view to supplementing the opinions of the candidate for the Presidency—yet this very fact makes the Vice-President an inharmonious element for the purposes of administration. The author traces to this cause the fact that, whenever our Vice-President has become President, his administration has not been satisfactory to the country. On the whole, the author doubts the value of the office of Vice-President, and says that our example in this particular should not be followed elsewhere." A. J.

NORWALK, CONN., July 25, 1881.

THE MAIN REASON FOR CIVIL-SERVICE REFORM.

TO THE EDITOR OF THE NATION:

SIR: While it is true that the late attack upon President Garfield's life is drawing the attention of the country more directly to the necessity of reform in our civil service, it is amusing to observe that even some of our leading papers assume as the principal reason for this reform the added protection to the person of the Executive to result therefrom, ignoring the many advantages which overshadow this in importance. The careful preparation of youths destined to occupy positions of command in the naval and military services of the Government is so generally admitted to be needful, that any measure looking to the abolition of the training-schools would be strenuously opposed by public opinion, which, however, views with apparent indifference the selection of persons unfitted by previous technical training for offices involving duties more constant and important. The hope of radical reform in this quarter has been so often disappointed, the efforts of the declared friends of an improved civil service in Congress so faint-hearted and transitory, that every lover of his country may well prepare himself to see a continuance of the mortifying spoils system, despite the passing protest induced by the attempted assassination.

H. W. T.

NEW ORLEANS, July 16, 1881.

GUITEAU A REPUBLICAN FANATIC.

TO THE EDITOR OF THE NATION:

SIR: It seems to me that the fact that Guiteau was an applicant for an office before he shot the President has little or nothing to do with our civil-service methods. There is little or nothing to show that his failure to obtain an appointment made him an assassin. And when we remember that since the days of Andrew Jackson there have been every four years a hundred thousand disappointed office-seekers, we should ask something better than newspaper clairvoyance in pointing out Guiteau's motive.

Now, Guiteau himself says that he shot the President in order to unite the Republican party; and we submit that there is nothing to make this at all improbable. The assassin belongs to a class of monomaniacs, and it is not a small class, who believe that patriotism and support of the Republican party, if not synonymous terms, are always found united; who think that no man who votes the Republican ticket can be a very bad or a very dangerous man, and that the man who does not cannot be either a good or a safe man. Such a man, who thought the President wrong in his fight with Conkling and that the Republican party was in danger, would regard the death of the President as a great blessing to the country; and such a man was Guiteau.

The civil service has enough to answer for, but with all its begettings it did not beget Guiteau. —Yours, etc., B. M. T.

EAST SAGINAW, MICH., July 20, 1881.

AN ANNUAL REPORT FROM YALE WANTED.

TO THE EDITOR OF THE NATION:

SIR: In the last issue but one of your paper you give voice to what is, I am sure, the wish of a great many graduates of Yale—namely, that their Alma Mater should let them know every year how she stands pecuniarily, and what changes she has made in discipline and instruction. The New England college of twenty or thirty years ago was a poor dead-and-alive place, devoid of enthusiasm; a place where the best students were not allowed to get along any faster than the worst could be forced to do. We want to know for certain what colleges no longer deserve this reproach before we make choice of a college for our sons, and we want to know how the funds of our own Alma Mater are invested and expended before we subscribe to increase them. There are, to be sure, New England colleges which have a good deal to conceal. There is one in which recently the trustees swelled the total of the Freshman class by admitting a number of candidates whom the Faculty had rejected for deficiency of scholarship. But Yale is certainly not to be classed with these. The Yale catalogue is sent every year to its graduates, but it contains at present very little but names of men and of text-books, which nobody cares about. It might well contain information of various sorts which the parents of students and the constituency of the corporation have a right to demand. What are the regulations for the government of students? Is it the policy of the college to employ as tutors men who are going to teach and study all their lives, or does it advocate rotation in office and the continual infusion of fresh blood into the lower (*i. e.*, the more fundamental and important) arteries of instruction? Are tutors appointed to teach each his specialty, or do they accept office and then first learn to what department they are assigned? Are there advanced sections for the more competent students? Do members of different college classes recite together? May a student question his instructor during the hour on doubtful points which arise, or is he forbidden (as I was) to ask anything until the class is dismissed?

I have myself made personal enquiry and am able to answer one or two of these questions. Tutors are still appointed "maids of all work," and the junior tutor teaches what is left after his seniors have had their pick among Greek, Latin, and Mathematics. If this seems incredible, it must be remembered that, according to Hillebrand—whose book, however, I have not at hand—even professors of law in France do not know what part of the law they are to lecture upon, until a specialty has been assigned them by their superiors. Furthermore, there *are* advanced sections, and seniors and juniors are sometimes found on the same benches at recitation. As not one graduate in a hundred knows these things I venture to publish them here. But I wish I could find out whether a student may go out sailing now without asking the president, . . . and a great many other things. I infer from the silence of the catalogue that a Freshman who has been over the Freshman mathematics at school must still, as in 1852 or 1853, take them all over again with his class.

Men or boys who have been together a long time will be pretty certain to feel an affection, which scoffers will, perhaps, call sentimental, for what kept them together, it makes no difference whether this was a college or a man-of-war, an Arctic expedition, a boarding-house, or a secret society. There is plenty of such affection expressed at the alumni or class-meetings of every college in the Union, and everybody present enjoys it and sympathizes with it. But the familiar enthusiasm for "old" Brown, or Yale, or Williams, or Wesleyan is neither a measure of the real worth and significance of these institutions at present, nor a measure of the pecuniary aid which these same graduates, who cheer so loudly, will grant when called upon. Neither will a thoughtful man send his son to the college he becomes so enthusiastic about when he revisits it, unless there is no better college to be had. Now, the presumption is that the college which is most willing to tell all it does, to take its alumni and the public into its confidence, is the best college. Such a course provokes controversy, but on the one hand controversy is the best of advertisements, and on the other it is only by letting us know what the college is to-day that we can retain any other than a sentimental regard for it.

Last commencement a pamphlet with the following title was distributed in New Haven: "Yale College in 1881. Some Statements Respecting the late Progress and Present Condition of the various Departments of the University for the Information of its Graduates, Friends, and Benefactors. By the Executive Committee of the Society of the Alumni." I am sorry to say this pamphlet belies its title. In the first place, it is not written by the Executive Committee of the Alumni at all, but by members of the different faculties, who remain anonymous. Neither is there any editor named, nor is any editor, in fact, responsible to the Committee of the Alumni and the public for the whole. The definiteness, detail, and novelty of its statements, and the literary skill and logic which characterize it, are sufficiently illustrated by the following extracts, with which I conclude my long letter:

"It is believed, too, that the general love of good scholarship has been well maintained by the students, among whom, to their credit be it said, good scholarship and the achievement of success in any field of science or literature has [*sic*] always [!] commanded the highest respect."

"It would not be proper in this pamphlet to pass any compliments on our colleagues, but this may at least be said, that the students of this college have never enjoyed better opportunities of instruction than they do now.

"We may congratulate ourselves on the truth of the foregoing statements. A college is primarily a place of education; and if students of a right spirit assemble in satisfactory numbers, and there is a sufficient force of competent and laborious instructors to ensure their right intellectual activity in the acquisition of knowledge and discipline, the conditions of substantial success are met. Large pecuniary endowments are not indispensable to a high degree of prosperity. To prove this we need only look at the record which Yale College made during its first hundred and thirty years—a record of which every Yale graduate is proud. . . . On the other hand, the history of the next half century, which ends with the present year, illustrates strikingly the power of pecuniary endowments to stimulate and promote the stable growth and productiveness of such an institution. . . . The bequests do not all immediately mature; but the certainty of future endowments, no matter how far off the pos-

session may be, is a ground of confidence which is only inferior to actual possession."

"It would . . . be well for the citizens of Connecticut to see to it that there be no decline of the higher education within her borders. We trust that they are not alarmed at the indications of a tendency towards a too liberal policy on the part of the clerical members of the Corporation of the college. It cannot be denied that, as the generations have passed, these successors of the Congregational divines who founded the college have introduced great changes in liberal directions. They have themselves opened the door by which no less than eight men of other Christian denominations, or of no denomination whatever, may enter their small corporate body; they have ceased to require the officers of the college to subscribe to the Saybrook Platform; and at the present moment they have, by their own appointment, no less than fourteen professors holding offices of instruction and government in the college, who are not Congregationalists nor Presbyterians, but are connected with other Christian denominations; and what is a more serious matter still, they permit these non-Congregational professors to have more to do with the selection of new professors, as vacancies occur or new professorships are established, than they themselves have.

"We commend these facts to the consideration of those whose minds are in any degree exercised on this general subject.

"But it is to be hoped that the constitution of the Board of Corporators will suffer no further change; for so much of unity as the clerical portion of the Board still have in being connected with one denomination is believed to be the best means of securing the management of the college in the quiet spirit of a just Christian liberality. We do not share the fear that under their care the college will cease to be a Christian college. For so long as the great English universities, after which we were modelled, maintain their distinctively Christian character and call their undergraduates to daily worship, so long as our own houses of legislation and our courts of justice are opened with prayer, so long as our soldiers, in the field and in their barracks, although of mature years, must obey the roll-call of their chaplain, and our marines are piped down to prayers, so long, at least, we doubt not, our Corporators will find it proper that the undergraduates of such a college as this should be called together to worship God and to crave His gracious blessing on their daily life."

"The various courses undergo every year the modifications and improvements suggested by observation and experience which the means at the disposal of the Governing Board [of the Scientific School] allow them to make. . . . They feel a certain degree of pride in the knowledge that no other Scientific School in the country, however ample its means, ventures to claim that the instruction furnished by it is superior, even if equal, to that imparted here, or that the results it accomplishes are more valuable than those accomplished by this institution with its comparatively scanty revenues."

Yours truly, A GRADUATE.

YORK HARBOR, MAINE, July 18, 1881.

NAMES OF THE "BLUE-WATER" INDIANS.

TO THE EDITOR OF THE NATION:

SIR: The proper name of a small tribe of Indians who have lived for time out of mind in this Territory, in Cataract Cañon, near the Grand Cañon of the Colorado, without attracting much attention, seems likely to come into question, now that a reservation of land for their exclusive use and benefit has been declared and defined by the United States. The name by which these Indians are known, as far as they are known at all, has no fixed orthography, and of its derivation and signification probably few persons are aware. It is commonly written "Yavai Supai" or "Yava-Supai," or the same without the hyphen and capitalization of the following letter; the plural in any case being formed by adding "s." As I hear it spoken, both by the Indians themselves and by an interpreter, the final syllable, "-pai" or "-pais," is often or usually dropped, the remainder of the term being sounded "Yavazu," or "Havazu," or "Avazu." On some maps the name is printed "Suppai," omitting the most characteristic part and needlessly duplicating a letter. The phonetic rendering of the word in conversation gives the clue to its meaning and derivation. Literally translated into English, "Yavazu" is "blue water," the stream flowing through Cataract Cañon showing that color perceptibly. Notwithstanding the great arbitrary transliteration the word really differs little in sound from the Spanish *Agua azul*, from which it is thus evidently derived, with modification of the initial impulse of the breath, softening of "g" into "v" or "w," and elision of the final "l." To the Spanish word thus corrupted has been suffixed a native term, "pai" or "pais," of very frequent occurrence in the languages of Arizona Indians, said to mean all or every—the sum or totality of anything; and thus, in its application to persons, a whole tribe, or "the people" collectively or generically. In this view, "Yavai-Supai" signifies "all those of the blue water," or, more simply, "Blue-Water Indians."

The emended orthography "Aguazulpai" or "Aguazul" may be suggested and recommended for usage, as being phonetically near enough to the fluctuating corruption to prevent misunderstanding, while it is more elegant, and has the decided additional advantage of preserving and displaying the true etymon.

Yours truly, ELLIOTT COUES.

"SUPPAI SETTLEMENT," ARIZONA, June 20, 1881.

CAMPBELLITES ONCE MORE.

TO THE EDITOR OF THE NATION:

SIR: When "intelligent people" (of whom certainly Mr. Tomlins is one, *vide* the *Nation* of July 21) come to understand the position of those Christians who refuse to be called "Campbellites," or by any other human name, they will find that this is not because they claim to be the *only* Christians, but because they refuse to be anything else than Christians. They freely and gladly allow that there are many Christians in the various other sects, Protestant and otherwise, but they hold, which goes without saying, that this could not be unless these sects, differing so widely among themselves, had added somewhat that is not essentially Christian. That is to say, they are Christians not because of their peculiarities but in spite of them.

And it is certainly the part of courtesy to allow a people to announce to the world that they are trying to follow only Christ, and that they are trying to be neither more nor less than Christians. Surely it is nothing against their sincerity that they can claim a separate organized existence of little more than fifty years. And since an appeal has been made to facts, let it be distinctly stated that this "organized" existence was not by their own will, but because other denominations refused to be *simply* Christian. The ground on which a man calls himself by that name is not that he can trace his spiritual genealogy back to Pentecost through an unbroken line of human spiritual progenitors, but that he is now a personal and practical believer in Christ. The same is true of a church.

M. J. FERGUSSON.

DANBURY, CT., July 25, 1881.

ENGLISH OPPRESSION IN JAPAN.

TO THE EDITOR OF THE NATION:

SIR: My attention has recently been called to the letters of two correspondents in a late number of the *Pall Mall Budget*, in which one honest fellow stands aghast at the frightful picture of English oppression in Japan as revealed by Mr. House in his article entitled "The Martyrdom of an Empire" in the May number of the *Atlantic Monthly*. A few such enquiries as his, if properly responded to, might arouse the English people to some course of just action, or at least to some sense of shame at the deplorable results of their Government's policy in Japan. Unhappily, however, the second correspondent replies by denying every one of the charges of Mr. House as not only false but utterly absurd, and refers to the Blue-Books. At the time, neither of these correspondents had seen an article in the *International Review* by a Japanese student, Mr. Mitsukuri, wherein attention is called to precisely the same points made by Mr. House.

The second correspondent signs himself "An Eight-Years Resident in Japan." Surely in that time he should have seen the broad and generous acts of the British minister in helping, with a patient and Christian spirit, the efforts of a brave and gentle people who, having been forced to come into the company of Christian nations, were doing all they could to fit themselves for this high honor! And furthermore, this "Eight-Years Resident" must have recorded the prompt severity with which the British minister rebuked the English press at Yokohama for their hostile and defamatory criticisms of the Japanese Government. It is true one might reside for eight years among the Ainos of Yeso without being able to note these things. One has a right to challenge this "Eight-Years Resident" as to whether he is a competent witness. He hails from Lincoln's Inn. It is a singular coincidence that another "Eight-Years Resident" hails from the same place; and this one, at a recent meeting of the Anthropological Society of London, in discussing Mr. E. B. Tylor's interesting communication on the early use of the plough, did not remember having seen the plough used in Japan, where ploughs of several different types are in common use from Idsu to Satsuma. He also attempted a review of an archæological work published by the University of Tokio, and a Japanese student in London called attention to his blunders in Japanese history, while a correspondent in the *Japan Mail*, an English paper published in Yokohama, rebuked him for his many mistakes, and ended by saying that he was "criticising a work on a subject of which he evidently knew little, if anything."

Any attempt to present a picture of English oppression in the East is sure to be thwarted by such apparently authoritative letters as that of the "Eight-Years Resident," who, if he remained thrice eight years, would probably show the same inscrutable blindness to the injustice and oppression which have always characterized English policy there, defended at the same time by a brace of English journals which have never lost an opportunity to malign the Japanese or defame their country. In the meantime, Japan suffers at the hands of a nation that should now be foremost in her efforts to repair the almost irreparable injuries inflicted by her on a patient and inoffensive people. E. S. M.

SALEM, MASS., July 21, 1881.

Notes.

J. E. Potter & Co., Philadelphia, have in press and will shortly issue a work on French Syntax, founded upon Eduard Mätzner's, by James A. Harrison, Professor of Modern Languages in Washington and Lee University.——A. S. Barnes & Co. announce that a second edition of Mr. Kwong Ki Chiu's remarkable 'English Phrase-Book' has already been called for.——There is no end to the variety of editions of the revised New Testament. Fords, Howard & Hulbert have brought out what they call the American version—*i.e.*, the readings preferred by the American Committee have been incorporated with the text, the English readings relegated to the margin. I. K. Funk & Co. are preparing a teachers' edition, of which the chief feature is the printing in full in the margin of the parallel passages only referred to in the Bagster and other Bibles.——Mr. John Austin Stevens's illustrated 'Yorktown Centennial Hand-book' gives the history, rather summarily, of the Pennsylvania Campaign of 1781, with biographical notices of the chief French officers; the proceedings of Congress consequent upon Cornwallis's surrender; particulars of the movement to celebrate the laying of the monumental corner-stone next October; and a short account of the Peninsula campaign during the civil war. This is succeeded by a topographical guide to the York Peninsula, to Norfolk, Richmond, etc. More abundant and better-printed maps might have been looked for; and it is a pity that Mr. Johnston's account of the Cornwallis siege, in the current *Scribner's*, could not have been obtained for this Hand-book.——The latest of the "Personal Narratives of Events in the War of the Rebellion" published by the Soldiers and Sailors' Historical Society of Rhode Island is also one of the very best, and pertains to one of the most important and memorable engagements—the battle of Chancellorsville. The author is Horatio Rogers, late Colonel 2d R. I. Volunteers.——Vol. ii., No. 6, of the *Journal of the Military Service Institution of the U. S.* consists of three essays on "Our Indian Question," the first being the prize essay by Brevet Major-General John Gibbon, for which a gold medal was awarded. The subject of the next competition is, "The important improvements in the Art of War during the past twenty years, and their probable effect on future military operations." Essays must be sent in triplicate to the Secretary, Governor's Island, N. Y. Harbor, on or before Nov. 1, 1881.——The annual report of the operations of the Engineers' Department of the District of Columbia for the year ending June 30, 1880, has just been issued from the Government Printing-Office. Lt. R. L. Hoxie treats of sewage and water-supply; Lt. F. V. Greene of streets. The latter officer accompanies his report with a fine topographical map of the District, and with twelve statistical colored maps, which may well serve as a model to our city ediles everywhere. The first shows the valuation of real property, with its centre at the junction of Pennsylvania and Louisiana avenues; No. 2, street grades by contour lines; No. 3, varieties of street pavement, the wretched wooden pavement still covering nearly 17 miles; No. 4, varieties of shade-trees, 21,150 being maples out of a total 53,050, extending 120.4 miles; No. 5, gas-lamps, 4,826, or 112.38 miles; No. 6, water-mains, 175.37 miles; No. 7, sewers; No. 8, public schools; No. 9, police and fire stations; No. 10, telegraph lines and companies; No. 12, street-sweeping—daily only on Pennsylvania avenue from the White House to the Capitol.——The author of "The Student's Dream," who may be addressed care of F. Leypoldt, 13 Park Row, offers a prize of $500 for an essay confuting the theory of that work, viz., that "all phenomena are explained by motion."——The Lisbon correspondent of the *Athenæum* announces that the African travels of the some-time companions of Serpa Pinto, Capello and Ivens, are about to be published in many languages, under the title, "De Benguella ás Terras de Jácca," etc. The causes of this estrangement from the hero of the "King's Rifle" will probably now come to light.——It used to be mentioned as somewhat remarkable that 'Uncle Tom's Cabin' had been translated into Armenian. In these latter days versions into "outlandish" languages are becoming common. The latest announced is Bluntschli's "Völkerrecht," which has been rendered from Lardy's French version into Chinese and published at Peking, and the same writer's "Lehre von dem modernen Staat," translated by a Japanese who had studied at Heidelberg, and printed at Tokio in Japanese character but European book-form.——Both the *Revue politique et littéraire* and the *Revue scientifique*, published weekly in Paris by Germer Baillière et Cie., were founded in 1863. On the first of January, 1881, twenty-six volumes of each review had appeared, or fifty-two of the two together; and to these fifty-two volumes a topical index has just been prepared and published at the low price of twelve cents. Some of the best work of M. Scherer, M. Sarcey, M. Charles Bigot, M. Renan, M. Pressensé, and other important French authors has first appeared in the *Revue politique et littéraire*. It has recently begun the publication of short stories, chief among which have been the "Vieux Portraits" of Turgeneff.——M. Scherer has recently contributed to several numbers of the *Temps* an elaborate study of Wordsworth.

—"The Indians, with that fine occasional instinct which is in such odd contrast to other of their characteristics, gave the place [Rhode Island] its pretty name. Aquidneck, the Isle of Peace, they called it." So writes "Susan Coolidge" in the opening paper (on Newport) of the August *Scribner*. By "fine occasional instinct" we suppose is meant a departure from the habitual formation of Algonkin place-names with reference to topography, history, a natural product, the animals of the neighborhood, or "position, or direction from places previously known." These are the only categories allowed by Dr. Trumbull, and there is not room under any one of them for an abstract conception like "Isle of Peace." Moreover, the same authority identifies *Quidnic* and *Aequidaneck* with a compound meaning "place at the end of the hill," or possibly "place beyond the hill." This difference among the interpreters detracts in nowise from the readable and other good qualities of the paper in question, in which the title is not maintained as a thesis, and which is charmingly illustrated. A writer new to us, Mary G. Loring, gossips with noticeable cleverness about the Normandy watering-place of Etretat. Professor Thurston furnishes a discriminating introduction to a letter of Robert Fulton's to Jefferson, relating, with the aid of diagrams, the former's experiments in submarine gunnery for a floating battery—a sort of forerunner of Ericsson's latest contrivance in the same direction. This document, never before published, is printed verbatim, and possesses a high degree of interest. "Uncle Remus" ends his rainy day to the regret of others besides "the little boy." While the fables of the evening perhaps fall below those of the earlier part of the day, the colloquial scaffolding of the story-teller extorts renewed admiration. In a first paper on "Poetry in America" Mr. Stedman clears the ground for an explanation of the sudden appearance of the group of poets, now veterans or departed, who ushered in "the first period of what may be called, for want of a better term, a true American school"—to wit: Longfellow, Poe, Whittier, Emerson, Lowell, Whitman, "and others." This involves, of course, a consideration of the obstacles to the cultivation of poetry during the first two centuries of the settlement of the now United States, as well as of the more recent limitations which have closed one period before the next has opened—at least with anything like the *éclat* and promise of the earlier.

—Mr. Albert Stickney, in his second paper on "The People's Problem," outlines his scheme of political reform, which may be briefly described as a reduction of electoral districts to the manageable size of a town-meeting, for the conduct of local affairs and for the election of delegates to sundry electoral conventions. "The delegates thus chosen to an electoral convention would in their turn meet as one body, at one time and place, and would elect the mayor, or member of the State legislature, or governor, or presidential elector, or representative to Congress." It might and probably would be found necessary to have intermediate conventions "to choose the members of the final electoral convention, which should elect the officer himself." The chief executive of the city, State, or nation, and the legislators, State and national, alone should be elective. The executive should be charged with the responsibility of appointing heads of department, each officer having the appointment and removal of his own immediate subordinates. A two-thirds vote of the legislature would, according to Mr. Stickney, check the abuse of this power at its source by summary removal. In his next and final paper he will indicate a way for putting his system into effect.

—An anonymous paper on "The Pension Office" in the August *Lippincott's* belongs to not the least useful class of magazine articles. The descriptive portion of it, giving the peculiarities of the office and of the law under which it operates, is of quite as much value as its recommendations, so far as the general reader may judge of these on the face of the article; and they excite regret that the writer, who is an ardent friend of the office, should not have lent them the weight of his name. In "The New York Fresh-Air Fund" Mr. P. G. Hubert, Jr., relates the origin and successful execution of the charity with which readers of the *Evening Post* have long been familiar. One anecdote of several which Mr. Hubert has collected is worth quoting. An urchin who did full justice to the breakfast provided for his party remarked that he enjoyed it hugely, but criticised the untimeliness of the meal. It appeared that one meal a day was the rule of his experience, and his surprise and satisfaction at dinner were redoubled at supper. "His last direction to his neighbor in the next crib, as he fell asleep that night, was, 'Wake me if they sets that table again in the night.'" Dr. Oswald writes about "Secretiveness" in his popular series, "Zoölogical Curiosities," and an analogous paper on "The Home of the Giant Squid" (the Newfoundland Banks) is readable. The same can scarcely be said of the rest of the number, which is mainly made up of that kind of light reading

which, unless one is in the mood for it, seems particularly heavy. "Housekeeping in North Carolina" ought, perhaps, to be excepted as a brief narrative of personal experience dealing with the habits and manners of the blacks of the region, though it is hardly more than a fragment of the story of shiftlessness and loose morality, several chapters of which we have had lately. The serial "Craque O' Doom" concludes in an anti-climax of disagreeable and sentimental absurdity, and is to be followed next month by the first instalment of a story by "Sherwood Bonner," which will perforce be a pleasant substitute, and probably of merit in itself, judging from some of the author's previous performances. The "short stories" and poetry of the number amount to very little.

—Mr. George W. Julian's Reminiscences (of the Thirty-first Congress), which begin the *International Review* for August, are interesting, as all retrospect of the sort must be, for their personal quality, and of more or less historical value; and though the time concerned has, of course, been pretty thoroughly gone over heretofore, we cannot have too much about it. Until our history comes to be written, at least, the more material of this kind that accumulates for the writing of it the better. Mr. Charles F. Thwing narrates and accounts for the steady decline of "College Graduates in the Ministry." This year the proportion is less than ever—nine per cent. at Yale, and less than two per cent. at Harvard, for example. The chief causes assigned are the growing demand of a wealthy country for educated men in all pursuits, and the prevalent scepticism, the ranks of the clergy being only recruited when creeds are generally stable. "An American Bonaparte" is one of Mr. Eugene L. Didier's articles on the Bonaparte-Patterson literature. Mr. Waldorf H. Phillips, in "The Divorce Question," recounts some of the enormities inevitable under the present system, or rather lack of system, and prescribes a Congressional enactment providing for the recognition by every other State of all regular divorce proceedings in any State, or else a constitutional amendment prohibiting the granting of a divorce "when both parties are not within the actual jurisdiction of the court, except by the court of the State where the marriage was contracted or consummated." "Why Ireland has been misgoverned" is explained by "A Celt," as perhaps the reader would have divined unassisted. "Some Curiosities in Horological Reckoning," by W. F. Maffin, has the interest, at least, of curiosity, and contains a practical suggestion for making the value of hours absolute instead of, as now, merely relative. The article of the number, however, is Mr. Wasson's discussion of "Rights," a philosophical and political study eminently deserving of being read by advocates of "natural" rights, as opposed to rights deducible from and dependent on duties. The fact that Mr. Wasson pushes his argument into the realm of logical speculation does not conflict with its value as an examination of the testimony of consciousness on the subject.

—Among the multitudes of subjects whose investigation has been undertaken by the Census is that of the ownership of the United States registered bonds. A bulletin giving a summary of its character and distribution, by Robert P. Porter, has just been issued by the Census Office. The status of ownership was taken at the date of the payment of interest nearest to the census day—*i.e.*, in the case of the 4 per cents, July, 1880; of the 4½ per cents, June, 1880; of the 5 per cents, August, 1880; of the 6 per cents, July, 1880. The total amount of registered bonds at these dates was $1,173,749,250. Of this amount, $528,100,950 were 4 per cents, $170,280,800 were 4½ per cents, $294,440,800 were 5 per cents, and $180,926,700 were 6 per cents. Omitting the 6 per cents, the interest on which was payable in the ten principal cities only, there is left a total of $992,822,550. Of this amount, $644,990,400 was held by individuals and corporations, $27,894,350 in foreign countries, and $319,937,800 by national banks to secure their circulation. The total number of holders of 4, 4½, and 5 per cent. registered bonds was 73,114, owning, as above, $644,990,400. Of these, 1,527 were corporations, holding $227,451,550, or 35.26 per cent. The male holders numbered 42,262, owning $327,185,500, an average of $7,741.84, while the female holders numbered 29,325, owning $90,353,350, with an average of $3,081.10. The following table shows the number of holders and amounts held by individuals, classified by the amounts of individual holdings:

Classes.	Male holders.	Amount held by males.	Female holders.	Amount held by females.
Amounts exceeding $50,000	850	$176,229,350	168	$23,344,900
$25,000 to $50,000	1,018	36,608,100	281	10,747,850
$10,000 to $25,000	2,326	36,861,750	953	15,395,600
$5,000 to $10,000	3,416	270,090,900	1,571	12,235,400
$2,500 to $5,000	5,490	21,466,300	2,861	11,032,950
$1,000 to $2,500	7,505	13,402,300	4,871	8,552,850
$500 to $1,000	8,368	7,449,750	6,372	5,591,100
$50 to $500	13,309	4,067,050	12,248	3,472,700

From the above table it appears that nearly one-half of the total amount of that held by individuals was owned by about 1,000 persons, and that 2,206 persons owned nearly 60 per cent., while 4,500 persons owned fully 70 per cent.

—Examining the geographical distribution of the bonds and their holders it is seen that New England contained no less than 36 per cent. of the holders, but only 11 per cent. of the amount of the bonds; the Middle States 42 and 43 per cent. respectively; the Southern States but 3½ per cent. of the holders and 2 per cent. of the bonds; while in the West resided 15 per cent. of the holders, owning 8 per cent. of the bonds. The corporations, numbering but 2 per cent. of the holders, owned not less than 35 per cent. of the amount. Of the States severally Massachusetts takes precedence in the number of holders, followed in order by New York, Pennsylvania, Ohio, and Illinois, and ending with Oregon. Considering the number of holders with relation to the population, the series is quite different. It commences with the District of Columbia, which, out of 100,000 population, has 1,320 holders. Then follows Massachusetts, with 950, and the other New England States, interrupted only by New York, which enters above Maine. The Middle Atlantic, as a rule, follow next, while the Southern States are near the end of the list. In respect to amounts held, again, the order is quite different from either of the above. New York comes first, followed by Massachusetts, Pennsylvania, Ohio, District of Columbia, etc., ending, as before, with Oregon. Out of the total number of individual holders 50 per cent., owning 77 per cent. of the bonds, reside in 117 of the principal cities of the country, the remainder being owned in the smaller towns and the rural districts.

—The above notes and tables show, 1st, that the great mass of the registered bonds are held in the northeastern part of the country, in New England and the so-called Middle States; and 2d, that they are by no means "popular loans" (meaning by that term that they are held in small amounts by large numbers of the people), since, on an average, there is but 1 holder in 700 of the population. But in another sense they are popular loans. Large quantities of these bonds are in the possession of banks, savings institutions, insurance companies, etc., which hold them as investments, and through them large numbers of people are directly interested in them—as is estimated, about one in five of our whole population.

—Near a fortnight ago it was reported that Professor Stone and his assistant, of the observatory at Cincinnati, saw the comet "separate before their eyes, forming a double comet." This remarkable phenomenon has not been confirmed with better instruments elsewhere. It is well known that Biela's comet did separate, but no observer actually saw the process, which, it is safe to say, must have been very gradual. As the present comet describes more and more of its arc of visibility, it becomes certain that it cannot be a return of the great comet of 1807. This object has yielded unparalleled opportunity for research on the physical constitution of comets: it has been abundantly photographed by Draper and Common, and a series of drawings has been made by Holden; a thorough optical examination of the comet's spectrum has been made by Young, Harkness, and Pickering; the spectrum has been photographed by Draper and Huggins; the light of different parts of the comet has been photometrically determined by Pickering, the results being expressed in stellar magnitudes on Pogson's logarithmic scale, showing the comet to be of the seventh magnitude very near the nucleus, and the tail at four degrees from the nucleus to be of the 11.6 magnitude; and, lastly, the polarization of the comet's light has been observed by Wright, establishing the fact that the light emitted by the tail is polarized rather strongly in a plane passing through the sun's place, the percentages indicating that reflected sunlight constitutes the greater part of the light of the tail. Early last week the discovery of a fairly bright telescopic comet, 1881 (*c*), was reported by Schaeberle, of Ann Arbor. Professor Swift has already seen it with the unassisted eye, and says it has a tail one degree long. It will increase in brilliancy very rapidly until after the perihelion passage (which occurs about August 18). We may, therefore, expect a very conspicuous object, as it will be nearest the earth a day or two after its perihelion passage, and will be visible in a moonless sky. It is early yet to say certainly whether the comet has ever been seen before. Some astronomers surmise its identity with the comet of 1337, observed in Europe and in China, and visible three or four months. But the elements of the best orbit yet computed—that by Mr. S. C. Chandler, Jr., of Cambridge—bear no special resemblance to those of any known comet.

TROLLOPE'S CICERO.

The Life of Cicero. By Anthony Trollope. New York: Harper & Bros. 2 vols. 1881.

Lord Macaulay, in his essay on "History," alludes to Scott as having skilfully "used those fragments of truth which historians have scornfully thrown behind them," and adds that "a truly great historian would reclaim those materials which the novelist has appropriated," and that the perfect historian for whom we wait will possess many of the qualities of the novelist. The essayist him-

self, in his 'History of England,' though certainly not a perfect historian, did nevertheless carry into execution in a most brilliant manner this part of the historian's work which he here describes; and it is certain that this essay, and his own practice built upon it, have formed an epoch in historical literature. Mr. Motley no doubt owed some of his success as an historian to his having tried his 'prentice hand at novel-writing; and one of the most interesting of recent works in this field is the 'History of Our Own Times,' written by the novelist Justin McCarthy.

It is, therefore, no intrusion when a novelist like Mr. Trollope appears in the ranks of the historians—especially a novelist so distinguished for simplicity and truthfulness of delineation. It is a satisfaction, too, to find him in the field of ancient history. The Greeks and Romans seem at an immeasurable distance from us, not so much because of their distance in time as because of the difference in religion, and still more, perhaps, the wide contrast in the details of life—the house, the food, the dress, etc. So there is a certain unreality about them which the most picturesque historians have not been able to dispel. Even Mr. Froude's 'Cæsar' is the life of a person belonging to a different world from us. But Mr. Trollope has succeeded in giving to his narrative a remarkable degree of actuality, and making the men and women of Cicero's time more real, we are inclined to think, than any historian of antiquity has done. This is an excellence for which we should be willing to barter a large share of special scholarship. Mr. Trollope is not a philologist by profession, and there are many details of classical antiquities which he cannot be expected to know, though he is a well-trained scholar of the English pattern, with a genuine English comprehension of practical life and practical politics. For example, it is a singular misconception to speak of "the Bona Dea, or goddess Cybele" (vol. i. p. 255); for although the "Great Mother" of Pessinus embodies the same religious conception as the Roman goddess, and there was considerable analogy in the mystic rites of the two, yet they had a totally distinct cult, one being entirely foreign, the other purely native. Again, it is a mistake to say (vol. ii. p. 29) that in regard to prætorian provinces "the people had the right of voting." Neither does the author appear fully to appreciate (vol. i. p. 188) the fundamental change made by Sulla in the character of the executive offices: he speaks as if the consuls ceased to take actual command of armies because of the distance of the wars, whereas it was the result of the formal withdrawal from them of the *imperium militiæ*, the extension of the bounds of the city so as to embrace the whole of Italy, and the confinement of the magistrates of the year within these limits.

But, after all, there is very little even in the line of antiquities to which exception need be taken, and as a vivid, picturesque life of a great man, this deserves to rank high. It is not, however, a mere biography, nor is it simply as an accurate picture of a man and his times that its author would have it judged. It is a book written with a purpose—called out, it would seem, by Mr. Froude's 'Cæsar,' and designed to controvert the view of Cicero taken not only by Mr. Froude, but by most writers of the present day, with Mommsen at their head. It appears at first sight as if this thesis could have been sufficiently well argued in a review article; and indeed, if it were not for the intrinsic excellence of the biography, Mr. Trollope might have stopped with his introduction, in which he presents his case forcibly and well. In fact, the principal fault of the book is that he recurs too often to his theme, and that too large a proportion of space is given to arguing in Cicero's vindication at one period of his life after another. It would be better, after a full and elaborate introduction, to let the story be its own argument, and the life of the great orator be its own vindication.

When he reaches Cicero's death (vol. ii. p. 245), he sums up his alleged faults as "dishonesty, cowardice, and insincerity," and defends him at some length against the several charges, as he has done upon so many occasions during the recital of his life. But the real and serious charge is that of a want of political consistency. Mr. Trollope finds it easy to show that, as compared with other men of his own time, and even when judged by the standard of our times, Cicero was not as a man, nor even as a public man, markedly dishonest, cowardly, or insincere—in fact, that he was conspicuously free from these faults. But the scorn which Mommsen and those of his school heap upon Cicero has less reference to his personal qualities than to the part he played in the great drama of his day—one of the great tragedies of human history. He was, they say, a dilettante politician, with neither head nor nerve to fit him for the place of a leader, but nevertheless with an inordinate vanity and ambition which would not let him rest in a second place; with no adequate appreciation of the real issues of the time, and no clear policy—a straw tossed upon the eddies of a great revolution. Mr. Trollope practically admits this, only insisting that Cicero has a right to be judged in the light of facts and motives present to his generation, not by the wisdom which comes after the event. He says (vol. i. p. 75):

"We are inclined to agree with Mommsen, because we have seen what followed. But that Cicero, living and seeing it all as a present spectator, should have hoped better things, should not, I think, cause us to doubt either Cicero's wisdom or his patriotism. I cannot but think that, had I been a Roman of those days, I should have preferred Cicero, with his memories of the past, to Cæsar, with his ambition for the future."

This is a perfectly defensible position, and we are inclined to think that it is an adequate explanation of what seems to be blindness and vacillation in Cicero: it is no discredit to a patriotic man to refuse to despair of the commonwealth, and to be unable to see the necessity of a change ushered in by treason and civil war. And, at any rate, the last six months of his life were a period of unqualified glory. At many points of Cicero's career, moreover, it is well to bear in mind that he alone of the leading men of his day stood in a peculiar relation to the parties in the state, belonging wholly to neither one nor the other. He was by birth an equestrian, and he never ceased to reckon himself as belonging to this order; but by his political career he raised himself to the ranks of the nobility—not as being a noble himself, for he was a *novus homo*, but as having all his interests and future career associated with the nobility. Among the nobles, therefore, but not one of them, and never heartily liked by them; a part of the machinery of the oligarchical government, but with personal and family associations which connected him with the opposing faction, he was almost by necessity a "trimmer" of the type that Macaulay describes in Lord Halifax, and, like all trimmers, failed to please either party.

We have mentioned it as one fault of the book that the biographer and historian slips too readily into the language of the advocate; another fault is indicated by what we have already said, that the nature of the struggle, as based upon the character and workings of the Roman constitution, is not very clearly depicted. It is, in short, a biography rather than a history, and, in so far as it is a history, it is political rather than constitutional. The preliminary sketch of "the condition of Rome" (chap. iii.) is defective from this point of view: men and parties are excellently depicted, institutions are not well described. The constitutional question between Cæsar and Pompey at the outbreak of the civil war (vol. ii. p. 116)—probably the most difficult as well as most important question of this nature in ancient history—is hardly touched upon. It is, to be sure, a life of Cicero, not of Cæsar, but then Cicero's course at this juncture must be judged largely in view of the constitutional principle which was at stake.

On the whole, we are heartily glad that this aspect of Cicero has at last found an advocate; if not absolutely correct, we are inclined to think that this view is nearer correct than the opposite. And whether we agree with it or not, we must say that there is no book within our knowledge which will give to persons who are not scholars by profession so graphic and living a picture of the Roman republic as this.

A CYCLE OF CELESTIAL OBJECTS.

A Cycle of Celestial Objects, observed, reduced, and discussed by Admiral William Henry Smyth, R.N., K.S.F., D.C.L. Revised, condensed, and greatly enlarged by George F. Chambers, F.R.A.S., etc. Second edition. Oxford: Clarendon Press; New York: Macmillan. 1881. 1 vol. 8vo, pp. xxiii.–696.

THE first edition of the 'Celestial Cycle' was published in 1844, and now sells for about $25. It has long been out of print, and this second issue may be said to come in answer to a demand. Before examining the distinctive features of the new work, it will be instructive, and perhaps not uninteresting, to give the pedigree, as it were, of the volumes upon which it is based, and to see the origin of the demand.

Admiral Smyth was born in 1788, and entered the Royal Navy in 1805. In the course of his professional duties he was called upon to make a survey of Sicily, and while engaged upon the work he visited Palermo and met the venerable Piazzi, then the dean of astronomers. This meeting had an important effect on Admiral Smyth's future inclinations. He became a devoted amateur of astronomy, and for years was perhaps the best-known private astronomer of England. He was a friend and admirer of the most famous of English astronomers, Airy, John Herschel, and South; and he finally settled himself at the house of his friend Dr. Lee, where he engaged in observations mostly of double stars and nebulæ. From Hartwell House (Dr. Lee's manor) he published privately 'Ædes Hartwelliana,' 'Speculum Hartwellianum,' as well as 'Sidereal Chromatics,' etc. Various other works and translations are also due to him, all on important subjects. Thus it appears that, judged either by his companions or by the titles of his books, he was an important personage in astronomical England. These works were always interesting, because they were practically transcripts of what his conversation might have been, and because his varied experience and a natural

bent towards odd and recondite bits of knowledge gave him a store of anecdote and allusion not common to the makers of star catalogues. These last are usually dry numbers arranged in parallel columns and void of poetry, except in the Admiral's most important work, the 'Cycle.'

His distinction was purely a personal and largely a social one. He was not unlike Thackeray's courier, who could be ungrammatical in all the languages of modern Europe, and who, nevertheless, was a very interesting fellow. The works on the Egyptian tablets at Hartwell House, on the incidents of the stay of Louis Philippe there during his exile, on the building of the observatory attached to the manor, are all of real interest, well recounted, and worth the reading, if not of high scientific impo.t. These works, moreover, are well illustrated by engravings made under the Admiral's own eye. One of these engravings represents Admiral Smyth himself making an observation with the transit instrument; and this plate contains a picture of a clock whose pendulum must either have been a very crooked bar or else have been suspended a foot or so *outside* the top of the clock-case. This will, perhaps, illustrate his minor inaccuracies, which influenced not his dramatic effects but his astronomical preciseness.

For some years previous to his stay at Hartwell House he observed double and colored stars with diligence, and as the results of these labors he published the 'Celestial Cycle.' This was in two volumes; the first was a popular treatise on astronomy, the second was the "Bedford Catalogue." The appearance of this work was hailed by friends and admirers, and the Royal Astronomical Society gave its gold medal to the author of the "Bedford Catalogue," thereby approving his results. To appreciate this distinction we must remember that this same gold medal was the reward of Encke for the researches on the comet which bears his name, of Struve for his discoveries of double stars, of Herschel for his observations of nebulæ, of Bessel for the parallax of 61 Cygni.

In the "Bedford Catalogue" each object has a paragraph to itself. Its place in the sky is given, and then, if it is a double star, follow the measures of the Herschels, of Struve, etc., and then the measures of Smyth himself. After this comes an amusing farrago of doggerel verse, Arabic lore as to the stars (the Admiral had picked up Arabic in the Mediterranean), notes on the colors of the stars, and speculations on various points. As an example of the lore we may quote from page 430 of the first edition, as follows, a part of the description of the constellation *Aquila*:

"The asterism into which the Sporades are here constellated has ever been regarded as a needless memorial of a 'sporco nume,' and one which might now well be dispensed with. Ptolemy evidently eschews it, for, after tabulating *Aquila*, he places half a dozen *amorphotæ*, from which, he says, if you like, you may form *Antinous*; wherefore Bailly's reprimanding him for the exaltation is not altogether in place, since it seems that the Bithynian was never regularly gazetted by the ancients."

Or this for poetry:

"From staid Polaris cast a glance to beauteous Lyra's lines,
'Twill guide, rectangular from these, to where Arcturus shines:
Or lead a line from two bright stars, in Ursa's tail the last,
The same, prolonged thrice ten degrees, will on that gem be cast."

The "gem" in question is the bright star Arcturus. Here is another sample:

"To strike th' insidious Serpent's heart a line from Altair wield,
From thence below Ras Alague across th' Arabian field;
And when as far again you've reached as those two stars may be,
The middle one of three fair gems, Serpentis Cor, you'll see."

The verse, the Arabic lore, and the speculations (if original with the Admiral), are no longer thought of. The colors assigned to his stars are known to be usually wrong. But the measures of his stars being expressed in figures, and according to the usual forms, had for long a vogue as results of genuine value. These measures of double stars were of two classes: the first class had usually been measured by other astronomers before Smyth, by Herschel, South, or Struve, and it is a noteworthy fact that in nearly every such case the Admiral's figures agree with those of his able predecessors, and are therefore right. Another class of stars, not properly double at all, consisted in bright stars with very distant minute companions. This class is the Admiral's own property, and the results are almost invariably wrong, and wrong by incredible amounts. On the faith of these measures stars have been supposed to have disappeared, a nebula to be in rapid motion, etc. But the lost stars have all been found, and the nebula is shown by observations, both before and after Smyth's, to have remained in the same place.

These facts have been lately pointed out with some acrimony in the Royal Astronomical Society; and the quarrel as to whether Admiral Smyth was right or wrong has not been settled by an appeal to the sky, but has in a mysterious way become intermixed with the other chronic feuds of the society, in which the names of Col. Strange, Mr. Proctor, and Mr. Lockyer continually resound. This quarrel was at first a purely domestic one, but in the course of it the opinions of a distinguished American observer were quoted, and this became the signal for letting loose vials of wrath upon his head also. But, in the expressive language of the new Northwest, "they waked up the wrong customer," for after a short delay the American observer presented to the Society a brief and temperate critique on the 'Cycle,' accompanied by a complete remeasurement of all the Admiral's objects. This showed that the results of the 'Cycle' were erroneous in the mean of one hundred and twenty-six cases by 25″ in distance and 7° in angle! There was really nothing more to be said, and the 'Cycle' as a source of original data was thus shown to be without value. As its amusing doggerel, its erudition, its speculations, and its original measures are of no use, there remains to it only the distinction of being an observing list of the brighter nebulæ and double stars, written by an agreeable man of pleasant social qualities and varied information.

We now come to the second edition, which is edited by Mr. G. F. Chambers, already well known by his admirable 'Descriptive Astronomy,' which has reached its third edition. The new work consists essentially of two parts, of which one is what remains of Admiral Smyth's original text, and the other is due to the hands of the editor. Mr. Chambers gives an introduction of nine pages before proceeding to the main purpose. He says that in dealing with the objects registered by Admiral Smyth he has done his best to revise all the items of information, to cancel erroneous passages and observations, and to omit unnecessary comments. He has also stricken out a few uninteresting objects, and he might well have omitted more. In his own additions he has given a considerable number of isolated objects, as clusters, nebulæ, doubles, variables, and colored stars, and has included a number of objects in the southern hemisphere. The additions made by Mr. Chambers do not seem to us specially well chosen. In particular many doubles of Struve's lists are added which are simply interesting as being *double*, and which, so far at least, have shown no evidence of a binary character. He might easily have made better selections from Flammarion's recent valuable work on Binary Stars (1878). The nebulæ added are also often quite uninteresting to the amateur, for whom the book is especially intended. As a whole, the selection of objects does not seem to us as judicious as that given by Webb in his little work, 'Celestial Objects for Common Telescopes,' and the latter book is only a third as costly or as bulky.

We must also object to Mr. Chambers's rather crude remarks on star magnitudes and on the revision of the southern constellations by Dr. Gould. It is not necessary to defend Struve against the remarks on magnitudes (p. xix.), nor Gould against the criticisms on "what he calls his catalogue" (p. xxii.). Time has decided in favor of the one, and will decide in favor of the other also. The form for recording observations on page xxiii. is entirely unpractical, and we seriously doubt if a single competent observer uses it to-day. Other technical points of this nature, as the order in which the separate measures of triple stars are given, need not be objected to here. It seemed necessary, however, to mention the points likely to be confusing to a young observer's ideas in a book specially intended for amateurs. The main object of the work is undoubtedly this, and on the whole this new edition of an old work seems to us not the best one to recommend to the possessor of a small telescope. We should rather advise such a one to provide himself with Chambers's 'Descriptive Astronomy,' Webb's 'Celestial Objects,' and Flammarion's 'Catalogue des Étoiles Doubles en motion relatif certain,' and only to add the new edition of the 'Cycle' in case the latest measures (1880) are wanted.

CHANDLER'S MEMOIR OF ANDREW.

Memoir of Governor Andrew, with Personal Reminiscences. By Peleg W. Chandler. To which are added two hitherto unpublished Literary Discourses and the Valedictory Address. Boston: Roberts Bros.

THE Massachusetts Historical Society is one of those institutions which still retain the good old academic practice of pronouncing obituary orations on deceased members. In the opinion of a late secretary of that society, Edmund Quincy, this custom adds new terrors to death, but it has its advantages. In case of the obscurest man, the habit preserves a name which would otherwise hardly be remembered; it records facts which would otherwise be forgotten. Just now nobody may be grateful for this; but a half-century hence, when this man's grandson has done something extraordinary, everybody will be wishing to trace back his hereditary qualities. Even Miss Anna Seward's memoir of Dr. Erasmus Darwin has become worth reading since Charles Darwin has revolutionized science. Then in the case of a really eminent man there is always a possibility that his full biography may be, for some reason, indefinitely postponed, and that each person who undertakes to fill the gap may prove to have stood too near to see the real proportions of the man. It is undeniable that very much this state of things has existed in the case of Governor John A. Andrew, of Massachusetts; and it is fortunate that the duty of preparing his memoir has been placed in hands so good as those of Mr. Chandler.

Hitherto the best-known sketches of the Massachusetts war-governor have been those of his secretary, Col. A. F. Browne, and of his pastor, Rev. Dr. J. F. Clarke. The latter, indeed, often refers to his eminent parishioner, and it is needless to say that his delineation is always warm-hearted, sympathetic, admiring, and sincere. But it is needful to say, for the sake of historic truth, that the John Andrew whom he portrays is not always the John Andrew of every-day life, whom thousands of his constituents saw often and knew well, in those days. It is impossible to accept that figure of unvarying blandness and sweetness as a substitute for the high-minded, ardent, generous, choleric little man who was the civilian Miles Standish of Massachusetts during the War of the Rebellion. Nor can we recognize as one who "never had an enemy" a man who loved General Butler very much as Miles Standish loved the Indian chief Pecksuot, except that in the more modern instance the knife in the nape of the neck was wanting. Writing with the best intentions, Dr. Clarke and others have smoothed away much of the vigorous individuality of their subject. Fortunately it is not yet too late to repair the error, and Mr. Chandler has done something towards it. Brief though these pages are, they recognize the boyish side of Andrew, as well as the manly and heroic side; they give us his impatient utterances, his exceedingly strong language, his often turgid rhetoric, and the "something like contempt and even abhorrence" (p. 29) to which he was so easily aroused.

It is peculiarly desirable that all these qualities, and those kindred to these, should be frankly handled; for never was there a man in public life more guilelessly transparent than Andrew himself. All his gifts lay in that direction; he could not have dropped a curtain over his policy, or have lowered his voice to a whisper, had the fate of the commonwealth depended upon it. At the State-House, where his predecessor, Governor Banks, had loved to sit with closed doors, and to consult mysteriously with the most commonplace intruder, Governor Andrew met all the world in presence of all the world; and the most timid applicant must have his affairs discussed before any chance comer. The governor had, moreover, a great taste for letter-writing, and he liked to read aloud his own letters; and some point involving really difficult political strategy—as in the long contest with Butler, who undertook practically to officer his own regiments—would be discussed in resonant tones for all to hear. Such a man needs on the part of a biographer a frankness like his own. Greater than his own it could not be.

Governor Andrew had no undue personal sensitiveness, and no tact but that of a kind heart; his likes and dislikes were very strong and were never concealed; he took no pains to adapt himself, exaggerated the merits of those whom he liked and the sins of those he disliked, and never learned to guard his expression or policy in dealing with either. The task which he had to perform in organizing and officering the State regiments was something enormous. He performed it, of course, with absolute uprightness; if he discriminated against anybody, it was against his personal friends and associates. It was a great deal to know that such entire integrity was at the head of affairs. But in many ways he was, and used to own that he was, very little fitted by nature for the work; he had no military instincts or aptitudes, and no eminent gift for the very difficult problem of discerning in advance the right men for army appointment. Always upright and fearless, he was often whimsical, impulsive, unreasoning. Probably there was not a State in the Union where fewer merely political appointments were made than in Massachusetts; but there never was any security that a man might not be appointed for the reason that the Governor distrusted the motives of those who opposed him, or because the man himself had been previously refused a place and had behaved remarkably well about it. The motives and methods were never petty or ignoble, but they sometimes seemed inadequate and not quite solid. Then he had imbibed his full share of the reverence felt at that day for any man who had spent a year or two at West Point or in any foreign army, and this sometimes misled him. He was, moreover, pretty sure to support his nominee through thick and thin, even if it kept a whole regiment in hot water. If the appointment was criticised, the governor only grew indignant: it was because other men were jealous of the candidate's superiority; he was worth all the other officers in his regiment—worth all the officers in all the regiments put together. But if this paragon fell from the governor's grace at last, he fell, like Lucifer, never to rise again.

Mr. Chandler sums it up well by saying that "Governor Andrew more often made mistakes in regard to men than measures" (p. 106), and he records with praiseworthy frankness (p. 125) that extreme emphasis of speech which was a familiar fact to those who knew Andrew well. He frankly recognizes also that element in greatness best stated in the French proverb "Il faut venir à propos," and admits that in ordinary and peaceful times his hero might not have been very prominent. The only point where he seems a little less than fair is in his references to Governor Andrew's celebrated argument against the prohibitory law. It is not quite just to attribute only to "malignant philanthropy" (p. 65) the disapprobation with which this particular speech was received by many. It must be remembered that the orator thought it necessary in that argument not merely to attack the prohibitory law, which was fair enough, but to attack almost as strenuously the whole practice of total abstinence—a practice found necessary by some, and approved by great numbers who are opposed to prohibition. No doubt many unreasonable things were said and written about this address at that time, but most of the sober opposition had less reference to what it said about prohibition than to what it said about total abstinence. It must be remembered, also, that the argument then offered by Andrew did not proceed from him as governor, but as the paid counsel for the anti-prohibitory petitioners; and the fact that he received a fee, and a large fee ($5,000), for his services naturally gave less popular weight to his utterance than if he had spoken officially.

Mr. Chandler has added to his original memoir a series of "personal reminiscences," which cover the same points with the memoir, and might better have been worked in with it, giving us one sketch instead of two. They are valuable, however, in any form; and the book is farther enlarged by three addresses delivered by Governor Andrew, two of which appear in print for the first time. We find in the whole work much that is excellent, and very little to which exception can be taken. Mr. Chandler's statement that Mr. Andrew never earned as a lawyer "more than enough for the decent and comfortable support of his family" (p. 141) must be read in the light of the previous statement that "he was earning at the time of his death at the rate of thirty thousand dollars a year" (p. 58). When it is said of the raising of colored troops in Massachusetts, "This was the first authorization of an act which caused the greatest excitement everywhere" (p. 33), the remark is perfectly correct if applied to Massachusetts only, but not if applied to the nation. Five colored regiments were already in existence—one raised in South Carolina, one in Kansas, and three in Louisiana—before authority was even granted to Governor Andrew to enlist any. The service rendered by him was not in originating these enlistments—for that had been already done—but in giving to them the weight of a powerful State at a time when the Confederate Government had refused to recognize colored men as soldiers, and had threatened to hang their officers if captured. More than this, the attention justly excited by the careful way in which the Fifty-fourth Massachusetts was organized and officered, its subsequent good behavior at Fort Wagner, and the picturesque and heroic death of its youthful colonel (Shaw), undoubtedly did more than any other single source of influence to secure the final adoption and popularity of the whole policy. Mr. Chandler has not in the least exaggerated the services of Governor Andrew in this direction; it is only that his statement might lead to misconstruction. As a whole, with some defects of arrangement, this is not only the best tribute yet paid to John Albion Andrew, but the best that is likely to be paid. For it is sadly true that the services of the "war-governors" were best known to their contemporaries, and will be eclipsed in the eyes of posterity—just as the vast services of the Sanitary Commission, for instance, are already eclipsed—by the dazzling records of the actual field.

Resources of Southwest Virginia. By C. E. Boyd, E.M. New York: John Wiley & Sons. 1881.

SOUTHWEST Virginia has long been known to be exceptionally rich in mineral wealth, but the information on the subject has heretofore been so vague and general that it has been of little benefit to the owners of these mineral treasures, or to capitalists seeking to make profitable investments. But now exact and detailed information upon every point which the immigrant or capitalist would desire to know is presented in the work before us. The writer, a mining engineer, has spent years in the survey and study of the geological features, mining and agricultural resources of this region, and has therefore had the best opportunities to make a complete and trustworthy guide for all who desire to become better acquainted with it. The tract embraced in this survey contains the counties of Montgomery, Pulaski, Wythe, Smythe, Washington, Giles, Tazewell, Bland, Russell, Scott, Lee, Wise, Buchanan, Floyd, Carroll, and Grayson, covering an area of not less than ten thousand square miles. Each county is taken in succession, its geological features described and illustrated by map and section, the mineral deposits traced, the character of the soil indicated, the agricultural products enumerated, and the water-power, the manufacturing facilities, the towns, villages, public improvements, mineral springs, and educational establishments described. In short, the information imparted is of such a character as to give to a stranger a very perfect picture of the country in all its aspects.

MALDEN PUBLIC LIBRARY

A generous soil, extensive forests of the best timber, abundant water-power, a delightful climate, and numerous and valuable mineral springs are in themselves enough to make a rich country. But when we learn that in addition there are in Southwest Virginia ores of iron in inexhaustible quantity in every county; in several, rich deposits of copper, lead, and zinc ores, salt, gypsum, and coals, there is obviously hardly anywhere an equal area containing so many elements of wealth. From the geographical map which accompanies the volume, together with the sections for each county, a very clear idea of the geology of the whole region may be derived. Indeed, the geological features are so large and well defined that two or three sections from the Blue Ridge westward to the Kentucky line would have sufficed.

The eastern boundary of Southwest Virginia is the Blue Ridge; the western, the Kentucky line. Near the northern extremity of Floyd County the Blue Ridge bifurcates, its branches gradually separating and forming an elevated valley, or table-land, which is the highest inhabited and cultivated portion of Virginia. This table-land is occupied by the counties of Floyd, Carroll, and Grayson in Virginia, and Ashe, Alleghany, and other counties in North Carolina. The geological features of all these counties are similar, indeed almost identical. The Blue Ridge was the centre of volcanic energy which upheaved the whole Appalachian system of mountains, and, therefore, as might have been expected, the rock formations of this table-land are igneous or transition, and the soil such as would naturally be produced by their decomposition. Travelling westward from the Blue Ridge one passes in succession over the upturned Palæozoic formations—the Silurian, the Devonian (occasionally), and the Carboniferous. The counties which lie along the western base of the Blue Ridge—viz., Montgomery, Pulaski, Wythe, Smythe, and Washington—form an elongated valley. These counties are almost identical in geological character, the rocks exposed in each being mainly the older Silurian. The next westward tier of counties is composed of Giles, Bland, Tazewell, Russell, Scott, and Lee. These form a second valley parallel with the first. In the eastern portion of this valley the rocks exposed are principally the upper Silurian, and in the western portion the Carboniferous attains a full development. Still further west the counties of Wise and Buchanan are wholly Carboniferous, and, in fact, form a part of the great Appalachian coal-field.

In regard to the distribution of minerals, iron ores are found in abundance in all these counties; in the counties of Floyd, Carroll, and Grayson copper ores of superior quality; along the western slope of the Blue Ridge, in Pulaski and Wythe, lead and zinc ores, both of which are now worked with success; in Smythe and Washington, salt and gypsum in inexhaustible quantities. In Montgomery and Pulaski are coal deposits, not, however, of great extent, but in all the western counties coal is found of the finest quality and inexhaustible in quantity. Besides these minerals, which are the true sources of wealth, gold has been found in Montgomery, and there are indications of silver at numerous points in that and other counties.

Regions rich in mineral resources are generally found to possess no other source of wealth, the surface being usually too rugged or too sterile for profitable culture. Southwest Virginia is a marked exception to this rule. Overlying its mineral stores is a soil of great fertility, adapted to the growth of the cereals generally, and especially suited for pasture. Indeed, the principal available wealth of this favored territory at this time is its broad pastures and its thousands of cattle. The work of cataloguing its resources seems to have been executed by Mr. Boyd laboriously, faithfully, and, in the main, correctly. We notice, however, that in his sketch of the flora of Wythe County some familiar plants appear under strange titles. For example, *Leucothoë recurva* has been transformed into *Leucothæ Recurra*; the genus Asarum has become Azarum; Uvularia is changed to Unularia; and Clintonia to Clintoria. One would hardly recognize the sweet Lily of the Valley (*Convallaria Majalis*) under the name given in this book, viz.: *Convellata Majælis*. But we presume these are the faults of the proof-reader on one or two pages, and by no means a specimen of the general typographical character of the work. To all who desire full and accurate information in regard to Southwestern Virginia, whether with a view to making investments, or securing a home, or making a tour of its mineral springs and natural curiosities for health or pleasure, this book will be found as useful as is Murray or Baedeker to the European tourist.

A Romance of the Nineteenth Century. By W. H. Mallock. [Transatlantic Series.] New York: G. P. Putnam's Sons. 1881.

MR. MALLOCK'S book is misnamed, in the first place: it really is a romance of the Middle Ages presented to nineteenth-century readers as a picture of their own times. Or, if its color is not that of the concentrated and morbid-visioned period of history, it should be put still further back, and, indeed, reminds the reader not a little of the epileptic enthusiasm of the early African Christians, whose feverish and spasmodic practices in plucking the flower virtue from the nettle temptation are related with a pardonable sneer in the foot-notes of Gibbon. If the scene of it were laid in those times it might be rightly set down as a very clever book, and, as nothing that is historic is of alien interest, Mr. Mallock would be entitled to recognition as well as sympathy. As it is, however, it is a thoroughly fraudulent literary performance, and the more so for being undeniably clever. We make haste to say that we avoid more than a bare epitome of the plot, to give which without offence in less space than he develops it in would be impossible to Mr. Mallock himself. It is a fragment, at best, and entirely of a piece with the rest of its author's work, which is the vague and intense dissatisfaction of a man who can find no rest for his soul outside the Roman Catholic Church, but who nevertheless is fain to remain without that communion for some reason or other. The heroine of 'A Romance of the Nineteenth Century' is a surpassingly beautiful girl, whose brain and heart show not only noble potentialities but actual qualities of the finest sort. She has nevertheless been corrupted to the lowest conceivable degree by a vulgar *roué* of the type which one finds only in English novels, who sends her presents of obscene photographs and amuses himself, while awaiting assignation with her, by carolling low ditties. The hero falls desperately in love with her, and endeavors to draw her to God through her love for him. The action is confined almost entirely to moral introspection, tinctured with animalism. The event is the death of both lovers—the girl of heart disease, and the other at the hands of the rake aforesaid.

Now, to represent such characters and action as these as belonging to the nineteenth century is, as we say, the vice of Mr. Mallock's book. It is wholly a secondary matter that the character of the heroine is an inconceivable character, and violently at variance with what the freest imagination can suppose possible in the utmost complexity of character. The girl of the first part of the book simply inhabits another moral sphere from the girl of the last half; but so far as this is concerned the story might be included with the considerable number of French romances which hinge upon moral solecisms, and might be considered a pendant to 'Mlle. Giraud, ma Femme,' let us say. What distinguishes it is the diseased spiritualism in which the author has drenched it in order to make it appear a typical story of human life—of the war of the members against the spirit. This unites it with the rest of his work, which is designed to exhibit the hollowness of any substitute for faith perceived through the affections. And, we may add, the discerning reader will find it the *reductio ad absurdum* of this theory. Whatever beneficence may exist in this view of the "life which is worth living" is eliminated on this showing; no further proof of which is needed than the fact that the book is ostensibly a moral tractate, and that it nevertheless leaves a very bad taste in one's mouth—a contradiction in terms which is final as regards moral efficacy.

The truth is that Mr. Mallock has in this work made perfectly clear what many people, doubtless, have all along suspected—the fact, namely, that he is not to be regarded as a really serious person. He is familiar with utilitarian terminology, and particularly sharp at discerning the weak points of a purely intellectual credo that claims universality, but he has never offered aught but what Carlyle termed the sprinkling of moonshine as a substitute. And his advocacy of his moonshine, instead of having any positiveness, has always taken the direction of endeavoring to prove that everything else is still less substantial. The reader of this latest book would be justified in inferring that morality and religion are inconsistent. He would, however, reflect that if this be so the sooner religion perishes the better. Mr. Mallock clearly desires to leave the contrary impression, but the sophistication upon which he relies to this end is of the mustiest imaginable odor. To attempt to clothe it in modern garb, and make it appear that the only relief from the weight of sin and the only source of spiritual consolation, nowadays, are to be sought in the attitude prescribed by St. Francis in his famous demand: "Give me not men, but corpses!" cannot be called serious by any one who has apprehended the meaning of the "process of the suns." Whether for better or worse the world moves, and perhaps there never was a better instance of the impossibility of fighting foes of the present (admitting, of course, which we should not, that Mr. Mallock's phantasms need to be exorcised) with the weapons of the past, than is implied in this attempt to adapt the Confessions of St. Augustine, so to speak, to modern needs, with the result of having produced a thoroughly disagreeable not to say nasty book.

BOOKS OF THE WEEK.

Allderdice, Mrs. E. W. Over the Hill to the White House. Poetry. New York: Denison & Co. 50 cents.
Baby Rue: a Tale. Boston: Roberts Bros. $1.
Dyer, Rev. T. F. T. Domestic Folk-lore. New York: Cassell & Co. 25 cents.
Jefferies, R. Wood Magic. New York: Cassell & Co. $1.50.
Northern New England and Canada Resorts. New York: Taintor Bros. & Co. 25 cents.
Stevens, J. A. Yorktown Centennial Hand-book. New York: Collin & Rogers. 25 cents.
Wilson, W. Poems. 3d ed. Poughkeepsie: Archibald Wilson. $1.

THE

Historical Poetry

OF THE

Ancient Hebrews.

TRANSLATED AND CRITICALLY EXAMINED.

BY MICHAEL HEILPRIN.

Vols. I. (1879) and II. (1880). 8vo, cloth, price of each volume, $2.

Extracts from Remarks of the Press.

"Mr. Heilprin's book . . . has a double interest for us, both as a translation and as an historical criticism. . . . The deviations from the common translation are sometimes quite marked; but they are generally well supported by eminent authorities, and show the latest results of Hebrew scholarship. . . . When we turn to the critical part of the book, we are impressed not simply with the erudition of the writer, but also with his thorough independence in the treatment of his themes."—*Rev. S. J. Barrows (Christian Register, Boston).*

"Because Kuenen is as undogmatic in his realm as Darwin is in his, and because Mr. Heilprin, like his leader, has the humility as well as the boldness of science, they, and such as they, are our best present guides in the tangle of early Hebrew literature."—*Rev. W. C. Gannett (Unity, Chicago).*

"Die gross[illegible]Belesenheit des Verf.'s bietet eine sorgsame Zus[illegible]menstellung der verschiedenen in der englisch[illegible]wie in der deutschen, holländischen und franzö[illegible]nen Literatur vorgetragenen Anschauunge[illegible]—*Count W. Baudissin (Theologische Literatur[illegible]ung, Leipzig).*

"In [illegible]chael Heilprin mogen wij een geesverwant b[illegible]oeten."—*Dr. A. Kuenen (Theologisch Tijdschrift, Leyden).*

"[illegible]n all his critical freeness . . . he deals reve[illegible]dly with the religious thought of the Old Testament."—*Prof. C. H. Toy (American Journal of Philology).*

D. APPLETON & CO.,
1, 3, and 5 Bond Street, New York.

In Course of Publication,

To be completed in Twenty Weekly Parts,

At 75 Cents Each,

L'EXPOSITION DES BEAUX-ARTS (SALON 1881), *comprising* 40 CHARMING FULL-PAGE PHOTOGRAVURES *by the Goupil process, and a profusion of fac-similes from the artists' drawings, initials, head and tail pieces,* etc., etc. With descriptive text (in French) by MM. Bernard Montrosier, Vachon, and others. Forming, when complete, a handsome vol., impl. 8vo.

*** *Orders must be for the entire work.*
The parts may be forwarded by post, free of charge, on receipt of price.

All of the notable pictures and statuary, including those adjudged prizes, will be reproduced directly from the examples themselves by the photogravure process, and the plates carefully printed on India-paper. There will be a larger selection of full-page pictures in the new volume than heretofore, and every care will be taken to render it worthy of the high praise so generally accorded by critics and art-lovers generally to the volume of 1880, the aim of the publishers being to place before the public a fitting memorial worthy of a prominent place in every gentleman's library.

J. W. BOUTON,
BOOKSELLER, PUBLISHER, AND IMPORTER,
706 Broadway, New York.

THE HYGEIA HOTEL, Old Point Comfort, Va., situated 100 yards from Fort Monroe. Open all the year. Equal to any hotel in the United States as a Summer Resort or Cold Weather Sanitarium. Send for circular describing hygienic advantages, etc.

BROWN BROTHERS & CO.,

The Nation.

NEW YORK, THURSDAY, AUGUST 4, 1881.

The Week.

THE President's condition has steadily improved during the past week, and a general confidence in his recovery has taken the place of the depression and anxiety caused by the alarming reports as to his symptoms, spread abroad at the time he began to suffer from chills. The exact position of the ball has been verified by the aid of an ingenious electro-telephonic machine, invented by Professor Bell. The ball is in the wall of the abdomen, a short distance from the surface, so that it will only require a simple operation to remove it hereafter. The President's pulse continues high, but there are no symptoms of pyæmia, nor of malaria, though the atmosphere of the White House is in so bad a condition that seven cases of the latter disease have already been reported. It is now thought that he can be removed in perhaps two or three weeks. The newspaper attacks on the physicians, for their reticence with regard to the condition of the President, have died out. The latter can hardly be expected to satisfy everybody, and if they succeed in curing their patient the question whether they ought to have talked a little less at one time to one set of interviewers, or a little more at another time to another set, will become comparatively unimportant.

The Stock Exchange markets, so far as they are controlled by speculation, were influenced during the week by reports concerning the condition of President Garfield, the crops, and the railroad war. The President's relapse was the foundation for alarming rumors, which temporarily broke down the prices of stocks. The tenor of the advices respecting the wheat harvest was rather more encouraging, and the most trustworthy estimates at the close were that the yield of wheat this year will be about 68,000,000 bushels less than last year, when it reached the unprecedented total of 480,000,000 bushels. There was no indication on the surface that the trunk-line railroad war is approaching its end, rates for freight and passenger fares at the close of the week having been lower than before; nevertheless, there were plenty of semi-confidential statements to this effect, and well-known brokers for prominent railroad managers were heavy buyers of railroad stocks. The net result of all the fluctuations in prices was a general advance ranging from ½ to 9 per cent. in the leading railroad stocks. United States bonds advanced, and the debt statement was such as to improve the public credit. Foreign exchange moved one point nearer towards gold imports, the beginning of which this month would cause no surprise. The condition of the banks changed but little. General trade continues active and profitable. Railroad tonnage is as large as, if not larger than, a year ago; and the effect of the reduction in freight-rates has been to divert traffic from the canals, and of the reduction in passenger fares to increase the travel. The price of silver bullion in London fell to 51½*d.* per ounce from 51¼*d.* The bullion value here of the 412½-grain silver dollar at the close was $0.8623.

On Monday the Collectorship of the Port of New York was formally transferred by General Merritt to his successor, Mr. Robertson. It has been frequently asserted that the latter was appointed for the purpose of making the Custom-house a political machine again, and also that he promised a very large number of appointments to a variety of persons while conducting the campaign against Mr. Conkling in the Legislature. We are glad to hear from the new Collector that, on the contrary, he will maintain in force the civil-service rules now prevailing, and also that he has neither himself promised anybody an appointment nor authorized anybody else to make such promises for him. Mr. Robertson's character permits no doubt as to the truthfulness of these declarations and of the sincerity of his purpose to adhere to them. Moreover, he cannot but be aware that nothing would shock the people more at this moment than an attempt to replace the old political machine by a new one, and that every appointment and removal in the Custom-house will now be watched with too keen an interest to permit any covert attempts in that direction to escape public attention. The best thing he can do for his own reputation, for the good name of those who appointed him, and for the general interest of the country, is to resolve firmly to follow in the footsteps of his predecessor in the best sense, and to resist any and every temptation diverting him from that purpose even in the smallest detail.

It was hardly to be expected that his election to the Senate would divert Mr. Warner Miller from his clearly-announced purpose of using his political position to further his private interests, but it would perhaps be better for him to go to work quietly in committee rather than make such speeches as he delivered last week before the Paper-makers' Association at Saratoga. He called attention to the fact that the paper business is in an unusually prosperous state, the output during the past year being fully twenty per cent. in excess of that of the year before, and the increased export amounting to 16,500 tons. He then insisted that the tariff was unfairly low, because while the average duty on all articles is forty-five per cent., paper is only protected to the extent of twenty per cent. on ordinary qualities, and thirty-five per cent. on fine. He said nothing about the demand of the laborers engaged in paper-making for a reduction of time, but strongly urged that the present gross injustice to the capital employed should be remedied by subsidies to steamship lines to South America, so that American paper-makers might be able to ship their goods direct to that part of the world instead of by way of London.

These views are not mere hasty suggestions, but the result of a study of the subject here and abroad. A few years ago, it seems, Mr. Miller travelled in Germany, where he discovered a mill which was turning out a peculiar kind of paper for Brazil. He found on his return that he could make the paper cheaper than the Germans could, but he could not put it down in Brazil as cheaply, because the only steamship lines to Brazil are from Europe. In this distressing state of affairs what can be done for American paper but subsidize the steamship men to take it to Brazil? But surely, if the fact be as Mr. Miller says, the tariff ought to be increased too. Otherwise, although subsidies may enable our paper-makers to export to South America, the English manufacturers may still in the end circumvent us by flooding North America. The only way that this can be effectually prevented is by making the tariff equal to the average tariff on all articles imported. The economic principle upon which the recommendations of Mr. Miller rest is, as we understand it, that when an industry has been protected into a flourishing condition, neither the consumer nor the laborer ought to profit by the result, but the community should be further taxed, not merely to kill off any vestige of foreign competition, but to enable the industry itself, when it produces more than the home market requires, to compete in foreign markets with foreign producers.

Death has removed the Democratic Secretary of the Senate, who leaves behind him an excellent name for probity and efficiency. Col. Burch was a man of training and experience, quite fit to be a Senator himself, and who came very near being appointed the successor of Andrew Johnson on the latter's death. Only the exigencies of machine politics could have endangered his place, in order that it might be filled by an adventurer like Gorham; and, in fact, the two-months' unavailing struggle to bring about this change marks what we trust was the lowest point in our political abasement. Col. Burch, happily, lived to see the complete downfall of the Boss who was at the bottom of this disgraceful manœuvre. Mr. Dawes, who engineered it, is now to be congratulated on the arrival of the opportunity for which he longed last April, of making a fair start in the Senate appointments on the principle of fitness, non-partisanship, and permanency.

We publish elsewhere a letter from a correspondent who thinks that we "hardly did justice" to Judge McCrary in our remarks last week about his recent decision in the Southern Express case. We do not see, however, that what our correspondent urges as to the abstract right of courts to determine what is a reason-

able charge for transportation, settles the question of the advisability of such a course. As a matter of fact, the courts never have made the attempt hitherto to "run" the railroads of the country, for this is what fixing rates must in the end come to, and we have never seen the innovation suggested before. The utmost that the Grangers ever attempted to do was to establish the right to have rates fixed by the Legislature. They never thought of having a judge draw up a railroad freight-tariff. What the effect might be on the rates we do not know, but we know very well what it would be on the judges. The proposition of our correspondent that "the belief that the people will always, if they can, do injustice to corporations is worse than the vulgar cry that corporations are always cheating the public," true though it may be, is also inconclusive as to the question of having transportation charges fixed by judges or masters in Chancery. The Granger cases settled nothing but an abstract right, and the transportation problem remains precisely where it was before the decision of them.

The Democratic candidate for the Ohio governorship has written a letter accepting the nomination offered him, in which he takes occasion to say a few plain words on several subjects which are now attracting attention in that State. A letter of acceptance is sometimes thought to be of as much importance as a platform, and therefore we are not surprised to find that Mr. Bookwalter takes some pains to define his exact position. First, with regard to legislation, he urges that it "should be directed solely and strictly to the interests of the Many," and not to the interests of "the Few." He thinks that it "tends more and more in these times toward subservience to the Few." If this is the case the tendency ought to be broken up, particularly in Ohio, where he says that "under the auspices of the party in power it has become more dangerously prevalent than ever before." What precise means the Many ought to take to put a stop to it Mr. Bookwalter does not state, but that, after all, is a question about which people may take different views, and it is unnecessary to say that a letter of acceptance which suggests remedies as to which different views may be taken is open to the objection that those who dislike the remedies suggested may be led into voting for some other person than the writer of the letter. Some of his critics have found fault with Mr. Bookwalter for being merely a rich manufacturer, and for not having devoted time and thought to the consideration of political questions. They are much mistaken, however, as they will perhaps be ready to admit when they find that "it is a belief" to which he has "ever adhered" and "often given expression," that "a function of the government should in no case be exercised in behalf of any section or class to the detriment of any other." If such a proposition is not the result of reflection on political subjects, we should like to know what it is. The Ohio Republicans may try to persuade the public that exercise of this sort is good for the functions of government, but their arguments will affect the Few, not the Many.

The fifth plank of the Ohio platform opposes legislation of a sumptuary character, but Mr. Bookwalter points out that this "does not imply hostility to rational and practical measures for the abatement of any of the evils with which society is afflicted." But at the same time he reflectively adds, that "it may be well to remember that in a free country the object of all law is the maintenance and not the abridgment of the rights of the citizens," a distinct warning to those who take the opposite view that they can under no circumstances have Mr. Bookwalter's support. He admits that "the preservation of social order, and the wholesome restraint and control of the elements of danger to the community which cannot be wholly removed, are objects eminently desirable in themselves, possible of attainment, and properly within the scope of constitutional legislation." From these premises he reaches the conclusion, as to this branch of his subject, that "it is much to be deplored that all well-disposed citizens, including those at opposite extremes on this question, cannot be brought upon a common ground for what is or ought to be a common object"; but this, we suppose, cannot be helped. His views with regard to the tariff are simple and direct. He does not beat about the bush, but boldly announces that, "viewed only in an economic light, civilization is but the development and organization of varied industrial pursuits, and it has come to be regarded as almost an axiom in political economy that the prosperity and maintenance of any especial industry is dependent upon the perfect co-ordination and harmonious adjustment of all"; from which the conclusion naturally follows that "legislation upon this subject should be of such a character as will ever keep in view this well-balanced relation of the many parts which go to make up the vast economic scheme of the nation." A child can comprehend this.

We asked the wine merchants some weeks ago for an explanation of the fact that, although the supply of French wines had fallen off nearly one-half since 1875, their price in this country "had remained perfectly steady," and we suggested that the question would form a good subject for a magazine article for "a wine merchant possessed of the literary faculty." The answer has been furnished in a somewhat nebulous form by a wine-organ called *Bonfort's Wine and Spirit Circular*. It says, after some preliminary vinous abuse, that the explanation is one which "a little experience" in what it euphemistically calls "mercantile affairs" would have taught us, namely, that manufacturers find it so difficult to induce buyers to pay more for a given article than they have been in the habit of paying, that they use a brand or "generic name" which covers a great many different varieties of the article—as, for instance, "St. Julien," "Cognac," "Very Old Sherry"; and that having thus prepared themselves for contingencies, when the supply falls short, and they find that they can no longer sell the "St. Julien" they have been in the habit of selling at one franc a bottle, and cannot get the buyer to pay one franc three centimes, they send him a wine which before the rise cost only ninety-seven centimes. "Sometimes," says the *Wine and Spirit Circular*, "this is done with the knowledge and consent of the buyer, in which case it is up to that point a perfectly legitimate transaction. If it is done without the buyer's knowledge it is, of course, cheating." This is a tolerably candid though not complete answer to our question. What it lacks can, however, be readily supplied by any reader who has what the *Circular* calls a "little experience in mercantile affairs." We fear this "experience" is much more widely diffused than our vinous and spirituous contemporary imagines.

Mr. George Bliss has taken the trouble to write a letter to the *Times* on the subject of the Police Commissioners' case, for the purpose of convincing that newspaper that "Mayor Grace's proceedings are not in good faith." During the period covered by the charges against Messrs. French, Mason, and Nichols, he says, there have been in all eight commissioners in office. All of these, except Messrs. French and Mason, are Democrats. Mr. Nichols, however, is the only Kelly Democrat among them. The evidence "shows without contradiction" that all of these eight commissioners have concurred in the acts or omissions complained of by the Mayor, except that Messrs. Voorhis, McLean, and Nichols, as successive chairmen of the committee on street-cleaning, have had especial charge of that subject. Now, how, enquires Mr. Bliss, have these eight commissioners been treated? The Mayor has appointed Mr. Voorhis Commissioner of Docks, Mr. Matthews Commissioner of Police, and General Smith Rapid Transit Commissioner. Mayor Grace's predecessor appointed Mr. McLean Park Commissioner, and Mr. Morrison secretary. "In other words, five Democrats have been rewarded. On the other hand, two Republicans and one Kelly Democrat are on trial for doing and leaving undone just what the men rewarded did and did not do." The picture presented by this letter would no doubt seem very shocking to the public, had not familiarity made them callous to it. Mr. Bliss cannot expect the Mayor to do much for Republicans; but if he succeeded in removing the present Commissioners, we see no reason why he should not give the Kelly Democrat a new office. Still, as Mr. Bliss knows, it is improbable that the Mayor should be successful in his attempt to remove the present Commissioners. The "hearing" has taken a good while, but when the great writs of *certiorari* and injunction are resorted to, and the defendants bring the judges of the Supreme Court into play, then the litigation will really begin,

and what the end of it will be no man can say.

The story of the Nihilist Leo Hartmann, published in the *Herald* of Saturday, is a ghastly account of his connection with the attempt to blow up the late Czar on the Moscow railroad. We say ghastly, for admitting all that the Nihilists urge both with regard to the necessity of overthrowing the existing *régime* in Russia, and the impossibility of effecting this object in any way but by assassination, his description of the plot, with its subterranean mines, its final *ante-mortem* conviviality, its conclave of conspirators nerving themselves for their work amid flames of green fire, suggests the doings of fanatics with a taste for melodrama rather than those of liberators of an oppressed people. But Hartmann, whatever else he is, is a man of intelligence and education. He says that he has come to this country for the purpose of enlisting the sympathy of Americans for his cause, and, according to one story, he is going to lecture on Nihilism. It cannot be denied that the public stands in need of authoritative information on the subject, but only a morbid curiosity could get the better of the indignation naturally excited by the presence and sight of such an expositor.

Hartmann rightly says that in the eyes of many of his readers in this country he shall "nevertheless remain a criminal." That he should be a criminal at large, when his acts and his doctrine rank him among the enemies of the human race, is owing to the novelty and the very enormity of his offence. Society has hardly begun to protect itself against the brigands who wreck trains for plunder, and has never contemplated such a state of things as would result from the popular approval of the methods of Hartmann and his fellow-conspirators. He is kind enough to say that if a republican form of government were obtained for Russia, there would be no need of blowing a trainful of innocent travellers to shreds in order to reach the one despot imagined to be on board. But the socialistic and communistic view of government finds despots everywhere —the mine-owner, the banker, the railway president, the manufacturer, anybody who is the ultimate term in their disagreement with the established order of things; and the terrorism of the Nihilists is as dastardly and, in spite of its mock-heroic fatalism, as vulgar as that of the Molly Maguires. The sympathies of burglars may be touched by the recital of the hardships in excavating the gallery and the danger of discovery by the police, but the closing of the electric circuit to explode the charge was, after all, as safe and as inglorious as Rousseau's suppositional "killing the mandarin" in China by pressing a button in Paris.

The Irish Land Bill was read on Friday in the House of Commons for the third time and passed by a vote of 220 to 14, the majority of the Conservatives and some Parnellites, including Mr. Parnell himself, refraining from voting; the bill then went to the House of Lords, where it was read for the second time on Monday. In another column our London correspondent explains very fully the feeling of parties with regard to it. It does not wholly satisfy either the Liberals—for among them are numbered many Whig land-owners who see in the measure a menace to the English land system—nor the extreme Irish party, a great part of which secretly or openly insists that nothing short of complete legislative independence will satisfy Ireland. The Conservatives would, of course, kill it if they could, but the alarming condition of Ireland would not permit them to do this, even if they could rely on much popular support in England. On the second reading of the bill Lord Salisbury made a speech, in which he indicated that the Conservatives would make a stand upon the necessity of amendments for the purpose of inserting a clear definition of fair rent, for the exemption from the operation of the bill of estates managed on the English system and tenancies of over £100 a year, and for the maintenance of the inviolability of leases. In the House of Commons on the same day Mr. Parnell took occasion to raise the question of the Irish political prisoners, and declared that the House was always upon the side of power. His language was so violent that he was "named" by the Speaker, and Mr. Gladstone then moved his suspension from the House for the remainder of the sitting, upon which Mr. Parnell rose, and, saying that he did not care to go through the farce of awaiting the result of the vote, left the House. The motion for his suspension was then carried by a vote of 132 to 14.

Ayub Khan's victory over the forces of Amir Abdurrahman on July 27 was achieved on the anniversary of his triumph at Kushk-i-Nakhud, or Maiwand, over the Anglo-Indian troops under General Burrows. The issue of the battle of July 27, 1880, was a terrible surprise to the British, and its consequences seemed at the moment incalculable. There was danger not only of losing Kandahar and other isolated positions, with their British garrisons, but perforce of speedy and ignominious retreat from all Afghanistan before a revengeful and fanatically elated people. This time it is only the protégé of the British whose army has been vanquished; it is Afghan tactics and Afghan treachery that have caused the rout, and the Anglo-Indian forces being already out of the country the Indian Government does not feel bound to retrieve the loss. The consequences may prove injurious enough to British rule and prestige in the border lands east and west of the Indus. Ayub Khan may drive the adherents of the Amir before him, or gain them over and be generally recognized as the Allah-ordained deliverer and ruler of Afghanistan; Ghazni and Kabul, like Kandahar, may open their gates to him, and Abdurrahman be forced to flee once more beyond the Hindu-Kush, and once more place himself under Russian protection. But all this implies neither imminent danger, nor grave responsibility, nor military disgrace, since England has had the courage, after avenging the defeat of Maiwand by the triumph at Kandahar, completely to withdraw from this field of endless strife, which she ought never to have entered. Ayub's campaign is almost a perfect repetition of his last year's movement from Herat to Kandahar. He takes the same route through Farah, crosses the Helmund near Girishk, as he did then, makes the same approach toward the left flank of the enemy through the valley of the Argandab, and fights the same defensive battle in a strong position, resulting in the rout of the assailants through their own fault. Burrows's brigade, last year, was half annihilated; the Amir's general lost only a few hundred men, but all his artillery, and part of his troops deserted to the victor. And Abdurrahman has no General Roberts to restore the fortunes of the war.

It is but natural that the Amir, if unable to defend the throne of Kabul, created for him last year by the British, should retire beyond the lofty mountain-range which separates Afghanistan proper from Afghan Turkistan, and try again to maintain himself in the latter country. It is equally natural, considering the geographical positions, that, in order to hold Badakhshan, Balkh, and the adjoining territories against Ayub Khan installed in Kabul, he should ultimately go to the length of accepting or submitting to a Russian protectorate, such as makes Bokhara and Khiva, though nominally independent khanates, virtual dependencies of the Czar, soon to be formally annexed, as the Khanate of Khokan was in 1876. It cannot be denied that the mountain barrier of the Hindu-Kush forms as natural and powerful a boundary between the sphere of Russia's rule and influence in Central Asia and England's in South Asia as the Altai range has proved to be between Russia in North Asia and the Empire of China. That the people of Afghan Turkistan are united by the bond of Islam with the Durranis, Ghilzais, and other tribes of Afghanistan proper, will prevent their absorption by Russia as little as the same moral bond helped the Bokharese, Khokandians, and Akhal Tekkes in their contests with the overwhelming forces of the White Czar. Skobeleff, a few months ago, crushed the Akhal Tekkes; the Tekkes of Merv are already seriously considering the necessity of submitting to the Muscovite yoke; the adjoining dependencies of Afghanistan, north of the Hindu-Kush, are naturally doomed to the same fate. The Moslem ruler south of the mountains, however—whether he be Ayub Khan or even a stronger man than he—will probably rely in vain on Russian aid in hostile endeavors against the English, and if he commits himself against them as did Dost Mohammed or Shir Ali, while England's power is unshaken in India itself, he will most likely share their fate. Allah is too high and the Czar is too far away —beyond the Hindu-Kush.

SUMMARY OF THE WEEK'S NEWS.

DOMESTIC.

THE President has improved steadily during the week, without a relapse or the rumor of one. Though not yet considered out of danger, considering the possibilities of the case, he has been declared by his physicians slowly convalescent, and only hopeful anticipations have been made. He now "sits up in bed," or makes an attempt at that attitude, every day, and partakes of what is called "solid food," but, of course, sparingly. Experiments with Professor Bell's "induction balance," tried on Sunday and repeated Monday, very satisfactorily "placed" the ball "on a straight line running through the body from the front to the back, just above the right groin"—how near the abdominal surface can only be inferred, but it is supposed to be about two inches. This result corroborates entirely the original diagnosis made by the President's surgeons. No intention is entertained of attempting to remove the bullet at present, and so long as it gives no trouble its disposition will be left unconsidered until the President's recovery.

General Merritt, who has been Collector of the Port of New York since 1878, formally quitted his office on Saturday, preliminary to its occupancy by Judge Robertson on Monday. Large numbers of his friends made the occasion an opportunity of paying the outgoing Collector their respects and regrets. Collector Robertson, who had already filed his bonds and taken the oath of office, announced that he would make no changes in the force employed at the Custom-house for some time, "nor unless he found that the needs or the interests of the service required a change to be made."

The Warren Court of Enquiry closed its sessions on Saturday, after listening to the surrejoinder by Major Gardner to General Warren's counsel's reply on Friday to his argument of the day before. The Court will not report its findings to the War Department for some time, and they will not then be made public until President Garfield has passed upon them; they may therefore not be expected for several months.

The three-months' trial of the Police Commissioners before the Mayor was closed on Wednesday last, after argument for the accused by their counsel, and some vigorous and contemptuous expressions by Mr. George Bliss. The Mayor reserved his decision and announced that he would communicate it at his leisure.

Hartmann, the Russian Nihilist refugee now in this country, has been interviewed, and declares that the purpose of his faction is simply to work for "a general congress of delegates elected by the universal suffrage of the people to frame a constitution which the people themselves may adopt." "The Nihilists," he continued, "do not even set forth a programme for the people; they simply ask that the people be granted the liberty to establish their own form of government." He added that his visit to America was merely for the purpose of acquainting the people here with the state of Russia and the wrongs of the Russian people, and explained, by the way, that the term "Nihilist" is not employed in Russia by any one, but was "originally used by a set of novelists who applied the term to a class of people with certain qualities of a philosophical mind." "Socialists" is the name by which in Russia the Nihilists are known and know themselves.

A fire, which at first startled considerably the dwellers in the wooden caravansaries at Coney Island, destroyed, on the 27th ult., the Pierrepont Hotel, the depot of the New York and Brighton Beach Railroad, and various outhouses and stables at that watering-place.

Another person, Frank Tobey, has been killed by trying to get on a car of one of the elevated roads after the platform gate had been closed. Witnesses differ as to whether the fault was the conductor's or the victim's.

The special court appointed to decide upon the Minnesota State railway bonds question began its sessions at St. Paul on the 25th ult. Objections to the jurisdiction of the tribunal were filed by the Attorney-General, the chief one being the alleged unconstitutionality of the legislative enactment creating the court. Writs of prohibition were then read, issued upon affidavit by the Supreme Court, and an order from the same court, signed by the Chief-Justice, requiring the five district judges who compose the special tribunal to show cause why the writs should not be issued. A return to the order was made denying the premises recited in the affidavit and replying to the objections of the Attorney-General, after which the court adjourned for a week to afford time for the further consideration of the questions involved.

Some fifty leading Ohio Democrats held a conference in Toledo on Thursday last to discuss "the situation" and to arrange the "plan of the campaign." Among the chiefs of the "Old Guard," who are believed to have been highly incensed at Mr. Bookwalter's nomination and who remained away "sulking in their tents," were Theodore Cook, John F. Fallett, General Banning, Judge Thoman, Senator Harper, and William W. Armstrong. The likelihood of a large prohibition and Methodist defection from the Republicans is said to have afforded the chief solace of the conference, which also decided not to make "a money campaign," in which case their opponents would "draw on the East and on the national banks for large contributions" (*Times* report), but to resort to a "still hunt," making "great but quiet" efforts in the mining and manufacturing districts, and endeavoring to increase by subtle arts the discord among the Republicans.

Senator Dawes, of Massachusetts, has written another letter upon the civil service, supplementing and partly explaining the other, which, he declares, was "not put forth as a panacea" but as a help, and was, furthermore, due to "a wish to ascertain how sincerely we in Massachusetts desired our Congressmen to give up the miserable business of office-brokerage." In pursuance of the subject he addresses himself to the "relief of the President," whose task of appointing a hundred thousand officials "is killing him." Under the Constitution, however, "legislation can do little to relieve him," and until a change is made in the organic law his "best powers" will continue to be "frittered away." How to relieve him, and at the same time allow him to "retain his personal control and responsibility for his whole administration in the broadest sense," is a difficult problem to solve. It is improbable that "any single remedy will cure the evil." But, while discussing, as strenuously as ever, possible legislation, "let us," concludes the Senator, "enquire whether something of the evil may not be remedied by a change in the mode of administering the system as it is." It should be mentioned that the letter is not addressed to the general public but to the Springfield *Republican*, which observes that though its correspondent "works out the principle of giving each official full responsibility for his subordinates," this principle has already been "prominently advocated by Arthur Helps," and is also not so simple as Mr. Dawes believes.

Among the criticisms of his first letter, to which the Senator refers as above, was one by Governor Long, of the same State, who suggested that Mr. Dawes "would have done better service if he had developed the simple, practical, and excellent plan" known as the Pendleton bill. This plan, the Governor thinks, "has the merit of working no violent changes" and causing "no shock," since it applies only to bureaus where fifty or more appointees are employed, and would therefore, he understands, affect in New England only the Boston Custom-house and Post-office. The reform was coming, he added, "not because the scholar in politics espouses it, not because your civil-service reformer is less hungry for office than anybody else," but because it is "fair" and "democratic," and "gives to the people an equal chance to go in on their merit, and not on their control of political influences," and because the business interests of the country demand it. Meantime, the Boston *Advertiser* has interviewed several of the Massachusetts Congressmen upon the subject, and finds an unanimity of opinion in favor of the general end to be obtained, but considerable variety of view as to the means to be adopted. Messrs. Bowman and Rice are opposed to competitive examinations, and Messrs. Harris, Morse, and Crapo are more or less sceptical concerning them.

The Committee of the Dartmouth College Trustees appointed by the New York alumni of the college to investigate the affairs of that institution—which means the charges, already noticed in these columns, against President Bartlett—have made a rather non-committal report. They say that "while finding some errors of management, such as, however, are natural in connection with decided abilities, and errors not confined to any one person," they have endeavored to "correct such errors in the best possible manner." What this manner is the committee does not consider it necessary to explain, but the report is supposed to mean a Scotch verdict against President Bartlett.

The Virgin Mary has appeared several times to a blind, bed-ridden, fasting, and sleeping girl in Philadelphia during the past week. Each visit after the first has been predicted by the sick girl, who has only waked occasionally during the last five weeks, and at the last materialization the vision was clearly apparent to all of a large number of intelligent Catholics except one lady who missed it by being "followed by the devil in the form of a black tomcat." The bell of the Rev. Mr. Jasper's church at Richmond, Virginia, has also been tolled by supernatural labor, and the fact was at first erroneously accepted as an intimation of the death of the pastor, who is, however, speedily convalescing from illness. The reverend gentleman still adheres to the good old belief that the sun turns round earth.

FOREIGN.

The English Land Bill was read a third time in the House of Commons on Friday night, and passed by a vote of 220 to 14, the Opposition largely refraining from voting, as is evident, of course, on this showing, and the minority being exclusively composed of Conservatives. Their names are, perhaps, worth chronicling; they were: Sir Walter Barttelot, Earl of Bective, Mr. Yorke, Mr. Dixon-Hartland, Sir Henry Holland, Right Hon. John Hubbard, Mr. Onslow, Viscount Folkestone, Mr. David Scott, Mr. Schreiber, Mr. James A. Campbell, Sir Henry Tyler, Mr. Wharton, and Mr. Whitney. The bill was immediately sent to the Lords and at once read for the first time. Lord Randolph Churchill improved his last opportunity to make what the cable calls "an extravagant speech," which aroused Mr. Gladstone's indignation and ridicule, and provoked a "powerful vindication" of the bill. "Unusual enthusiasm" was excited by the passage of the bill among Liberal members, and "a general feeling of relief among all parties" is reported.

At the second reading of the bill in the Lords on Monday it was moved in a set speech by Lord Carlingford (Mr. Chichester Fortescue), who was answered by Lord Salisbury, the Conservative leader, in a "severe criticism" of the measure. Several Tory conferences to determine the action of the party in the Upper House have been held, but it is generally believed that the bill will pass, amended enough to secure the dignity of the Lords but not enough to endanger its final enactment.

The French squadron has surprised Gabes and landed a force of men without opposition. Bou-Amena has retreated to the desert, and the occupation of Gabes is believed to have produced considerable moral effect upon the Arabs of the vicinage. The Bey of Tunis is apparently exercising, or desirous of being thought by the French to exercise, the utmost of his authority in the environs of Tunis and Goletta, but he has been deserted by most of the native troops, of whom only about four hundred remain, nominally as his personal guard, and these are of a rebellious and uncertain disposition. On Friday a panic was reported at Tunis, and many of the shops are said to have been closed in the face of Arab incursions; but the alarm quickly subsided, and the whole report is of the description known in business circles as "feverish." France has declared her willingness to recompense the Algerian Spaniards who suffered from Bou-Amena's raids, but reserves the right of ascertaining whether compensation has been paid on account of damage done to French subjects during the Carlist and Transigente insurrections and the Cuban rebellion. Troops continue to leave for Algeria. The Spanish Government has addressed an "energetic remonstrance" to France concerning the alleged plundering of the Spanish vice-consulate on the occasion of the capture of Sfax.

Correspondence between Lord Granville, the British Secretary for Foreign Affairs, and M. Barthélemy-Saint-Hilaire relative to possible French designs on Tripoli has been published. Lord Granville affirms that England will decidedly object to any repetition of the Tunis policy in Tripoli, and the French Secretary's reply is that France has no such intention, and that her intermeddling in Tripoli, which she considers an integral part of the Ottoman dominions, simply means a just resentment at, and endeavor to counteract, Turkish fanatical intrigue in Tripoli directed against the new régime at Tunis.

M. Gambetta read the decree closing the session of the French Chamber on Friday last, adding the hope that the future Chamber would be inspired by a determination to promote the well-being of the country. Elections for the new House have been ordered for the 21st inst., the secondary balloting to take place on the following Sunday.

The British press have, of course, been much agitated during the week over the "dynamite disclosures." "We hope," says the *Standard*, "that 'due diligence' will now bear the same interpretation as in the *Alabama* case. We demand no damages; we only ask friendly aid in checking an infamous conspiracy." The *Morning Post* wishes O'Donovan Rossa (whose real name is understood to be Jeremiah O'Donovan, by the way) may be treated by America as England treated Herr Most. Commercial men in Liverpool are said to believe that the explosives were sent over to England merely to create a sensation and thus "encourage the dupes of the skirmishing fund to continue their subscriptions." Furthermore, regrets are expressed that no chemical analysis was made and that the supposed dangerous material was so quickly thrown into the sea. The publication of the news of the discovery is pronounced premature, and investigations, which at first promised well, have been, it is feared, thus rendered useless. A series of meetings of Irish organizations in England to protest against the assumption that the attempted outrage had anything to do with "the Irish national movement," has been begun. It now appears that the machines were manufactured in Peoria, Illinois, by one Crowe, whence they were shipped to Philadelphia. Any correspondence between the Governments of Great Britain and the United States has not yet been disclosed.

Crowe has been interviewed at his home in Peoria, and delivered himself of the usual blood-thirsty sentiments, and divulged the usual truculent plans of the Fenian Brotherhood. He says that all English steamships, whatever their business, will soon be provided with Fenian infernal machines, and that though the loss of innocent life will unfortunately be very great, it will be necessary; and, anyhow, "war is cruel." He talks with great glibness, enthusiasm, and atrocity, but has not yet succeeded in making sufficient effect upon the criminal authorities to cause his arrest. As to his responsibility to either State or Federal laws there is considerable doubt expressed, but, of course, a universal feeling that if the present statutes are not sufficient to permit of his summary punishment, others should be speedily enacted. Crowe has cast O'Donovan Rossa quite into the shade.

Prince Napoleon has memorialized, so to say, the Bonapartist Electoral Committee in favor of a revision of the Constitution of France, to allow the election of President by direct popular vote. Both the Royalists and, on behalf of the Bonapartists, M. de Cassagnac have issued appeals for subscriptions. Gambetta's programme for the campaign is said to be uncertain, but will probably be found definite enough.

The banquet which it was designed to tender to Minister Noyes at Paris has, owing to the precarious condition of President Garfield, been indefinitely postponed, at Mr. Noyes's request.

The Primate of Spain, the Cardinal Archbishop of Toledo, recently issued a pastoral letter which has been read in every church of his diocese, indignantly attacking the Government and people of Italy, and calling upon all Catholics of high and low degree to unite and, by force if necessary, restore the independence and temporal power of the Pope. The Italian minister at Madrid forthwith protested, and the Government apologized as gracefully as possible, but the Primate is said not to have been reproved, and the Pope has received the condolence of Spain upon the disturbances at Pius IX.'s funeral, which were the cause of all the trouble.

The death of Madame Blanc, the proprietress, since her more famous husband's demise, of the gambling-rooms at Monaco, the mother-in-law of Prince Roland Bonaparte and Prince Radziwill, and the possessor of an immense fortune, is worth chronicling, at least for the effect it may have upon the prospects of Monaco and the gaming there.

General Di Cesnola has been very cordially received since his arrival abroad. Mr. White, the American Minister to Germany, entertained him at a banquet in Berlin, last Thursday, at which Professors Curtius, Lepsius, Knaus, and other celebrities were present. General Di Cesnola is reported to have secured for the New York Metropolitan Museum of Art an exchange of duplicates, especially of the Olympian treasures, with the Museum of Berlin, and Professor Curtius, it is said, will write the preface of his General Atlas, which is soon to be published.

The Cornell crew have, rather unexpectedly, written to the London *Sportsman* to express their thanks at the kind and courteous treatment received at the hands of the press and the English rowing clubs, especially the London and Thames Rowing Clubs. They also assure the *Sportsman* that any suggestion that Cornell was purposely fouled at Henley is nonsense.

The hitch in the negotiations between the British Royal Commission and the Boers is now believed to have been arranged satisfactorily to both sides. Several joint meetings have been held during the week with favorable results. The chief provisions of the convention agreed upon are reported to be the right of passage of British troops through the Transvaal, the control of all foreign relations by the suzerain, the abolition of slavery, and the maintenance of religious toleration. The Volksraad has three months in which to ratify these terms, at the end of which period, if it declines to approve them, the Queen's sovereignty will "revive." Sir Charles Dilke announced on Friday, in the House of Commons, that the Government had now no intention of taking any further steps to bring to punishment the murderers of Captain Elliott and Magistrate Malcolm in the Transvaal.

The forces of the Amir Abdurrahman of Afghanistan were defeated on the 27th ult. in a pitched battle with the rebels under Ayub Khan, the result being due, according to the report, to the excessively bad generalship of the Amir's forces, a very small part of which were brought into action, and this in the most disadvantageous way. Ayub has entered Kandahar. Lord Hartington has announced in the House of Commons that the Indian Government has made no proposal to employ an Anglo-Indian force in Afghanistan.

The French Catholic Bishop of Massua and four missionaries, who had been making a tour of Catholic missionary stations in Abyssinia, have been captured by the natives, who have also pillaged and burned a mission-house, and, after robbing the prisoners, sent them into the interior.

The provisional President of Peru, Garcia Calderon, has, it is announced this week, succeeded in assembling the Peruvian Congress. The Chilian conquerors lent their support, and by a large guard relieved the fears of a descent upon the session by Pierola, the irreconcilable, who is doing his utmost to prevent the consummation of peace negotiations. The Congress met, July 10, at Chorillos, nine miles from Lima, which city the Chilians still hold as a guarantee of order, and held its sittings on bare boards, which is taken as significant proof of the poverty of the provisional Government, and also as an indication that the labors of the session will not be unnecessarily prolonged. Fifty senators and eighty-five deputies, Calderon and his cabinet, the justices of the Supreme and Superior courts, and the representatives of foreign governments, including Mr. Christiancy, were present. The President's message insisted upon the absolute hopelessness of continuing the war, and declared that Bolivia would act in concert with his Government. Mr. Calderon was chosen President for another year and accepted the post, and the Congress is believed to be in hearty accord with him. The courts have already resumed their sittings, and a Peruvian Government, spite of Pierola's influence, which is rapidly declining, once more exists. In treating with the conquerors, however, it is said to entertain no illusions, and the necessity of ceding a large and rich tract of territory is admitted on all hands.

THE DAWES PLAN.

SOME time ago Senator Dawes, of Massachusetts, wrote a letter drawing a vivid picture of the miseries inflicted upon members of Congress by office-seekers, and setting forth the necessity of a thorough civil-service reform. It was an excellent letter as far as it went, and had the merit of bringing some glaring abuses in a striking manner to the attention of the people. He has now supplemented it with another contribution to the literature of the subject, in which he proposes what he considers a simple business rule upon which to organize the administrative machinery of the Government, and thus to relieve the President of the pressure of place-seekers. It is as follows: The President is to determine in his own mind what the policy of the administration with regard to the different subjects in its charge shall be. He then appoints his seven cabinet ministers or heads of the different departments. These several heads of the departments he holds personally responsible for the conduct thereof, leaving to them the appointment of their immediate subordinates. Each head of department appoints the chiefs of the several bureaus into which the department is divided, holding them responsible for the conduct thereof, and leaving to them the appointment of their immediate subordinates. Each head of a bureau appoints the chiefs of the several divisions into which the bureau is divided, holding them responsible therefor, and leaving to them the appointment of their clerks. Thus a chain of responsibility is established which is expected to keep the whole machinery in efficient working order and to relieve those highest in station of pressure—responsibility of the division chief for the conduct of his clerks to the bureau chief; responsibility of the bureau chief for the conduct of his bureau to the head of the department; responsibility of the head of the department for the conduct of his department to the President.

This looks very well—on paper. But how will it work in practice? Will it secure the appointment of fit men to office? Will it stop the pressure complained of? If there is anything we should avoid in the discussion of such subjects, it is to delude ourselves with fine words of vague meaning. Such a word is "responsibility." What does responsibility in this case signify? If it means that when an executive department is badly managed the President is to remove its head and replace him with a better man, and so all the way down, we have that responsibility now, and have always had it, except perhaps under Presidents to whom the public business was a secondary consideration. But if it means that when a clerk does a foolish, or mischievous, or dishonest thing which, as is sometimes the case, draws grave consequences after it, not only the clerk must be removed but also the division chief, because he appointed or kept that clerk on his responsibility; and the bureau chief, because he appointed or kept that division chief on his responsibility; and the head of the department, because he appointed or kept that bureau chief on his responsibility—if it means that, then it does not now and never will exist. The responsibility of the division chief will be enforced by his removal only if it appears that he could have prevented the mischief by greater watchfulness, or that he had knowingly appointed an untrustworthy person. And the officers above the division chief will, all theoretical responsibility notwithstanding, not be touched unless similar things are shown.

But Mr. Dawes may say that under this system of responsibility the division chief will be exceedingly careful not to have untrustworthy persons under him. What kind of care will he exercise? Look at his situation. At present when a member of Congress wants a clerkship for a man he desires to provide for, he goes to the Secretary. Under Mr. Dawes's system of responsibility he will go to the division chief, who is himself only a high-grade clerk. The same pressure formerly brought to bear upon the Secretary will now come down upon the division chief. And with what effect? It is matter of experience that the power of resistance to pressure decreases according to the relatively lower grade of the officer exposed to that pressure. A Senator of the United States appears an infinitely "bigger man" to a chief of division in a department than to a Secretary, and some of them urge their requests or demands upon the former in a much grander style than upon the latter. And when the division chief yields to them and appoints men who bring him into trouble, and he is then to be made "responsible" for the appointment of an incompetent or dishonest person, he simply produces as his justification a letter from one or a dozen Senators certifying that the untrustworthy clerk is a man of the most excellent ability and the highest character.

Mr. Dawes's system of making appointments under a gradation of personal responsibility would therefore not abolish pressure, but only transfer most of it to the point where it would meet with the least resistance. This is no mere speculation. We can remember an executive department the head of which was known to be somewhat "unaccommodating." Members of Congress would address themselves to bureau chiefs, expecting to obtain through their recommendation the appointment which they could not obtain from the Secretary himself; some of these chiefs now and then made such recommendations to the Secretary, informing him privately that they had done so because they were unable to resist the urgency of members of Congress, which sometimes went even to the length of threatening insolence, and against which they asked the Secretary's protection. Things can, therefore, not be mended by merely transferring pressure. We must extinguish it altogether by doing away with the system which admits the making of appointments on the ground of mere favor. As a friend of civil-service reform, Senator Dawes will do well to push Mr. Pendleton's bill, which, we are glad to know, he helped frame, and which embodies in a law the system already tested in the New York Custom-house and in some offices in Washington—a system which, so far as it is applicable, secures good public servants, relieves the appointing power of pressure, and does not impair proper responsibility.

THE STOCK MARKET AND ITS FLUCTUATIONS.

THE recent heavy decline in stocks and investment securities consequent upon the unfavorable turn in the President's condition on the 23d ultimo, and the uncertainty of his case for several days afterwards, cannot be explained upon ordinary business principles. No one supposes that the death of President Garfield would cause the loss of a blade of grass or an ear of corn, or would affect the nation's wealth in any manner whatever. It is true that a "railroad war" was started, or rather aggravated, about the time the President had his first chill. It continued without cessation and still continues, yet when the splinters of bone were successfully removed from the President's wound and he began to improve, stocks also began to improve, the bears became frightened and hastened to "cover," and an advance of from one to ten "points" was made within a few days. It would appear, therefore, that the stock market was powerfully moved both downward and upward within a week's time by an event which could not affect the real value of securities in any way whatever.

This experience, which is not at all infrequent, serves to show that the intrinsic value of the properties is not the sole factor, perhaps not the principal one, which fixes the prices of securities in the stock market. The main point to be considered is not what a particular thing is worth, but what the multitude think it is worth, or will be worth to-morrow or next week. It is plain that while nobody thought that "Milwaukee and St. Paul," for instance, would be harmed a penny by anything that might happen to President Garfield, yet a great many persons who held that property believed that other persons not so well balanced in mind as themselves would be alarmed and get into a panic and sell out; that this movement would cause a decline, and that it would be wise to anticipate it by selling out now. So the selling produced a decline, and the decline led to more selling, and a stampede took place, and a lot of speculators were ruined without knowing exactly how or why, and without there being any substantial reason for the catastrophe. Most of them attributed the misadventure to the outrageous conduct of the bears.

The public who dabble in stocks are nearly all on the "bull" side of the market, operating for an advance. They do not understand the art of "selling short" and borrowing stocks for present delivery, hoping to buy them at a lower price hereafter; and if they understood it not one in fifty would practise it. It requires no talent to be a "bull." Anybody who has money enough to "put up a margin" can buy shares and wait for a rise. Experience and nerve, and knowledge of human nature, and

acquaintance with a multitude of special facts are required for the equipment of a "bear." The general public do not dare to sell what they do not have. This is what the "bear" is constantly doing, and what he does with the greatest assiduity and persistence when he sees any tendency on the part of the outside "bulls"—the unassorted multitude whose orders come in by telegraph from all parts of the country—to sell their holdings or to get into a state of hesitation and confusion. Undoubtedly they tell a great many lies at such times, and resort to a great many stratagems which could not be justified in a court of law or in the forum of morals. When President Garfield had chills they spread reports that he could not live forty-eight hours—they went so far as to name the principal members of Mr. Arthur's Cabinet. Of course, no tale was too absurd or too inconsequential to be spread abroad to the injury of the small holders of stocks in Chicago, Mobile, and Indianapolis. But people who speculate in stocks seldom take a sober point of view. One bugbear is about as good as another for them, and this the "bears" know perfectly well.

The "bears" have a great advantage in being collected together in one place, while their antagonists are scattered over a continent and unable to take any joint action, even if they were capable in any case of forming a common opinion. The "bears" are nearly all to be found within a few blocks of each other. They can initiate a combined selling movement on the shortest possible notice. The chapter of accidents is always in their favor, and it makes little difference what kind of an accident happens provided it is large enough to fix public attention keenly. The favorite accidents are short crops—a belief in short crops without the reality will answer just as well—railroad wars, fires, floods, pestilence, and Democratic funding bills, to which has now been added any unfavorable symptom regarding the health of the President. When the President's condition was found to be hopeful the decline in stocks was arrested, and when the doctors pronounced him out of immediate danger an upward turn commenced. Then it was discovered that the "bears" had rather overdone the thing, and had sold more shares than they could deliver or could buy in at the low prices they had established. Borrowed stocks have to be returned at some time, and it is best to get hold of them before the frightened multitude recover their senses and reappear in the market as buyers. A "sharp rally in prices" after a tedious decline usually signifies that the "bears" are trying to "cover their shorts"; but no "bear" was ever known to acknowledge that he was "short" of anything on a rising market.

Probably no demonstration and no amount of bitter experience will suffice to warn the public away from the stock market, or teach them to buy no more than they can pay for in cash. All the lucky ventures are noised about in the neighborhood of the successful speculator, while the losses are concealed as much as possible. Consequently there is always a troop of victims coming forward for the bears, who lie in wait for them and watch the chapter of accidents which are sure to come sooner or later. This time it was President Garfield's chill; the next time it may be the appearance of the chinch-bug or the grasshopper, an early frost, too much rain or too little, an outbreak of yellow fever, some tightening of the money market, some sinister legislation at Washington, the death or failure of some "Wall-Street magnate," another chill of the President—anything which shall lead the scattered buyers of stocks "on margin" to suspect each other of a design to sell out. Stampedes like that of last week occur two or three times every year with as much regularity as any of the dispensations of nature which are usually attributed to chance. They are as sure to come as a particular trump is sure to be turned up in a given number of hands at whist. When they do come there is a distribution of property which defies all mathematical and moral laws, and the only thing certain is that Wall Street makes a living out of it without raising any crops of recognized value in the world's traffic.

THE DYNAMITE PROBLEM.

THE suggestions of the English newspapers with regard to the shipment of infernal machines from this country make it clear that, while there is a general desire among them that our Government should "do its duty," there is no general agreement even in England as to what that duty is. One newspaper suggests that the course pursued by England with regard to Herr Most be followed; but this is impossible, for several reasons. Herr Most, the editor of the *Freiheit*, a radical paper published in London, was indicted for articles published by him inciting to the murder of the Czar, under an English statute which provides that any one who "shall solicit, encourage, persuade, or endeavor to persuade, or shall propose to any person to murder any other person, . . . shall be guilty of a misdemeanor." Now, assuming that O'Donovan Rossa, or any other Irish agitator here, has been engaged in publishing articles inciting to murder, there is no statute of the United States under which similar proceedings can be taken. It does not seem to be understood in England that crimes against life and property in this country come under State and not Federal jurisdiction, except in an extremely limited number of cases. In the present instance the only crime against the United States which has been committed is a violation of the statutes regulating the transportation of explosives, and even these statutes, though they can fortunately be resorted to, were not passed for the purpose of covering the shipment of infernal machines destined for use against the property or lives of subjects of a friendly nation.

The British Government some time ago addressed remonstrances to our Government on the subject of the Fenian newspapers and the "Skirmishing Fund," to which, according to Sir William Harcourt, no reply has yet been returned. The delay in replying has probably been partly caused by the difficulty of knowing what reply to make. Publications in New York urging Irishmen to subscribe to a fund to be spent in the perpetration of outrages in England are not, as we have said, offences against any United States law, and while they may be punishable under State laws, it is to the last degree improbable that any prosecution of the Fenian newspapers by the State could be carried through effectively. The current of public feeling would be decidedly against it, and it would, as a practical matter, be almost impossible to impanel a jury that would agree upon a verdict. Nor do we think that such a prosecution, even if possible, would be advisable, either in the interests of England or of this country. People who are really bent on violence for some even mistaken political end will not be stopped by the incarceration of an overzealous editor or two. The sentence of Herr Most, for instance, while it may for the time being convince other Nihilistic agitators that it will not do to publish in England articles suggesting assassination, will hardly have any further effect. No one can really believe that such men as Hartmann, who is an outlaw with a price upon his head and no interest in life save the destruction of the Russian autocracy, will be deterred from another attempt upon the life of the Czar by the fact that Herr Most is no longer publishing articles inciting to murder. In the same way, if all the Fenian newspapers were gagged to-morrow, it would not prevent any desperate man or combination of men who desired to do so from conspiring the destruction of life and property in England on a vast scale. In the present condition of the law it is, in fact, rather an advantage to England that the publications should continue. Incendiary publications, by the very publicity they give to the facts and intentions of the conspirators, often furnish a warning which makes it possible to prevent the actual perpetration of the crime intended.

This brings us to the question, Can anything be done to prevent the use of our territory as a basis of operations of this sort against the lives and property of a friendly nation? And here it is important to observe at the outset that the export of infernal machines is not an ordinary established branch of commerce, in which any man may engage as he would in the export of wheat or iron, or even of arms and ammunition. No man can possibly undertake to have infernal machines manufactured and exported without there being a criminal design against life or property somewhere. In the ordinary case of hostile military expeditions against foreign governments no harm to innocent persons is contemplated. The horror which dynamite conspiracies inspire comes partly from the fact that the cold-blooded murder of the very class exempted from the perils of war—women and children, and persons in no way involved in the quarrel—is one of their ordinary and necessary incidents, while the conspirators themselves, instead of having to take their lives in their hands like fighting men, are able to carry on their murderous work in complete security.

Now, the theory of the English Government with regard to the "Skirmishing Fund" is, that it is money collected by an Irish organization in this country for the avowed and published object of being used, by means of this kind, to destroy life and property on a large scale in England. The machines are said to have been manufactured openly in Illinois. Taking these facts as susceptible of proof, it would seem difficult to distinguish the case in principle from the use of our territory for the purpose of fitting out expeditions or ships against the subjects and property of a friendly country. The laws of the United States, which provide a severe punishment against "every person" who in the United States "begins, or sets on foot, or provides or prepares the means for any military expedition or *enterprise* to be carried on from thence" against a friendly nation, are, as we insisted all through the *Alabama* case, not mere municipal enactments, but rest upon and declare a fundamental principle of international law, that every nation must prevent as far as possible the use of its territory as a basis of hostile operations against its neighbors. This duty is just as obligatory in time of peace as in time of war.

A foreign government may, then, well urge upon us that Congress should extend to the case of dynamite plots the principle which underlies our neutrality acts. At the time these statutes were passed the only important form of hostile proceedings against a foreign nation was of a military character. Modern science has furnished conspirators with means of attack equally hostile, but at the same time non-military. It is perfectly true, as one of the Irish agitators has recently said, that with this means neither troops, nor ships, nor guns are needed to strike blows at England of a very serious character. To deal with this new kind of secret and criminal warfare, why should not the laws of this country provide (exactly as they now do in the case of war vessels and military "enterprises"), on sufficient proof of such facts as are now alleged, that the persons implicated should be severely punished for the breach of international law involved? Why should they not, if there is any doubt of the facts, be made to give heavy bonds that a breach of international law shall not be committed? The nature and extent of the penalties to be imposed are a matter of detail; but it is much to be hoped that some common agreement can be speedily arrived at as to the principles which ought to govern the settlement of this difficult international problem.

POLICE TYPES.

Mr C. E. Howard Vincent, Director of Criminal Investigations in London, has recently published a police code or manual which has attracted some attention in England. It is made up in part of maxims for the guidance of policemen, and from Mr. Vincent's position it must be inferred that they represent ideas on the subject of the improvement of the police shown by his experience to be important. When he lays it down, for instance, that "there is nothing a police officer should more studiously avoid than argument: it rarely convinces any one, and much irritates persons smarting under some real or imaginary grievance," we cannot but conclude that the London policeman has a tendency to resort to argument, and to rely upon a display of reasoning as a means of preserving the peace or preventing offences against life and property which needs checking. On the other hand, when we find that the author of the code thinks it advisable to point out to members of the force that "a civil question will frequently elicit a courteous answer and valuable information," it seems as if such a hint must have been suggested by a practice among policemen of attempting to elicit information by means of rude and haughty enquiries—perhaps connected with their irritating disposition to indulge in argument. He strongly insists that "a constable must speak the truth at all times and under all circumstances"; and the suggestion that "a police officer who keeps his own counsel and does not gossip or divulge confidences will have plenty of informers," points to a belief in Mr. Vincent's mind that policemen in London have fallen into the common error of imagining that gossip on a large scale is the best source of information as to the doings and designs of one's neighbors. "Foreigners," he continues, "should be invariably treated by the police with the utmost consideration and respect," though we suppose this in practice he would confine to foreigners not engaged in criminal occupations; for why a foreigner caught in the act of picking a pocket or breaking into a house should be treated with any more consideration and respect than a native-born criminal engaged in a similar violation of the law, it is hard to see.

Some of the maxims are not altogether as simple as could be wished, considering that they are intended for the guidance of what the author assumes to be a not over-intelligent class, as, for instance, the following: "Letters from any doubtful source should be invariably replied to through the local police, begging that the writer may be acquainted if they think it desirable, as instances are not wanting of police knowledge and intentions being tested by confederates pretending to have been duped." This clearly conveys some important advice—but what is it? "Every minute spent in education is a sound investment, one certain to bear fruit, sooner or later, besides giving constant personal satisfaction," says Mr. Vincent; but no amount of education, however much fruit it might bear, or however much personal satisfaction it might give, would enable the most intelligent policeman to be perfectly certain what course ought to be pursued to comply with the maxim just quoted. "When once the mind of an officer is made up to arrest a delinquent he must not be asked any question without a strict caution that the answer may be used against him," seems to be a caution addressed to the delinquent rather than to the officer. But these obscurities are mere peculiarities of style. Almost all the maxims are not merely intelligible, but express truths which experience must have shown to be of the utmost consequence.

Although a good many of the maxims are directed to the moral improvement of the police, the defects which have suggested most of them appear to be of an intellectual kind, and in this Mr. Vincent's experience confirms in an interesting way the view of the police taken by the most noted Anglo-Saxon writers who have dealt with the subject from the time of Shakspere down to that of the "Pirates of Penzance." From the advice given by Mr. Vincent it would seem as if the modern London policeman must retain a good many of the intellectual traits which English constables had in the time of *Dogberry* and *Verges*, though, as he treats the subject professionally, he naturally deals with it in a somewhat more serious spirit than the author of "Much Ado about Nothing." Many of the maxims are, indeed, nearly the reverse of those laid down by *Dogberry*. Others, again, seem to have been almost taken from the Shaksperian manual. *Dogberry's* warning, for instance, that the watch "are to meddle with none but the prince's subjects," seems closely analogous to Mr. Vincent's direction that "foreigners should be invariably treated by the police with the utmost consideration and respect," while his warning against gossip closely resembles *Dogberry's* advice: "You shall also make no noise in the streets; for for the watch to babble and to talk is most tolerable and not to be endured." A more modern type of the policeman is to be found in the character of Daniel Grummer in 'Pickwick,' the constable who arrests Mr. Pickwick and his friend Mr. Tupman, on a charge that they are about to engage in a duel, and brings them before George Nupkins, Esq., the Mayor of Ipswich; and his intellectual and moral qualities, as represented by Dickens in the celebrated scene of the examination before the Mayor, so closely resemble those which suggested their police scenes and manuals respectively to Shakspere and Mr. Howard Vincent, that we cannot help feeling that the type is a permanent one.

In this country the policeman has not figured much in literature, but in the press, of course, he is a constantly-appearing type, and a type which in crossing the Atlantic has evidently undergone considerable modifications. While he has retained many of the intellectual traits of the old-fashioned constable, just as the coroner in New York seems to resemble closely his predecessor of three hundred years ago, he has added to them some moral peculiarities of a rather startling kind. In New York, for instance, the popular idea of the policeman is that, while his nominal duty is to preserve the peace and prevent crime, his propensities are at bottom criminal. His well-recognized practice of "clubbing" the inoffensive citizen, his invariable absence from the scene of the perpetration of any crime, his fondness for subsequently fastening upon perfectly innocent people as the perpetrators, his practice of giving information in advance to criminals whenever it is the intention of his superiors to break up lotteries or other illegal enterprises—all these traits, which go to make up the popular idea of the policemen in New York, show that the type has become considerably modified or developed in the atmosphere of free institutions. No one can deny that there is a considerable basis of fact for the popular impression prevailing on the subject. Such incidents in New York life as the career of Captain Williams, who, so far as the public could judge, worked his way up to a position at the head of an independent city department by acts of unprovoked violence; or the murder of Mrs. Hull, which was followed by such extraordinary activity on the part of those engaged in the detection of the criminal that the surviving inmates of her house were obliged to form themselves into an association for mutual protection against the police—could not but contribute to create the belief that the policeman, in the

guise of a preserver of the peace, is really an enemy of society, who lives by violence, perjury, and plunder. Nor is this view by any means confined to New York. We find the same type strongly delineated by the reporters of Chicago, St. Louis, and Cincinnati. Some years since an investigation was set on foot in Cincinnati into the discipline and organization of the police in that city, which led to the discovery, among other curious facts, that one of the best-known officers of the force was in the habit of keeping his valuables in the safe of a noted receiver of stolen goods. The type is not local—it is a national police type, and it will be seen that it presents a much more interesting field for study than the old type of constable ever did. It may be said, of course, that it is a burlesque type, that the bold, bad policeman of our newspapers bears the same relation to the real policeman that the gendarmes of opéra bouffe do to real gendarmes. But then the same things may be said of our old friends *Dogberry* and *Verges* or Daniel Grummer. Even a burlesque type cannot exist without some facts to base it on.

THE IRISH LAND BILL IN COMMITTEE.

LONDON, July 16, 1881.

IT is now more than two months since the House of Commons went into Committee on the Irish Land Bill, and nearly the whole of that time has been devoted to it and to it alone. One by one the other measures which the Government had brought in have been thrown overboard. The time allotted to private members for pressing forward their bills and for raising questions to be debated has been altogether absorbed; for the last three weeks no subject whatever but the Land Bill has, during the five working days of the week, been dealt with. Any one may see that some causes beyond the mere length and complexity of the measure must have led to this unusual expenditure of time. Such, in fact, has been the case. The bill has excited the dislike of three parties in the country and the House of Commons, and these three parties have freely used the opportunities which the very cumbrous and indulgent procedure of that assembly gives them to exercise a criticism which in at least one instance has become positive obstruction. The Tory party are, of course, heartily hostile to the bill, and if they had followed their instincts would have opposed it tooth and nail, not only because they sympathize with the Irish landlords whose rights are supposed to be diminished, but also, and still more, because they regard it as laying down dangerous principles which strike at the rights of property, at freedom of contract, at the position of the land-owning class altogether—principles whose application in Ireland will, as they think, furnish a precedent for their application in England. That they have not ventured to meet it with a direct negative has been due partly to their feeling themselves in a decided minority, partly to the attitude of the Tory members for Ulster, who dare not offend their tenant-farmer constituents, but mainly to the alarm inspired by the disordered state of Ireland, where the outrages of last winter would reappear in greater numbers and violence were this bill to be lost. Hence the Tory leaders have confined themselves to fair criticism, and, while declaring their rooted objections to the principles of the bill, have admitted that under the circumstances it, or something like it, must be suffered to pass. They have not, however, been able to keep in check the more restless members of their own party. Several of these have persisted in discussing some clauses at inordinate length. They have proposed a multitude of small amendments calculated to cut it down and maim it, and in the discussion of each of these have introduced the same arguments, the chief of which is an *argumentum ad hominem* against Mr. Gladstone for doing in 1881 what he had condemned in 1870. Although the House of Commons appears to an observer wonderfully tolerant of prolixity and repetition, the behavior of these Tory free lances has frequently provoked the majority into hostile demonstrations, and the consequence has been a lamentable amount of interruption, clamor, and exasperation on both sides. But the assailants have persisted, probably in the hope that they might so long delay the progress of the bill as to give the House of Lords a better pretext for rejecting it on the ground that in the middle of August they would not have time to discuss it properly.

The second set of opponents have been a section of the Liberal party itself, namely, some of the so-called Whigs who belong either by birth or by sympathy to the territorial gentry, and whose sentiments are substantially the same upon land questions as those of the Tories, although the ties of party make it impossible for them to oppose a Government bill outright. They are not yet very numerous, perhaps hardly more than from twenty to thirty, but the fact that they are reckoned as Liberals gives them an influence exceeding their numbers. They object to the concession to the tenants of a free right of sale of their holdings, and also to the provisions enabling the Land Court which the bill constitutes to fix a fair rent as between landlord and tenant; and upon several occasions they and the Tory party have combined against the Ministry to limit the operation of the bill. Their opposition, such as it has been, has been fairly given; that is to say, it is the result of their honest convictions, and it has never been of an obstructive character. But of course it has had the effect of encouraging the Conservative party, and has thus caused further delay in the progress of the measure.

Lastly come the Irish Home-Rule party, or, rather, that more extreme section of them which accepts the leadership of Mr. Parnell. When the bill first appeared they, with three or four exceptions, pronounced it inadequate, abstained from voting for it on the second reading, and declared that it would not be of much service unless it were considerably amended in a sense favorable to the tenant. Their own favorite scheme was to turn the Irish peasant tenants into proprietors by buying out the landlords. But as this would have required a vast expenditure of public money, and would have either involved injustice to the landlords if they had been compelled to accept eighteen or twenty years' purchase of their estates, or have proved too favorable to them if they had been allowed to sell at a price to be fixed by arbitration (since in arbitrations the private vender always comes off best and the public worst), it was summarily rejected by the Government, and has been seldom mentioned in recent discussions. Hence this Parnellite party, looking on the bill as a perpetuation of landlordism, although in a modified form, do not relish it; while some, at least, among them seem to think that, since nothing less than complete legislative independence will remedy the evils of Ireland, palliatives are positively injurious, and that it is well to keep up as much irritation as possible in the hope of accelerating the ultimate separation of Ireland from Great Britain. Hence it may be conjectured that the extreme men would, if they had simply obeyed their own impulses, have denounced the bill altogether and tried to defeat it. But as the general feeling in Ireland is that it will very much improve the tenant's position, they could not take that course; and through the earlier points of the discussion they refrained from all obstruction, complained of it when practised by those Tory raiders to whom I have already referred, and were content with suggesting a series of amendments which it was known that the Government would not accept.

However, when that part of the bill was reached which empowered the Land Commissioners to give assistance to emigration by loans of money, their tactics immediately changed. Emigration has for years past been the only remedy for Irish ills which land-owners would consent to propound, and as their object is to get rid of the smaller tenants and consolidate farms, it commends itself naturally to them. It is also the only one of all the suggested remedies which the extreme National Party has consistently rejected. In their view emigration is unnecessary, because there is already abundance of land in Ireland which might be reclaimed and made available for the surplus population of the overcrowded counties, and it is pernicious, because it would still further reduce the nation and lay it more completely at the mercy of England. The feeling of the priesthood runs strongly in the same direction; it rests both on their class interest, which desires not to lose those whose payments support the minister of worship, and on the religious fear for the soul of the emigrant, who is much more likely to lapse into Protestantism or indifference when severed from his friends, his relatives, and his early associations in some foreign country. Even those, therefore, who hold that the miserable peasantry of counties like Mayo and Kerry, supporting a half-starved life on patches of land less than two acres in size, would be infinitely better off beyond the Atlantic, must admit that there are some grounds for the unwillingness of the Nationalist leaders to see their countrymen carried away in larger masses from the old soil. Accordingly, Mr. Parnell and his friends opposed the emigration clause in a determined spirit, and when it became plain that they were in a small minority they began to obstruct it in the usual way—the way practised so long on the Coercion bill at the beginning of the session—by handing in amendment after amendment, by making long speeches full of repetitions, and by repeated motions to report progress, threatening the Government that unless the clause was withdrawn this course would be persisted in. However, the Government, even if it had been disposed to yield, could not venture to do so, because a section of the Tory party declared that if the clause was withdrawn they would obstruct the rest of the bill. So things went on for three days, the resistance being maintained by about twenty Irish members, while the governmental majority became more and more incensed at the loss of time over a matter of such comparatively small importance and at the unbecoming language used toward Mr. Gladstone. On the third evening preparations were made for an all-night's sitting to force the clause through, when in the small hours of the morning, owing partly to a speech of Mr. Gladstone—such a speech as he only can make, an outburst of scorching indignation

which shook the House of Commons like an earthquake—partly to the rumors that the Speaker was to be called in and several of the obstructing members suspended, the obstruction suddenly collapsed, and the clause was passed.

As the Government have announced that they do not propose to pay out more than £200,000 in these emigration loans, the whole matter is really of small consequence. I mention it chiefly to indicate how many difficulties this scheme of land reform has to encounter from different quarters, and how easy it is under our parliamentary forms for the smallest minority to check the action of a large and united majority. It is an unfortunate result of such struggles that they renew and intensify the bitterness of feeling between the English Liberal party, who came into power with plenty of good-will toward Ireland, and have been, since they came in, almost incessantly occupied with plans for promoting her welfare, and the Irish Nationalists. True indeed it is that the Irish members who assail Mr. Gladstone with so much bitterness are only a minority even among the Home-Rule party, and a small minority out of the whole representatives of Ireland. But as they assume the right to speak for the whole country, as they were supported by popular demonstrations there, and as no one doubts that their numbers would be largely reinforced if a general election were now to take place, they are commonly taken to be the exponents of Irish feeling; and moderate men, both Conservatives and Liberals, are inclined to despair of the good effects of this bill, or of any bill, in mollifying the Irish people, and bringing about healthier and kindlier relations between the two islands. What, they say, can be done with people who, just when you are sacrificing for their good all the time of your Parliament, which was badly wanted for measures of English and Scotch reform; just when you are abandoning, in deference to their wishes, your cherished principles of legislation and those doctrines of political economy which you believe to be the only sound basis of policy, tell you that they hate you as heartily as ever, and look upon these concessions as only a basis for further agitation, while they continue to do all in their power to stop your parliamentary machine and render its debates ridiculous? Is there any use trying to conciliate such people? Sentiments like these, although it would be easy to show that they are not fair to the Irish people as a whole, and that their indulgence would only aggravate our present misfortunes, are far from unnatural. It is only those who have both studied the history of Ireland and learned on the spot to understand her present condition that can be expected to make all the requisite allowances, and to perceive that, after all, things are better now than they were thirty or fifty years ago.

Such persons are, of course, very few—too few to stem the angry reaction against Ireland which may be looked for if parliamentary obstruction should be resumed next session, or if agrarian outrages should continue after the Land Bill has been passed. In the meantime, Mr. Gladstone's control over his party is sufficient to prevent the attitude of the extreme Parnellite section from prejudicing the prospects of the bill, not to add that the majority of the Irish members, including moderate Home-Rulers as well as Ulster Liberals and Ulster Tories, are substantially in accord with the English Liberals on the subject. There is now a very general expectation that the bill will not only pass, but pass with comparatively few and unimportant changes. The House of Lords, of course, dislike it, but they are not in a fighting humor. Everybody is tired of the business; everybody feels that the four months already spent on the bill ought not to be thrown away; everybody is anxious to purchase at least a respite from Irish topics. Of course the Lords will insert some amendments, if only for the sake of asserting their rights; but, unless these amendments seriously damage the bill, they will probably be accepted for the sake of peace.

It need hardly be said how deep and universal was the sympathy felt here when the news of the attempt on Mr. Garfield's life arrived, nor with how keen a pleasure the intelligence of his progress toward recovery has been received. It was with a sense of profound discouragement that we saw the crimes which had been supposed to be peculiar to despotic monarchies reproducing themselves in free countries. Even when such a deed proceeds from a disordered brain, its effect as an example is pernicious; the only thing which can check that effect is the failure of the attempted crime, or the fact that even when the victim falls, the result which the murderer desires is not attained. But one cannot help feeling how slight is the influence of such checks, and how great the advantage which modern science on the one hand, and the simplicity of manners in countries like America and England on the other hand, give to an assassin reckless of his own life. Y.

RUBINSTEIN'S "DEMON."

LONDON, July, 1881.

THE production of Rubinstein's opera, "Il Demonio," at the Royal Italian Opera, must perhaps be put down as the most significant event of this year's musical season in London. Announcements that one of Rubinstein's operas would be brought out in London had got into the papers in previous years, but they always proved to be mere embellishments of the preliminary programmes. The friends of the great pianist could hardly regret this, for they felt that the time had not yet come when his dramatic efforts would be appreciated by English audiences. Even in Germany his operas have so far met with indifferent success. The best of them, "Die Maccabäer," failed at Munich and at Vienna, to the great astonishment of the Berliners, who regard it as one of the best works now on the stage, and demand frequent repetitions of it. But his "Feramors" failed also at Berlin to give satisfaction, and the only city, besides St. Petersburg, which admires all his operas is Hamburg, where "The Demon" and "Nero" were first introduced to the Germans by the enterprising director Pollini. Why the first of these was preferred to the second for London I do not know. "The Maccabees" would have been better, at least from a dramatic point of view, than either of them, but was excluded by the old English prejudice against introducing Biblical stories on the stage.

It has always been the fate of composers who were at the same time good pianists to have their performances on the piano-forte appreciated much sooner than their original works. Experience has therefore taught them to raise a favorable wind for these by giving a series of concerts at the time of their first production in any city. The concerts given by Rubinstein before and between the first nights of his opera were attended by greater success and enthusiasm than at any previous appearance of his in London, so that it would hardly have required his personal leadership on the first night to ensure "The Demon" a success characterized on all sides as sensational. But arriving in London in time to hear the third performance, I found the house hardly more than half filled. This will doubtless seal the fate not only of "The Demon," but of Rubinstein's operas in general, for England for some years to come; and yet it can hardly be said that the verdict of the English people has been unfavorable. The Royal Italian Opera of London seems to be still what Italian opera used to be not so many years ago all over the world—a sort of fashionable entertainment, to which people of means go principally to see each other and to show that they own a stall. The absurdly high prices and ridiculous regulation of obligatory dress-suits ensure a brilliant spectacle in the house, but they keep the main body of musical people from attending a new work, or at least from attending it often enough to get so familiar with it as to love it. Until the Londoners come to their senses in this and some other respects, their verdict—aside from that of the critics—will have as little influence in determining the ultimate fate of an opera as would the verdict of a lot of Sandwich-Islanders.

In saying this I do not mean to imply that the fault in this case lies entirely with the audience. As usual, the libretto, although not as positively silly as most of them are, lacks that dramatic interest which is necessary to keep a serious opera afloat until people have heard its music often enough to like it for its own sake. A summary of the plot in a few lines will show the truth of this statement. The opera opens with a loud and stormy introduction, foreboding the thunder and lightning upon which the curtain rises. Invisible choruses of good and evil spirits, choruses of the winds, the waters, and the rocks, are heard behind the scenes, while the *Demon* slowly crosses the stage, cursing the world and all it contains. The *Angel of Light* appears and asks him to cease to curse, and return to heaven's true, boundless love; but in vain. When they have disappeared a lot of maidens, playmates of *Tamara*, the daughter of *Prince Gudal*, come on the stage singing a most exquisite chorus. Their mistress soon follows them, warbling like an Italian prima donna. The *Demon* reappears and, (struck by *Tamara's* beauty), invisible to the others, confesses to her his love and bids her become his queen, to her great terror and dismay, for she is engaged to *Prince Sinodal*, who is on the way to meet her, and whose arrival is expected every hour. The *Demon* resolves to remove this obstacle to his love. We discover his rival in the next scene encamped in a wild, rocky pass in the Caucasus Mountains, with his servants and followers. As it is too late and the horses are too tired to proceed to the end of the journey that evening, a quick messenger is despatched to announce their arrival on the following morning. During the night, however, they are attacked by a band of Tartars and all slain, with the exception of *Sinodal's* old servant, who escapes. The second act takes us among the festive preparations for the impending wedding in *Gudal's* castle. The messenger arrives to tell of the bridegroom's speedy arrival, but hardly have these joyous tidings been heard and celebrated by a dance when the old servant's arrival to report the prince's death changes the joyous scene into one of grief. *Tamara*, to whom the *Demon* has again appeared, offering his love and kingdom, begs to be permitted

to enter a cloister, to which her father, after some resistance, consents. War is then declared against the murderous band, the scene thus ending in grand style with a warriors' chorus. The interior of the cloister in which *Tamara* has sought refuge furnishes the scenery for the third and last act. The old servant, now janitor, strikes rhythmically on a gong, which causes a wag in the gallery to applaud him as a soloist. Enter the *Demon* and meets the *Angel*, who in vain attempts to make him quit the premises. Now follows a long scene and a series of lovely duets between *Tamara* and her tempter. Unable any longer to resist his advances, she finally yields to his kisses and embraces; but at this moment the ghost of *Sinodal* and the *Angel* appear on the scene. *Tamara* frees herself from the *Demon* and seeks refuge in the arms of the *Angel*, but suddenly falls dead to the ground. The *Demon's* efforts to gain possession of her body are frustrated by the *Angel*, the nunnery falls into ruins, and in a final scene we see *Tamara* carried on high by a chorus of Angels.

It is evident that such a slender and simple plot is better suited for a secular oratorio than an opera. No real dramatic interest attaches to any of the characters. The *Demon* is a peculiar compound of *Mephistopheles* and *Faust*, of man and devil, spirit of evil and sentimental tenor, and the *Angel* is a mere *deus ex machinâ;* while the prince and princess have often appeared on the stage before in very much the same rôles. The beautiful voices and admirable acting of Mme. Albani, Mme. Trebelli, and M. Lassalle could not supply the deficiency just pointed out; but they left the conviction that with a better plot the opera would have at once commanded that popularity which one day will be accorded to it on account of its beautiful music. As in all other operas of Rubinstein's, the choruses are the best portions, a real jewel among them being that of the maidens in the first scene, "When the sun sets o'er the mountains." Unfortunately, it was just the choruses to which least justice was done in the rendering. It is one of the most curious things about the musical life of the English that while they are so fond of oratorio, and provide such fine choruses for that form of art, their operatic choruses hardly ever can be made to sing in as perfect tune or time as they do on the Continent. The orchestra was better, though by no means up to the mark of a royal German orchestra as far as expression and spirited playing are concerned. The scenery left nothing to desire in appearance, but was managed in a most clumsy fashion whenever a change was to be effected.

It will be interesting to watch the further progress of Rubinstein's operas in England, as well as in Germany. It can be said of most of them that, although they do not contain dramatic life enough to keep a permanent place on the stage, they yet deserve to be heard in every city until some new composer appears and supplies something better; after which the musical portion of them will perhaps be more frequently heard in concert-halls than in theatres. Rubinstein is greatly diminishing his own chances of success by clinging to old operatic forms and ways, and refusing to submit to the *Zeitgeist*. For it is amusing and instructive to observe how even those critics who ostensibly condemn the modern reforms of the opera, nevertheless in their criticisms unconsciously adopt the modern standard, and praise or condemn a work in its details according as it comes up to that standard or not.

Correspondence.

"PATRICK HENRY AS A PROPHET."

To the Editor of The Nation:

Sir: Patrick Henry's utterance in the Virginia Convention of 1788, upon the constitutional power of Congress to abolish slavery, was brought to the notice of public men and others in the autumn of 1862. The late Mr. George Livermore, of Cambridge, then printed it in the first of five editions of his valuable work, entitled 'An Historical Research respecting the Opinions of the Founders of the Republic on Negroes as Slaves, as Citizens, and as Soldiers. Read before the Massachusetts Historical Society, August 14, 1862.'

It may not be amiss to add that Senator Sumner bore testimony to Lincoln's interest in Mr. Livermore's publication, especially while he was preparing the final proclamation of emancipation, and that the pen with which that instrument was signed was presented to Mr. Livermore by the President.

G. H. Whittemore.

Cambridge, Mass., July 26, 1881.

THE PEABODY LIBRARY.

To the Editor of The Nation:

Sir: The "falling-off in circulation at the Peabody Library in Baltimore," alluded to in your paper of the 14th instant, need not "exercise the minds of the librarians" of that fossil institution in the least. In the first place, the "Peabody" is not a circulating library, for no books are removed from the building. Secondly, the system of card-catalogues and other formalities deter many persons from the use of its books, except upon urgent need of special information unattainable elsewhere. Thirdly, the library closes at 9 P.M. in winter and 6 P.M. in summer, utterly precluding the mechanic or business man from practical benefit from its rich stores of learning.

For these reasons, and on account of its too-fashionable and almost inaccessible situation, the Peabody has long been relegated to students, school-teachers, and persons of infinite leisure. In conclusion, it may be said that the Peabody is closed most religiously upon the Sabbath and upon all holidays—in fact, whenever the working class might use it if it were open.

Believing that the munificent donor of this library intended the working classes particularly to be benefited by his gift, and unwilling that they should bear any part in the blame for "loss in circulation," the above note has been hastily penned for your kind consideration.

Respectfully yours, W. M. C.

Baltimore, July 30, 1881.

DIVORCE STATISTICS.

To the Editor of The Nation:

Sir: The article in the *International Review* for August on "The Divorce Question" contains some errors that deserve attention. Those to which I refer are on pp. 141–143. They are all the more noticeable because made in an attempt on the part of the writer to show that "the so-called statistics which have been given to us of late are often misleading, and the moral which some persons have attempted to draw from them is consequently unwarranted and false." Let me correct a few of the mistakes in this attempt.

The writer should have said that there was one divorced *person*, not one divorce, "to every 679 of the population" in Maine in 1878, and not "1880," as he has it. There was one divorce to every 1,357 inhabitants.

Then, his opinion that the *majority* of the 478 cases were, "in all probability," brought by temporary residents coming to Maine from other States for the purpose is incredible. New Hampshire that same year had one divorce to every 1,439 inhabitants. But if, as this writer declares on the next page, foreign parties are practically excluded from the courts of that State, we must doubt the fact he asserts of Maine.

In a note the writer speaks of the swollen social and matrimonial impurity of France as a cause of divorce in the Revolution, either as a quotation from Bishop or on his authority [Bishop, vol. i. sec. 44, is his reference]. An examination of the latest edition of Bishop, issued probably since Mr. W. H. Phillips wrote his article, shows that vol. i. sec. 44 does not contain the citation, and the gentleman who writes me of it thinks it is left out of the book. The statement in the third foot-note that "general jurisdiction to grant divorces in the discretion of the judges is conferred upon the courts of the State"—*i.e.*, Connecticut—is also wrong. The law granting this power—the notorious "omnibus clause"—was repealed in 1878 and has never been restored. Its repeal reduced the divorces of 1879 to 316 from 401 in the year 1878. By the way, a sentence in the new edition of Bishop, vol. i. p. 22, *implies*, at least, that this learned writer also is in error on the point of the repeal of that clause in the divorce law of Connecticut.

The writer quotes President Dwight, who estimated that there was in Connecticut in 1816 one divorce "out of every hundred pairs," and goes on to tell what ought to be inferred from "these statistics"—of Dr. Dwight, I suppose—and from the supposition that "divorce, owing to liberal laws, had increased at the rate represented by Mr. Dike." The fact on this inference, he thinks, should be that "in 1880, in Connecticut, one in less than every twenty-five married pairs should have been divorced!"

Now, President Dwight's statement cannot be explained except by assuming that he meant pairs *married within the period under consideration*—that is, the divorces of the one or five years are compared with the marriages contracted in the same time. That this is the intention of Dr. Dwight can hardly be doubted. Even then, with anything like a fair marriage-rate of 10 or 12 marriages in those days to the 1,000 inhabitants—it is less now—it is hard to reconcile the statements of Dr. Dwight. It is certain, however, that Mr. Phillips is quite at fault in his reasoning, either from faulty premises or other causes. The ratio of divorces to marriages for many years before 1879 was 1 to 10.4.

The assertion on page 143, in a note, that "divorce is no more frequent among the lower classes than it is among the higher," is not true of New England, unless in exceptional localities. It probably is increasing among the higher classes of society in some quarters, especially in Connecticut, but not enough to justify the broad assertion of the writer. Whatever, then, the merits of the article in the discussion of its main question, it is not a success in showing how "the so-called statistics" are "misleading."

As considerable has been said by others than Mr. Phillips—I believe the Albany *Law Journal* is among the number—about the responsibility of

New York and other States for divorces in New England, let me add a further word upon the point. The proof of this does not appear in the statistics. The two western counties of Connecticut—even Fairfield, lying near New York City—have only a slightly larger divorce-rate than the State as a whole, and are actually better than Windham and Tolland. Berkshire County is even better than the rest of Massachusetts; and when a restriction was placed upon foreign parties in Vermont, the western counties showed no more improvement than the eastern. The lines of travel have undoubtedly sent a few such parties into the heart of New England, but not many. Probably not over ten or fifteen per cent. of the 2,113 divorces in New England in 1878 were of persons who came here for the purpose. For every one coming East probably two or more go West; more, however, to avoid publicity than to secure the end more easily.

I will say, too, that the edition of my lecture, to which much reference has been made, that appears in the 'Boston Monday Lectures for 1880–1,' is the only one free from typographical errors, and with whose statements all reports of it should be compared.—Respectfully yours,

SAMUEL W. DIKE.

ROYALTON, Vt., July 29, 1881.

"THE ISLE OF PEACE."

TO THE EDITOR OF THE NATION:

SIR: In your notice of the pleasant paper on Newport, in the August *Scribner*, you suggest that if the Indian name for the island of Rhode Island represents an abstract conception like "Isle of Peace," it is "a departure from the habitual formation of Algonkin place-names." The conception is, in fact, modern—and not due to the "fine occasional instinct" of the Indians. In "Whatcheer; or Roger Williams in Banishment," a poem by Chief-Justice Durfee, of Tiverton, R. I., published in 1832, "Aquidnay" is called "The Isle of Peace." In his notes the author says:

"*Aquidnay* is the Indian name for Rhode-Island. . . . *Aquene* signified in the Narraganset dialect 'peace.' *It is possible* [the italics are mine] that *Aquetnet*, as the name of this island has been sometimes written, may be its derivative: *et* is a termination usually denoting place. But whether this be or not its etymology, the designation is not inapplicable, since the Island must have been a place of security against the roving Maquas, Pequots, Tarrateens, &c."

What seemed "possible" to Judge Durfee became certain to the Rev. Charles T. Brooks, who, in his graceful poem "Aquidneck"—which every visitor to Newport should know by heart—notes that "Aquidneck, the old Indian name of this island, meant 'the Isle of Peace.'"

Now, *Aquedne* (or *Aquednay*) in the Narraganset and Massachusetts dialects, means 'island'; and *Aquednet*, with the locative affix, means 'on, or at, the island.' Eliot wrote (Acts xxvii. 16) "kishke *ahquednet* hettamun Clauda"—'near an island called Clauda': and elsewhere (Is. xl. 15) he has the same noun in the plural, as *ogquin-ash*, for 'isles.' In the Narraganset dialect, the locative *et* often becomes *ek*, *ik*, or *uk*—whence the forms, *Aquednick*, *Aquethnick*, etc.

Aquednēse is the diminutive of *Aquedne;* and Dutch Island—west of Conanicut—was called *Aquedneset* or *Aquidnesick*, i.e., 'at the *little* island.'

The resemblance of *Aquidnet* to *Acqueednuck* (now *Quidnic*), close as it is, is only superficial. The principal root of the latter name is *-adene* 'hill.' Between "*Aquene*"—which Roger Williams translated by "peace"—and *Aquedne* 'island,' there is no traceable connection. The former means 'to leave off,' 'to refrain'—only this, and nothing more; and denotes a cessation of hostilities.

I have said that *aquedne* means 'island'; but it was not the general Algonkin name for islands, though it is found in many widely-separated Algonkin dialects. In its connotation, there is a trace of the imaginative, that is not often to be detected in Indian place-names. It describes an island, not merely as "land surrounded by water," but as land 'resting on,' 'floating in,' or 'rising above' water. We find the word in the far-off Cree; and in the (Micmac) name for Prince Edward's Island—*Ep-ag-wit* 'it lies on the water,' or, as another translates it, "reposing on the water." I know of no islands on the coast of New England, except the two in Narragansett Bay, to which this name has been appropriated. May I hope that "Susan Coolidge" will accept as my apology for disturbing the "peace" of Aquednet, my admission that there *is* evidence of the "fine occasional instinct" of the Indians, in this word-picture of the beautiful island that rests like a bird upon the waters? It is curious to observe how nearly modern poets have, in their descriptions of the island, unconsciously approached the Algonkin conception. Compare Bryant's

—"a lovely isle . . . .
Smooth and with tender verdure covered o'er,
As if just risen from its calm inland bay":—

and Sands's picture, in "Yamoyden" (c. ii., st. 3) of "forest-fringed Aquetnet,"

—"green *reposing isle.*—
Soft cradled in the illumined bay":—

and C. T. Brooks's, in "Aquidneck,"

"The bold, bald rock that beetles o'er the surge,—
The bold, green bank that *hangs o'er ocean's verge*":—

and Durfee's, in "Whatcheer,"

—"where *in ocean's arms*
Smiles wild Aquidnay, robed in virgin charms."

J. H. TRUMBULL.

HARTFORD, Aug. 1st, 1881.

THE SOUTHERN EXPRESS CASE.

TO THE EDITOR OF THE NATION:

SIR: It seems to me the *Nation* of the 28th instant hardly does justice to Judge McCrary's decision in the Southern Express case. That suit was one of several in the United States courts, in which Judges Wood and Baxter, circuit judges of the Fifth and Sixth circuits; Judges Key, of Tennessee, Gresham, of Indiana, and Treat, of Missouri, arrived at substantially the same conclusion as Judge McCrary, the circuit judge of the Seventh circuit, did in the Arkansas suit. Subject to review by the Supreme Court, these cases establish in the United States a rule of the highest importance—that railway management must adopt modern methods of traffic as well as new and improved devices for physical safety; that the function of the railway is not merely the carrying of passengers and their baggage in fast trains and of freight in slow trains; that the railway as a public servant must permit any suitable use of its carrying facilities which has been so generally adopted and so long continued by railway corporations as to be commonly relied upon as part of their ordinary duty, which cannot exist without the railway, and which is highly and universally advantageous to the community; and that the express business, a creation of very recent years, involves such a use, which railways must permit in the usual way, by admitting express messengers and furnishing package-room on passenger trains, at depots, etc. These decisions of Judge McCrary and his associates seem to me, therefore, of marked interest in social science. They indicate a method of dealing with railway abuses the chief machinery of which is at hand, and which, with a railway commission having prosecuting as well as investigating powers, would be far more efficient than wild and helpless cries against monopolies. Such agitation too often ignores the public advantages of uniform and combined railway service, and the absolute necessity of rewarding with large profits venturous but successful railway constructions.

The fixing of "maximum rates to be charged for the transportation of express matter" is merely part of the judicial machinery by which the railway is compelled to perform the particular duty adjudged against it in the recent express cases. If the court enjoin the railway to furnish express facilities, but permit it to charge any rates, the judgment of the court may be made nugatory by rates intentionally impracticable. The court fixed "maximum rates" only, because the express company and the public are sufficiently, but not unfairly, protected by a maximum, and because neither party to the suits sought any other limit of rates. Judge McCrary confined the investigation to express companies because their suit alone was before him. It would in a proper case doubtless extend to the charges against any one to whom the railway owed a duty for hire.

Nor is there any new danger in a judicial investigation and determination of maximum railway rates. To these powers of the courts common carriers have from time immemorial been subject. By publicly assuming to carry, they become bound to carry for fair rates. When the shipper tenders a reasonable compensation, whether it be less than the carrier's charges or not, the latter must carry or respond in damages. If the shipper and carrier differ as to what is a fair rate, the dispute must, like any dispute of fact, be determined in the judicial method appropriate to the form of the action, by a jury at common law, or in chancery by a judge or master, as in the Arkansas case you notice.

In respect of railways the right and duty of the courts are far stronger. A common carrier may be, and often is, a private person, only from time to time assuming a public character. But a railway is a corporation expressly created to discharge public duties, and only because its duties are public permitted to exercise the right of eminent domain. It is well settled, therefore, that the courts will, by the peremptory process of *mandamus*, compel a railway to carry freight upon tender of a fair rate, whose amount, if in dispute, the court will determine, as it determines any question of fact. That the courts usually adopt "accustomed rates" does not disprove this. The custom is simply a valuable piece of evidence. The famous "Granger cases" upheld legislative right to fix railway rates. The Supreme Court, however, asserted besides, and with emphasis, the right and duty of judicial tribunals, in the absence of legislative provision, to ascertain and adjudge the same rates (Chief-Justice Waite in *Chicago, &c., Railway v. Iowa*, 4 *Otto*, 61).

This is doubtless a serious power to lodge with the courts. But courts are created to exercise se-

rious powers. It is no more serious than other powers exercised by them without animadversion. It is quite true the courts may come to control "consolidation" and "pooling." They will do so when those matters involve any question of legal obligation. Indeed a court *can* without right take a railway out of its lawful owner's hands and put it into the grasp of an adventurer (as ten or twelve years ago a judge of New York did). We cannot, however, safely build a rule on such an atrocity. Courts, in the vast majority of cases, administer justice with honesty and painstaking, which err, if at all, on the conservative side. The possibility of abuse is never sufficient reason for depriving courts of powers as broad as the necessities of justice.

Very certainly, too, the ultimate power of ascertaining reasonable rates is safer with the courts than it would be in the private hands of railway officials, who would then wield without legal restraint, but with legal sanction, a part of the sovereign power. The judicial power will be rarely used, and the knowledge of its existence ought really to be grateful to the railway as well as to the people, as any barrier against wrong-doing is to a virtuous man. Under that power the relations of the corporation to its creator, the public, will be easily maintained free from disturbing gusts of popular passion.

The belief that the people will always, if they can, do injustice to corporations is worse than the vulgar cry that corporations are always cheating the public. It is better for both sides that railways should in all respects be recognized to be, as they ultimately are in fact, dependent upon the justice and good-will of the communities which support them, and which will require from them just and fair dealing in return.

EDWARD M. SHEPARD.

NEW YORK, July 30, 1881.

Notes.

G. P. PUTNAM'S SONS' fall announcements include Edmondo de Amicis's 'Spain and the Spaniards'; 'Norsk, Lapp, and Finn,' by Frank Vincent, jr.; 'A Scandinavian Summer,' by Kate C. Tyler; 'Cuban Sketches,' by James W. Steele; 'The Autobiography of Mark Rutherford,' edited by Reuben Shapcott; 'Buddha and Buddhism,' by Arthur Lillie; 'Lectures on the Origin and Growth of Religion,' by T. W. Rhys Davids; and several additions to the New Plutarch and English Philosophers series.——J. B. Lippincott & Co. have in press 'Spanish Fairy Tales,' by Fernan Caballero, translated by J. H. Ingram; 'Words, Facts, and Phrases: a Dictionary of Curious, Quaint, and Out-of-the-Way Matters,' by Eliezer Edwards; 'The Mystery of Hamlet,' by Edward P. Vining; and 'Hume,' by William Knight, in the Philosophical Classics series, of which he is editor.——S. C. Griggs & Co., Chicago, have nearly ready 'The Foreigner in China,' by L. N. Wheeler, D.D.; and 'Isms, Old and New,' discourses by the Rev. George C. Lorimer.——Under the title of 'Mercy and Judgment' Canon Farrar has arrayed his objections to the hell of Calvinism, in a volume of which E. P. Dutton & Co. are the American publishers.——'Cymbeline' and the 'Comedy of Errors' have been added to Rolfe's illustrated and annotated edition of Shakspere (Harpers).——Mr. W. W. Corcoran, of Washington, purchased at the late Stevens sale in London, for the Virginia Historical Society, the original MS. records of the colony for the years 1752–57, under the administration of Gov. Dinwiddie—a collection of the greatest value to the historian. It embraces a considerable correspondence between Dinwiddie and Washington, and covers the period immediately before and after Braddock's defeat. An important document relating to the assignment of lands on the Kanawha to the officers and soldiers of the Braddock campaign, now preserved in the Chancery Court at Staunton, in Washington's own handwriting as special commissioner and surveyor, is likely to find its way for safe keeping to the same society.——Apropos of the Stevens sale, the Boston *Advertiser* states that if the Franklin papers had not been bought by the Government, subscriptions for its purchase pledged by citizens of Boston would have secured it for the Public Library of that city.——Richard Dudensing & Son have just issued a steel engraving of President Garfield, which, with many of the merits of the medium, illustrates also its defects in an excess of mechanical definition and, in general, a "slick" look transcending mere humanity in the direction of the line-engraver's ideal. It is, however, we think we may trust our memory sufficiently to affirm, the best steel portrait of the President which has appeared, and is very presentable and perhaps framable.——In the July *American Art Review* Mr. T. H. Bartlett, the sculptor, has a first article upon Walter Shirlaw, the painter, and probably leaves for the second any necessary qualification of his eulogy. Mr. Thomas Davidson begins, and will finish next month, an account of "The New Frescos in the Benedictine Abbey at Monte Cassino." Mr. Winthrop continues his "Old English Porcelain," and the editor reviews the recent exhibitions of the Pennsylvania Academy of Fine Arts and the Boston Art Club. Of the number's illustrations the most valuable is an etching by Unger, after Rembrandt's portrait of "The Jewish Bride." Mr. Moran's "Morning," however, shows much expertness, and a woodcut by Juengling of Shirlaw's "Very Old" should be mentioned.——A correspondent calls our attention to the fact that civil-service reform doctrine is now served out even to the "patent-insides" papers—certainly a sign of the times.——In the last number of volume iii. of the *American Journal of Mathematics*, just issued, Dr. Craig's paper "On Certain Possible Cases of Steady Motion in a Viscous Fluid" is completed. Mr. O. H. Mitchell has a long paper, "On Binomial Congruences"; Professor W. W. Johnson treats of "The Strophoids"; Dr. W. E. Story, the associate editor of the *Journal*, writes "On the Theory of Rational Derivation on a Cubic Curve"; and Dr. Sylvester has one paper, "On a Point in the Theory of Vulgar Fractions," and another—"Instantaneous Proof of a Theorem of La Grange." The change of printers of the *Journal* about a year ago has brought great improvement in its typographic appearance; even the objectionable highly-calendered paper has been given up in the latter part of the present number. If the *Journal* were now to be issued regularly at a smaller interval from the date it bears, we should think no further change desirable.——The new Century Company will remove in September to the fine building lately erected on the north side of Union Square, where it will publish its two magazines, *Scribner's* and *St. Nicholas*, and in time its books. Mr. La Farge's decorative glass factory already occupies the upper part of the same building.——The French edition of 'Ahn's Method for German,' first published in 1843, has reached its one-hundredth edition. The English translation had some vogue in this country twenty years ago. There were also similar methods for Italian and for Spanish, and even for Russian, and we remember a friend's poring in some bewilderment over the 'Method for the Dutch Language,' and forming for himself (not having any master) a style of pronunciation which afterwards not a little amused a native of Holland whom he chanced to meet. That result has given us a certain scepticism as to the possibility of discovering the real orthoepy of any language from books alone, and a feeling of insecurity in the present style of pronouncing Latin, better though it undoubtedly is than the absurd style which preceded it.——A work similar to Roget's 'Thesaurus,' with just the same numerical divisions, was written a number of years ago for the French language by Robertson (the 'Dictionnaire Idéologique de la Langue Française.') A third work, with the same numbering, has appeared this year in German, Schlessing's 'Deutscher Wortschatz' (Stuttgart.)——*Le Français* notices that the laxity of "Republican" police regulations has gone so far in Paris that the immoral photographs exhibited on the streets have shocked even the *Voltaire*, the journal in which Zola's 'Nana' was first published.

—The first five engraved mezzotints by Mr. Charles H. Moore, which we announced some time ago, have been issued by the Harvard Art Club. They are from drawings of different bits of European natural scenery, and executed in the manner of Turner's famous series. These five are entitled respectively: "The Village of Simplon," "Gathering Storm, Simplon," "Old Doorway, Venice," "Florence from near San Miniato," and "On the Lagune, Venice." The Swiss scenes are particularly impressive, and naturally gain most from the treatment of the artist, which is the extreme of accuracy and, as Mr. Moore's master would say, reverence. Technically speaking, all are of great interest, the management of light and dark and the resultant tone of each plate being conspicuously successful. As to the "general effect," different observers will inevitably differ, since the work is, to the most pronounced degree, in a vein not so popular at present as it has been; and in this respect the simple description of it as engraved mezzotint is a characterization beyond which it is needless to go.

—A twelvemonth ago, on the first issue of *Science*, we observed that for the English-speaking race we should have considered *Nature* a sufficient scientific medium and entitled to universal support. As the new journal has gradually taken permanent form, we have been gratified to note the lack of confirmation of this view by, among other things, the falling off in its quotations from *Nature*. That it has, however, not yet had the support of the most prominent scientists of America, in its fullest sense, is apparent. Very little original scientific research has found first publication here; but it takes a long time to divert this class of publication from the customary channels of print. *Science* needs better editorials, and those confined to more important subjects. Perhaps we should venture the general criticism that too much space has hitherto been given to industrial topics. The scientific book reviews have been noticeably defective—not more than a half-dozen really good reviews have appeared during the entire year. The exercise of a stricter discrimination would have ensured the exclusion of much pseudo-science. The tedious exposition of the Duke of Argyll on the unity of Nature—

already run through fourteen numbers and more than sixty close-set quarto pages of *Science*, with no prospect of the definitive unification of Nature yet—is entirely out of place in such a journal. *Science* has done a thing much needed in this country in giving immediate publication to the papers read before the American Association for the Advancement of Science and the National Academy of Sciences—always heretofore greatly delayed in publication, and, in the case of the Academy, very often never printed at all.

—"B. S." writes us from Strassburg, July 16:

"The term 'Stalwart' has been figuring largely in the telegraphic despatches sent to German journals by their American correspondents. Much to the bewilderment of the home editors, no explanation of the word has been furnished them; they have, therefore, been compelled to invent an etymology of their own. Some of your readers will be interested in learning the ingenious manner in which a Strassburg journalist has solved the 'Stalwart' puzzle. According to this savant (who is not jesting), 'Stal'=*Stelle*, and 'wart'=*warten* ("Stellen-warter")—*i.e.*, those who are awaiting Government appointment! The German editor had evidently heard that the term in question is now applied to the supporters of Conkling & Co. The *Nation's* explanation and history of the word in politics I have seen quoted recently in various German journals."

—Mr. David Gill, Her Majesty's Astronomer at the Cape of Good Hope, has just issued, as a reprint from the forty-sixth volume of the 'Memoirs of the Royal Astronomical Society,' his definitive paper on the determination of the solar parallax from observations of Mars at Ascension in 1877. We think it no exaggeration to style it the most important separate determination of this constant which has ever been made—we should like to say it is the most accurate. Some three years ago we printed a brief note on Mrs. Gill's charming little book, 'Six Months in Ascension: An Unscientific Account of a Scientific Expedition,' in which were fully described the incidents and details of a somewhat arduous undertaking, now become historic. The expenses of the expedition were defrayed by vote of the Council of the Royal Astronomical Society in the first instance, and later from the Government Grant Fund of the Royal Society. The observations at Ascension were made with the heliometer owned by Lord Lindsay (now the Earl of Crawford and Balcarres), in accordance with what astronomers call "the method of the diurnal parallax," or "east-and-west method." While much of the detail of reduction of the work is presented in Mr. Gill's admirable volume, a vast deal has been omitted in the printing—in full accord with the more advanced and advancing notions on this subject. The original note-books and manuscripts are deposited with the Society, where they may, and should, be referred to, if the re-examination of the work is ever undertaken, or any doubtful point arises. The final result of Mr. Gill's investigation is 8″.78, with a probable error of o″.012—which gives, for the mean distance of the earth from the sun, 93,080,000 miles. Most astronomers will have little doubt that this value of the solar parallax is too small; nevertheless, the more important of the recent researches on this subject show this value to be a close approximation to the truth.

—That those who are neither "æsthetes" nor pottery experts can yet share in the china mania is frankly confessed by Mr. Geo. W. Marshall, the well-known English genealogist, in the July *Antiquary* (New York: J. W. Bouton). He has "a rather extensive collection of old bowls, cups, plates, mugs, and teapots," whose intrinsic value he could probably not estimate, but which he prizes exclusively for the arms of their former possessors painted upon them. This custom, he says, arose about 1700, or a little later, 1720 being the earliest date he can safely assign to any specimen. Wealthy merchants in the East-India trade began it, and Mr. Marshall concludes that all the earliest specimens are of Oriental porcelain. The generally accepted date of the obscure beginning of the Lowestoft manufacture (the middle of the eighteenth century) he makes coincident with the origin of the rage in England for armorial china—a rage which was quite over by 1820. Certainly a great deal of this sort of work was done at Lowestoft, the ware being often apparently Oriental. Mr. Marshall's doubt as to the correctness of the current opinion, "that china was sometimes made in the East and sent over to be painted with arms in this country [England]," cannot be allowed the same weight as his heraldic and genealogical tests of the approximate age of specimens. Of these he gives a number of instances, adding that "the modes of tricking changed so much between 1700 and 1800 that there is very little difficulty in saying from the tricking (or, to speak less technically, drawing) of the arms, within twenty years, at what date they must have been painted." Finally, he has an instructive word about forgeries consequent upon the competition of collectors of his own kind. He says nothing, it is to be remarked, of a pseudo-heraldic decoration which issued from the Lowestoft factories, and of which examples are not infrequent among the heirlooms of this country—a crest of two doves billing, above a shield or oval containing the initials of husband and wife, or of either, with lambrequin, etc. The paste of ware thus marked, though known to be as late as the last decade of the last century, has a strong Oriental appearance.

—*Le Livre* was never more true to its name than in its July issue, which opens with an article on the Plantin Museum, at Antwerp, by Léon Degeorge, followed by a "Bibliographical Study on the Fifth Book of Rabelais," by Bibliophile Jacob. Neither of these important papers is entire, and the continuation of each will be awaited with much interest. Paul Lacroix defends the authenticity of the disputed Fifth Book. M. Degeorge, with good reason, upbraids the municipal authorities of Antwerp for their narrow seclusion of the bibliographical treasures of the Plantin Museum since they entered into possession of it in 1877. He then describes in detail the building, the disposition and contents of the rooms (of several of which he gives views), etc., in a way to make any lover of the art of printing long to inspect the noble relics of a famous house. The collection of type alone is so great "that it would be possible to undertake works of the first importance." Under the head of "Nouvelles Diverses" the editor complains that the National Printing-office has ceased to be a model and pioneer in typographic development, like the national textile and ceramic establishments of Beauvais and Sèvres, and has become a subsidized competitor of private establishments at a great charge to the annual budget.

—M. Adrien Langlet, a bookseller at Saint-Quentin, has ready for the press a 'Dictionnaire-manuel des libraires et des amateurs de livres, 1445–1881.' It is to appear in twenty-five parts, and is to include and fuse into one alphabet "all the bibliographical works that have hitherto appeared." If the work is well done it will be extremely useful, for valuable as are Brunet and Graesse, they have both serious gaps, and the promise of finding everything important that has yet appeared relating to any remarkable book in one place is very attractive. But we fear that the new Brunet, like his predecessor, will be full only in regard to French works, unsatisfactory on English and German, very weak on Scandinavian, and will ignore the Slavic altogether. One feature announced would, it seems to us, much better be put in an entirely separate work—namely, a list of all the (important?) manuscripts in the libraries of Paris and the provinces.

—There seems to be no diminution in the French liking for amateur theatricals, and in consequence there is a steady stream of publications containing little plays for two or three actors, or the strangely-popular monologues which are best suited for production upon an extemporized stage. Although one cannot but think that the production of monologues and dramatic trifles has been carried perhaps a little too far, still, as we have said often enough before, there is no means of training the ear in the tricks and turns of the spoken language of France so profitable as the reading aloud of plays written to be spoken, and not too long to fatigue the attention of the beginner. Almost any of the many collections of comedies for amateur acting, continually appearing just now in Paris, can be consulted to advantage, but perhaps no series is quite as good as the 'Théâtre de Campagne' (Paris: Ollendorff), of which the seventh volume has now appeared. In this M. Legouvé, to whose suggestion the series owes its being, again appears. The general level of merit in the volume is much the same as in its immediate predecessors. Perhaps the best play is the touching but rather abruptly concluded "Part de butin," written by the lady who calls herself "Georges de Létorière." "La Souris," a frankly comic little farce; "L'Heure de la Liberté," a well worked-out humorous suggestion, and "Madame Limaray?" an amusing imbroglio, may all be recommended. The monologue usurps more than its share of space—eight out of seventeen pieces. One of the most amusing of these is "Le Fou Rire," written by M. Jacques Normand, who has also included it in his recently published 'Paravents et Tréteaux; fantaisies de salon et de théâtre' (Paris: Levy). M. Édouard Pailleron's 'Théâtre à Madame' (Paris: Levy), a daintily-printed volume with its rough edges and rubricated title, contains three little plays in metre and a dozen or two bits of verse, some to be recited and others to be read. The best of the plays is "Pendant le Bal," written to precede the author's important three-act comedy, "Le Monde où l'on s'ennuie," now acting at the Théâtre-Français. One of the other two is the "Chevalier Trumeau," published last winter in the *Revue des Deux Mondes*. The plays are preceded by a delightful metrical prologue, which girds wittily at the prevailing naturalism in French literature.

—One of the most interesting essays in *Sagenliteratur* that we have read of late is contained in Vogt's 'Salomon u. Markolf' (Halle: Niemeyer). The editor has traced with great care the resemblances and differences between the German and the Slavic versions of the Solomon-story, and their connection with the Rabbinical legend of Solomon and Asmodeus. Vogt assumes that the Jewish legend must have passed into German-Slavic literature through the medium of Byzantine Greek. Hence, *e.g.*, the name of the Russian rival of Solomon, Kitooras—Greek κένταυρος: centaur being a generic term applicable to the half-human

demons over whom the Rabbinical Solomon had power. Inasmuch as one of the most peculiar pieces in our Anglo-Saxon literature is the collection of dialogues entitled 'Solomon and Saturn,' Vogt's essay will be helpful to our scholars. Vogt, it is true, does not treat the Anglo-Saxon poem very fully; he even passes over in silence the name Saturn, as substituted for the Hebrew Marcolis, corrupted in German into Mark-wulf, Markolf. Perhaps he agrees with Ten Brink's explanation, that Marcol was confounded with Malcol, Moloch, and Saturn, *i.e.*, the gloomy god, used as the equivalent for the latter name. In any case, Vogt's essay places the Solomon-saga upon a new footing, and modifies considerably the opinions held by Kemble and Ten Brink, and by Schaumberg. We may add, in conclusion, that Vogt's analyses of the several German and Slavic versions will give the reader a survey of the whole subject, and that his style is admirably clear.

—In the death of Professor Lotze, three weeks ago in Berlin, where he had been lately called after thirty-six years of uninterrupted activity at Göttingen, philosophy has lost one of its most genial, independent, and influential minds. A competent reviewer lately said that he had profoundly affected the culture of all German scholars under forty-five who were interested in his lines of thought, and even from this country he has had many pupils who will learn of his death with a sense of almost personal bereavement. Remarkably acute and sure as a critic, with a disposition from which Czolbe is said to have copied his famous ideal of classic poise and equanimity, and, what is still more unusual in Germany, with a culture no less broad and symmetrical, he was an Academician in the true Platonic sense, living the philosophy he taught, and teaching always and only his own character and mental life. When he began to write, the mechanical methods and conceptions of organic nature were achieving their first triumphs under J. Müller and E. H. Weber amid considerable enthusiasm, and one of Lotze's first essays was a very effective defence of these methods and a refutation of the then prevalent vitalism. Most of the superstitions and confusions of medicine are always found in conceptions of the nature of disease and the action of remedies. For the light he shed in this field by his 'Pathology and Therapeutics as Mechanical Sciences,' in 1842, Lotze deserves to be named next to Virchow, although his merit is of course of a far different order and his first signal achievement in this line was not followed up. All physiological processes, he argued, are ultimately explained under the laws of matter in motion. Omitting his less important works, his 'Medical Psychology' (1852) was the first methodic attempt at a physiology of the soul, which is, however, carefully distinguished from matter on the one hand, and from vital force and the ideal-real unities of the identity systems on the other. Each isolated, afferent nerve-fibre which carries impressions inward to the soul that moves freely in the fibreless *parenchyma* of the brain gives a peculiar sign or mark to each impression which traverses it, by which the soul can know what part of the periphery it came from. This is Lotze's conception of local signs, which, with his subsequently conceived temporal signs, have played a rôle in this department almost as prominent as the theory of specific energy or isolated conductivity of nerve fibres. This work was soon to be revised, as it greatly needed to be. Those, however, who wish Lotze's later views, as he would no doubt himself have presented them soon, will find them briefly sketched in 'Les Principes Généraux de Psychol. Physiologie,' by A. Penjon, which is a résumé of Lotze's psychology made under his own supervision and with many essential changes.

—Lotze is at his best in the 'Mikrokosmos' (1856–64), in which he seeks "the entire significance of human life" from the standpoint of an anthropological psychology. The lessons of history, art, science, and literature are here turned against mechanical conceptions of the world (which are said to be universal in application but very limited in scope), and in a way which caused Carl Vogt and others to charge him with apostasy to his own earlier standpoint. In his carefully-written 'Logic' (1874) and the radical revision of his juvenile 'Metaphysics' two years later, Lotze shows still more fully the folly of attempting to prove the existence of God, although insisting most strenuously upon an instinctive belief in personality at the centre of the universe which is beyond the reach or need of proof. If people would not attempt to objectify and demonstrate divine realities in general, he urges, they would never have been doubted. His optimism is summed up in the phrase, "The world of worths explains the world of forms." Whatever is is not only right, but, philosophically regarded, best. On the whole, Lotze's work may be best described as ethical, and a final estimate of its value can hardly be made till the foundations of ethical science are better laid. If this estimate be questioned, we can only add the opinion that it will be more manifest when his admirable lectures on the Philosophy of Religion come to be published.

HOWARD'S NEZ-PERCÉ WAR.

Nez-Percé Joseph: An account of his ancestors, his lands, his confederates, his enemies, his murders, his war, his pursuit and capture. By O. O. Howard, Brig. Gen. U. S. A. Boston: Lee & Shepard. 1881.

General Howard has given us a very entertaining book, and one of permanent value as well. The Nez-Percés war was a good deal befogged at the time by the confusion of the "treaty Indians" with those who had refused to recognize the settlement made by part of the tribe with the United States, and many good people were greatly troubled by the belief that the hostilities were with those who had been for many years under missionary influences upon the reservation. This narrative draws with complete distinctness the line between the two classes of Indians, and emphasizes with very proper care the fact that the majority of the Nez-Percés took no part in Chief Joseph's war, and did not recognize him as their leader, but remained quietly upon their reservation in sincere effort to make progress in civilization, and in perfectly good understanding with the officers of the Government. The disaffected part of the tribe had been so for a whole generation, and really consisted of those who repudiated all civilizing influences; and, whatever was the nominal cause of discontent, the real trouble lay in their ineradicable purpose to live and die in the roaming, hunting ways of their fathers.

This is brought out very graphically by the General in a preliminary description of the tribe and their hunting-grounds in the days of old Joseph, the father of the young chieftain who made the war. The topography of the country about the head-waters of the Great Snake River is very lucidly described, and the picture given of the land and of its aboriginal inhabitants is one of the best things of the kind which we have. The fact is not blinked that in all our dealings with the Indians, the Nez-Percé treaty included, there has been an element of insincerity, not to say fraud, and that every settlement of controversies has been made by the Government with a mental reservation holding it good only till the growth of frontier settlements should make it convenient to ask the tribes to "move on," or to suffer another contraction of their hunting-grounds. The local causes of trouble, such as individual wrongs and murders, are also touched upon and shown in their true relations to larger affairs, as the occasions if not the causes of outbreaks. The personal description of Joseph and his brother Ollicut is cleverly done. Both of them young men and deeply attached to each other, their traits of character were unlike and a mutual foil. Joseph was keen-witted but reticent and astute, showing wisdom beyond his years and a tendency to slyness if not to treachery. Ollicut was a laughing, open-faced athlete, of almost gigantic but supple form, following his brother with affectionate devotion.

The story of the way the war broke out is told with details for which we are thankful, for it is typical of Indian outbreaks; and, given as it is by one of the responsible actors in the scene, it is an authentic picture, which makes all similar troubles comprehensible. At the beginning of May, 1877, a council was held at Fort Lapwai, and it looked as if everything would be peaceably settled by the discontented Indians going on the reservation. The scene was a striking one. The post is a quadrangle of buildings nestled in the most picturesque of valleys, and the Indians arranged their approach with a keen instinct for barbaric show:

"A long rank of men, followed by women and children, with faces painted, the red paint extending back into the partings of the hair—the men's hair braided and tied up with showy strings—ornamented in dress, in hats, in blankets, with variegated colors, in leggings of buckskin, and moccasins, beaded and plain; women with bright shawls or blankets, and skirts to the ankle, and 'top moccasins.' All were mounted on ponies as various in color as the dress of the riders."

After making a considerable delay whilst they were waited for at the fort—a delay purposely calculated for effect—the cavalcade approached, striking up a weird song as they came.

"It was shrill and searching: sad, like a wail, and yet defiant in its close. Our ladies, thinking it a war-song, asked with some show of trepidation, 'Do you think Joseph means to fight?' The Indians swept around, outside the fence, and made the entire circuit, still keeping up the song as they rode. The buildings broke the refrain into irregular bubblings of sound, till the ceremony was complete."

Then, as an indication of modesty, with a poetic sort of politeness, they entered the quadrangle by the back door of the commandant's quarters. They agreed to go on the reservation, and doubtless would have done so, but at the last moment a few young braves, the most reckless of those who favored war, rushed off and committed some savage murders, and, riding back to Chief Joseph's camp, harangued the excitable red men: "Look here; see this fine horse! Behold this rifle, this saddle, and all these good clothes! Why do you remain here talking and talking? The war has begun! I am mad! I have killed the enemies! Up! Get your horses and come on; there is plenty of everything if you only work for it." Young war-

riors caught the war-fever. Chiefs and cooler heads saw that things had gone beyond their control; and they would not have been savage chieftains if they had not determined to lead the wild outbreak which they could not restrain. So the war began.

General Howard gathered in haste such forces as could be collected, sending Colonel Perry to check the Indians and protect the fleeing inhabitants. Perry's detachment was drawn into a defile, attacked in front, flank, and rear, and almost destroyed. As soon as a sufficient force could be collected General Howard himself led it against Chief Joseph, defeated the Indians at Clear Water, and began a long and memorable chase. The Indians had great droves of ponies, which afforded them relays of horses as often as they were needed, and by this means they were able to keep in advance of Howard through a pursuit of more than a thousand miles. The incidents of this laborious march of nearly three months are full of interest, and excite admiration for both the tenacity and determination of the soldiers and their commander, and the real military ability shown by the Nez-Percé chieftain. Hitting General Gibbon in Montana on one side, narrowly dodging General Sturgis from Nebraska on the other, remorselessly followed by Howard and his troopers, the Indians were at last driven into the northernmost bend of the Missouri River, and Miles was able to stop them and bring them to a decisive action, at which Howard himself was present, riding with a small escort far in advance of his own men.

The full narration of the facts leaves no doubt that the most important share of the work had fallen to the troops led by General Howard, whose engagement at Clear Water was as fierce a fight as any of the strange campaign; and whose remarkable and protracted chase was almost unique in the history of military marches. Miles's brilliant battle near Bear-Paw Mountain merited the recognition it got; but General Howard has done well to give permanent form to the record of the wonderful work done by the little column which drove the savage tribe half across a continent and into the hands of their fellow-soldiers. In all its parts the book is a valuable addition to the literature of our Indian relations and our frontier wars.

A NATURALIST IN BORNEO.

The Gardens of the Sun; or, a Naturalist's Journal on the mountains and in the forests and swamps of Borneo and the Sulu Archipelago. By F. W. Burbidge. With illustrations. London: J. Murray. 8vo, pp. xviii.-364.

THE island of Borneo, though perhaps the second largest in the world, contains, according to a recent statement by the President of the Royal Geographical Society, Lord Aberdare, "probably nearly as much unknown land as any other portion of the globe of equal dimensions." The coast-line of nearly 3,000 miles has been well surveyed, especially upon the west, but the mouth of its largest river, flowing into the Celebes Sea on the eastern coast, was discovered only a few months since. The farthest interior has never yet been reached by any white man, though attempts have been made from several points by both English and Dutch travellers. According to the best English authority, Mr. Spenser St. John, the island "is about 830 statute miles in its greatest length and 700 in breadth, having an area of about 280,000 square miles." The last edition of the 'Encyclopædia Britannica' makes the extraordinary statement that "its whole area is estimated by Melvill von Carnbee at 12,745 square miles." The Dutch geographer's estimate was, however, "6,992 square myriametres," equivalent in round numbers to 270,000 square miles. In Vivien de Saint-Martin's 'Nouveau dictionnaire de géographie universelle' its area is given as "748,700 kilomètres carrés," or 284,506 square miles. Since the publication of St. John's 'Life in the Forests of the Far East' little has been written about Borneo, though some attention was drawn to the country three years ago by the cession of about 20,000 square miles in the north, by the Sultans of Brunei and Sulu, to an English company under Baron von Overbeck. This company intends to follow the example of Sir James Brooke and to form a state on the model of that of Sarawak, and has applied to the English Government for a charter. Its success in developing the rich mineral and agricultural resources of this part of the island so far has been moderate, and as, according to one of its managers, the Malays will not work for wages, "the Chinese must be looked to as the chief helpers in opening up the country." It seems not improbable that it is in this direction that the best outlet will be found for the surplus population of China, as the island is very thinly peopled. Though it nearly equals in size Great Britain and France together, its inhabitants probably number less than two millions. There are already many Chinese colonies in different parts of the island, and they are beginning to push into the interior, as the following passage shows:

"Armed with a chopper and [a] spade-hoe, a solitary Chinaman will not unfrequently build a miserable little palm-leaf hut on a well-watered bit of forest near a river, and in a month or two he will have cleared several acres, to which, when planted with gambier or pepper, he looks for a fair return. . . . I have often come across these clearings right in the heart of the forest, miles away from any other human habitation, and have been as much astonished at the amount of labor performed with such a simple tool as the thrifty laborer himself was to see me."

Mr. Burbidge's 'Gardens of the Sun' does not add much to our general knowledge of the island, though our author was very successful in the main object of his travels, "the collection and introduction of beautiful new plants to the Veitchian Collection at Chelsea." He added some fifty species of ferns to those already known to exist in Borneo, nearly half of which "were absolutely new to science." His greatest exploit was, however, "the introduction alive of the Giant Pitcher Plant of Kina Balu (*Nepenthes Rajah*, Hook. f.)" One of these plants described by St. John measured nineteen inches in circumference, and "held exactly four pint bottles." He adds: "We afterwards saw others apparently much larger, and Mr. Low, while wandering in search of flowers, came upon one in which was a drowned rat." Mr. Burbidge makes it plain that there has been a great improvement in the last few years in the condition of that part of the island most subject to the influence of the English. Head-hunting and piracy may be said to have almost ceased, and the people invariably treated the traveller with the greatest kindness, though this may have been largely owing to his own good humor and determination. "Land culture is becoming much more general among the natives inland than formerly, security of life and property having also increased." These reports are confirmed by a paper read before the Royal Geographical Society, February 14, 1881, by Mr. W. M. Crocker, Resident of Sarawak, in which he states that the revenue of that state has increased from $26,000 in 1854 to $250,000 in 1880, while the trade which at that time amounted to $671,000 "has now reached $4,000,000." It may be noted here that "the territory of Sarawak alone furnishes more than half the sago produce of the world."

Our author's first impressions of the lowland forests near the equator seem to have been somewhat disappointing. In one of these, he tells us, "all the vegetation you see around you on earth, rocks, or fallen trunks, is represented by a few ferns . . . [and] gingerworts; but epiphytes of all kinds seem totally absent: and the truth is that, like lovable 'Tom Bowling,' of Dibdin's minstrelsy, they, too, have 'gone aloft.' Above you is a world of light and air and sunshine, which birds, insects, and flowers alike enjoy." The only way to secure specimens of the rarer orchids was either by climbing or by searching for fallen trees in the clearings. "Some of these ruined trunks are perfect gardens of beauty, wreathed with graceful climbing plants, and gay with flowers and foliage." On one of these he found "a plant of the grammatophyllum orchid big enough to fill a Pickford's van, and just now opening its golden brown-spotted flowers on stout spikes two yards long."

Considerable space is naturally devoted to two partial ascents of Mount Kina Balu. This mountain is the highest yet known in Borneo, and resembles in general appearance Mount Roraima in South America, though its summit is not inaccessible, as appears to be the case with this latter mountain. Sir Edward Belcher gives its height as 13,698 feet. It is especially interesting to botanists from the fact that there is upon it a belt, extending from a height of five thousand to six or seven thousand feet, in which grow a number of species of enormous pitcher-plants, not to be found in any other part of the earth. Some of those seen by Mr. Burbidge had "stems five or six feet in height." Others had "rounded pitchers of the softest pink color, with a crimson-frilled orifice." Several days were spent upon the mountain gathering specimens, in which Mr. Burbidge seems to have been admirably aided by his native followers, although at times they were almost paralyzed with the cold. Another of the curious plants of Borneo is the *myrmecodia*, a parasite, which "actually depends for its existence on the bite of a species of ant. The seed germinates on the bark of the foster-tree; and when the seedling has attained a certain height the growth ceases, and it remains stationary until the necessary bite is given, when the stem swells out at the base, and leaves and flowers are produced in due course. If not thus punctured the young plant dies. The gouty or swollen stem is hollow, and forms a refuge for the ants, which in their turn may afford it some needful protection, since they rush out boldly to attack trespassers who disturb the tree on which their fostered shelter-plant grows."

Brunei, the capital of Borneo (one of the divisions of the island), is described as a water city of about twenty thousand inhabitants. The houses are built on piles driven into the river, and as they are mostly palm-thatched, their general appearance cannot be very unlike the prehistoric lake dwellings of Switzerland. "It is the Sheffield of northwest Borneo, the manufacture of knives, parongs, and krisses being largely carried on there; and on one of the little islands is a primitive foundry, where

gongs, brass guns, cooking-pots, betel-boxes, etc., are cast. Some of these articles are ornamented with well-designed figures in relief, and would not be any disgrace to a European manufacturer. The models and methods of casting are singularly like those of our own artisans. I visited one rude armorer's shop, and much admired the exquisite finish of some weapons he had made." An expedition to the Sulu archipelago, while it does not appear to have been very successful botanically, is made interesting by lively descriptions of the Sultan and his court. Their favorite amusements are pig-sticking and riding, the islands producing a fine breed of ponies. "An enormous species of day-flying bat was quite common here near the Sultan's palace, and most weird and supernatural did they appear on dull days, solemnly flying from one tree to another, their great wings distended against the leaden sky overhead. . . . I shot one which measured four feet six inches across its outspread wings, and its head was as large as that of a little terrier dog, and of a similar shape, being of a dark, foxy-brown color." It is with no little surprise that we read: "It is not uncommon to see some few of the Sulus from the hills wearing tunics of chain-armor, having brass plates on the breast and down the back, all the rest being fine chain-work." Whether these were made by the islanders themselves appears to be doubtful. Mr. Burbidge suggests that they may have been captured from the Spaniards. The signs of a former higher civilization are very noticeable, but the warlike tendencies of the people have greatly checked their growth and prosperity. These islands were the last stronghold of the pirates, and, apparently in despair of putting an end to piracy except by actual occupation, the Spaniards in July, 1878, took formal possession of the Sultan's dominions, by hoisting their flag in his capital of Meimbong. He had already ceded his Bornean possessions to Baron von Overbeck's North-Borneo Company.

A chapter is devoted to some very sensible advice on travelling in the tropics, and another to the fruits of Borneo. Mr. Burbidge is quite as enthusiastic over the durian, "or the fruit with the fragrant stink," as Mr. Wallace, who says, "To eat durians is a new sensation, worth a voyage to the East to experience." Our author says: "If it be possible for you to imagine the flavor of a combination of corn-flour and rotten cheese, nectarines, crushed filberts, a dash of pineapple, a spoonful of old dry sherry, thick cream, apricot-pulp, and a *soupçon* of garlic, all reduced to the consistency of a rich custard, you have a glimmering idea of the durian." Judging from the lists given at the end of the book Borneo is very rich in both mineral and vegetable products. The enormous rainfall, however, has hitherto prevented the successful working of the mines, while the people have not yet made great progress in agriculture. Some of the trees which bear gutta-percha and rubber are "gradually, but none the less surely, being exterminated by the collectors." The climate is "fairly healthy, especially on the hills inland, where the air is much fresher and cooler than on the lowlands near the coast; the mean annual temperature is about 84°." We regret to say that a fair table of contents by no means takes the place of a good index, the want of which impairs the value of this very readable book.

A SOLDIER OF THE LORD.

Colonel Gordon in Central Africa, 1874-79. From original letters and documents. Edited by George Birkbeck Hill, D.C.L. London: De La Rue & Co. 1881.

"THE soldier of the Lord, with his Bible and his sword"—this line from Macaulay's spirited ballad on Naseby Fight would describe the character of Colonel Gordon if it did not place "the Bible" and "the sword" so precisely on the same level. For though a soldier of unshaken courage and the most distinguished ability, no man could regard the pomp, pride, and circumstance of glorious war with deeper abhorrence than Colonel Gordon, and no man could be more completely indifferent to the prestige and *éclat* which surround the successful soldier. War, in his eyes, is a terrible necessity, to be justified only by the fact of its necessity, and to be conducted without one thought of personal glory, but with the constant, unsleeping desire to diminish to the utmost the sorrow and suffering which it entails. It was in this spirit that Colonel Gordon, then a Major of Engineers in the British Army, undertook the command of the "ever-victorious army" (as it came to be called) against the Tai-ping rebellion which had devastated and depopulated vast provinces of the Chinese Empire. In the course of a year's campaign he destroyed a power that threatened the very existence of the Chinese state, and then laid down his command, refusing any pecuniary reward for himself, although "he had spent more than his pay in contributing to the comfort of the officers who served under him, and in assuaging the distress of the starving populations whom he rescued from the yoke of their oppressors."

The men whom he commanded in these operations were raw, untrained recruits, and he had to lead them against armies vastly superior in numbers and elated with success. To inspire them with the requisite courage and confidence, it was necessary that he should himself be present wherever the fire was hottest and the danger most extreme. But he went into battle armed with no more formidable weapon than a small cane, and this circumstance caused his Chinese soldiers gradually to come to the conviction that the cane was possessed of magical properties which ensured protection and success to its owner. The source, however, of Colonel Gordon's calmness and intrepidity in danger lay in his religious convictions. He regards himself, literally, as a mere instrument in the hands of Omnipotence, with a set work before him to do, and regards, therefore, as matters of entire indifference the conditions amid which that work has to be done—whether it be amid the shot and shell of a battle-field or amid the dangers of a waterless desert. A religious fatalism is commonly supposed to breed a listless and apathetic habit of mind, but in Colonel Gordon it provoked a devouring energy. Alike in China or in Central Africa, he had his "work" to do. In China it was to suppress the Tai-ping rebellion; in Central Africa, to extinguish the horrors of the slave-trade; and his work he felt himself, as it were, under a divine compulsion to carry through with a total disregard of personal health and comfort, with an utter scorn of fatigue and danger.

It was in September, 1872, that Colonel Gordon met Nubar Pasha, the Egyptian Minister, at the British Embassy at Constantinople. The Pasha enquired of him if he knew of any engineer officer who would accept an appointment as governor of the tribes in the Nile Basin, when it should be vacated by Sir Samuel Baker. In July, 1873, Colonel Gordon wrote to Nubar Pasha intimating his willingness to take up the appointment, if the British Government would grant the loan of his services to the Khedive. They were applied for and granted, and the book we are reviewing is the record of his doings in Central Africa during the five years he remained in the employ of the Egyptian Government. The five years' story is given from Colonel Gordon's letters and diaries arranged in chronological order. These unstudied writings were never intended for publication, and are so many self-revelations of a character the possibility of which is hardly conceivable in this nineteenth century. Probably had Colonel Gordon not passed so many years of his life amid lonely deserts and savage peoples, his sense of the nothingness of life would not have attained such vivid intensity. Fatalism is a creed born of waste places and troublous times. In the midst of great cities and all the marvels of civilization men look around them, very much in the spirit of Nebuchadnezzar, exclaiming, "Behold this great Babylon which I have built"; but they are crushed with a sense of their own insignificance and weakness in the "ever-silent spaces" of a trackless desert. Nature here presents herself as an enemy mighty and pitiless—the devourer of mankind, and not their docile and laborious servant. And Colonel Gordon's sense of utter dependence upon God grew in strength and intensity in the thoughts which visited him as he urged his camel over the waterless waste of the Sudan. But, like his Puritan prototypes, Colonel Gordon was no idle dreamer. He prayed to God, but he was equally assiduous to keep his powder dry, and his government of the Sudan is a marvellous history of what the energy and iron will of a single man can do to rescue a vast province from suffering and misgovernment.

"I think," he writes on May 18, 1877, "the people like me, and it is an immense comfort that, while in the old régime ten or fifteen people were flogged daily, now none get flogged. A huge crowd stands around the palatial gates all day, but only a few are privileged with an interview; for I keep a box with a slit in the lid for petitions at the door, and every one can put his petition in it. Hitherto the people could never approach the governor unless they bribed the clerks. . . . It is all nonsense for the Turks to say that the people would oppose the nomination of a Christian governor. The people want justice. . . . I am breaking up, to the great joy of the people, the Bashi-Bazuks, who, of course, do not love me. A great sorrow has been taken off the land. The reign of the whip has ceased, and I do believe the people rejoice at my being here."

This was written from Khartum, the capital of his province, but he was rarely, and only for short intervals, in Khartum. He became noted for the speed with which he traversed upon camels large tracts of country. Neither want of food nor scarcity of water delayed him.

"I have," he writes, "a splendid camel—none like it. It flies along, and quite astonishes even the Arabs. I came flying into this station in marshal's uniform, and before the men had time to unpile their arms. I had arrived with only one man with me. . . . It is fearful to see the governor-general arrayed in gold clothes flying along like a madman, with only a guide, as if he was pursued. The Mudir had not time to gather himself together before the enemy was on him. Some of the guards were down at a well, drinking. It was no use; before they had got half way to their arms the goal was won. Specks had been seen in the vast plain around the station moving toward it (like

Jehu's advance); but the specks were few—only two or three—and were supposed to be the advanced guard, and before the men of Fogia knew where they were the station was taken."

The hardships which had to be encountered in these rapid rides were terrible. They were taken across a country producing nothing but scrub, with scanty wells sometimes as much as three days' journey apart, the one from the other; they had to be accomplished under the burning heat of the equatorial sun; food there was little to be had, and, what there was, so execrably bad that no human digestion, except Colonel Gordon's, could have assimilated it. Thus he writes of one of these journeys:

"The water on the way consists of pools of rain. Caravan A comes and drinks and bathes in it; then Caravan B comes and does the same; then Caravan C, and so on. It is dreadful; but I have given up all ideas of this sort. I have no pleasure in eating or drinking, and do both to keep myself alive, and with these ideas it makes little matter if the water is a solution of blacks or not. If I were fastidious, I should be as many weeks as I now am days on the road; I gain a great deal of prestige by these unheard-of marches. It makes the people fear me much more than if I were slow. . . . The wrecks left in my passage are numerous. I have set my face as a flint, and regardless of consequences have been hard, right and left. I do not wish to be so; I should like to praise, not blame; but seeing what I know of the suffering of the people, I cannot force myself to let things slide."

The helpless, dilatory character of the people he had to rule over drove him half mad, and, in truth, it would be hard to conceive of a greater contrast than that between this vehement, hard-riding, self-helpful Englishman and the passive dependence of the Oriental:

"For the very smallest thing men come direct to me, and force their way in, let me be as engaged as possible. There is no chain of responsibility. Every one thinks he has a perfect right to come to me, and also thinks himself aggrieved if I do not give him an immediate hearing. Besides this, in giving or taking a paper to you, they take two or three minutes. You never saw such a dilatory set! The consequence is that papers are snatched out of their hands, and also thrown at them. All very undignified, but I cannot help it. If you send for a man, he takes a nice funeral pace to come to you. You see him afar off long before he arrives, and sometimes I am so undignified as to rush to meet him. . . . Your brother is much feared and, I think, respected, but not overmuch liked. His refusals are definitive, and very strongly couched. 'Never!' is the answer to many requests, shouted with a loud voice, and followed with, 'Do you understand?' and 'Have you finished?' Pashas are threatened that if they do not move swiftly I will come after them myself. I pursued one all the way from Dara, and he barely got out of Khartum in time. He halted at three days' distance, thinking the pursuit at an end; but I gave him a telegram and started him again."

The main object, however, of his fierce and untiring energy was the suppression of the slave-trade. It was the appalling misery in which the populations that came within the sphere of the Tai-ping rebellion were plunged which impelled Colonel Gordon to take the command of the "ever-victorious army." In like manner it was the horrors of the slave-traffic in the Sudan which drove him into the service of the Egyptian Khedive. At the time when he took the government of the Sudan these evils may be said to have reached their culminating points. Large districts, which a few years previously had been dotted with villages and inhabited by a thriving and happy peasantry, had become solitary wastes. Not a human being was to be seen for a journey of many days. The terror of the slave-dealer had entirely depopulated them. One-third of the population in the province of Darfur alone had been carried into slavery. The routes along which the slave caravan travelled were cumbered with the fleshless skulls and bones of those who had sunk exhausted on the march. For, for every slave who reached the markets of Cairo or Constantinople, at least twenty had fallen to feed the vultures and prowling animals of the desert. The misery occasioned by this abominable traffic Colonel Gordon declares repeatedly to be beyond the power of words to describe. The idle, effeminate Egyptian officials made no effort at suppression, and could have done but little, even had they been so disposed. For the great slave-dealers had assumed the status of princes, and maintained around themselves the pomp and ceremonial of a king. They had armies of disciplined men under their command, having converted their slaves into soldiers, and these soldiers were much more than a match for the troops of the Egyptian army. In a word, when Colonel Gordon entered the Sudan it had become the seat of a slave power sufficiently formidable to be a danger to the Khedive himself.

Such was the hydra which Colonel Gordon was determined to slay, and had he been properly supported by the Egyptian Government there is no doubt that he would have exterminated slavery in the Sudan. But a man like Gordon was an abomination in the eyes of the corrupt officials of an effete Mohammedan despotism, and they labored zealously and unceasingly for his recall. Still, in the two years he remained in the Sudan he achieved immense things. The power of the slaveholders was completely broken, and their armies routed and dispersed in a series of bloody engagements. These battles were fought, not under the direct leadership of Colonel Gordon, but by an Italian of the name of Gessi (lately deceased), who served under him. Slave-caravans were everywhere arrested, the dealers flogged and turned loose upon the country stripped of all they possessed, the slaves set free to dispose of themselves as they pleased. But it soon became apparent to Colonel Gordon that, do what he might, he could only stanch the sore for the time. As soon as his own fiery and exhaustless energy was lost to the province the evil would spring up phœnix-like from its ashes and again overshadow the land. For in Egypt, as in every Moslem country from the dawn of Islam until now, the (so-called) Government fulfils no single duty of a government. It simply drains away the wealth and industry of its subjects, and, so long as its coffers are full, cares not one iota what the misery of its people may be. On Colonel Gordon's resigning the government of the Sudan, the Egyptian Government at once appointed to the vacant office a pasha whom Gordon had himself expelled from his province on account of his tyranny and his complicity with the slave-dealers.

In conclusion, we desire heartily to thank Mr. Birkbeck Hill for the publication of his book. It is as interesting as it is instructive, and the explanatory chapters written by the editor are replete with information not easily accessible.

RECENT NOVELS.

Blessed Saint Certainty. By the author of 'His Majesty Myself.' Boston: Roberts Bros.

The Emperor: A Romance. By Georg Ebers. From the German by Clara Bell. New York: Wm. S. Gottsberger.

A Question: An Idyl. Related by Georg Ebers. From the German by Mary J. Safford. New York: Wm. S. Gottsberger.

The Count's Secret. From the French of Émile Gaboriau. Boston: Estes & Lauriat.

Rosecroft. By W. M. F. Round. Boston: Lee & Shepard.

I I I By George H. Hepworth. New York: Harper & Bros.

Helen Troy. By the author of 'Golden Rod.' New York: Harper & Bros.

A Book of Love Stories. By Nora Perry. Boston: James R. Osgood & Co.

The Georgians. [The Round-Robin Series.] Boston: James R. Osgood & Co.

Among the Hills. By E. J. Poynter. New York: Henry Holt & Co.

Harry Joscelyn. By Mrs. Oliphant. [Franklin Square Library.] New York: Harper & Bros.

An Ocean Free-Lance. [Franklin Square Library.] New York: Harper & Bros.

A Nihilist Princess. From the French of M. L. Gagneur. Chicago: Jansen, McClurg & Co.

The Bailiff's Maid. By E. Marlitt. Philadelphia: J. B. Lippincott & Co.

Dunderviksborg, and other Tales. By Frances C. Henderson. Philadelphia: J. B. Lippincott & Co.

The Eichhofs. By Moritz von Reichenbach. Philadelphia: J. B. Lippincott & Co.

Annals of Brookdale: A New England Village. Philadelphia: J. B. Lippincott & Co.

In looking over current fiction we are struck by the desperate catastrophes in which the authors, at least, delight. Small-pox, scarlet-fever, pistol-shots, or bursting guns are but a few of them, and meanwhile, as if to bring the whole to concert pitch, the lovers' quarrel is no longer a sudden word, a proud reply, a silence of repentance, but it has developed into a wrangle, prolonged till the "give and take" has exhausted all the resources of the combatants. Is it the recoil from commonplace, or is it to out-do the extravagance of reality? The questions are worth studying by some one, and 'Blessed Saint Certainty' would do to begin upon, for it has more than its share of terrors. It is meant as a portrait of "a perfectly natural, not an artificial, man." He is found in the dubious Eden of a squalid village on an Indian reserve. The story of the life there has an air of reality which is lost when the scene changes to an Eastern city, whither "this most aboriginal man" betakes himself to find out what manner of thing it is. The narrator is the Stephen Guernsey of an earlier book. What he would present is, of course, the contrast between nature and—call it civilization, culture, or art; but he fails entirely, spite of his ready judgments upon philosophy, theology, and all the rest. The phrase, "the spluttering electricity of Voltaire," is an unintended gauge of his knowledge of relative values.

'The Emperor' is the latest of Professor Ebers's series of historical novels. Like its predecessors, it is concerned with Egypt, which is its author's specialty, and, although "the Emperor" is Hadrian, the situation of the book is Egypt under Roman rule. The story is chiefly of a romantic interest, however, and the action is so limited in time that the historical importance of the work is less than that of 'Uarda' or 'The Sisters,' or of 'An Egyptian Princess.' The author sets out with

the avowed intention of making a consistent study of Hadrian's character from the contradictory accounts that exist of that prince, but this intention is early forgotten in a story of which Antinous is the hero and the daughter of a Greek official under Hadrian, in Egypt, the heroine. The young girl becomes a Christian and is murdered by the mob for refusing to worship Hadrian's statue, upon which Antinous, mourning her loss, and hoping to avert an evil omen from Hadrian by sacrificing his own life, voluntarily drowns himself. There are, besides, two love-stories which are happier in their incidents and events. The historical portion contains the adoption of Verus by Hadrian as his successor, on the intervention of his wife; the romantic suggestion follows that, having studied the horoscope of Verus, and learned from it that the young man would outlive him, the Emperor hoped to replace him by his favorite. The portrait of Hadrian is shadowy and ineffective. The many occupations with which he diverted his mind are so dwelt upon that he appears merely an elegant amateur, while his character as a ruler is given in a page of panegyric by his Egyptian prefect upon receiving news of his death. If it be said that, owing to the contradictions of Hadrian's disposition and conduct, abundantly recognized even by his contemporaries, this is as much as could be expected from Professor Ebers, it still remains true that as much could be expected from any one.

'A Question' is a love-story founded on one of Alma Tadema's variants of his picture "The Sphinx." "An Idyl" is its alternate title, and the professor plainly intended to make it a poetic and graceful fantaisie. To conceive and to execute such a design are, however, different things, as much of the lighter literature of the Fatherland illustrates, and here the sportiveness must be admitted a little deliberate. Around the young girl and youth of the picture are grouped the families of two Greek brothers, with their servants and slaves, a conjurer with trained hens for the comic element, and a priest of Aphrodite. There is little plot. The son of one brother loves the daughter of the other, and while the respective fathers are seeking other matches for them the young people meet at the fountain, the "question" is asked and answered, and the parents acquiesce.

It would be impossible to give within a limited space the skeleton of 'The Count's Secret,' and yet, on the other hand, this is all that one of Gaboriau's novels needs to have told about it. His method and manner are too well known to readers of French novels, and, through the translations, of which this is one, doubtless to readers of English only, to require any general reference, while to particularize in regard to this work would be difficult on account both of its unusual complications and of the (for Gaboriau) clumsy way in which these are managed. The book opens with a mystery, of course; this fairly laid before the reader in all its impenetrability, another is introduced, and, in turn and in like manner, a third appears. So far all is very fine, but when the task of combining these several mysteries, and of showing their interdependent relations, ensues, the great mistake of the book occurs. The thing to do here, and in doing which Gaboriau is usually so successful, is plainly to maintain, not to say to deepen, the impenetrability of the general plot. Instead of this, we have the whole matter disclosed at the point where the revelation is formally just about to begin. The last half of the book is therefore tedious, which is the same thing as saying that it is one of the worst of its author's stories. It is no particular drawback to it, considering the conditions of this kind of literature, that it contains no characters which unite point and probability, but there is a particularly absurd scene at the end which is a blemish, as it introduces the alien sentimentality of a grand tableau, in which the good are rewarded and the guilty punished in a way worthy of Dickens.

The author of 'Rosecroft' would succeed better in character-sketches than in the formal novel. The plot of the story is based on such harsh unkindness that we are glad to take refuge in its improbability; but the village oddities are worth knowing, and Mrs. Stowe herself has done nothing better than the old negress, unlettered Rachel, and her Bible reading.

'!!!,' if a novel, is most clumsily put together. It is a rambling discourse about metempsychosis, etc., winding up with a nineteenth-century version of the Euphorbus-Pythagoras test, all repeated in a single night by a man who describes himself as "simply the result of a wonderful concatenation of circumstances." We may leave him to the judgment of his sole auditor: "I think you are quite as interesting when you talk of the charms of Paris as when you are discoursing on the mysteries of transmigration."

'Helen Troy' is an advance upon 'Golden Rod.' The author has more material and handles it better. The scenes of the little drama are prettily set, whether in the New York drawing-room or on the hillside at Lenox. The heroine we all know—gay, too careless perhaps, but true at heart, and strong and steady when trial comes. Blanche de Préville is not so well done. She is the fascinating woman of European opportunity and experience, who is the complement in fiction on this side the water of the American girl on the other. Necessary as she is made to the plot she is too large a figure for the little sketch, and in such a frame nothing but genius could save her from being out of drawing.

From 'Helen Troy' to 'A Book of Love-Stories' is to leave to-day, with its craze for crockery and crewels, and its rattling pace, and to turn back—not so very far either—to a quieter time, when Mount Desert was not, and Newport hardly more than the Ocean House. The tales are well told, so simply and naturally that to read them is like listening to soft harmony after the shrill notes of a high-pitched voice.

'The Georgians' introduces us to a dull country neighborhood, sketched with faint local color, and a hero whom the heroine calls "that young, unusual, unworldly man." She herself is, again, the accomplished woman of the world, returning from abroad with a mysterious history, the supposed widow of a Russian count. The book would not be worth a comment, for it lapses into a sensationalism of a very questionable kind, were it not for a sort of *ex-officio* moral tacked on, which unluckily may justify it to some readers. The moral is as illogical as the catastrophe, given the author's premise of character. Only a conception of life which friends might call naïve, but others ignorant and crude, could have inspired such a story.

'Among the Hills' has all the sweet freshness and grace of an idyl, even though its *motif* is in a minor key. Its lesson is of the truest—that to the disappointed, the stricken, there may come a brightness, not indeed of the sunlight, but gentle and tender like the after-glow.

Mrs. Oliphant's 'Harry Joscelyn' will rank with the best of her work. There is no figure so new or so original as the incomparable "Jock"; but honest Harry's protest, as he makes his confession to the father of his love, "It never—it never happened to me before," is as good as the "But why must I be married at all?" of the 'Greatest Heiress in England.' It is the old story of the prodigal son, but worked out with such variants as to make it new. The riotous living is of the quietest, and in the somewhat lurid atmosphere of current novels a climax of prosperity and peace is a relief.

A new book by the author of the 'Wreck of the *Grosvenor*' needs only to be certified as a worthy successor. The colors are used with less reserve than in the first book, and the incidents verge sometimes on the melodramatic, but 'An Ocean Free-Lance' has all the vivid charm of the buoyant life of the sea.

'A Nihilist Princess' is another book made up from the recognized formula for a Russian story, according to Western ideas—wealth, a tyrant father, a cruel husband, a woman of supernatural beauty, a devoted serf, at least three desperate lovers, conspirators and secret chambers, flogging and murder *quant. suff.*, Siberia *ad lib.* The real suffering in Russia is far beyond a jest. Yet admitting that the incidents are true, as true as the *Police Gazette*, the whole picture here given is false because there are other things which are also true. There is the same superficial *vraisemblance* in the portrayal of character and manners as in the Henry Gréville stories, but, as with them, when compared with the work of a Russian the likeness vanishes. The work is all at second-hand. The writer had no materials beyond the commonest newspaper reports. The extracts from revolutionary documents are only such as have appeared again and again. The wife's story requires us to believe that the Russia of 1864 is the Russia of Ivan the Terrible. The inconsistencies in character and plot would refute themselves but for the general ignorance of Russian affairs. We cite one instance only. No Nihilist career ever began by the founding of schools and instructing the peasants, as the Princess Wanda's is represented to have done. The book ends with 1878, but the bomb by the Catherine's Canal added a commentary which we may hope the writer never anticipated. In the story it is the Czar who reprieves the Nihilist prisoners at Kieff, it is the Czar's full pardon which is sent for "the Nihilist Princess"; but before this translation was finished the Nihilists had proudly assumed the responsibility of his death. We commend to readers seeking trustworthy information about Russia Danieleffsky's 'Ninth Wave.' It is to be found in the cheap "Universal-Bibliothek" under the somewhat misleading title of 'Die Nonnenklöster in Russland.' Though not a work of the highest genius, it gives such a distinct idea of life in the small towns and in the country in the years soon after emancipation, as greatly to help in forming judgments about the present.

"Dunderviksborg" is one of a half-dozen tales which, with as many plays, have been gathered in the main from the less familiar languages of Europe. They make an interesting volume, and the compiler permits us to infer that she has obtained them in all cases from the original; but it is not unfair to her to warn the reader that the selection from the Russian is a very unworthy specimen from Pushkin, a hackneyed story long in use in all the Russo-German instruction books.

We have two German stories in Mrs. Wister's

well-known translations—'The Bailiff's Maid,' bright, fresh, frolicsome, and with that touch of *Gemüthlichkeit* which no whole-souled German ever lacks; and 'The Eichhofs,' a tale of fashionable high life, with the usual Russian in the villain's rôle; but the attempt to carry out a double, and even a treble, plot in very brief space leaves only an impression of scraps.

Life in a Vermont village fifty years ago might have been described in the 'Annals of Brookdale,' but two-thirds of the book are filled with the commonplace adventures of very commonplace travellers in Europe. One sentence fairly marks the quality of plot, characters, and style: "Mr. Rhodes, having in vain tried to make himself acceptable to Mary Ogden, laid siege to Miss Stearns, but she evidently preferred Tom, who was a great deal with her."

NEUROLOGICAL STUDIES IN AMERICA.

A New Form of Nervous Disease. Together with an Essay on Erythroxylon Coca. By W. S. Searle, A.M., M.D. New York: Fords, Howard & Hulbert. 1881. Pp. 138.

Lectures on Diseases of the Nervous System, especially in Women. By S. Weir Mitchell, M.D. Philadelphia: Henry C. Lea. 1881. Pp. 238.

American Nervousness. By Geo. M. Beard, A.M., M.D. New York: G. P. Putnam's Sons. 1881. Pp. 352.

NEARLY all that is known of the functions, as distinguished from the structure, of the nervous system, has been learned during the last fifty years. The true theory of electric stimulation suggested by Galvani was not established until Nobili's observations with the astatic needle. Since then Charles Bell and Magendie have laid the chief corner-stone for neurology as a science by demonstrating the difference between sensory and motor nerves, and Marshall Hall's studies of reflex action have invited exact research in this field. It was Longet, Flourens, Leuret, and Esquirol who gave the first great impulse to neural physiology in Germany, where Reymond, Hitzig, Fritsch, Goltz, Munk, and scores of pathologists and histologists have since made such important contributions to the sum of medical knowledge. Practical, as distinguished for the most part from what is known in Europe as scientific, neurology is finally becoming the fashion in England and this country. Most of the papers presented at the meeting of the British Medical Association last summer were more or less neurological. Most of the medical students from this country who are met with in European hospitals are making more or less a specialty of nervous diseases. New forms of nervous disease are being discovered, and an increasing number of familiar ones are diagnosticated as nervous in their origin. Interest in trance, which Dr. Beard calls "next to evolution the great scientific problem of the century," has revived in some places almost as in the days of Mesmer himself. Moreover, emboldened by the now generally conceded relationship between nerves and soul, the doctor not infrequently assumes the rôle of philosopher in true Hippocratic fashion, sometimes with good, but more often, so far as our observation extends, with somewhat curious results, which recall to mind a humorous remark of Professor Ludwig, that the time seemed not far distant when the average medical man would pay his devotions to the grey ganglionic cell as if it were indeed, like the monads of Leibnitz, *parvus in suo genere deus;* and which make it almost seem, at least to the uncritical, as if in fact all the secrets of the universe were bound up in those of the nervous system, as some one else has lately said.

These tendencies in this country are well illustrated by the volumes before us. After an introductory section, setting forth the profound modification of the cell-life of the individual by habit, and by those nearest to him, Dr. Searle gives a narrative of twenty-one cases, mostly from his own practice, and none of which were *known* to result fatally, in which mild shock, without loss of consciousness and probably with venous congestion, induced by various causes, was the chief symptom. These, he urges, cannot be epilepsy, save in the broad sense of Hughlings Jackson, and are located probably in the cerebellum and constitute a "new disease," which Charcot declares, in a note translated in the preface, that he has not met with. The cure of this new disease, as indicated by homœopathic "testing," and by the writer's practice, is chewing the leaves of Peruvian coca. We cannot recall, even in Sprengel's voluminous history of medicine, any panacea heralded as more universally salutary than Dr. Searle's coca, which we are assured is to be "the great preserver of life and health in future generations." "Had our army at Gettysburg been supplied with it Lee and his troops need never have been allowed to recross the Potomac."

Dr. Mitchell's book consists of thirteen clinical lectures, mainly on hysteria and allied disorders. The unconscious but none the less despotic selfishness, and the lack of self-control, which characterize all forms of this disease, and to which the precociousness and extreme self-consciousness induced by our methods of moral and religious education so often lead, make hysteria one of the most dreaded, difficult, and it would almost seem, in certain classes of society, the most common disease which the American practitioner is called upon to treat. Sympathy and kindness are the very food it lives on, and proper medical strictness and true insight into the nature of the disorder are generally resented. From his "enormous experience" with these diseases Dr. Mitchell concludes that the best treatment is seclusion under the care of a good nurse, rest, massage, electricity, and full feeding. He, too, believes that nervous diseases in this country tend to take on asthenic forms, and that those convulsive types of hysteria which have lately been made so famous in the cliniques of Charcot are less common here.

Dr. Beard's book is far more comprehensive and ambitious. He has a theory of the universe which he designates as the omnistic philosophy. He would reform our educational system. He has a tabulated scheme of the evolution of nervousness which begins with nervous dyspepsia and sick headache, deepens into hay-fever, inebriety, and epilepsy, and culminates in insanity. All forms of neural disorder here are assumed to be species of exhaustion, for which he coins the name *neurasthenia.* He is a psychologist, and explains the trance state, and the performances of the "jumpers," "jerkers," "holy rollers," and the mediæval "psychic pests," so well characterized by Haeser. He has demonstrated the longevity of brain-workers, and traces American oratory, humor, rapidity of speaking, word-clipping, and high pitch of voice to American nervousness. We submit that the natural inference of a nervous patient after reading all this would be that his disease was too deeply rooted in the constitution of the universe to be cured, least of all by one who had devoted so much attention, not to say ingenuity, to the study of causes beyond human control, and whose philosophical propensities might possibly incline him to theoretical methods of treatment to which severely scientific observers often apply severe names. Whether this is in fact the case, or whether any one ever drew such an inference, we have no knowledge or ground for inference outside this book.

However valuable works like the above may be, they also serve to emphasize the need, now more strongly felt by the best part of the medical profession in this country than ever before, of having a body of specialists, as in Continental Europe, released from the distractions of miscellaneous practice and trained as only a life-long study of special forms of disorder in large hospitals, and a thorough acquaintance with all the important literature in their line, can train men to be generally recognized authorities. Within the last few decades the medical profession there has been given a new life and raised to a higher plane by the universities. Such a work is greatly needed here; especially is this the case if the nervous system be the source of all physiological ills, and be at the same time so crazy and shattered generally as American nerves are now represented to be by a few specialists—unless, indeed, we are too far gone to be worth, or to be able to make, such a struggle to continue our existence.

Poems. By Oscar Wilde. Boston: Roberts Brothers. 1881.

QUITE as interesting as most of Mr. Wilde's verses is the perplexity that they have caused candid critics. Mr. Wilde is reported the original of Du Maurier's *Postlethwaite*, and yet his poetry is very fair poetry, as that article is produced by many versifiers of the present day. The contrast thus afforded between the contemptibility of his rôle of "æsthete" and the respectability of his numbers, has proved bewildering, and, so far as we have noticed, it has been explained to be, like so many things about poets, inexplicable. We fancy, however, the poetry has acquired a factitious respect from this contrast which, unheralded in this way, it would hardly have obtained, and that, on the other hand, the literalness of *Punch's* caricatures has been equally overestimated. Whatever absolute fidelity these may possess, it remains true that they are caricatures, and the essence of caricature is humorous exaggeration, not to say distortion. Nevertheless, we are bound to say there are many characteristics disclosed in the volume before us which seem not wholly incompatible with the qualities ascribed to *Postlethwaite*. Traits may be ascribed to *Postlethwaite* by *Punch* which in their excess really belong more appropriately to *Postlethwaite's* admirers, the dignity of whose character and bearing, we are free to confess, is probably not distinguished. But it would be unreasonably narrow to say that the best of these poems are beyond the origination of a poet who wears long hair, sad garments, a melancholy expression, and a lily in his left hand. The distinctive trait of *Postlethwaite* and the interesting folk who emulate his sighs is, we take it, an ardent love of the love of the beautiful. And this is Mr. Wilde's most marked characteristic. He has an intense desire to delight in the things which poets delight in, and the poets are responsible for his singing as well as for himself. He declares, p. 228, that

"Keats had lifted up his hymeneal curls from out the poppy-seeded wine.
With ambrosial mouth had kissed my forehead, clasped the hand of noble love in mine";

and, in a subjective sense, it is undeniable that this must have been the case. But the procedure thus described has by no means been confined to Keats. The sonnet "On the Massacre of the Christians in Bulgaria" and that "To Milton" would clearly never have been written if the poet of the Piedmontese Sonnet and the sedate Wordsworth had not done the same thing, and the number of kisses imprinted upon Mr. Wilde's forehead by the ambrosial mouths of Messrs. Swinburne, Rossetti, Morris, and even the fastidious Mr. Tennyson, would make any one shake his hymeneal curls to contemplate.

The result of this has been to transform Mr. Wilde into a lyric parrot. The inevitable defects of the best and most melodious parrot qualities, however, are an absence of direct inspiration, of genuine significance, and, to a measurable extent, of consciousness. One is never sure that the parrot perceives the precise bearings of his utterances, and the preponderance of the purely oral in them is an undeniable drawback to the permanence of one's enjoyment with them. In the way of modulation, measure, and propriety, too, disagreeable errors are made by the parrot-poet, since these, above all others, are only to be avoided by simplicity and unaffectedness. Nevertheless, it would be obviously unfair to say that Mr. Wilde's volume could have been written by any one who should set himself to reproduce the impression of certain English poets. He has, in the first place, a musical gift of manifest excellence. His metrical tact, so far as it depends upon his ear, is unusual, in spite of being very frequently both slip-shod and unscrupulous; one remarks with some surprise the absence of madrigals from his book, and concludes that *Postlethwaite* should be depicted from time to time strumming a guitar. In the next place, for the distinguishing verbal and metrical marks of the more sensuous school of his masters proper he has manifestly an aptness, born, doubtless, of the sympathetic inclination which his admiration of them argues. And, thirdly, he has unquestionably much perceptiveness and appreciation. This, however, is a different thing from having a natural voice of one's own, however plaintive and insignificant, from having anything to communicate, or, finally, from having any emotion to express. In all these respects Mr. Wilde's muse seems to us essentially commonplace—precisely of that perfunctory order and texture demanded for affecting affectation, which is what *Postlethwaite* and his kind are really represented as doing. On the other hand, it should be distinctly mentioned that he lacks the intellectual immaturity, not to say puerility, of the more abject of the poets who follow the Swinburne-Rossetti gonfalon—Mr. George Barlow, for example, and others of the "utter" school. Occasionally, however, he approaches them rather too nearly. The following is from "La Bella Donna della Mia Mente" (Mr. Wilde's titles recall *Postlethwaite* more vividly than his verses):

"Her neck is like white melilote
Flushing for pleasure of the sun;
The throbbing of the linnet's throat
Is not so sweet to look upon.

"As a pomegranate, cut in twain
White-seeded, is her crimson mouth;
Her cheeks are as the fading stain
Where the peach reddens to the south.

"O twining hands! O delicate
White body made for love and pain!
O house of love! O desolate
Pale flower beaten by the rain!

These lines are a very fair illustration of Mr. Wilde's own verse; when he is better than this he is apt to be echoing that of stronger singers. They are not conspicuously devoid of merit; but to study, by a careful analysis, to measure the exact quantity of creditability and insignificance they and others like them contain, strikes us as a singularly unprofitable literary endeavor.

The Lyrical Drama. Essays on subjects, composers, and executants of Modern Opera. By H. Sutherland Edwards. Two volumes. London: W. H. Allen & Co.; New York: Scribner & Welford. 1881. Pp. 316, 312.

BESIDES a paper on "Tatra Füred and the Music of the Hungarian Gipsies," and another on the "By-ways of Bookmaking"—neither of which has any right in these volumes—there are here collected more than forty magazine essays and newspaper articles having to do more or less directly with the general subject of operatic music. They are, however, loosely thrown together, instead of having been worked over into the symmetrical whole which their matter deserved. There is scarcely a statement in the brief newspaper article on the "Romantic and Necromantic" which is not repeated afterward in more detail in the fuller articles on Don Juan and Faust, the Flying Dutchman and Robert the Devil. Illustrative anecdotes are repeated in like manner. We are told, for instance, three or four times that Balfe borrowed the pretty melody to which he set "Come into the Garden, Maud," from Verdi's opera of "Macbeth," and as often that Mr. Alfred Bunn translated his libretto of the "Bohemian Girl" from the French of M. de St.-Georges, who had taken his plot from his own ballet of the "Gitana," which in turn was based on Cervantes's tale of the "Gipsy of Madrid." Nor has Mr. Edwards taken the trouble to bring his articles "down to date": he tells us, for example (i. p. 67), that a young Spaniard presented himself at the National Library in Paris "only twenty-five years ago," declaring himself to be a lineal descendant of Don Juan; but on the next page he leads us to believe that this happened in 1850, or thirty-one years ago, for apparently Mr. Edwards's paper was written six years ago. Much in the same way, the chapter on the "Flying Dutchman" does not mention the poetic play of "Vanderdecken" written for Mr. Irving by Messrs. W. G. Wills and Percy Fitzgerald, and acted three years ago. Nor does the chapter on "Shaksperian Operas" refer to Goetz's "Taming of the Shrew," although that has recently been sung in English in London by the Carl Rosa company. It is the result of an oversight in the original article, and not of any failure to bring down to date, that nothing is said about the "Don Juan de Marana" which the elder Dumas brought forth as an attempt to revive the mystery. Thackeray, it may be remembered, made fun of it in his 'Paris Sketch-Book,' and Mr. Buckstone made an English adaptation for the Adelphi Theatre.

This brings us to the end of fault-finding, and the good qualities of the volumes far outbalance their deficiencies. In the first, Mr. Edwards gives us in a series of chapters a detailed discussion of the origin and growth of the Don Juan legend, and of its treatment by the Spanish and Italian dramatists, by Molière, Shadwell, Mozart, Alfred de Musset, and Pushkin. This and the four following chapters on the Faust legend are the most valuable part of the work, and they are as entertaining as they are instructive. Mr. Edwards has collected a great many facts, not a few of them but little known even to those who have given some attention to the history of the legends. It may be doubted, for instance, whether many people knew that a German dramatist, the late Christopher Grabbe, "produced a tragedy called 'Don Juan and Faust,' in which the two daring personages, each of whom provoked relations with the supernatural, figure jointly as heroes." Of this extraordinary play we have here a synopsis. Hardly inferior in interest is the account of the literary growth of the Flying Dutchman, as treated by Marryat, Fitzball, Heine, and Wagner. Other essays consider the chief operas of Meyerbeer, Verdi, Rossini, Donizetti, Bellini, Thomas, Flotow, and Bizet. There are cognate papers on the "Rise and Fall of the Tenor," on the "Extinction of the Ballet," on "Libretti," on the "Literary Maltreatment of Music," and the like. All of them abound in pertinent illustration and anecdote. Mr. Edwards's style is easy and attractive, as those who know his sketch of Rossini's life and his 'History of the Opera' will remember, and he has a wide knowledge of the *ana* of the lyrical drama. The utility of the volumes is greatly increased by an index.

Goethe-Jahrbuch. Herausgegeben von Ludwig Geiger. Zweiter Band. Frankfurt-am-Main. 1881.

THIS second volume is in the main an improvement upon the first, although it contains no one article so readable as Herman Grimm's sketch of Bettina von Arnim last year. Those of our readers who are familiar with George Brandes's 'Hauptströmungen in der Literatur des 19 Jahrhunderts' will be a trifle disappointed with his present article, entitled "Goethe and Denmark." It is an exceedingly clear, succinct account of the slow spread of Goethe's writings and ideas in Danish literary circles. No one but Brandes could have written on the subject with a like knowledge of facts. But we miss the warmth of tone and the suggestiveness that made his 'Hauptströmungen' so captivating. His fiery aggressiveness seems to have died away into cold, dry contempt for Danish obscurantism. Moreover, the article, however valuable for the study of Danish culture, adds but little to our understanding of Goethe. Julian Schmidt's view of Goethe's attitude towards Christianity will probably meet with little dissent, for the reason that it offers nothing novel. Summed up in a few words, Schmidt's argument is that Goethe was a free-thinker, but not a denier of the unseen and spiritual; that he asserted his personal freedom of action outside of all creeds, but readily admitted the *lasting* power of Christian motives and principles. In proof, consider the tone of *Versöhnung* throughout 'Iphigenie' and in many passages of 'Faust.' This is true enough. But every sympathetic reader of Goethe will have felt this long ago. As for the unsympathetic, need we remind them that they will never understand Goethe's temperament by dint of reading dissertations upon him?

Suphan's study of the original versions of some of Goethe's poems, although necessarily technical in its details, is at once valuable and interesting. It is the continuation of a similar paper published five years ago. Suphan, known to our readers as the able editor of Herder's works, has discovered among Herder's papers copies made by him (some by his wife, Caroline Flachsland) of about fifty

poems loaned to them in manuscript by Goethe, in 1781, some few as early as 1772. These early copies enable us to correct the later printed texts, as well as to fix the time of composition. Heinrich Düntzer is cruel enough to spoil the charming story told by Goethe of the beginning of his friendship with Schiller. The story was first published as an appendix to the second edition of the 'Metamorphosis of Plants,' 1817, and is now usually inserted in the 'Annalen,' under date of 1794. Düntzer shows that Goethe, writing in 1817, and trusting to his memory, transferred events from the year 1790 to 1794, and gave to his famous conversation with Schiller upon the "ideal plant" a conclusion quite the opposite of the real one. We have no space for further notice of the contents of this second volume; they are as diversified in nature as in value. The most useful part of the book, aside from original documents now first published, is the copious bibliography at the end. Yet even this is susceptible of improvement. By a curious misprint in the table of contents, p. iv., forty-one letters *by* Goethe are referred to as *Briefe* AN *Goethe*.

Punctuation, and other Typographical Matters, for the use of Printers, Authors, Teachers, and Scholars. By Marshall T. Bigelow, Corrector at the University Press. Boston: Lee & Shepard.

MR. BIGELOW'S training and long experience qualify him to speak with authority on the subject of which he treats. He is, however, far from dogmatic, and wisely recognizes the latitude which must ever be allowed the punctuator, not only in consideration of individual temperaments and styles, but also because of the interchangeableness of the points themselves—*e. g.*, the comma, the dash, and the parenthesis in marking parenthetical clauses. We have found ourselves in almost entire agreement with his rules. We should, in the case of the colon, have noticed its nice and peculiar function of denoting equivalence, whether or not the extreme logical use of this point by the Germans is to be commended. The intermediate members of a compound question we should sometimes separate with the semicolon as well as with the interrogation point. The use of the diæresis in distinguishing a sounded from a mute final *e*, as in Brontë, is overlooked on page 87; nor is any allusion made to the use of ē and ō to represent the corresponding long vowels in Greek. Apropos of the Greek epsilon and omicron, there is, in the valuable chapter on "Accents, Divisions, etc., in the Classical and Modern Languages," the following curious foot-note (p. 89):

"Notwithstanding the circumflex accent can never be used on these short vowels, English typefounders send out with all their Greek fonts a great quantity of these useless accents; and in a printer's manual recently printed in Philadelphia, notwithstanding the use of the accents purports to be explained, in the Greek case which is given boxes are shown for various combinations of these letters."

Mr. Bigelow indulges in some wholesome censure of the dictionaries for their shortcomings in regard to compound words and syllabication—shortcomings which he repairs or shows how to repair. Under orthography he gives a number of useful lists, such as that of all verbs spelt with *ize* in this country, the plurals of nouns in *o*, and words variously spelt, with an indication of his own preference. In short, one can have only praise for this little manual, which in respect of typographical accuracy is worthy of its theme and of the University Press, though, as a parting criticism, we will say that we think the judicious use of italics in the examples would have much facilitated the application of the rules; and whether or not the rules should not follow the examples, we believe open to question.

BOOKS OF THE WEEK.

Brockett, Dr. L. P. Our Western Empire. Philadelphia: Bradley, Garretson & Co.
Bruce, Rev. A. B. The Chief End of Revelation. New York: A. D. F. Randolph & Co. $1.
Champlin, J. D., Jr. Young Folks' Astronomy. New York: Henry Holt & Co. 75 cents.
Colvin, S. Landor. New York: Harper & Bros. 75 cents.
Daily Bread: a Birthday Text-book. New York: A. D. F. Randolph & Co. 50 cents.
Drew, Catharine. The Lutaniste of St. Jacobi's: a Tale. New York: Henry Holt & Co. $1.
Farrar, Rev. F. W. Mercy and Judgment. New York: E. P. Dutton & Co. $1 50.
Henshall, Dr. J. A. Book of the Black Bass. Cincinnati: Robt. Clarke & Co. $3.
Hervey, A. B. Sea Mosses: a Collector's Guide. Boston: S. E. Cassino. $2.
Holbrook, J. F. Worship in Song. New York: A. S. Barnes & Co. $1 50.
Hunt, T. S. Mineral Resources of the Hocking Valley. S. E. Cassino. 75 cents.
Johnson, Virginia W. The Neptune Vase. New York: Harper & Bros. 20 cents.
Lippincott's Magazine. Vol. 27. Philadelphia: J. B. Lippincott & Co. $2.
New Testament—American Version. New York: Fords, Howard & Hulbert. $1.
Odenheimer, Rev. W. H. Sermons. New York: E. P. Dutton & Co. $1 75.
Once a Year; or, The Doctor's Puzzle. Cincinnati: Robt. Clarke & Co. $1.
Otis, Prof. C. P. Elementary German. New York: Henry Holt & Co 90 cents.
Fatty's Perversities. Boston: J. R. Osgood & Co. $1.
Peninsular Campaign of General McClellan. Vol. I. Boston: J. R. Osgood & Co. $3.
Revised Odd-Fellowship Illustrated. Chicago: Ezra A. Cook. $1.
Rolfe, W. J. Shakspere's Comedy of Errors, Tragedy of Cymbeline. 60 cents.
Tissot, V., and Amero, C. The Exiles: a Russian Story. Philadelphia: T. B. Peterson & Bros. 75 cents.
Trollope, A. Ayala's Angel: a Tale. New York: Harper & Bros. 20 cents.
Two Lady Tramps Abroad. Flushing.
Virginia Belle. New York: W. B. Smith & Co. 25 cents.
Wagner, Dr. C. Mouth-Breathing. New York: G. P. Putnam's Sons. 75 cents.
Walker, Dr. J. The First Baby. New York: Brown & Derby. $1.
Where the Old and New Versions Differ. New York: A. D. F. Randolph & Co. 75 cents.

The Young Folks' Astronomy.

By John D. Champlin, Jr., author of 'THE YOUNG FOLKS' CYCLOPÆDIAS,' etc. 16mo, illustrated, 60 cents.

This little volume has been prepared in the hope that it will fill a want long felt in homes and schools. There can be little question of the propriety of early grounding a child in an elementary knowledge of the earth and of the universe of which it forms a part, yet it is almost impossible to find a text-book in which either the language or the ideas are within an ordinary child's comprehension. The topic is treated in the most elementary way, and the language used is always simple.

The Lutaniste of St. Jacobi's.

A Tale. By Catherine Drew. 16mo (Leisure-Hour Series), $1.

"We can only express our sense of obligation to the writer who has enriched our literature by this sound, sweet, tender, wholesome book."—SPECTATOR, LONDON.

HENRY HOLT & CO., New York.

HELIOTYPE.

PERMANENT PHOTOGRAPHIC BOOK ILLUSTRATIONS.

THE HELIOTYPE PRINTING COMPANY

Are producers of illustrations by the most approved Photo-Mechanical, Photo-Lithographic, and Photo-Engraving Processes. Employed by the United States Government in illustrating Scientific and Medical reports; by Scientific, Historical, and other learned Societies; by the leading Publishers, and for illustrating Town and Family Histories, Trade Catalogues, Show-Cards, etc. Fac-similes of Medals and Coins, Ancient Manuscripts, Paintings, Drawings, Sketches, and Autograph Circulars, Views and Portraits from Nature, Medical and Scientific Objects, Antiquities, etc.

Estimates and specimens furnished on application.

THE HELIOTYPE PRINTING COMPANY,
Near Boylston Street. 211 Tremont Street, Boston.

Antiques.

A new, large, and rapidly-changing collection of Antique Furniture, etc., restored, when required, with intelligence and skill.

New York is the best and the best market for such. It buys liberally, but sells dearly.

Our prices are not more than two-thirds.

JOHN WANAMAKER.

1313 Chestnut Street, Philadelphia.

BOOK-BUYERS WANTING BOOKS on any subject or by any author, authors having MSS. to sell or publish on their own account, address, with stamp for reply, Book Exchange, 123 South Seventh Street, Philadelphia.

H. J. HEWITT, Printer, 27 Rose St., New York.

The Nation.

NEW YORK, THURSDAY, AUGUST 11, 1881.

The Week.

THE condition of the President continued unchanged till towards the end of last week, when the usual afternoon rise of temperature began to come on earlier in the day than it had previously done, and the feverish symptoms became more aggravated. This was found to be due to the partial closing of the wound in the process of healing, and the consequent retention of pus in its deeper parts. It was therefore decided by the physicians to make a new incision. The operation was performed on Sunday morning, the President being kept under the influence of ether. Since the operation his condition has much improved. He continues to sleep well without the aid of opiates, which is an encouraging sign, and the feverish symptoms have greatly moderated.

Among the things requiring the President's attention on his recovery is the determination of the Bangor collectorship. Though a successor to the present incumbent was appointed, the withholding of his commission was one of Mr. Garfield's last acts before the attempt on his life, and now it is reported that Collector Smith has gone on to Washington, armed with petitions for his retention from nearly all the business men of the port, and two-thirds of the Republican voters. That an officer about to be displaced in the middle of his term should be prompt and vigilant in bringing "influence" to bear to save himself, is natural; but the lying-in-wait, as it were, at the bedside of an invalid President is a repulsive spectacle, quite worthy of the barbarous spoils system which is the cause of it. We observe that the Boston *Journal* is very solicitous to divert the feeling roused by Collector Smith's removal from Secretary Blaine to Senator Hale. It virtually asserts that Mr. Blaine did not advise the proceeding and does not now favor it, and this we are very glad to hear. But then, it leaves the President in the dilemma of yielding to Senatorial prerogative, or of repeating the arbitrary act which cost Collector Merritt his place without warning, without necessity, and before his term had expired. The fact that he reconsidered the matter may be variously interpreted.

There is no doubt that the most significant phase of public feeling over the assault on the President has been manifested at the South. For spontaneity and warmth there has been nothing like it on this side of Mason and Dixon's line; and while the Southern press generally has been in full sympathy with it, in one instance within our knowledge indelicate rather than hostile editorial expressions were summarily rebuked by a visitation *en masse* from the townspeople, who extorted a retraction. Whether the colored population have had their share in these creditable exhibitions of sensibility and loyalty, we are not informed. There is no reason why they should separate themselves from the whites in such matters, and they are perhaps not yet accustomed to take the initiative in meetings having a constructive political aspect. Still, in South Carolina the Charleston *Courier* has found fault with their apathy, and on Monday, under the lead of their pastors, they came together in that city and resented the imputation and passed appropriate resolutions.

The Virginia Democrats held their convention at Richmond on Thursday, and adopted a platform which represents the strongest position the party feels it safe to assume on the debt question. They say that they "condemn repudiation"; that they "will make every effort to secure a settlement of the public debt" of the State, "with the consent of her creditors, which is consistent with her honor and dictated by justice and sound public policy"; that the several classes of the debt ought to be "unified" in order that "equality, which is equity, may control in the annual payment of the interest, and the ultimate reduction of the principal." They promise that they will use all lawful and constitutional means to secure "a settlement upon the basis of a three per cent. bond," and at the same time that they will not "increase the present rates of taxation." Besides this, they are in favor of "equality of rights and exact justice to all men"; they are opposed to "special privileges," and they favor "freedom of religion," "freedom of the press," "freedom of the person," "trial by juries impartially selected," "elections by the people free from force or fraud," and, above all, "the election for public offices of those who are honest and best fitted to fill them." On this platform Major John W. Daniel, of Lynchburg, has been nominated for Governor. It is alleged of him that he was at one time tinctured with the greenback heresy.

The pledge not to increase the present rate of taxation will probably be regarded by the creditors of the State as an intimation that they must take a three per cent. bond or nothing, and it is no small misfortune for the Democrats in their present position that they should feel obliged to begin their campaign with such a declaration. It gives the platform a hollow look, which even the manly words of Colonel Bocock, who reminded the Convention on taking the chair that "righteousness exalteth a nation, but sin is a reproach to any people," does not wholly remove. The idea that a three per cent. consolidated loan could be floated by the State of Virginia in the open market at par is, of course, preposterous. The United States has not yet been able to do this. Practically what the Democrats say is, that they will give the present creditors of the State a three per cent. bond instead of their present obligations, or they will give them an indefinite quantity which may turn out to be nothing at all. In other words, they will once more guaranty their principal if the creditors will submit to a reduction of interest. This is simply an ingenious mode of taking advantage of the repudiation sentiment in the State to beat the creditors down, and is not paying the debt, however good "politics" it may be.

Few political occurrences of recent years have been on the whole so singular as the prohibition canvass in North Carolina which ended in Thursday's election. That a Southern State, and one largely interested in the cultivation of the vine and manufacture of spirituous liquors, and above all governed by a Democratic legislative majority, should submit to the people a temperance law of such stringency, was surprising, to begin with. But that when this had been accomplished, and the leading Democrats had either been constrained to support the measure, or, like Governor Vance, to observe neutrality; when the clergy had taken up the cause of prohibition, and manifestly the best elements of society were outspoken on the same side, the result at the polls should be an overwhelming defeat of the measure, is at first sight incomprehensible. The adverse majority amounted to upwards of 40,000, and in scarcely more than one county did the friends of prohibition prevail. Seldom has a legislature either so mistaken or so misrepresented public sentiment, and such was the temporary obliteration of party lines that few were prepared for so decisive a vote on one side or the other.

The truth is, of course, that the Democratic vote could not be counted upon, while the negro vote was sure of being protected to the utmost extent, and was, in fact, fully polled without "intimidation" of any kind. The blacks voted almost solidly against prohibition, in utter disregard of their religious advisers, but in perfect loyalty to the Republican programme. The disagreeable feature of the canvass has been the active part taken by the Federal office-holders in defeating the temperance movement, not, we may be certain, from any objections to the proposed law as crude and impracticable, but from the desire to revive the Republican party by making capital out of a measure essentially Democratic. In other words, the occasion was seized to renew the old alliance between ignorance and poverty and political unscrupulousness, contrary to the best interests of the whole population of North Carolina, for the result is, that a blow has been dealt not only against prohibition but against temperance. The canvass, however, has not been without its bright side. It has emphasized the era of good feeling which has for some time existed in North Carolina, and has brought both races into close and harmonious contact at every

stage. Prohibitory Democrats were glad to secure the services of Republican colored men of weight and respectability to speak beside them on their platforms, and were probably led to think more highly than before of the capacity of these allies. Party lines were only nominally drawn, and were undoubtedly weakened, as the next local political crisis will show. Finally, the minds of the people were forcibly concentrated on their own affairs, and something was gained in political education by the meanest and humblest citizen, and something in toleration by the highest and most prosperous.

In Wall Street the money market was extremely easy at the lowest rates current for a long time, notwithstanding the fact that the New York banks lost nearly one-half their surplus reserve, only $5,735,225 being left. Foreign exchange, although close to the gold-importing point, did not permit of gold imports, mainly because the "bull speculation" in breadstuffs and provisions has interfered with the export of these commodities, which in turn cut off the supply of commercial bills. The Italian Government has begun drawing gold from London in preparation for the resumption of specie payments, and the probable early movement hither of gold from Europe, therefore, attracts this year more than ordinary attention. The best opinion is that our imports will be less than last year or the year before, but will still be considerable. Speculation at the Stock Exchange continues to be moved by the varying changes in trunk-line railroad affairs and in the physical condition of President Garfield. A conference of the managers of these railroads has been called at Saratoga for the present week; at times it has been asserted that the chances for a settlement of differences and a restoration of rates were good, and at others bad or doubtful. The latter have preponderated, and the result has been a decline in prices of stocks during the week. The second surgical operation on President Garfield helped to depress the stock market on one day.

That the volume of mercantile transactions all over the country is large is shown by the expanding figures of the Clearing-house exchanges. The returns of railroad traffic also point in the same direction. For July the forty-odd railroads which publish their receipts show a gain of 16 per cent. over July, 1880; as rates are lower than then the increase in tonnage must be larger. The crop information has not materially changed previous estimates respecting wheat in this country, and the extremely hot weather of the last week, unfavorable to the corn crop, has pushed up the price of corn. The foreign harvests are reported to have fallen below previous reports in France and England, but to have exceeded expectations in Russia, where, according to cable reports, the yield of wheat will be larger than for twenty years past. The price of silver bullion has advanced during the week; the closing price in London was 51½*d.* against 51⅛*d.* per ounce a week ago. The 412½-grain silver dollar had a bullion value at the close of the week of about 86⅝ cents.

The Senate Judiciary Committee, which is considering the question of a new bankruptcy law, has received from Mr. D. C. Robbins, the chairman of the Chamber of Commerce Committee, some important suggestions. They are that officers should, as far as possible, be compensated by fixed salaries instead of fees, that the powers of the registers should be increased, that the amount of indebtedness required to authorize voluntary proceedings should be at least $1,000; that composition settlements should not be allowed to take the discharge of the bankrupt out of the control of the court, without the consent of a majority of the creditors in number and three-fourths in value; and that the discretionary power of the court relating to the granting of discharges should be greatly enlarged. At the next session of Congress the attempt will be renewed to secure an efficient and fair bankrupt law, and the present business condition of the country is such that it ought to be possible to pass a measure of this kind. Hitherto bankrupt laws have been passed by Congress in times of commercial depression, under pressure from debtors whose main object has been to wipe out their obligations and start afresh. When this has been accomplished the law has always turned out to be very objectionable, for one reason and another, and has been repealed. In the present prosperous condition of trade, however, when there is no distinct pressure from either debtors or creditors, the main interest in the subject comes from the desire of the mercantile classes to have a permanent and uniform system which the insolvency laws of the various States can never supply, and the only objection to such a system must come from people who have a sinister interest in keeping up the confusion and uncertainty which these laws produce.

It is said to be contemplated in Boston to hold an indignation meeting at Faneuil Hall this week, "to protest against the alleged action of the State Department in regard to Leo Hartmann, the Russian Nihilist." It is not stated what the "alleged action" was, and the only alleged action that we know anything of is not that of the State Department with regard to Hartmann, but of Hartmann himself, and consists in his having suddenly run off to Canada, thus relieving the State Department of the opportunity of taking any kind of action at all. We trust that the subject will be approached calmly in Boston, because, important as the questions brought before it by the presence of Hartmann in the United States would be, the proper position for the Faneuil Hall meeting to take with regard to Hartmann when he is in Canada is an abstract matter, about which there is room for thought and discussion. If it be true that the "alleged action" of the State Department is believed in Boston to have consisted in a statement by the Assistant Secretary that if the Russian Government demanded the surrender of Hartmann he would be immediately given up, the attention of the meeting will no doubt be directed to the fact that it is now denied that anybody connected with the State Department ever made any such allegation. As the identity of the alleged Hartmann is also in dispute, the whole subject is now in a position which would seem likely to give any discussion of it rather an "academic" than a practical value. However, Secretary Blaine's letter to the counsel of Hartmann in this city, declining to give any intimation what the Government would do if Russia should demand his client's surrender, has appeared since the call, or talk of a call, and if the protestants are in earnest they will make the most of it.

According to the St. Louis newspapers, the manufacture of infernal machines is going on actively in that city, and a "well-known Irish revolutionist" there "claims" that the machines recently seized in Liverpool were made in St. Louis. He says that he knew all about it from the first, and admits that it is "rather brutal to destroy a hecatomb of people in order to reach one man," but insists that "actual experiment is the best way to convince these people that the bomb idea won't work in England." The reporter was referred by this thoughtful agitator for further information to Mr. Denis O'Hara, whom he found to be of that "clear-cut and transparent type of Irishmen who seem to join an almost feminine delicacy of feature with an iron understanding"—a type which, we suspect, is not common in any part of the world. Mr. O'Hara, on learning the errand of the reporter, readily gave him all the information he desired. He said that it need cause his visitor no surprise that he was ready to talk freely, because by the time the interview was published he should be "away," and, besides that, he was a member of no oath-bound order. "If a man betrays us we kill him; that is all there is to it." Mr. O'Hara says that since June 20 he has himself sent over to England eighty-six infernal machines, of which number at least fifty, he thinks, have got safely into the island. The intention of the conspirators is to "cripple the English navy," but crippling is a word which does not quite accurately describe his intentions, for "three years from to-day there will not be an English man-of-war on the ocean." It is hardly necessary to add, "We are desperate and determined men."

One of the results of the investigations of the New Jersey Constitutional Commission now in session will probably be to sweep out of existence the "lay" judiciary of that State. The theory of "lay judges," which has made its appearance at various parts of the country at different times in its history, is that by associating a judge trained in the law with a judge who knows no law you get something as a result which is better than law—something simpler, and purer, and less technical, and less harsh than law, which may perhaps be supposed to resemble abstract justice. As a mat-

ter of fact, it has invariably turned out, wherever "lay" judges have been employed, except in justices' courts in the country, where in most cases no technical knowledge is required, that the judicial product of the mixture of law with ignorance of law has not been justice, but confusion and uncertainty. In New Jersey, where Bench and Bar have preserved most of their ancient traditions intact, it will be rather a surprise to most persons to know that the existing judicial system of the State provides for "lay judges" at all.

Dr. Howard Crosby, the President of the Society for the Prevention of Crime, delivered an address on Sunday, in which he gave a depressing account of his unsuccessful attempt to suppress the illegal liquor-traffic in this city. A State law, passed in 1857, forbids the sale of liquor to be drunk on the premises by any but recognized "hotels," and the Society went to work several years ago to enforce this law. A test case was decided by the Court of Appeals in favor of the Society in 1877, and the Society then got the Police Commissioners, for the first time, to enforce the statute, with the result that "for nine days and nights in December, 1877, there was not a rum-hole open." Now, however, the Mayor interfered, and caused the indictment of the Police Commissioners (Dr. Crosby speaks of his action as if it was intended for the benefit of the "rumsellers"), and within twenty-four hours "all the rum-holes were in full blast again." The next year the efforts of the Society were directed to preventing the passage at Albany of a "free rum law," and in this it was successful. The law of 1857 was allowed to stand, but the Excise Commissioners went to work and nullified it by deliberately making every "rum-hole" in New York a "hotel." Then the Society had the Commissioners indicted. It took exactly a year to bring them to trial, and the trial was a farce. At length a "rumseller" was convicted under the law, but he was immediately pardoned by Governor Robinson. Then Mayor Cooper was induced to turn the Commissioners out. The present Commissioners, Dr. Crosby says, are reasonable men, but they will not enforce the law because they say the community will not support them. He seems to overlook the fact that there is a good deal in this objection. In such a city as New York the restriction of the sale of liquor to hotels proper is an impossibility, and in any good license law this ought to be borne in mind. Dr. Crosby's experience with the law of 1857 proves that it cannot be enforced, except spasmodically, and if we are to be shut up to the alternative between "free rum" and this antiquated statute we shall always have "free rum."

The London *Times* of July 23 contains a remonstrance on the subject of Penn's bones written by Mr. George J. Harrison, commissioner for Pennsylvania. It is not, of course, necessary to import the bones into Pennsylvania if all that is wanted is a memorial of Penn, because a monument is an effective reminder even without bones. Mr. Harrison, however, thinks otherwise. He insists that if the bones are allowed to remain in England the feeling about Penn in Pennsylvania will die out. "Neither painting, nor statue, nor memorial building will serve the purpose so well as a tomb which holds the ashes of the people's benefactor." It might be inferred from this that the commissioners intended, if they got possession of the bones, to subject them to the process of cremation before consigning them to their permanent resting-place. But the context shows that the word is used metaphorically, and is really intended as a synonym for "bones." But how is it, if "bones" are required to keep alive a strong sentiment of this kind, that the present excitement on the subject has arisen? Can the mere hope of securing possession of a distinguished man's bones arouse a feeling which reverence for his memory and gratitude for his services will not make perpetual? Mr. Harrison refers to the case of Napoleon's bones, and insists that nothing will "arouse the adherents of his dynasty to perpetuate it like the tomb in which his relics rest in the Hôtel des Invalides in Paris," but this is an unfortunate illustration just now, for it would seem from recent events that the bones of Napoleon are beginning to lose their power among the adherents of the dynasty. In fact, the party could hardly be in a worse condition if the bones were in St. Helena.

Under the lead of Lord Salisbury, but apparently with some reluctance, the House of Lords has loaded down the Irish Land Bill with amendments which radically alter the character of the measure. One of these strikes out the words authorizing the land court to "have reference to the interest of tenant and landlord respectively"—a change which seems intended to prevent the recognition of the property of the tenant in his holding. The bill has gone back to the House of Commons. The obstruction offered by the House of Lords appears to be mainly due to the obstinacy of Lord Salisbury, who seems to be blinder than the majority who follow him to the dangerous position into which they are getting themselves.

The electoral contest now going on in France is in the main a contest between two different shades of Republicanism, of which President Grévy and Gambetta are the respective exponents. The former represents faithful adherence to the constitution as it is, the latter insists on radical reform, for which, as his mouthpiece Spuller emphatically tells us, "the country yearns," demanding the consolidation of the Republic on the basis of "the broadest, freest, and most enlightened democracy." There is, however, no open hostility between them; but the late defeat of his favorite measure, the *scrutin de liste*, has forced Gambetta to seek "vindication" in the electoral canvass. At Tours, a few days ago, while announcing his programme, he warmly eulogized the President, and declared himself—contrary to some former expressions—in favor of the existence of two Chambers, though desirous to see both animated by one spirit. He would introduce into the mode of nominating senators the principle of proportionate equality of communes, would urge the abrogation of the irremovability of the senators elected for life, and their submitting to re-election by a congress of the two houses. He advocated a complete system of secular primary education, the introduction of measures tending to make entrance into public service independent of private means, and the enactment of a law giving workmen complete liberty of association; and—imitating and surpassing Bismarck in courting the support of the laboring classes—proposed a system of Government life insurance, accident insurance, and insurance of crops. All this is certainly radical enough, but slightly vague, and, perhaps, is partly meant only as a bid. The Cabinet at first seemed inclined to observe neutrality in the struggle, and leave the advocacy of moderation to independent leaders, but M. Ferry, the Premier, has now taken the stump in person. The Bonapartists, Legitimists, and Clericals are also in the field.

The electoral contest for the German Reichstag waxes hotter from week to week. Prince Bismarck's organs, such as the *Norddeutsche Allgemeine Zeitung*, the *Provinzial-Correspondenz*, and the *Grenzboten*, carry on an aggressive warfare against the Liberals, with violent attacks on their leaders, both past and present. The source of the inspiration of these journals renders retaliation in kind a very delicate if not an impossible task. The Opposition tactics are, therefore, defensive and comparatively free from personalities. Bismarck's numerous tentative moves in various directions are, however, sharply criticised, and his coquetting with Protectionists, Ultramontanes, Socialists, Anti-Semites, etc., boldly commented upon, less as being manœuvres dangerous in themselves than as indicating a determined resolution to continue a dictatorship based neither on a great principle nor on a great party, upheld by a more skilful than honest shuffling of the political cards, and derogatory to the intelligence and manhood of the nation. The supporters of the Prince Chancellor by local coalitions of a very questionable character—as in Berlin against the Progressists—offer frequent opportunities to such opposition journals as the *Kölnische Zeitung* or the Augsburg *Allgemeine* for ridiculing the so-called Conservative camps, in which former *Culturkämpfer* shake hands with Ultramontanists and Anti-Semites, and former Free-Traders bargain with Socialists for mutual support at the polls. Yet, judging from the result of the late elections for the Bavarian and Saxon Diets, and other indications, the "immoral" coalitions in favor of the Prince's rule—with its indirect taxes, laborers' life and accident insurance, protection and free-port annexation—are likely to be triumphant at many an election for the Reichstag, and the prospects of the Liberals are, on the whole, to say the least, not bright. That no party will have a majority of votes is sure, and the balance of power will probably remain with the Centre, or Ultramontane, party.

SUMMARY OF THE WEEK'S NEWS.

DOMESTIC.

FOR several days previous to Monday the daily increase of the President's fever had been unusual, and there was a doubt as to whether the cause was the formation of a new pus cavity or merely the obstruction of the flow, owing to the too rapid healing of the entrance of the wound. Monday morning, accordingly, another operation was determined upon and the latter was found to be the case. After the President had been etherized Dr. Agnew enlarged the old opening about three inches downward and forward, and made another incision into the track of the ball below the margin of the twelfth rib. For the present at least, therefore, the discharge will continue free. Naturally, the President experienced considerable exhaustion and suffered a good deal from nausea; the pulse and temperature also increased noticeably, but as soon as the effects of both the ether and the operation have passed off Dr. Agnew anticipates decided improvement.

The report of the Commissioner of Internal Revenue to the Secretary of the Treasury gives the receipts of the office for the year ended June 30 as $135,229,902 12, and the expenses as $5,063,330. During the past five years, the term of Commissioner Raum's administration, $602,310,787 22 have been collected, the expense of collection being $21,992,330, or 3.37 per cent. upon the amount collected. During the past year the largest receipts from any State have been those from Illinois—nearly twenty-six millions; Ohio comes next with nineteen, and then New York with seventeen; the next is Kentucky with nearly nine millions.

The Conservative-Democratic party of Virginia, as the Funder-Democrats of that State formally call themselves, held their Convention at Richmond last Thursday. It was composed of six hundred delegates, and its action was thoroughly "harmonious" and enthusiastic. The resolutions adopted declare, among other things, that "the maintenance of the public credit of Virginia is the essential means to the promotion of her prosperity," condemn "repudiation in every shape and form as a blot upon her honor," pledge the party "to use all lawful authority to secure a settlement of the State debt so that there shall be but one class of public debt," recommend as the basis of such settlement a 3 per cent. bond, pledge the party further "not to increase the present rate of taxation," and, finally, denounce as "unfounded in fact" and "dishonorable to its authors" any intimation that the party "has been, is now, or proposes to be opposed to an honest ballot and a fair count." After the adoption of this platform the Convention expressed the "tender sympathy" of its members with President Garfield and proceeded to ballot for a candidate for Governor. The principal candidates were General Fitzhugh Lee, James A. Walker, and James Goode. On the second ballot, however, John W. Daniel, of Lynchburg (a Mahone stronghold), was nominated and made a speech, accepting the honor and approving the resolutions "from beginning to end." Mr. Daniel is thirty-nine years old and served on the Confederate side during the war, being at one time assistant adjutant-general under General Early. He has been a Greenbacker and is accused of having at one time favored "readjustment." The remainder of the ticket is: for Lieutenant-Governor, James Barbour, and for Attorney-General, Philip W. McKinney.

The North Carolina election passed off very quietly on the 4th. The vote was so light that it has been difficult by comparing the returns with those of former years when intimidation has been charged—none has been heard of this year—to extract much significance from the result, so far as bull-dozing is concerned. The interest of the election resided wholly in the fact that the main issue was prohibition, which, in a particularly radical form, was advocated by the Democracy. The negroes voted with the Republicans in opposition to the proposed measure, but as the majority against it is over 40,000, many Democrats must have voted similarly, at which no especial astonishment is expressed.

The Kentucky election on the second inst. was for a State treasurer, nineteen senators and one hundred representatives, and a judge of the Court of Appeals from the Third District, comprising twenty-one counties of the State. There was a light vote and no disturbance of importance. The result was, of course, an overwhelming Democratic success as usual, though the Republicans made a slight gain in their legislative representation. The call for a constitutional convention is defeated by the smallness of the vote, all votes not polled being counted against it. Mr. Beck's return to the United States Senate is assured.

The Mississippi Democratic State Convention met at Jackson on the 3d and spent the day in organizing, there being many contesting delegations. Thursday was passed in taking twenty ballots for Governor. Late on Friday the nomination of Mr. Lowry was secured by the withdrawal of other candidates, amongst them Col. Barksdale, who now asserts that he retired with the promise of substantial support for the United States Senatorship, which, together with the defeat of Gov. Stone, Mr. Lamar's candidate, is supposed to presage Lamar's retirement from the Senate. The politics of the State are, however, in a very confused condition, and predictions are difficult to make. General Chalmers, who is hostile to Lamar, is said to have an eye upon the Senatorial succession and to expect the assistance of the Greenbackers. The latter hold their convention on the 24th inst., and the Republicans meet on the 25th. A joint ticket and consequent "live campaign for Lowry" are already spoken of.

The Maine Democrats of the Second Congressional District, contrary to the advice of ex-Governor Garcelon either to endorse the Greenback candidate or to adjourn without making any nomination, nominated Franklin Reed, of Bath, by acclamation, on Thursday last, at Lewiston.

Delegates from nineteen out of eighty-eight counties organized the Ohio State Prohibition Convention at Columbus on the 4th inst. They endorsed the ticket nominated by the recent Temperance Convention at Loveland, and supplied a vacancy in it; adopted resolutions declaring in favor of "absolute prohibition of the liquor-traffic," of woman suffrage, of laws against "gambling in gold, stocks, or produce," and various other measures, and pronounced Guiteau's attempt "a startling illustration of the danger arising from the debasing influences of executive patronage and the liquor crime."

A Commission appointed some time ago by the Governor and Legislature of New Jersey to consider and recommend amendments to the State Constitution, met at Newark on Friday and listened to arguments as to proposed changes in the State judiciary. At its next meeting it will consider the subject of railway taxation.

Hartmann, the Russian Nihilist refugee, betook himself to Canada last week, abandoning his project of enlisting the sympathies of Americans in the cause of his order or faction, in view of some uncomfortable statements made to a reporter by Assistant Secretary of State Hitt. These were to the effect that if the Russian Government should ask for Hartmann's extradition on the charge of murder, and he could be unmistakably identified, he would be surrendered. Some doubt had been expressed as to his identity, but as, at all events, assumption of this was his only "card" here, he concluded to seek protection under the British flag, where he had found it before. Hartmann devised the machinery by which a train of people were blown up near Moscow, the late Czar's movements at the time having been miscalculated.

The amount of offal which the harbor of New York is constantly receiving appears at last to have attracted sharks of a man-eating size and in considerable numbers. There have been bathers frightened during the past two or three years, and at least one instance of the serious mangling of a boy, but the exaggerated rumors provoked by such occurrences have not hitherto been very widely credited, perhaps. This year, however, the presence of sharks in the bay and along the piers of both rivers seems to have been frequent, and last week several were caught off Pier 23 on the North River and exhibited. One weighed four hundred pounds and was ten and a half feet long, and another only a trifle smaller. This pier has heretofore been one of the most popular places for surreptitious bathing, but, like the rest of both river fronts, has, since the shark excitement, caused the police very little vigilance.

Owing to an injunction restraining Trustee Chaffee from using the funds of the company for running expenses, all the works belonging to the Sprague estate have been closed. They include the Baltic, Quidnick, and Arctic mills in Providence, those at Natick and Kennebec, Me., the Morgan Mill at Johnson, the United States Flax Company's works, and the Cranston Print works. Over six thousand men, besides a large number of women and children, are thus suddenly thrown out of employment.

The Joint Executive Committee of the trunk railway lines, which have been "cutting under" the regular tariff rates for both passengers and freight for some time, held a meeting on Friday in this city, and agreed on a new freight tariff to take the place of the old which will at least effect a temporary change. The rumor that a conference of the presidents of the various lines will be held at Saratoga this week is vigorously denied by Mr. Vanderbilt.

William G. Fargo, President of the American Express Company, died at his residence in Buffalo on the 3d inst., in his sixty-fourth year, and after a life of great business activity and success. The deaths of James Clark, the senior member of the spool-cotton manufacturing firm at Paisley, Scotland, and of Bishop E. O. Haven of the Methodist Church, and of a literary and theological reputation, at Salem, Oregon, also occurred last week.

Orvil L. Grant, the brother of ex-President Grant, who has been a year in the New Jersey State Asylum for the Insane at Morris Plains, died there Friday, in his forty-seventh year.

General Robert Patterson died in Philadelphia on Sunday. He was of Irish birth and served this country, whither he early came, in the War of 1812, the Mexican War, and the Rebellion.

FOREIGN.

The Duke of Argyll, who left the Cabinet on account of differences on the Land Bill, attacked the measure in the House of Lords on the 2d inst. in vigorous terms, comparing the Government to a jelly-fish, and describing its procedure as "eminently ridiculous." He was followed by the Duke of Marlborough, Lord Selborne, Lord Cairns, and others on the same side, and the *Times* admitted that the Liberals were no match for their opponents either in oratory or in mastery of the subject. Over

fifty amendments, twenty of which are described as serious, were determined upon at a meeting of the Tories, and in the main received a steady majority during the consideration of the bill. In reference to clause seven, Lord Salisbury moved on Friday that "in any proceedings under the act the rent of a holding should not be reduced on account of any sum paid by a tenant or his predecessors, on coming into the holding." Despite protests from many of his own party, the Tory leader insisted on this and carried it by a vote of 157 to 110. The bill was finally passed through committee on the same day, and on Monday night the House read the bill for a third time without a division.

The Liberal press expresses marked indignation at the freedom of amendment exercised by the Lords. The *Pall Mall Gazette* speaks of the measure as "maimed and impaired." According to the *Daily News*, "The bill is both transformed and deformed," and the writer continues: "The House of Commons must decide whether a veto on legislation, which the Crown no longer possesses, is to be exercised by Lord Salisbury and the mute herd which follows his lead in the House of Lords." Mr. Bright, in a speech at the Mansion House, Saturday night, "ignored the amendments of the House of Lords, and spoke of the bill as almost ready to receive the royal assent." A conference on Thursday between the Liberal leaders in the Upper House with Mr. Gladstone, to decide what amendments should be accepted, apparently resulted in nothing practical, but it is not deemed likely that any changes that touch the principle of the bill will be adopted.

At the weekly meeting of the Land League on the 2d inst. it was announced that the usual remittance from America had not arrived, and that accordingly there were but £319 to be acknowledged. Arrests during the week have been few, those of Messrs. Murphy and Campion, of Queen's, being the most important. Sunday, John Dillon, M.P., was released from Kilmainham jail by order of the Lord-Lieutenant, and his exit has given rise to rumors that all the "suspects" are soon to be released also. The release of Davitt, indeed, it is reported, will take place on September 1, with the understanding that he shall not return to Ireland for seven years. Mr. Forster, however, replying to various questions in the House of Commons on Monday, said that Dillon had been released simply because the Government had learned that further confinement would endanger his life.

McGrath and McKevitt, who pleaded guilty to the indictment charging them with attempting to blow up the Liverpool Town-Hall, were found guilty and sentenced, the former for life, and the latter for fifteen years at hard labor, on the 2d inst.

A very large meeting was held in Trafalgar Square on the 2d inst. to protest against Mr. Bradlaugh's exclusion from his seat in the House of Commons, to which no one denies that he has been elected. Mr. Bradlaugh made a great speech, announcing at the close that he would "go home" the next day. The next day, however, in deference to a previous engagement, he attempted to force his way into the House of Commons, and much fright was caused lest his "supporters" should gain access to the lobby and enable him to accomplish his design. Orders were accordingly issued to prevent the admission to the lobby of any but members of Parliament. Just before noon Mr. Bradlaugh appeared, approaching through the members' entrance. He "looked pale, and evidently suffered from suppressed excitement"; indeed, "it was frequently remarked that he looked like an animated corpse." At the door, however, stood a number of policemen "picked for great bodily strength," besides two deputy sergeants-at-arms, and when Mr. Bradlaugh attempted to push one of the latter aside he was seized and dragged forcibly to the entrance. He resisted, and "a painful scene" ensued, in which the agitator's coat was torn, and at the end of which he was hustled unceremoniously, and in spite of vigorous struggling, down the staircase and into the arms of his "supporters." A number of members who were present at the finale cried "Shame! shame!" and an incipient riot threatened.

When the news got into the House Mr. Labouchere at once raised the question of privilege that the resolution in regard to Mr. Bradlaugh only excluded him from the House, whereas he had been hustled out of the lobby, and moved that the officials had exceeded their authority. The Speaker decided against him and Mr. Gladstone supported the Speaker, adding that Mr. Bradlaugh must thenceforth be treated as having no more right to enter the House than a stranger. Sir Wilfrid Lawson moved that the resolutions against Mr. Bradlaugh's admission be rescinded, but was ruled out of order. Finally, after sympathetic and indignant speeches by Mr. Broadhurst and Mr. Cowen (advanced Liberal and Radical, respectively), Mr. Bright described how "Mr. Bradlaugh was brought down to the Palace yard in a fainting condition," and appealed to the Opposition to reconsider their former decision in the matter, but was called to order for irrelevancy, and a motion to approve the whole conduct of the dealings with Mr. Bradlaugh was adopted by a vote of 191 to 7. Mr. Bradlaugh went to Bow Street and attempted to procure the arrest of the officers who handled him so roughly, but without success. In the House on Monday Mr. Gladstone announced that the resolutions preventing him from taking the oath would expire with the present session, that at the next he might present himself, and that meanwhile the Government would "consider the matter."

M. Gambetta made an important speech at a banquet at Tours on Friday, in response to a toast to President Grévy. He regretted that the rejection by the Senate of the *scrutin de liste* had cut off "the opportunity of consulting the democratic party in a broader and deeper manner than at present," but declared that, in spite of what had occurred, he was still in favor of the existence of two Chambers. He desired, however, to see both Houses animated by the same spirit, and deemed it necessary to introduce into the mode of nominating Senators the principle of proportional equality of communes. With him, moreover, it was a question whether the irremovability of Senators was not contrary to the principles of universal suffrage, and he observed that whereas the first irremovable Senators were elected by the National Assembly, they are now chosen by the Senate itself. They should, he considered, submit to a re-election by a congress of both Houses. In this way the Republican majority would obtain the "ballast and stability" it at present lacked, and a restriction of the constitutional revision to this might find a majority in the Senate willing to pass it. Among other reforms which M. Gambetta advocated were a complete system of primary secular education, and a law giving workingmen complete liberty of association. The main point of the speech was, however, the desirability of the fusion into a compact Ministerial majority of the different Parliamentary groups—an end which, of course, the *scrutin de liste* was designed to accomplish.

The press reception of the oration is not very flattering, though it appears to have been very popular. *La France* and the *National* are unfavorable, and consider the "programme" foreshadowed vague and dangerous. *Le Temps* eulogizes the speech, but does not deem the reconstitution of the Senate at all urgent. The *Journal des Débats* condemns the proposal, and points out that two months ago Gambetta did so himself. The *Paix*, the *Parlement*, and the *Dix-Neuvième Siècle* express similar opinions. There is at present but very little excitement with reference to the approaching election, and, so far as reported, no important Republican attempt to oppose M. Gambetta's programme, "vague" as it is, is likely to be made except upon the part of M. Jules Ferry, the Premier, who is announced as contemplating an active and conservative campaign.

M. Rouher has published a letter to the Electors of the Department of Puy-de-Dôme, which he represented in the last Chamber of Deputies, announcing his retirement from public life. After his long service he considers that he has "the right of not proceeding further," and he regards his permanent withdrawal from politics as "an act of dignity and homage towards those who are no more"—*i.e.*, the late Prince Imperial.

Two battalions of French troops and a battery of artillery have arrived at Goletta, which is called the first entry of the French military into the capital of Tunis. England and Italy, it is announced, have determined to send two more iron-clads to the Tunisian coast to protect their respective subjects. General Lougeret declares that he has discovered the plunder of the European quarters at Sfax to have been the work of Arabs before the landing of the French troops. Bou-Amena is reported to be "disheartened," and the inhabitants of Susa have applied for French protection.

Mr. Levi P. Morton the new, and Mr. Noyes the retiring, United States Minister to France, had an audience of President Grévy on the 5th inst. In presenting his credentials Mr. Morton remarked that, though America is on friendly relations with all nations, "towards France she cherishes a warmer and deeper feeling," and spoke of "the great work of securing popular freedom under the control of law" as the sentiment which "binds the two leading republics of the world." In reply M. Grévy observed that if the relations of the two countries could possibly be further strengthened the choice of Mr. Morton as Minister would secure that end, and added kind wishes for the prosperity of the country and the recovery of President Garfield. Similar courtesies were exchanged with Mr. Noyes.

In spite of much opposition to the bestowal of such honors upon a "comedian," M. Got, of the Théâtre Français, was made a Knight of the Legion of Honor, last week, to the great delight of his friends, to whom it is a "triumph for art."

It is now reported that the recent journey of the Russian Court to Moscow was due to the discovery of an extensive conspiracy to assassinate the imperial family. Sixty persons, some of them of high rank, are said to have been concerned in the plot. The trial of the "Black Division" will be begun on the 28th prox. before a special court. A reward has been offered for the capture of persons guilty of spreading among the peasants false reports regarding the redistribution of lands.

The Emperors of Germany and of Austria held a short conference, otherwise than socially of no importance so far as appears, at Gastein on the 5th inst., after which the latter went to Munich.

Ayub Khan, it is reported, entered Kandahar on the 30th ult.

The announcement of the census of Canada taken last April has just been made. The population is reckoned at 4,350,933, an increase of 18.02 per cent. in ten years; in 1871 it was 3,686,505. The increase is not satisfactory to the Canadians, and, moreover, the showing is reported to be as good as it is partly because of the inclusion of permanent absentees—emigrants from the Province of Quebec to New England factory-towns, for example.

NEW YORK CITY AND HER RIVALS.

We have been requested, apropos of the present "railroad war," to give some attention to the special interests of New York as affected by the pooling arrangements of the trunk-line roads, which allow the cities of Philadelphia and Baltimore differential rates to offset the natural or acquired advantages of this city as a centre of the export and import trade. The facts are substantially these: Under the pooling arrangement, third and fourth-class goods may be taken from Western points to Baltimore at three cents per one hundred pounds less than to New York, and to Philadelphia at two cents less; on first and second-class goods to Baltimore at eight cents less, and to Philadelphia at six cents less. Rates to Boston are the same as to New York, although the distance to the former city is fifty miles greater than to the latter. Various reasons are given for allowing these advantages to Philadelphia and Baltimore. Distance is somewhat in favor of those places, and cheapness of coal is somewhat in favor of the Baltimore and Ohio and the Pennsylvania railways. These facts would seem to be better calculated to serve as arguments for New York railways—*i.e.*, to justify them in getting all the business possible under such adverse circumstances—than to warrant the establishment of arbitrary rates in favor of Baltimore and Philadelphia. The New York Central managers, however, have always contended that, by reason of their low grades, their large local business, their New England traffic, and the marked supremacy of New York as an entrepôt of foreign trade, they could carry at as low a rate from Western points to this city as any competing line could carry to Baltimore or Philadelphia; and in this matter we have no doubt they spoke the truth.

Why, then, are differential rates allowed to rival cities? The reason is that the natural and acquired advantages of New York as a shipping point are so decided that upon equal rates of freight she would take nearly all the business, and leave Baltimore and Philadelphia and their tributary railways an insignificant share of the export trade. But the Pennsylvania and the Baltimore and Ohio railways are bound to get what they consider their share of the through-traffic from the West, and rather than surrender it they will carry freight for the bare cost of operating expenses, or even for less. In their view this is a matter of life and death, and they might as well die carrying for nothing as die for nothing to carry. Hence the New York roads must either allow them a rate sufficient to offset, or partly offset, the natural advantages of New York, or enter upon a war of rates leading to a serious diminution if not a total drying up of profits. In other words, there are four or five trunk-lines from the Atlantic seaboard to the Mississippi Valley, and they must all be supported or none can be. The unrestrained law of competition would result in bankruptcy to the carrying companies, but, as George Stephenson sagely observed nearly half a century ago, where combination is possible competition is impossible, or at best only occasional and fitful.

Now, it is not easy to say what should be done under these circumstances. The Chamber of Commerce Committee allege that the pooling arrangement is consented to by the New York roads in order to "sustain rates high enough to pay returns upon their enormous mass of watered stock." This is probably true, but if the New York roads had no watered stock—if they had no stock at all—the principle would still hold good, that if one or two roads consider it to be a life-and-death matter that they shall handle a certain proportion of the through-traffic from the West, the New York roads must either allow them to do so or must carry for nothing, and tax their local business to make up the difference. It is presumed that they tax their local business already "as much as the trade will bear." At all events this is alleged against them, and it is not desirable that such traffic should be subjected to heavier burdens. So long as the Erie Canal could carry at cheaper rates than any railway, New York had an immense advantage over other Atlantic cities, and one of which she availed herself to the utmost; and her metropolitan position is due to it. But now that railways can carry on equal terms with the canal, her superiority is liable to be contested by any city which can push a road to the Mississippi Valley, and this regardless of the capitalization of New York railways. Perhaps the abolition of tolls on the canal, when effected, will restore to the city the advantage it so long enjoyed. The experiment is well worth trying, especially since new regions adjacent to Lake Superior are destined to cut a large figure in the grain trade, whose traffic can be more advantageously handled by water *via* the Sault-Ste.-Marie Canal than by the long haul around the southern bend of Lake Michigan.

THE BRADLAUGH AGITATION.

Mr. Bradlaugh's Parliamentary proceedings, which culminated last week in his attempt to get into the House of Commons by main force, constitute what in French politics is known as an "incident." It has no direct connection with any of the questions upon which parties ordinarily divide, it need never have occurred at all, yet having occurred it creates great excitement and commotion, and forces politicians to take sides upon a question which they have no real desire even to discuss.

The history of the case is a curious one. When Mr. Bradlaugh was elected to the House of Commons he refused to take the customary oath on the ground that he did not believe in the existence of a God. Many people found it hard to understand why an atheist should object to recite what must be to him a mere meaningless form of words; but Mr. Bradlaugh's conscientious scruples appeared to arise from a feeling that to take an oath under such circumstances would be what Carlyle would have termed "unveracious" conduct, and truckling to the "mother of dead dogs." If this were a true representation of the condition of Mr. Bradlaugh's mind, it would only serve to show that he is an extremely conscientious man, highly sensitive with regard to the obligation of truth, and therefore a member whose scruples Parliament could not afford to slight. In this country the statutes of almost every State provide for the case of persons having conscientious scruples on the subject of oaths by providing that they shall take an affirmation instead, and although with us these nice consciences are more often developed among persons anxious to escape from jury duty than among statesmen with lofty political aims, still the principle is the same.

If the matter had ended here there would not have been much to say about it, except that it was a defect in the law of England or of the House of Commons that such a case should be unprovided for. But Mr. Bradlaugh changed his mind about the oath, and expressed a willingness to take it. The House of Commons, however, now said that he could by no means be allowed to do so, because he had already shown that oaths placed him under no religious obligation. In other words, the House, which originally would have been perfectly ready to admit Mr. Bradlaugh, an avowed disbeliever in the existence of a God, to his seat, provided he would take the oath, now objected to his taking the oath because his refusal to take it on a former occasion had proved that he did not believe in the existence of a God. Up to this point it would be a nice question which had displayed the greater delicacy of conscience, the House or Mr. Bradlaugh, but the only result which the trouble had produced was the exclusion of Mr. Bradlaugh, and his sudden conversion from an unpopular agitator into a martyr. The dispute, however, left Mr. Bradlaugh in a much better position than the House, for his exclusion after his expression of willingness to take the oath cannot be justified.

Not content with his exclusion, to make sure that nothing should be left undone, one of the most zealous members of the House went to work and had Mr. Bradlaugh prosecuted for illegal voting while in the House, under an old statute certainly never intended by its framers to be applied to such a case, and an enormous fine was imposed upon him, which he has no means of paying. Having considerable ingenuity, however, it occurred to him that if he was guilty of crime in voting in the House of Commons before being duly sworn in, his prosecutor was probably guilty of another old-fashioned crime in supplying money to institute proceedings to have him punished, and he therefore at once began proceedings against him for "maintenance." Finally he makes an attempt to enter the House by force. His attempt being pretty well advertised in advance, he draws together an immense crowd, who loudly cheer him on, the police throw themselves upon him in a body, and, after a fight in which Mr. Bradlaugh is said to have "contended for every inch of the ground," he is at length driven off the field, announcing, however, to the crowd that he will return to the

House "with sufficient force to either effect his entrance or compel the Government to arrest him." Petitions from all quarters have been pouring in in his behalf, and the Government have given out their intention to furnish him relief at the next session.

The case is a curious illustration of the fact that agitators who can manage to identify themselves in any way with popular rights can afford to take many more serious risks than their opponents can. Mr. Bradlaugh occupies logically an utterly indefensible position, and his attempt to make his way to his seat *vi et armis* is an act such as no legislative body in the world could permit and long continue to exist. But an injustice is done him and his constituents by excluding him from the House; most people feel that in these times the exclusion is impolitic and unfair, even if technically proper. The result is that the impression is rapidly gaining ground that Mr. Bradlaugh is a victim of tyranny and oppression, and that "the people" must stand by him.

The case recalls that of Wilkes, but the wide difference between the two men, between the grounds of the dispute about their right to sit in the House, and between the House of Commons as it was in Wilkes's time and as it is now, makes the questions presented by the Bradlaugh incident practically new. Wilkes, but for his unfair treatment by the House, would have had as little sympathy as Bradlaugh originally had; but this was owing to his private life, while in Bradlaugh's case his first notoriety, and his original widespread unpopularity, grew out of his publicly-expressed opinions. Wilkes's legal position with regard to the House was perfectly consistent, sound, and intelligible throughout, while Bradlaugh had at the outset, when he refused to take the oath, really no legal position at all. On the other hand, the House of Commons, in Wilkes's day a close corporation which the Government managed by the open use of money, has, in our time, become a strictly representative body, which is forced to regard the rights and feelings of constituencies in a way it never had done before. It is this fact which furnishes Mr. Bradlaugh and agitators like him with their political capital.

"FAIR TRADE" IN GREAT BRITAIN.

In considering the so-called Fair-Trade movement in England the first question to be asked is whether it represents any body of opinion in the United Kingdom sufficiently strong, compact, and organized (or capable of being organized), to be called a "Movement," or whether it is only the repetition of mutterings that have been heard from time to time ever since the repeal of the Corn Laws. A considerable portion of the landlord class have never been reconciled to free trade, even in the years most prosperous to the agricultural interest. When Sir Robert Peel abandoned protection they abandoned him and ranged themselves under other leaders, among whom Mr. Disraeli eventually became the chief. Disraeli, perceiving that the Corn Laws were as dead in England as the *corvée* in France, persuaded the land-owners that, although their principles were undoubtedly right, the times were not propitious for reasserting them. We believe that he never publicly recanted the dogmas of protection, although he put his foot upon every movement in the conservative ranks to rehabilitate them, either in or out of Parliament. Consequently, the protectionist policy, which has at no time been destitute of adherents, has had no leader since the death of Lord George Bentinck.

The competition of American agriculture during the past four or five years, coupled with harvests below the average in yield and quality, has produced almost a social revolution in Great Britain. Rents have fallen, or are destined to fall, thirty-three per cent. on the average, and this means in many cases, where estates are encumbered by settlements and by mortgage, the total extinguishment of the landlord's income. His portion being the surplus over a fixed money payment due to others, the whole loss from reduced rentals falls upon him; but it has happened in some instances that the reduction has been so great as to carry away all of his receipts and a portion of the entailment also. A great deal of suffering and soreness has resulted from the enforced lowering of rents. The old-school protectionists, whom Disraeli kept in subjection while he lived, are now reinforced and embittered by hard times and the prospect of continued hard times. It happens at this crisis of the agricultural interest that the commercial treaty with France has expired by limitation, that trade negotiations are pending with Spain, and that Germany has adopted a protective policy. Now, if ever, is the time for putting a duty on foreign grain for the benefit of English land-owners.

But it is too late a day in British annals to talk of re-enacting the Corn Laws for their own sake. Lord George Bentinck himself, if alive, would not expose himself to the sarcasm which such a scheme would bring upon its supporters. Protection must take some other shape unless it is to be laughed out of court. The enemies of free trade must find some disguise. Not even reciprocity will answer for a new shibboleth—the hollowness of that phrase having been long ago exposed and its advocates silenced. "Fair Trade" is the latest euphemism adopted for protection. As expounded by Mr. Bonamy Price, who does not avow himself one of its supporters, it assumes that it is within the competency of statesmanship to put some pressure upon countries which enforce protective tariffs against British goods by adopting discriminating duties against their goods. It would be worth considering, for instance, whether a tax laid upon American breadstuffs and provisions equivalent to the American tax on British iron would not help the Yankees to see the folly of protection, and thus promote the cause of "fair trade" between the two countries.

We venture the opinion that it would have that tendency, but that it would cost more than it would come to, and that it will not be carried into effect. A week's travel in the north of England and the south of Scotland will satisfy any observer that Great Britain has so far outgrown her land and her land-owners that no legislation having their special interests in view is worth a moment's attention if contrived at the expense of her furnaces, her looms, and her ships. Her manufactures and commerce dominate the markets and waters of the world—at no time more unmistakably than now. Her superiority is based upon cheapness of production—the art of offering more to foreign countries in return for their goods than rivals can afford to give. When she ceases to be master of this art she will cease to be Great Britain. Cheap food is an essential and indispensable factor in her problem. Fair trade may be a desirable thing, but the most unfair trade for her would be any system which makes bread and meat more costly. A plan to add five shillings per ton to the cost of coal by act of Parliament would not be more untenable, and would not be more hotly rejected if seriously proposed.

The inconsequential character of the Fair-Trade movement is disclosed by a late article in the *Quarterly Review*, which sets forth the grounds upon which its advocates rest their case. After arguing at great length that British trade is declining and that of foreign countries increasing—a postulate not supported but distinctly contradicted by statistics—the reviewer shows that sufficient revenue might be derived from a duty on corn to enable the Ministry to reduce or repeal the income-tax. This suggestion that the bread of the poor be taxed in order to spare the superfluities of the rich has met with all the ridicule it deserves, and there being no other gain hinted at in the article, except the hypothetical one that the Americans might learn something to their advantage if their grain were encumbered with a protective duty, it is evident that the cause of "Fair Trade" is not likely to make many converts. Free trade has never rested upon more solid foundations in Great Britain than at the present time. The supporters of protection under its new disguise are not as numerous or as influential, relatively, as the Greenback party in the United States.

SOCIETY NEWS.

When the London "society journals" first began the business of furnishing the public with reports of the gossip and scandal floating about London drawing-rooms and clubs, their appearance created a good deal of astonishment on both sides of the Atlantic. English newspapers had, time out of mind, carefully avoided this branch of enterprise, and it had become an established tradition about English society that what it especially loved was exclusiveness, and what it especially detested was any invasion of its privacy. In this country particularly, where until very recently the ideas commonly prevalent about English society were drawn mainly from the descriptions of novelists whose social atmosphere really belonged to the past, there seemed to be something monstrous and totally un-English in the establishment of organs for the dissemination of this sort of news. Nevertheless the

new press has had a remarkable success. No attempts have been made to suppress it. Hardly any of the people whose names it makes such free use of have called the machinery of the law into play against it, while it has, of course, from the nature of the news it publishes, attracted an amount of attention altogether disproportionate to its intrinsic importance.

It is probably the success of such papers as these in England that has led to the appearance of what is termed the "society column" in our newspapers, though the "society column" does not play in our social economy precisely the same part that the society journal does in England. For somewhat the same reasons that it has never been possible to establish an American *Punch*, the long-continued existence or success here of such a paper as *Truth* would be out of the question. It is not deficiency of humor in the one case any more than it is an absence of the love of scandal and gossip in the other, and that this is so is proved by the fact that if we have no *Punch* we have *Puck*, and "funny men" and columns devoted to wit and humor by the score, and that if we have no successful society journal we have column after column of "society news." The main difference between the two is that "society journals" are much given to scandal, while "society news" is mainly a public record of what are supposed to be interesting private social events.

One of the first questions which suggest themselves to any enquiring mind with regard to the news about "society" which he finds in his daily paper is, whether "society" probably likes that he should be furnished with it or not. The popular theory in "society" is that it does not, and that it is the wicked newspapers which are to blame for the glare of publicity thrown around the balls and dinners and parties, the lawn-tennis and polo, and the births, the marriages, the funerals, and even the engagements, of the people who carry on society in London, New York, Saratoga, and Newport. It is the prying reporter who, instead of minding his own business, has been making free with the secrets of family life, and breaking down the barriers which shield it from the public gaze. This theory, however, is altogether too like the theory that the scandals in which statesmen become from time to time involved, owing to their unfortunate propensity to peculation or other forms of immorality, are due to the morbid passion of the press for criticism of public men. If society were not beginning to like to have the newspapers give full accounts of the doings of its members, if there were any general feeling in the community that privacy is something to be respected for its own sake, and that any invasion of it is a serious blow at the bonds which hold society together, "society news" would never have become an important branch of journalism.

The interest of this new journalistic development lies, to our mind, not so much in any light it may throw upon the condition of journalism as in the light it throws upon the condition of society itself. That a great change has come over the whole tone of society within a generation, few people will deny; precisely what the change is, is harder to define. Perhaps the main difference is that it has ceased to be managed by persons of ascertained and assured position, who possess a common body of inherited social tradition, and is now carried on by a vast and fluctuating horde who obtain admission to it by birth, by money, by success of any kind, or often by mere audacity. At the same time, it has tended to have less and less connection with the serious work of the world—in England, through the gradual growth of a rich idle class amply provided with rank and money, without even the desire to affect intellectual tastes, and with no occupation but frivolous amusement; in this country, owing to the universal absorption of the great majority of the community in "business." It is easy enough to see why a love of privacy and a delicate reserve were necessary characteristics of society as it used to exist. Without these it could not preserve its corporate identity, or keep alive its traditions, or enforce its laws. But as its identity has been effaced, its traditions lost, and its laws changed or swept away by the great modern democratic wave, the reasons for privacy and reserve have disappeared. As long as it was a close corporation there was every reason why its proceedings should not be published to the world. It had the same sensitiveness on the subject that the House of Commons had in the last century on the subject of the publication of its debates. But now it would be just as absurd for it to have such a feeling as for the Corn or Cotton Exchange to resent the publication of reports of its transactions. It has, in fact, not merely lost its old love of reserve, but it has come to take a positive delight in publicity and notoriety. The very vapidity and emptiness of so much of its proceedings is one cause of its liking to see them published, because it gives them an importance which they would not otherwise possess.

When Mr. and Mrs. Orlando Jones of Newport make up their minds to add a room or two to their house, the approaching event probably seems to the whole family an ordinary enough matter; but when they find all the "great dailies" announcing to the world that "Mr. Orlando Jones is contemplating the addition of a wing to his charming cottage on Bellevue Avenue; the dimensions will be," etc., etc., it is not in human nature that Mr. Jones and Mrs. Jones and all the little Joneses should not feel that they are more important people than they were before; because, as we all know, Mr. Jones, excellent man as he is, made his money by "consolidation," and is never likely to be talked about by the newspapers for either his wit or his learning. For his emergence from his original obscurity he has to thank the inventors of "society news." In the same way when a couple of dozen boys and girls have a dance, and it is announced in all the papers the next morning that Mr. Orlando Jones, jr., "led the German" with Miss "Tottie" Smith, does any one imagine that the hearts of this eminent boy and girl are filled with rage at the publicity given to their evening's entertainment? On the contrary, they like it, and are greedy to get the paper and read about themselves in it. It is to them like applause to an actor. And when toward the end of the summer, intoxicated with the charms of her society, the youthful Jones asks the charming Miss "Tottie" to marry him, do they dislike seeing the imposing announcement in several newspapers having the largest circulation in the world that a "marriage has been arranged" between them? If they do they give very few and uncertain signs of it.

Moreover, the very large class of persons who are not actually in but who are engaged in "getting in" to society find their account in these publications, as they never could have done in former times, because it furnishes them with much valuable information which they can use in a variety of ways. That they may themselves use the columns devoted to "Society News" for the purpose of giving accounts of their own doings, and thus accelerate their social advancement, is an idea which the occasional use of the "interviewer" by accomplished statesmen for a similar purpose will suggest to many cynical minds.

MME. DE RÉMUSAT'S LETTERS.

PARIS, July 22, 1881.

THE 'Letters' of Madame de Rémusat* have not met with the same success as her 'Memoirs,' for the obvious reason that the 'Memoirs' are full of the great Napoleon, while the 'Letters' are full of Monsieur de Rémusat. The 'Memoirs' were written for the public; the 'Letters' are artless, full of details which have lost their interest. When we spoke of the 'Memoirs,' we said that in 1802 Monsieur de Rémusat became *préfet du palais* and Madame de Rémusat *dame du palais*. Rémusat was afterwards chamberlain and superintendent of the imperial theatres, a post which he occupied till 1814. Madame de Rémusat followed the Empress Josephine in her retirement after the famous divorce. Her first letters, now published, date from 1804, when Napoleon visited the provinces of the Rhine in company with the Empress. During the year 1805 the Emperor was crowned King of Italy and crossed the Alps with his whole court.

When these letters begin, the Duc d'Enghien had already been executed, and you probably remember the emotions which this event aroused in the heart of Madame de Rémusat, who was a royalist by birth. The scenes at Malmaison are described in the 'Memoirs' in a way which can hardly be forgotten. But Madame de Rémusat was young and elastic; she was attached to Josephine, and she evidently got over her instinctive feelings—we see no trace of them, at least, in the letters written soon afterwards. Madame de Rémusat had a real affection for her husband. She writes to him often in the style of a lover: "My friend, I have a presentiment that after this stormy and agitated era the remainder of our years will be easy, and that our lives will be peaceful and happy. A pretty house in the country, where we would educate our children well; a good and amiable friend there, whom one would not often leave, and *cara libertà*—what a delight! Let us work for this dear future." The court-life was partly the "work" she alludes to. The daughter of the Vergennes felt that she was earning her daily bread in a court of upstarts and parvenus. She has a peculiar way of speaking of the people of the new court, who had old names. Talleyrand is her demi-god, her protector, her great man—more, almost, than Napoleon. She constantly recommends people of the old régime for places or favors. "Do try," she writes to her husband, "to get appointments for the little De Grasse and D'Houdetot." Charles de Rémusat, who became Minister under Louis Philippe and the Republic of 1871, was then a small child. "Charles has had a funny idea: he wished to make a little drawing representing the Emperor shaving, and each of the sovereigns of Europe bringing him a part of his toilet."

When the Empire began to imitate the pomp of the oldest courts the position of the Rémusats, which had been very important under the Directory, became a little subordinate:

* *Lettres de Madame de Rémusat*, 1804-1814. Publiées par son petit-fils Paul de Rémusat. Avec un portrait. Paris: Calmann Lévy; New York: F. W. Christern. 2 vols. 8vo. 1881.

"My friend," writes Madame de Rémusat on this subject, "I have always in my mind a reflection which hinders me from feeling deeply the little annoyances which vanity can cause us at the court. In fact, what have we done for the Revolution? What pledges have we given it, to use the fashionable expression? What claims have we to the distinction of the new authorities which it has created? We have suffered and moaned—a fact which interests nobody; and after this terrible break-up your situation must be envied."

This was the language of good sense, and Madame de Rémusat was quite right when she constantly urged her husband to take some administrative function, besides his functions at court. There was an old royalist in this young lady of Napoleon's court:

"You know," she writes, "my foible for Louis XIV.? The 'Memoirs' of Marmontel inspired me with a desire to read those of Saint-Simon. They amuse me, though he is very severe on the defects of his master, and very passionate in all his opinions. Notwithstanding all the evils which terminated that reign, the greatness of the century will always be imposing, and it will give such fine *relief* to the French name that we shall always be proud to bear it. I think of the century which is opening now, and of the great events which preceded it. However violent may have been the blows of the Revolution, whatever wounds it may have opened and painful traces it may have left, I believe—though I should not dare to say so to anybody but yourself—that our time, when it shall be seen from its true point of view, will also seem imposing to posterity, and that it will enhance still more the glory of the French name."

This is the "cri de l'âme," the true instinct of a soul hanging, as it were, between two periods, two ideals—attached to the past, and confident of the future. Such a profession of faith is all the more interesting as it has no motive. It is not made for the forum; it is a wife's confidence to her husband.

Madame de Rémusat was often alone, as the chamberlain had to remain near the Emperor. She occupied herself with the education of her son Charles, an amiable and intelligent child, who afterwards became a most distinguished man. She learned a little Latin and Greek, as many French mothers do, in order the better to teach her son. She was very intellectual, and read a great deal:

"This morning the curé of Sannois [Sannois is a little village near Montmorency, where she often lived] tells us that M. de Bonald has just published a book which proves absolutely the existence of an innate language, and which destroys the system of the Abbé Condillac. We at once unite against him; we begin a controversy; we plunge into the most profound metaphysics. We all exclaim together, in order to prove that people can think without speaking. Madame d'Houdetot tries in vain to be heard; the two Chérons, husband and wife, scream, this time in unison. The breakfast is forgotten. The curé feels that he shall be overpowered, but, like a clever man, he keeps his best weapon for the moment when he sees himself forced, and he crushes us all by saying that the Church will have people believe as he says. Then we are all silent; we only murmur between our teeth, and the curé, master of the battle-field, walks right and left, proud of having imposed silence on the bold logic of the niece of the Abbé Morellet [Mme. Chéron]."

Is not this a pretty picture?

During the great wars of the Emperor Napoleon France remained profoundly silent. The press was not free, and the public had no news except through the official "bulletins." Madame de Rémusat paints well this extraordinary state of things:

"You can imagine the effect produced by the victories and by the entry into Vienna. There was a feeling of extreme disquietude. Many false rumors, as usual, were spreading. At last we heard the fortunate gun [the victories were always announced by the guns of the Invalides], and we learned of these incredible victories. There was joy even in the streets, with a sentiment of French vanity which struck me, because it is unfortunately not common among the Parisians. . . . Each one now arranges Europe after his own fashion; we restore or destroy empires; we make peace or prolong the war. . . . In one drawing-room we make a king of Poland, in another a king of Bavaria—God knows what! Then they come to me, they put their questions; and when I am well tired of these questions, which I cannot answer, for the good reason that I know nothing, I say: 'Mon dieu! let him who governs us alone, and wisely enjoy in the idleness of your days the comforts which the activity of his days has procured you.'"

A few days afterwards she writes that a courier woke her up at seven in the morning:

"He rang louder than usual. . . . My whole household is at once in commotion; they all enter my room, shouting 'Peace! peace!' I still doubt; but I learn that last night in Paris it was announced in all the theatres that the first proposals were made by the Emperor of Austria, and that we are now treating. You can imagine the general joy. In the streets people embrace each other."

This joy was caused by false news; peace was only made a little while afterwards. Such was the life of a Frenchwoman at that time—long intervals of doubt and silence and fear, and then sudden outbursts of joy and enthusiasm. When the peace of 1805 was made, Princess Louis Bonaparte sent for Madame de Rémusat, who found her laughing and crying at the same time. Her first word was: "*He* commanded in person—he completely beat the two emperors." This was her short account of the battle of Austerlitz.

"The French," says Madame de Rémusat, "are a little like women—they are very impatient. It is true that in this campaign the Emperor has spoiled us, and no lover has ever been more desirous of satisfying the will of his mistress than his Majesty of contenting our wishes. 'Will you have a prompt march? Well, my army was at Boulogne. I have taken it in three weeks to Germany. You wish a town to be taken? There is Ulm, which has capitulated. You are not satisfied? Well, there are still other victories; then there is Vienna, which you wanted; and, finally, a pitched battle.'"

Madame de Rémusat must have been a most agreeable talker. Her letters have often the conversational tone, and she can relate the smallest incidents in a taking manner. For instance: "I had Friday last at dinner Madame de Vintimille, M. Pasquier [who became chancellor of France], the Abbé Morellet, and Picard [a dramatic author]. M. Pasquier was *en verve*—everything was good to him. We ended in our usual quarrel over La Rochefoucauld and La Bruyère. You know how this question always excites Madame de Vintimille; the abbé screamed as if he was twenty years old; I screamed as I could; M. Bertrand said constantly, 'Allow me, allow me' [*permettez, permettez*]; but we did not allow," and so forth. This lively way of speaking of trifles makes you go through the two volumes without ennui. Here and there you find a bon-mot. She announces, for instance, to Monsieur de Rémusat that the widow of Lavoisier (the famous chemist who died on the guillotine in 1793) is married again to an American savant, M. de Rumford: "Nothing is wanting in the match except the *calorique*." Madame de Rémusat was a great reader; she liked particularly the great writers of the seventeenth century. One day she obliges Talleyrand, the ex-Bishop of Autun, to read her aloud a sermon of Massillon's. She was not devout; she had become a woman in a time when the churches were shut, but we see her by degrees grow more and more religious. Her religion was a sort of Christian philosophy; her mind was full of tolerance, of ease—it was, perhaps, a little loose. She had the instincts of the eighteenth century in her; but she had been struck by the Revolution and by its horrors, and she revolved towards the old-fashioned ideas of the old régime as rapidly as her connection with Bonaparte would allow. On the whole, she was a very interesting person, full of sincerity, of *naturel*, fond of all intellectual pursuits, fond of the world, but passionately fond of her family.

THE VATICAN AND THE EXTENSION OF THE SUFFRAGE IN ITALY.

ROME, July 25, 1881.

A REGULAR "leap in the dark" is this new Reform of the Suffrage Bill voted by the Chamber of Deputies at the close of the last session, after ten years' debate, we may say, taking into account all the bills presented, rejected, or shelved during that period. Until yesterday, out of a population of 30,000,000 (say seven millions of males above twenty-one years of age) but little more than half a million were entitled to elect the representatives of the people to the national parliament. Of these scarcely more than half availed themselves of the privilege most highly prized by Anglo-Saxon nations—30, 40, 50 per cent. only depositing their votes in the urn on ordinary occasions; 62 per cent. in 1876, when the great fight between Conservatives and Liberals (or, as they say here, between Moderates and Progressists) left the latter victorious after sixteen years of exclusive power enjoyed by the former. Often have I tried to account to myself for this abstention, and never satisfactorily. Many people set it down to Pio Nono's injunction to all good Catholics to be "neither electors nor elected"; but the abstainers belong, as a majority, to a class who neither fast nor feast at the dictates of the Church. Some, of course, act in accordance with the instructions emanating from the Vatican, even as the "Puritan republicans" abstain from taking the oath or inducing others to take the oath to monarchy. But these "abstainers on principle," seeing that the world goes on the same without them, and that of nothing nothing can come, have each year grown fewer and fewer; the republican abstainers of to-day you may count on your ten fingers.

The cause lies rather in doubt as to the utility of exercising the vote. "Why lose time and take trouble to vote for Tizio rather than Cajo?" ask many. "The King remains the same, the laws the same, the taxes go on increasing, whoever sits on the ministerial benches." The repeal of the odious grist-tax on the inferior cereals made no impression on the people of the northern provinces, as there, unfortunately, maize is the staple food of the population; but nothing else has occurred to distinguish Right from Left, "progress" from regress, and the witty ditty of the Venetians gains ever fuller truth:

"Quando Marco governava
Si pranzava e si cenava;
Quando l'Austria governò
Si pranzava non si cenò;
Or che Italia ci governa
C'è la fame sempiterna."

That is to say: Under the republic we dined and supped; under Austria we dined only; now that Italy reigns we fast perpetually. And there is no denying that materially the working classes in city

and country "fared better when they were worse off," as taxes are doubled, provisions likewise; wages alone have not risen in proportion.

For the last two years deputies, ex-deputies, and republicans have held meetings and carried on a regular propagandism to instil into the people the belief that universal suffrage is *the* panacea for all existing evils, and the belief has penetrated to the brains of the workmen of the cities. The new law is, in fact, the recognition of universal suffrage, as *all* males above twenty-one years of age who can sign their names are entitled to be registered on the lists and to deposit their votes in the urn. Henceforward it suffices that a man sign in the presence of a notary the requisition printed or written by others, and he becomes a registered elector; the notary never to receive more than half a franc for witnessing and legalizing the signature. Clearly, therefore, every man who desires to vote can do so at the next general elections, having ample time between now and then to learn to sign his name. The opponents of the law hope that the Senate will throw it out, or at least increase the tax to be paid as land-tax or income-tax from ten to twenty francs per annum. But this is hoping against hope, as the Left has already "created" one hundred Senators and holds the menace of other forty "creatures" over the heads of that august body. King Humbert prides and piques himself on being a constitutional king *jusqu'au bout des ongles*; hence he will sign and seal whatsoever law be passed by the two Houses of Parliament.

The desperate leap, therefore, is taken; but into what utter darkness! The first question that arises is, Will the three millions now admitted to vote exercise their right with greater zeal than did the half million in the past? On the theory that a new broom sweeps clean, yes. On the other hand, it remains to be seen whether the half-savage, wholly-ignorant peasant population of the South will ever even hear that by learning to sign their name they may vote for a member of Parliament. The same doubt applies to the thousands of artisans in cities, such as Naples, who of governors and governed know only the recruiting sergeant and the tax-gatherer. Unless black, white, and red politicians set themselves for their own purposes to instruct, drill, and discipline the masses in the duties and beauties of the vote, we doubt their exercising the newly-conferred right.

What will be the conduct of the Vatican? is the next question. Pio Nono, suddenly bereft of his temporal power, learnt but slowly how much was implied in his cruel jest to the commander of the French troops who, when bidding him adieu, regretted that Rome was to be deprived of the protection of France: "Ça ne nous fait rien. La France a perdu ses dents" (Sedan). But only when French teeth were set firmly in the flesh of the Roman populations could he boast himself their master; when *Sedan* relaxed that grip, the prey escaped for ever. Pio Nono to his dying hour expected the Catholic hosts of Christendom to punish the "sacrilegious usurper" and restore to the Pope his own. Not so Leo XIII. A long residence as nuncio at the court of Belgium and the sharp, bright air of his beloved Perugian mountains had cleared his brain of all such cobwebs. On the day of his ascension he decided to bless the people from the outer balcony of St. Peter's, and take possession of the basilica of San Giovanni in Laterano. He saw clearly that the temporal power was gone for aye; that no Power in Europe would unsheathe a sword in its behalf. But he saw also that by accepting under protest the *fait accompli*, by revoking the edict "Nè eletti nè elettori," he could regain for the Church a large portion of the spiritual and moral power forfeited by his predecessor. Had not the Jesuits by sheer material force, and their satellites by their prophecies that any concession would be the ruin of the Church, prevented Cardinal Pecci from acting according to the dictates of his judgment and his conscience, to-day universities and colleges, secondary and elementary schools, communal and provincial councils and offices would be in the hands of the clergy and their adherents. But "the gods love Young Italy," and not the old Papacy. The golden moment was lost. Leo XIII. shut himself up in the Vatican, and is now, like all prisoners and exiles, an irritable, suspicious man, beset with sick fancies and distrustful of all; leaning now to this, now to that counsellor; never able to see things and judge events and circumstances in their true light and comparative proportions.

Still, he holds to his first conviction that conflicts between Church and state are worse than useless, ending ever in the defeat of the former. His conduct in Germany and France proves this, and the conflict in Belgium was none of his seeking. In Italy all the clergy of the northern provinces, and also of Sicily, assure him that unless the people are allowed to take their share in the affairs of the nation they will leave religion in the lurch and attend to their secular affairs. Leo XIII. is worn out with the daily, hourly contest; broken down with the tremendous responsibility laid on his shoulders. So he has adopted a half measure, saying: "I neither enjoin nor forbid. With secular and political matters the Church has nothing to do; let each man act up to his own conscience." Then, besides this, special injunctions are sent to bishops and priests and parish priests to see that all Catholics entitled to vote *be at least inscribed on the voting registers*.

The late fracas attendant on the reburial of the old Pope, exaggerated by the Catholics and palavered about by "own correspondents" to London newspapers, stood the Jesuits in good stead. A madder act than to allow a Catholic demonstration in the streets of Rome around the hearse of the man who for twenty-one years oppressed and cursed the Romans from his throne of bayonets, was never committed by any government. It is a wonder that all ended as it did; but the present Pope does not see this side of the question. "If," say the Jesuits to him, "the dead body of Pio Nono cannot pass through the streets without insult, what can your living Holiness expect?" And a glimmer of hope that the Powers of Europe will combine to guarantee his spiritual powers has revived in the "prisoner's" bosom. Hence the question of Catholics voting or abstaining is again in abeyance.

What will be the consequences? What number of Catholic voters will poll? For whom will they vote? No one in his senses would venture to answer either of these questions. From what I have seen of the workingmen in Venetian Lombardy I should say that they would choose radical deputies. Of the peasants it is far more difficult to judge. I hear a great deal of grumbling at the priests for exacting tithes—"forties" and "fifties"—for never visiting the sick or assisting the poor, for compelling the women to "glean" and the men to "thresh corn for the Madonna," when they and their children have barely polenta to keep body and soul together; but until the present House is dissolved and the results of the next general elections are known we can only say, "Chi vivrà vedrà"—Who lives will see. In Queen Margaret the Pope finds his stanchest ally, his strongest encourager to reconciliation. Then, again, the Vatican coffers are well-nigh empty, and that tempting three and a half millions of francs ready for payment to order. There is the plea, too, that the Socialists and Communists gain all the seceders from the Church. So it may be that universal suffrage, which has effected such strange and opposite results, may effect the reconciliation between Church and state in Italy. M.

Correspondence.

THE EMANCIPATION PEN.

To the Editor of The Nation:

Sir: Allow me to correct a slight error in the communication of Mr. Whittemore, in the *Nation* August 4, 1881. He says the pen with which President Lincoln wrote his Proclamation of Emancipation was presented to the late Mr. George Livermore by the President. In a letter to me written by Mr. Livermore, and enclosing both a photograph and a pencil-drawing of the famous pen, for my use in preparing my 'Pictorial Field-Book of the Civil War,' it is stated that the pen was presented by the President to Mr. Sumner at the latter's request, and by him presented to Mr. Livermore.

The pen with which that ever-memorable Proclamation was written was a common steel one, of the kind known as the "Washington." The handle was a common cedar stick—the whole affair as plain and unostentatious as the President himself. Benson J. Lossing.

The Ridge, Dover Plains, N. Y., August 8.

THE PEABODY LIBRARY.

To the Editor of The Nation:

Sir: Your correspondent "W. M. C.," in writing about the Peabody Library, seems to labor under a series of misapprehensions regarding it which could have arisen only from lack of familiarity with its workings. No one who is at all acquainted with the large number of rare and valuable books which it contains, or who knows anything at all about the constant accessions to its stores, could possibly style the Peabody Library a "fossil institution." The Peabody was not designed to be a circulating library, nor to furnish its readers with books which might be easily obtained at any bookstore. It was the founder's intention to bring together in a convenient building those books which, either from their rarity or from their extreme cost, are quite beyond the reach of persons of moderate means. To be plain, sir, it was meant for those who, though poor in pocket, are rich in brains—not a very *numerous* class in any place.

In regard to the card-catalogues, it is sufficient to say that *practical* librarians have found the system the only one of any use in a large and growing library. The "other formalities" consist simply in writing upon a slip of paper provided for the purpose the names of the books desired, and signing one's name to the order. That is all.

It seems to me that the library is open quite late

enough, both in summer and winter, for any mechanic or business man who has been working hard all day. It would be interesting to know how many of either class care to use a "*learned* library" at any time.

Is it not somewhat of a contradiction to speak of a situation as almost inaccessible, and in the same breath to condemn it as being too fashionable? There is an air, too, of charming innocence in the manner in which students and schoolteachers are coupled with "persons of infinite leisure."

Without opening up the vexed question of "Sunday closing," it will be sufficient to say that the Peabody Library, in not remaining open Sundays and holidays, follows a custom universal in this city.—Very respectfully,

JOHN H. BLACKLOCK.

BALTIMORE, Aug. 4, 1881.

THE PRESIDENT'S DISABILITY.

TO THE EDITOR OF THE NATION:

SIR: I send you the following in consequence of observing in the Baltimore *Sun* of this morning the statement that "Government officials are beginning to talk about the embarrassment . . . in consequence of the continued inability of the President to perform any of the functions of his office."

Mr. Madison's report of the 'Debates in the Federal Convention of 1787' shows that after "the proceedings of the Convention" had been "referred to a committee to prepare and report a Constitution conformable thereto," the Convention on July 26 unanimously adjourned till Monday, August 6, "that the Committee of Detail might have time to prepare and report the Constitution."

In the report delivered on August 6, by Mr. Rutledge, from that committee, article x. section 2, after a provision as to the President of the United States, for his removal from office, concluded as follows:

"In case of his removal as aforesaid, death, resignation, or *disability to discharge the powers and duties of his office*, the President of the Senate shall exercise those powers and duties until another President of the United States be chosen, or *until the disability of the President be removed.*"

August 27, there were objections to this clause and a motion to postpone it.

"Mr. Dickinson seconded the postponement, remarking that it was too vague. What is the extent of the term 'disability,' and who is to be the judge of it?

"The postponement was agreed to *nem con.*"

August 31, such parts of the Constitution as had been postponed and such parts of reports as had not been acted on were referred to a committee of a member from each State. The Committee of Eleven made, September 4, a partial report, which contemplated that a Vice-President should be elected, and that the latter part of section 2, article x. should read as follows:

"In case of his removal as aforesaid, death, absence, resignation, or *inability to discharge the powers or duties of his office*, the Vice-President shall exercise those powers and duties until another President be chosen, or until *the inability of the President be removed.*"

On September 7 was an insertion of words enabling the legislature to "declare by law what officer of the United States shall act as President in case of the death, resignation, or disability of the President and Vice-President." In lieu of words importing that "such officer shall act accordingly *until the time of electing a President shall arrive*," Mr. Madison moved to substitute "*until such disability be removed or a President shall be elected*"; which motion was seconded by Mr. Gouverneur Morris and agreed to.

A committee was appointed by ballot to revise the style of and arrange the articles which had been agreed to. That committee on September 12 made its report, containing the following words:

"*In case of* the removal of the President from office, or of his death, resignation, or *inability to discharge the powers and duties of the said office*, the same shall devolve on the Vice-President, and the Congress may, by law, provide for the case of removal, death, resignation, or inability both of the President and Vice-President; declaring what officer shall then act as President; and such officer shall act accordingly *until the disability be removed*, or until the period *for choosing another President arrive.*"

The last words, "or until the period for choosing another President arrive," were on September 15 changed into "*or a President shall be elected*" (according to the vote of September 7). So the Constitution was signed, and so it now is in the sixth section of the second article.

Although in case of the removal of the President from office, or of his death or resignation, the power and duties of the office would devolve on the Vice-President, and he would act accordingly until a President should be elected, yet they do not necessarily devolve upon him in the other case for so great a length of time. If, merely because or *in case of the President's inability* to discharge the powers and duties of the said office, the same shall devolve on the Vice-President, such devolving may cease when the President's inability shall cease. The constitution of Virginia of June 29, 1776, provided as to the council of state, that "they shall annually choose out of their own members a president, who, in case of the death, *inability, or necessary absence of the governor* from the government, shall act as lieutenant-governor." Under that constitution there was frequently a case of such inability or necessary absence that the president of the council acted as lieutenant-governor; and when such inability or necessary absence ceased, the governor acted again.

C. R.

BALTIMORE, August 8, 1881.

OVERLAND RAILROAD RATES.

TO THE EDITOR OF THE NATION:

SIR: Two paragraphs in the *Nation* of July 14 (No. 837, pp. 22, 23) indicate that you are but imperfectly informed as to abuses on the overland railroads. As you appear willing to aid in remedying them I give you some of the facts. The system of unlawful freight discriminations alluded to has not been recently revived; it has never for a moment been suspended since its formal introduction in the summer of 1878, but has been constantly enlarged and extended down to the present time, when it is more stringent and oppressive than ever before. The *modus operandi* is this: By arrangement between the Central and Union Pacific Railroad Companies the rates of Western-bound freights are fixed by the Union, and those of Eastern-bound by the Central Company. This arrangement is supposed to be nominal only; a sort of legal fiction to enable each concern to refer complaining parties to a "Mr. Jorkins," two thousand miles off; but that is the form of it. The Union Pacific Company has a printed classification of merchandise, and printed rates of freight for each class from New York and other Eastern points to San Francisco, ranging from $6 per 100 lbs. for first-class to $1 50 per 100 lbs. for Class D. These are declared to be the regular rates. But the company enters into contracts with the merchants here to carry for them at *special* rates, much reduced from these regular ones, on condition that the merchant shall import all his goods by their line; not only such as are usually sent by rail or *via* the Isthmus, but also such as have heretofore, and naturally, come by sea around Cape Horn; and they make him bind himself to ship by their road, and by such connecting roads as their general freight-agent shall, from time to time, designate, all goods purchased by or for him, or shipped by or consigned to him, by his procurement, directly or indirectly, or with his knowledge and assent. The contracts declare that their object is to give to the Union Pacific Company the transportation of all goods *bought, sold, dealt in, or handled by* the merchant; and any act of his tending to defeat this object constitutes a breach, so that he cannot even buy in open market goods imported otherwise than by rail, and this rule is enforced. They also provide that these special rates are for his own exclusive benefit, and he must not allow the use of his name or shipping marks by any one else. The freight must all be forwarded to Omaha by such carriers as are designated by the Union Pacific Railroad Company. They reserve the option (which is always exercised) of way-billing the goods and collecting freights according to the printed rates, agreeing to return the difference, on presentation of vouchers to the Central Pacific's freight-agent at San Francisco, after the lapse of a reasonable time—say thirty days—for transmission, verification, etc.

All our leading merchants have been forced to enter into contracts of this description; the man who attempts to import his coarse goods by sea, relying on the rail for such as need more rapid transportation, has to pay such rates on the latter that he cannot compete with his neighbors. He cannot even buy his coarse goods in open market here if they shall have come round the Horn, for that would defeat the "*bought, sold, dealt in, or handled by*" clause. Such goods and their importers are tabooed and "boycotted," and the merchant who touches them without leave of the railroad company can have no freight transported overland except at ruinous rates; even at such he is liable to casual delays, difficulties, and obstructions which, being unable to account for, his unregenerate nature attributes to malicious design.

The result is that ships obtain little or no freights from Eastern ports here; they have to come here in ballast, or half full, to load wheat for Europe, and our people are compelled to pay on their produce sent abroad a freight to cover the expense of the round trip. The standing forced loan exacted from our merchants, without interest, by collecting and after thirty days repaying the difference between printed and contract rates, may amount to half a million dollars; it operates oppressively to individuals, but to the community is of minor importance. But the tax levied on our exports in the form of enhanced freights to Europe is a monstrous and shocking wrong. In the absence of full statistics it is impossible to compute its amount,

but it is probably equivalent to about four dollars per ton on the exportable crop of the State. San Francisco, under this nefarious system, has degenerated from the rank and position of a maritime city open to the commerce of the world to that of an interior town some two thousand miles west of St. Louis, approachable only over deserts and mountains.

With these facts before you, which are known to every well-informed man in San Francisco (except, of course, the Railroad Commissioners), you can understand why the tide of prosperity which has spread over the rest of the Union during the last few years has never yet reached California, why all business has been depressed and real estate has been steadily falling in value ever since the overland railroad was completed. Perhaps, too, you will regard with more leniency the mistaken hostility to corporations (especially railroads) which has found expression in some of our recent legislation. Grant that it is unphilosophical, ill-directed, stupid, and in some respects unjust—that was not its intention; but people who have been so long and sorely oppressed as ours have been by the present monopoly cannot always reason coolly or justly as to the remedy, and in their anger seize any weapon at hand, careless whom else they may hurt, provided they can inflict a blow on their chief enemy.

You suggest an appeal to the courts—at least, so I understand your words "proceeded against with all vigor"; but who can proceed against them, and how? I defy any lawyer to point out a remedy, under existing laws, of the slightest value to the individual aggrieved. Our Railroad Commissioners, if so disposed, could doubtless do much on behalf of the public, if not to break up, at least to expose, the wrong. But the eyes of justice, you know, are bandaged, and they can only know what is officially communicated to them and duly proved by witnesses, and their governing majority has just completed a set of rules for proceedings before them well calculated to aid them in remaining ignorant of all public abuses of the kind. No individual merchant dare sue, complain, or even let it be known that he is dissatisfied, lest he should be straightway put at a ruinous disadvantage with his competitors in trade. His business would be broken up before he could get his first case sent to trial, and his family might starve while he was awaiting the result of new trials and appeals. The way of a man who enters into litigation with a company that keeps all the leading law-firms under standing retainers, most of the leading journals by some means quieted, and which finds in legislators, railroad commissioners, and auditors of railroad accounts its serviceable friends, is too hard to be voluntarily pursued by any man in business.

There is but one remedy for this monster grievance which oppresses the whole Pacific coast. The power so to oppress must be absolutely taken from the companies. For this purpose it is not necessary to establish rates of freight by law; but the law should lay down a rule for their establishment by the companies, and, once established, they should be made public, and no deviation permitted. The operation of the roads in all their departments should be kept under constant and vigilant supervision by Government, and any violation of law by railroad officials should be punished as a public offence. Actions for damages and like private remedies are wholly inefficient. Congress has ample power to remedy all evils in the overland system of transportation, for it is all built on Congressional legislation; and its just control of that system, judiciously exercised, could not fail to be attended with most beneficial results in the whole system of connecting roads.

The first thing needed is a Congressional committee of investigation, with ample powers and means to examine thoroughly into all existing abuses in the management of the Union and Central Pacific roads, and their leased and associated lines. The *Nation* cannot do a better public service than by aiding and enforcing through its columns the demand for such an investigation.

JOHN T. DOYLE.

SAN FRANCISCO, July 28, 1881.

DIVORCE STATISTICS.

TO THE EDITOR OF THE NATION:

SIR: I ask space to reply to the letter of Rev. Mr. Dike in this week's *Nation*, criticising a portion of my article on the "Divorce Question" in the *International Review* for August. When I wrote my satire, "Who is your Wife?" I prepared an appendix citing the authorities, but as the work was intended for the general public and the appendix would have given it a "heavy appearance," it was omitted for reasons which publishers of fiction will appreciate. As I expected, however, many critics, including members of my own profession, ventured to doubt some of the statements contained in the book. I therefore prepared the *Review* article to show that so far was the fiction from being an exaggeration that it fell short of the actual facts, and to offer a remedy for the evils set forth in it. Incidentally, I referred to Mr. Dike and his "statistics."

Mr. Dike says that *I* should have said that there was "one divorced *person*, not one divorce, to every six hundred and seventy-nine of the population in Maine in 1878, and not in 1880 as he has it." If Mr. Dike will look at the article again he will see that the statement is not made by me at all, but is quoted as having been made by ex-Governor Dingley. On Mr. Dike's explanation I was therefore right in criticising it; and if the ex-governor has been incorrectly reported, and Mr. Dike's figures are the correct ones, it does not in the least affect or alter the point of my criticism. The point is that these "statistics" leave out of consideration the fact, well known to every lawyer, that many of these divorces are obtained by persons who are not *bona-fide* citizens of the State where they are granted, but who resort to its laws and tribunals because, owing to the difference in laws, they could not procure a divorce in their own State; and, consequently, to charge these divorces to the actual inhabitants of the State where they were procured is to mislead, and present an incorrect picture of the State's morality. If Mr. Dike were a lawyer in active practice, instead of a minister without the means of judging from actual experience and observation, he would not regard my opinion as to the character of the majority of these divorces as so "incredible." He would know, what is more, that very often the "residence" which citizens of one State take up in another—New York and Connecticut, for instance—in order to procure a divorce in the latter, is merely *nominal*. But he says: "New Hampshire that same year had one divorce to every fourteen hundred and thirty-nine inhabitants. But if, as this writer declares on the next page, foreign parties are practically excluded from the courts of that State, we must doubt the fact he asserts of Maine." (The fact was intended as a general assertion.) Mr Dike seems to think he has me here. Let us see what my article does state. In answer to the broad assertion that the cause of the increase of divorce is loose laws, I explicitly say, what Mr. Dike admits, that "the increase has been as great in New Hampshire as anywhere else, while the law in that State has been changed but little in a century." Then I state that New Hampshire has a doctrine peculiar to herself, that the *delictum* must occur there to confer jurisdiction on her courts, "and that when the offence is committed when *both* parties are out of the court's jurisdiction it is no ground for a divorce." A moment's reflection should show Mr. Dike that this is very different from the statement he attributes to me.

The reference to France was made by me on the authority of Bishop, and also expresses my personal opinion. Mr. Dike will find it in vol. i. § 44 of the fifth edition. If it is not in the edition lately published, it is because since the first publication of his work Mr. Bishop, in the subsequent editions, has curtailed the argumentative and historical portions, and made it more purely a textbook. Lawyers are severely enough taxed for books without having to purchase every new edition. As to the repeal of the "omnibus" clause in Connecticut, I do not know how far the repealing act extends; I do know that the *grounds* for a divorce in that State are liberal enough to cover almost every case without it. The clause, according to Mr. Dike, conferred general jurisdiction on the judges to grant divorces in their discretion. According to Dr. Woolsey, it was, "any such misconduct as permanently destroys the happiness of the petitioner, and defeats the purpose of the marriage relation, shall be sufficient to entitle to a divorce." This might be repealed without taking away the discretion from the judges. Mr. Bishop, in the last edition of his work, does not *imply*, as Mr. Dike puts it, that this discretion still exists; he explicitly *asserts* it (Bishop, sixth edition, note to § 27.)

I am not surprised that Mr. Dike finds it difficult to reconcile Dr. Dwight's statements with his own statistics or the facts. But, having thus practically admitted the justice of my criticism, I am surprised that he should declare me at fault in my reasoning. He finds fault with my statement that, if his statistics were correct, in 1880 in Connecticut one in less than every twenty-five married pairs should have been divorced, and then says that for many years before 1879 the ratio of divorces to marriages was 1 to 10.4. Does he mean that one out of every ten marriages resulted in a divorce? If so, he makes it worse than I did; if not, what does he mean? The absurdity of the statement is too patent to need demonstration. He says that my assertion that "divorce is no more frequent among the lower classes than it is among the higher" is not true of New England, unless in exceptional localities. Does he mean by "higher" some particular arrogant "upper tendom," or does he use it as I do, as distinguishing between the educated and uneducated? If the latter, I am afraid he will not find many lawyers who will agree with him. But my assertion is general, and not particularly applied to New England. As Mr. Dike is not a Bostonian, I believe, he will probably be willing to concede, when his attention is drawn to the fact, that New England is not the United States, and that those of us who were not fortunate enough to be born in that section are still entitled to be counted in the nation's statistics, and are not mere appendixes.

Mr. Dike, referring to the responsibility of New York and other States for divorces in New England, says "the proof of this does not appear in the statistics." I should suppose not. I have not the remotest idea in what part of a court's records Mr. Dike would look to find it. But when he admits that probably "ten or fifteen per cent. of the divorces in New England in 1878 were of persons who came here for the purpose," and "for every one coming East probably two or more go West," he admits the force of my criticism that these "statistics" are not correct in the sense in which they are intended to be conveyed; for here, according to himself, would be from twenty to thirty per cent. of the divorces charged to the citizens of States which should not be credited with them. Dr. Woolsey, when asked in which State divorces are most frequent, replied: "I will not undertake to say, *so imperfect are the statistics.*" Yet Mr. Dike seems to regard his figures as infallible. It is a very simple thing to make a literally true statement convey a very different impression to the mind of the general reader, and, notwithstanding the old saying, figures are often the most mendacious of liars. I am sorry to have destroyed or impaired the effect of his "statistics," which he undoubtedly believes to be absolutely correct, but this is an iconoclastic age, and even the story of Blue-beard is now regarded as fiction. He will have great difficulty in making any lawyer believe that of those persons who seek other States to procure a divorce "more" of them do so to avoid publicity than because they cannot secure their end in their own State. He would probably welcome the Catholic rule (which makes France so moral) of indissolubility, if he did not adopt its mongrel offspring, having no divine or other authority, of divorce *a mensa et thoro*. Probably he joins with others in criticising my statement that the world always has been and is continually improving. One critic says that if this is so the world must have been very bad; but if it is not so I do not see how civilization could ever have advanced. He is probably one of the class referred to on page 141 of the *Review*.

The point he discusses does not, as he kindly admits, affect the merits of my article in the discussion of its main question; it simply arose incidentally. But, while I am not infallible, am open to correction, and welcome criticism as the best of teachers, I fear that Mr. Dike's letter will fail to convince me that my criticism of his and other statistics is erroneous on his own showing.

WALDORF H. PHILLIPS.

NEW YORK, Aug. 6, 1881.

Notes.

J. R. OSGOOD & Co. will publish early next month, as a holiday gift-book, Owen Meredith's 'Lucile,' with upwards of 160 wood-engravings after designs by prominent American artists. The form will be large octavo.——Among the forthcoming juvenile publications of Cassell & Co. will be the 'Little Folks' Album of Music' and 'Old Proverbs with New Faces,' the latter illustrated by Lucy Lawson, reputed "a most successful rival of Kate Greenaway."——A. C. Armstrong & Son have in press two juvenile gift-books, both abounding in colored illustrations, viz., 'Shaksperian Tales in Verse,' by Mrs. Valentine, and 'The May-Blossom; or, The Princess and her People.'——A limited fac simile reprint of the first edition of Burton's 'Book-Hunter' will be issued next month, with an added index, by Robert A. Tripple, Philadelphia.——'Pioneer Life in the West,' by J. B. Walker, is announced by Henry A. Sumner & Co.——A. D. F. Randolph & Co. add to the New Testament literature a little volume, 'Where the Old and the New Versions Differ,' the changes only being indicated in parallel columns. The complete texts thus placed side by side would seem preferable for convenience of comparison.——E. Steiger & Co. have now issued their pedagogic abstract of Kiddle and Schem's 'Cyclopædia of Education,' under the title of 'Dictionary of Education and Instruction.' It makes a duodecimo volume of somewhat more than 300 pages.——A fragmentary bibliography of "Educational Journalism" in this country is to be found in the address bearing this title delivered by Mr. C. W. Bardeen at Saratoga last month, and published at Syracuse by the author. The subject is a rather dreary one, but is treated in a readable, not to say lively, manner. Of existing journals devoted to education—the whole number has been legion—the average age is about three and a half years.——The *Penn Monthly* for August contains an interesting biographical sketch of the late Prof. S. S. Haldeman. He was, it appears, related not only to the British general, Sir Frederick Haldimand, who was stationed here prior to the Revolution, and afterwards became governor of the Province of Quebec, but to Mrs. Marcet (Jane Haldimand), an early popularizer of science, to whose 'Conversations' Faraday acknowledged his indebtedness.——The August issue of the *Magazine of American History* is a "Washington number." There is an excellent brief account, by Berthold Fernow, of Washington's military family during the war, and much kindred matter. The noteworthy illustrations are a fac-simile of a pen-and-ink sketch of Washington made about 1790 (as is supposed, by Benj. H. Latrobe, the architect of the U. S. Capitol); and a charming specimen of the St.-Mémin portrait-etchings, namely, of Dr. James McHenry, of Baltimore, Washington's military secretary, and subsequent Secretary of War.——A letter from Mr. Joseph Thacher Clarke, of the Assos expedition, on the "Architectural Aspects of the Chian Earthquake," is printed in the *American Architect* for July 30. It is an admirable and not too harrowing account by a highly intelligent observer. Mr. Clarke cannot forbear alluding to the effect on any of our great cities of an earthquake no severer than that of 1755 (the *Architect* has it 1775) in New England.——The *Bibliographer*, a periodical uniform in size and style with the *Antiquary*, is to be published by Elliot Stock, London, in the autumn.——The premium plate which each subscriber to *L'Art* obtains this year is a rather off-hand etching, by Champollion, of a hackneyed Spanish-Roman conventionality in *genre* by Casanova, in size 18½ × 15 inches. It by no means represents the quality of work which the readers of *L'Art* are familiar with, and may expect to find in each number.——*Polybiblion* states that the French National Library acquired last year a sealed box of letters by Alfred de Musset, not to be opened till 1910.——A plan is on foot in Belgium for offering a testimonial to Hendrik Conscience, the novelist, on the appearance of his hundredth volume. Although Conscience is the most zealous defender of Flanders and Flemish manners, and has done more than any writer to serve the Flemish language and spread the love of Flemish literature among his countrymen, yet his writings are as popular in Holland as in Belgium, and it is expected that the subscription will be willingly taken up in both countries.——The African Club of Naples has published in a neat pamphlet a lecture recently delivered by Count Luigi Pennazzi, describing his explorations in Eastern Sudan, or the vast territory between the Nile and the Red Sea. It opens with a feeling tribute to the late Romolo Gessi (Gordon's lieutenant, it will be remembered), who died in the arms of Count Pennazzi and his companion, Capt. Bessone, and was buried at Suez. A subscription is being raised to remove his body to Italy. Count Pennazzi describes him as wholly devoted to the extirpation of slavery and the slave-trade, and says his name will yet be written in letters of gold beside those of Franklin, Washington, and Garibaldi.——After a tedious intermission, the fifth number of Professor Daniel Sanders's 'Ergänzungswörterbuch der deutschen Sprache' has at length made its appearance. It is to be hoped that the new publisher will be more prompt with the rest of the work.

—We have been requested by Messrs. A. & C. Black to publish the following letter, which speaks for itself:

EDINBURGH, July 22, 1881.

SIR: My attention has just been called to the July number of a newspaper published by you entitled *Stoddart's Review*. This journal contains a notice of various alterations made in the American "reprint" of the 'Encyclopædia Britannica' issued by you, and it also contains an advertisement announcing the volume thus tampered with as being edited by me.

I must ask you at once to withdraw my name from every such advertisement, as you are well aware I have neither knowledge, control, nor supervision of your reprint, and that I repudiate all connection with it.

As you have publicly advertised my name in this unjustifiable manner, I shall consider this letter as equally public.

I am, sir, your obedient servant,

THOS. S. BAYNES.

MR. J. M. STODDART, Philadelphia.

—The twenty-ninth volume of the Proceedings of the American Association for the Advancement of Science, being the record of the meeting held at Boston in August last, is just issued—in two parts royal octavo, of about four hundred pages each. The Boston session was in all respects a notable one. The continuous attendance upon the meetings of the Association amounted to nearly one thousand persons, including members and invited guests. About two hundred and eighty papers were presented to the Association. As usual, a good share of the more important papers appear in the Proceedings by title simply (more than two-thirds of the entire number are so given), only a small portion of those here published in full having any considerable significance. It is not easy to account for this—doubtless it is owing in great part to the delay in printing the volume, the best papers appearing meanwhile elsewhere. A good many of these papers are published in the *American Journal of Science*, but a very large proportion are never heard of after the simple oral presentation before the Association. Of the papers presented on mathematics and physics, 19 are printed and 63 not; in chemistry, 20 printed and 19 not; in microscopy, 6 printed and 8 not; in natural history, 21 printed and 40 not; in entomology, 8 printed and 21 not; and in anthropology, 11 printed and 37 not. The membership of the Association is increasing in magnitude with great rapidity; the list now contains 1,555 names enrolled—1,149 being members, and 406 fellows. Over 600 new

members were elected at Boston, and nearly 50 members were advanced to be fellows. With this unprecedented growth it would be impossible that all should be actively engaged in the direct advancement of scientific interests: probably a goodly majority would hold equal rank with Clifford's "second class of persons" in the British Association, "who are engaged in work upon what are called scientific subjects, but who in general do not, and are not expected to, think about these subjects in a scientific manner." The Boston volume closes with a few brief notes on the "Scientific Institutions of Boston and Vicinity." The Association will meet next week at Cincinnati, the chief officers being Dr. L. H. Morgan, of Rochester, the retiring President, and Professor G. J. Brush, of New Haven, the President-elect.

—The Census Office has published, as Bulletin No. 223, a preliminary report on the anthracite coal productions of Pennsylvania during the census year, by Professor R. Pumpelly. Anthracite is now mined in eight counties, an increase of two since 1870—namely, Lackawanna, which was formerly a part of Luzerne, and Susquehanna, in which one small colliery has recently been started. The number of collieries has been increased from 225 in 1870 to 273 in 1880. The average number of hands to each colliery has increased from 235 to 250, or only 6.4 per cent., while the average product per colliery has gone up from 69,320 to 100,488 tons, or 45 per cent. of increase. The actual output is estimated to have been 67.28 per cent., or about two-thirds of the possible output—in other words, the mines were worked up to two-thirds of their capacity, with the present force, under a steady demand. The value of the output was 26.86 per cent. of the capital. The total merchantable product was 27,433,329 tons, valued at the mines at $1 47 per ton. In 1870 the product was stated as 15,596,257 tons, showing an increase of 75.9 per cent. Owing to the decreased price of coal, however, the value of the product has increased but 5.25 per cent. This difference in price is, on the other hand, in large part accounted for by the depreciation of the currency in 1870. In addition to the merchantable product given above, 83 collieries report 7,060,447 tons of impure coal and dust, which is at present unmerchantable. This is 34.8 per cent. of their product, and, if the same proportion holds in the other collieries, there would be not less than 9,382,086 tons of unmerchantable "culm" produced, to which no value is assigned. About one-tenth of this is used at the mines, while at present the remainder of it is thrown away.

—In the census year there were employed at the collieries 68,239 hands, of whom 28.7 per cent. were miners, 69.5 were laborers above ground, and 1.8 comprised the administrative force. The total wages paid were $21,680,120. The average yearly income of each man was $359 08, and his average monthly income $42 33. On an average, the employees worked 70.69 per cent. of the year, while 28.60 per cent. was lost by stoppages, and only 0.72 per cent. by strikes. The last item shows that the relations between employers and employees are much more harmonious than heretofore. The increase of force employed over 1870—29.04 per cent.—consists largely of boys under sixteen years of age, at work above ground. The number of adult employees has increased but 20 per cent. The coal-lands which are reported as being worked amount to 164,852 acres, valued at $102,614,844—an average valuation of $622 47 per acre. Of the total number, 13,852 acres are reported as having been worked over; the lower seams of coal, however, even in this area have not yet been touched. An additional area of 53,385 acres of coal-land is held in reserve by the companies. On the extremely conservative supposition that only 27 per cent. of the contents of the anthracite coal-field can be mined and marketed, it is estimated that the production of anthracite, after 1880, will reach 4,009,640,000 net tons before the field is exhausted. This would indicate that the production of the census year could be maintained for 146 years.

—At the International Medical Conference, now in session in London, Dr. J. S. Billings, of Washington, D. C., read a paper recently upon medical literature, with especial reference to its character and distribution. The paper opens with the following statistics: It is usual to estimate that about one-thirtieth of the world's literature belongs to medicine and allied sciences. The number of volumes is computed to be about 120,000, and about twice that number of pamphlets, and this amount is increasing at the rate of about 1,500 volumes and 2,500 pamphlets annually. Out of the 180,000 medical men in the civilized world about 11,600 are producers of or contributors to this literature. These are divided among the different countries as follows:

	Number of Physicians.	Number of Medical Writers.
United States	60 000	2,800
France and Colonies	26,000	2,600
German Empire	32,000	2,300
Great Britain and Colonies	36,000	2,000
Italy	10,000	600
Spain	5,000	300
All others	17,000	1,000

The number of physicians who are writers is proportionally greatest in France and least in the United States. In 1879 the total number of medical books and pamphlets published was 1,643, according to the *Index Medicus*. Of these France published more than any other country, the contributions of the United States ranking third.

—The special characteristics of the medical literature of the present day are largely due to journals and transactions of societies. These form about one-half of the current medical literature, and are by far the most widely read and studied. They amounted in 1879 to 655 volumes, containing about 20,000 original articles which were judged worthy of notice in the *Index Medicus*. Classifying the literary product of 1879 by subjects, we find the scientific or biological side of medicine represented by 167 books and 1,543 articles. In this branch Germany leads, while the United States is very low in the list. The practical side of medicine was represented by 1,200 books and 18,000 articles. Here France showed the greatest production, the United States next, and then Germany. In scientific medicine we go to Germany to school, as that country at present leads the world. It was not long ago that the scientific student of medicine found his career anything but a profitable one. This condition is, however, rapidly changing, with the increasing specialization of his profession and with the general tendency of science toward achieving practical results. So vast is the present range of medical science that we must now look for original discoveries mainly to specialists.

—The movement of the Board of Censors of the New York County Medical Society to suppress the illegal practice of medicine under the State law of 1880, is one in which the public is generally interested. At a recent meeting held to consider the subject, Dr. F. R. Sturgis, a member of the Board, made an interesting statement explaining its action. The law provides for a registration in the County Clerk's office by every practising physician of his diploma, which shows, of course, his right to practise if he has any. The penalty for non-compliance is liability for prosecution as an illegal practitioner, and the provisions of the law have been generally complied with. The Board is invested with authority to commence prosecutions under the law, but only one conviction has, it seems, yet been obtained. The difficulty of securing evidence is the main obstacle in the way of the enforcement of the law, the patients of quacks having a disinclination to come forward as witnesses. The mere fact that a man displays a sign, or that he has an office for the treatment of patients, is not evidence upon which a conviction can be obtained. The Board of Censors will try to obtain some new legislation at the next session of the Legislature; we trust that it may be as stringent as possible, for there is probably no city in the world where medical charlatans ply their trade more openly and recklessly than in New York. The fact that diplomas are so easy to get in this country makes it doubly important that the conservative members of the profession should be supported in any effort they make to protect the public against this particularly dangerous form of rascality.

—"W. B." writes us from Boston:

"In a notice of Sibley's 'Biographical Sketches of Graduates of Harvard University,' in No. 838 (July 21, 1881) of the *Nation*, Benj. Tompson is said to be capable of good lines like the following:

> "My Lovalty is still the same,
> Whether I win or loose the game,
> True as a Dial to the Sun,
> Altho it bee not shin'd upon."

Was not Butler, who in 'Hudibras,' Part 3, canto 2, ll. 173–176, wrote—

> "For loyalty is still the same,
> Whether it win or lose the game;
> True as the dial to the sun,
> Although it be not shined upon"—

a maledictus who said Tompson's good lines before that worthy author himself said them?"

Unquestionably. We should have said "capable of *appropriating* good lines like the following."

—Mr. Henry Larkin, who indexed Carlyle's works and made the maps for the 'Frederic,' contributes a long article to the current *British Quarterly Review* on "Carlyle and Mrs. Carlyle," which is entertaining in several ways. It is a reluctant offering, and Mr. Larkin has "always conscientiously shrunk from the bare possibility of such a thing" as publishing reminiscences of the intimate relations he held with the Carlyles; but when a person's shrinking is conscientious and is once overcome, it is, it seems, abandoned with singular completeness, and we have here glimpses of the Chelsea interior which an observer whose shrinking was merely instinctive would probably have withheld from us. In overcoming his shrinking, moreover, Mr. Larkin gives his true disposition the freest play, and his essay thus has, in a degree unexampled even in what has recently been written about his master, the merits of the type unalterably fixed by Boswell. He began his acquaintance with Carlyle by writing him a letter objecting

to the depreciation of Cromwell in Carlyle's work, and got a reply saying, as was certainly reasonable, "It is a great satisfaction to me to be chidden from that side of the Cromwell Controversy." Two years after he became convinced that his own letter had been presumptuous and wrote to say so, adding that "next to my sovereign Lord and master Jesus Christ it was to him that I was indebted." To this Carlyle replied, expressing thanks and satisfaction for this "loyal feeling," which "to yourself also signifies much," and advising him to "persist in that disposition, whatever hindrances occur, so long as you can." For four years more Mr. Larkin "wearily plodded on," but chancing to learn that Carlyle wanted indexing done, "I saw at once," he says, "that my opportunity had at length come, and that there was now a possibility of doing something useful while I lived." Accordingly he offered his services, which were accepted with some dubiety at first, requested and even commanded as time went on, and remunerated to a ridiculously small extent, but in proportion to Carlyle's abilities and beyond the expectations or desires of Mr. Larkin, upon whom his employer had to press checks.

—For many years he "persisted in that disposition," and the reader will find few more suggestive narratives than his account of it. It is difficult to read it without a feeling of worldly commiseration, and reflecting that this sort of thing is the logical and practical outcome of the Carlyle doctrines of reverence and hero-worship. Mr. Larkin, so far as we can see, did nothing but reduce these notions, with which he had become thoroughly imbued, to practice, with the national literalness and with an apparent consciousness that people in general would misapprehend and possibly ridicule his motives. This indeed seems to have added a fillip to the interest of his self-sacrifice. Carlyle "loyally" accepted it, and one has an uncomfortable feeling that he "sized" his admirer at once, and saw no harm but rather some possible good to the latter as the result of an intercourse which at any rate was to be very profitable to himself. Mr. Larkin became a kind of factotum at the house in Chelsea, and when he married came to live next door to be within call. He finds this last to have been a mistake, as he was a little too accessible. When the 'Frederic' indexing was doing he and his wife sat up night after night to hurry it along; Carlyle was almost abusive in his insistence on haste, and thoroughly unappreciative of the gratuitousness and amount of the labor involved; and, finally, Mr. Larkin, like the trodden worm, turned on him and wrote what must have been a plaintive but distinct protest. Then he went to call, and the subject was avoided and never afterward referred to, though he thinks it always remained a bar to perfect cordiality between them. Mrs. Carlyle, it is perfectly plain, foresaw the result of the experiment, and tried to console Larkin in advance for his inevitable disappointment, after an abortive effort to prevent it. "Once she told me it was mostly mad people who came running after Carlyle,' leaving me to make my own application." Mr. Larkin's thesis, so far as he may be said to have one, is that Carlyle neglected and failed to appreciate his wife, and that his pitiful lamentations in the 'Reminiscences' are expressions of a terrible remorse. He gives numerous little confidences of Mrs. Carlyle to him to this effect, which in the whole perhaps he shouldn't have done. But probably no harm will ensue; most readers will see that the relation he bore to both husband and wife was peculiar, and not quite appreciated by him, and that each used him as a soft and grateful cushion on occasion. What Mr. Larkin fails to see, and what even Mrs. Oliphant missed, it occurred to us at the time of her essay on the same subject, is the probable fact that Carlyle and his wife understood each other better than any one else did either of them.

—Instead of choosing, as was surmised, the present Radcliffe Observer, Mr. E. J. Stone, for Astronomer Royal of England to succeed Sir George Airy, whose resignation took place on August 1, the lords of the Admiralty have just appointed Mr. W. H. M. Christie to that high and responsible position. Mr. Christie, though yet quite young, is very well known as the chief and confidential assistant to Airy since the autumn of 1870, but more popularly as the able editor of an astronomical periodical, founded by himself in 1877 and called the *Observatory*. Mr. Christie is the author of several important astronomical and physical papers, and is particularly an authority in spectroscopic matters, and has made a considerable series of observations for determining the motions of stars in the line of sight. A recent paper treats of the systematic errors of the Greenwich North Polar Distances. Early in 1880 he was elected secretary of the Royal Astronomical Society, and in February last was re-elected to the same office.

—It is proposed to start a Pāli Text Society on the model of the Early English Text Society, in order to render accessible to students the rich stores of the earliest Buddhist literature now lying unedited and practically unused in the various MSS. scattered throughout the public and university libraries of Europe. The Society looks forward to publishing, within a no very distant period, the whole of the texts of the Pāli Pitakas. Professor Fausböll, having completed the Dhammapada, is already far advanced with his edition of the Jātaka Book, the longest of the texts of the Sutta Pitaka; and Dr. Oldenburg has the Vinaya Pitaka well in hand. The remaining texts of the Sutta and Abhidhamma Pitakas lend themselves easily to distribution among various editors. The project has been most heartily welcomed by scholars throughout Europe. It is proposed to include in the Society's series those of the more important of the earlier Jain and uncanonical Buddhist texts which may be expected to throw light on the religious movement out of which the Pitakas also arose. Analyses in English of the published texts, Introductions to them, Catalogues of MSS., Indices, Glossaries, and Notes and Queries on early Buddhist History will appear from time to time in the Society's publications. For persons dwelling in the United States the subscription to the Society will be five dollars a year or twenty-five dollars for six years, due in advance. No charge will be made for postage. To non-subscribers the price of the volumes published will be about double the price of the subscription. The work cannot proceed until a certain sum is in hand; and those who wish to join in this undertaking should therefore send their subscriptions at once to Professor Charles R. Lanman, Harvard University, Cambridge, Mass.

—The European journals bring notices of the life and works of Professor Theodor Benfey, of Göttingen, who died on the twenty-sixth of June, at the age of seventy-two years. He celebrated his "jubilee," or fifty-years' anniversary of graduation from the University as Doctor of Philosophy, in 1878, and had the satisfaction of then receiving tokens of recognition of his eminent services to science from every part of the civilized world; it was not suspected that his career was so near its close. He has represented Oriental, especially Sanskrit, learning at Göttingen since 1834, and has produced a remarkable series of works distinguished by immense erudition and the most indefatigable industry, along with wonderful acuteness and power of divination; but not exhibiting in the same degree soundness of judgment and practicalness. He was one who fought for his own hand, neither belonging to a school nor himself founding one, and holding himself aloof from controversy. His first notable and characteristic work was his Greek Root-Lexicon (from 1839), full of the most venturesome etymologies, of which, however, a larger part than for a time was believed have proved anticipations of science. His 'Sâma-Veda' (1848) was the first complete publication, with accents, version, vocabulary, and other apparatus, of a Vedic text—unfortunately, of much the least interesting one of its class. He produced three Sanskrit grammars, one of them in English, a chrestomathy with vocabulary, and a compendious dictionary. His edition of the 'Panchatantra' was the most important contribution to the study of folk-lore, and especially the tracing of European stories to Indian and Buddhistic sources. His journal, *Orient und Occident*, of which he himself wrote a great part, was unfortunately broken off in the midst of its third volume; apart from it, his numerous occasional articles are to be found especially in the *Gelehrte-Anzeigen* and Transactions of the Royal Society of Göttingen; some of them he recently collected into a couple of small volumes (noticed in our No. 817, Feb. 24, 1881). For many years past, he has been known to be engaged upon a Vedic grammar; and the specimens of it which he has from time to time published in the form of monographs on special points showed it to be constructed upon an enormous scale, and unlikely ever to reach the public in full; it is to be desired and hoped that its substance will be brought out by the care of some other scholar. Of his remaining works, the most conspicuous is a 'History of the Science of Language' and of 'Oriental Philology in Germany' (1869); he also made important contributions to the study of Zend and of the cuneiform or Achæmenidan Persian. He was of Jewish birth but of Christian profession; a man peculiarly and purely devoted to his work, exulting in it, filled with satisfaction at what he accomplished, and well-willing and helpful to his fellows. There remain of his generation of giants now only Pott and Stenzler.

—It would far exceed our limits to attempt a discussion of Horstmann's 'Altenglische Legenden,' chiefly of the fourteenth century (Heilbronn, 1881). We content ourselves with calling attention to the introduction. Here the editor gives, in less than forty pages, a highly satisfactory sketch of the growth of this branch of mediæval literature in general. Beginning with the *officium* and *horæ* of the early church, he shows how the legends of the saints began to acquire importance as a part of the church service in the ninth century by being introduced into the *nocturns*, which were gradually transferred from midnight to morning—*i.e.*, to *matins*. The relation of homilies to legends, and the encroachment of the latter upon the former in the services on saints' days, the formation of a *liber festivalis*, or fusion of homilarium and legendarium for the church year, and the significance of Voragine's *Legenda Aurea* as the final act in a long process of development—these and many other

points are brought out with great precision. No less valuable is Horstmann's exposition of the formation of the lives of the saints, from the calends and diptychs of the early church, through the martyrologies of Eusebius (in the version by Hieronymus), Bede (in Florus's version), Rabanus Maurus, Ado, Usuard, and their followers, to the finishing work of Voragine. The editor's wide reading has enabled him to bring together many facts hitherto scattered through inaccessible monographs and ponderous compilations. His view of the relations of the single churches to the Church in general is instructive; the services rendered by the national churches of Ireland and England are also treated with the attention that they deserve. In short, this Introduction is unquestionably the best résumé we have yet seen of a subject bristling with difficulties of all kinds.

—An important contribution to popular poetry has recently been made by Salomone-Marino in his 'Leggende popolari siciliane in poesia' (Palermo, 1880). The lyrical poetry and popular prose literature of Sicily have been fully collected and illustrated by Vigo and Pitrè, but narrative poetry was so lacking that students have heretofore believed that class to be peculiar to the North of Italy. The present volume, however, and a number of narrative poems in other collections show that the inhabitants of Southern Italy are by no means destitute of the epic spirit, although the tendency of the popular muse is undoubtedly lyric. The collection in question contains sixty-one *leggende*, an appellation embracing both legends proper (historical and local legends) and historical folk-songs, the latter largely in the majority. The collector, in his interesting preface, defends the popularity of his material, even where of recent date and by living authors. In this case the version current among the people only has been accepted. The fact that the author names himself in a legend is in Sicily no proof of its non-popular character, for the ambition to connect his name with this class of poems leads the rustic poet often to attribute to himself an old and anonymous legend or one belonging to another. More important is the distinction to be made between indigenous and foreign legends, for, especially since 1860, the popular literature of the two extremes of the nation is being rapidly exchanged and diffused by means of the army. The contents of the volume are too varied to be more than hinted at here. The poems date from Count Ruggiero (who died in 1101) to the death of Victor Emmanuel and Pope Pius IX. The famous Sicilian Vespers and the political events of 1860 are not forgotten. Here and there we find a pure legend like No. xx., "La Bedda di lu Scògghiu" ("The Beauty on the Cliff"), which relates how a maiden awaited her lover seven years on a cliff, asking the passing sailors whether they had seen him. At last a skipper tells her that he has seen a cavalier, "blond and slender, on a rock, with his breast shattered," whereupon the hopeless maiden throws herself into the sea. A poem on the cholera in 1837 is interesting as showing the belief at the time that the pestilence was spread by means of poisoners (the reader will recall the *untori* of the 'Promessi Sposi'), and it was even believed that King Ferdinand himself came to Palermo disguised as a monk to see whether the poisoning was carried out on a large scale, according to his orders, When we reflect that over sixty thousand people died in Palermo alone in three months, we can imagine what must have been the mental condition of the survivors.

THE ORIGIN OF NATIONS.

The Origin of Nations. In two Parts: On Early Civilizations; On Ethnic Affinities, etc. By George Rawlinson, M.A., Camden Professor of Ancient History, Oxford, and Canon of Canterbury. New York: Charles Scribner's Sons. 1881. 12mo, pp. 283.

As appears from the title-page, Prof. Rawlinson's 'Origin of Nations' consists of two entirely independent treatises, having in common only the purpose of vindicating the authority of the Hebrew Scriptures against the assaults of historical criticism. The first part is devoted to chronology, the second to ethnology. The discussion is conducted with much learning, and has an especial value as being probably the ablest and most complete presentation of the arguments upon this side. The aim in the first part is to show that the results of historical investigation, especially in the decipherment of the monuments, do not invalidate the Scripture chronology. The author takes up the several nations of ancient times in nine chapters (including an Introduction), and discusses with considerable fulness the claims of each to an extreme antiquity. For the sake of completeness he has carried the enquiry a good deal further than was really necessary. If this claim can be sustained at all it is in Egypt, Babylonia, and India. If the annals of these three countries cannot be proved to be irreconcilable with the Scripture chronology, it is useless to look to Phœnicia, Lydia, Etruria, and the British Isles for such antagonism. Indeed, we think any reasonable person would be satisfied to let the question be determined by Egypt, for here we have unquestionably the oldest and longest continuous historical record. Naturally Egypt is the subject of the first chapter of the enquiry; and the enquiry might very well have stopped here.

It is a pity that Prof. Rawlinson does not tell us at the outset what he means by the Scripture chronology. The only clear impression one gets is that the chronology of the Hebrews is materially shorter than the alleged chronology of the Egyptians, and that therefore reason must be shown why the Egyptian chronology may be considered incorrect. Of course, as he himself says, it is very much guesswork. We have Manetho's tables, supplemented in part by the monuments; and it is *guessed* that more or fewer of Manetho's dynasties were contemporaneous. So, according as more or less of this contemporaneity is assumed, we have a number of dates for the accession of Menes, ranging from that of Mariette and Lenormant (B.C. 5004) to Sir G. Wilkinson's (B.C. 2691). The first is manifestly incompatible with the Biblical chronology; the last is quite as incompatible with Archbishop Ussher's chronology (the Deluge, B.C. 2350). Prof. Rawlinson at the close of the chapter decides to follow the Septuagint for this event, which places the Deluge before B.C. 3000. But he does not tell us why he follows the Septuagint for this event, nor whether he follows it for this event alone or adopts it as a whole, nor whether the Septuagint carries the creation back as early in proportion as the Deluge. The argument sums itself up in this: take the latest piece of guesswork for the date of Menes and the earliest for that of the Deluge, and it is certainly possible that the ancestors of the Egyptians, setting out from the Tower of Babel at the confusion of tongues, made their way to the valley of the Nile in time to found this empire.

The fact is, the whole discussion is premature and admits of nothing but "possible." We are willing to allow freely, with Mr. Rawlinson, that we have no clear historical evidence of the existence of any of the great empires earlier than about B.C. 2000, unless it be that of Egypt; further, that, as he remarks (p. 33), it is hard to believe that the valley of the Nile stood alone in excessive antiquity; and that the accounts of the earlier history of Egypt are fragmentary and incomplete in the extreme. For anything beyond this we must wait until the patient scholars who are at work upon this earlier period can offer us something besides guesswork—a time which Brugsch's recent discoveries make, perhaps, not so far distant as has been supposed.

The second part, in seven chapters, may be described as a commentary upon the genealogical table in the tenth chapter of Genesis. The author's object in this discussion, as stated in the preface, is to refute that modern view of Biblical inspiration which maintains that "while the writers of Scripture are to be held infallible guides in whatever relates to religion and morality, in other matters they are to be considered as simply on a par with other men, equally limited in their knowledge, equally liable to error, not a whit superior to their contemporaries or in advance of their age." The genealogical table in question appears to him "to deal a rude blow to such a theory," by proving that the Scripture account is fully substantiated by historical science. With some inconsistency, after this preface, he proceeds to deal with this genealogical table exactly as an unbeliever would do. In the first place he assumes, exactly as rationalists do, that where the Scripture account says "sons" we are to understand ethnological families. In other words, he places this table precisely on a footing with the Greek genealogy of the sons of Hellen. But what right has he, on his own principles, to give any but its obvious meaning to the plain language of the Bible? We read in so many words that "the sons of Japheth" were Gomer and Magog and Madai and Javan and Tubal and Meschech and Tiras; when he says that this means that the branches of the Japhetic race were the Kelts, Scyths, Medes, Greeks, etc., does he not deliberately use his own reason to explain away the language of Scripture?

Assuming, however, that he has a right to use this rationalistic process to establish the verbal inspiration of Scripture, let us examine some of the results at which he arrives. These results are ingenious and interesting, and in many cases conclusive; but let us see how far they can be used to support his fundamental principle, that "if in the material world God has wrought every minutest part to a finish and a perfection the highest that it is possible to conceive, *much more* is it to be believed that in the far more important treasure of his Word he has left nothing incomplete, but has given to every jot and tittle his full care, the utmost perfection of which it was capable, so that the whole is designed and is the utterance to man of Absolute Wisdom."

The seven sons of Japheth, enumerated above (Gen. x. 2), are identified by him with the following branches of the Indo-European race: *Gomer* is the Cimmerians, and the Cimmerians are, of course, the Kymry—that is, the Keltic race. *Magog* is "probably" the European Scythians. *Madai* is, of course, the Medes; *Javan* the Greeks (Ionians). *Tubal* and *Meschech* are the Tibereni and Moschi of Asia Minor; *Tiras*, the Thracians. Thus of the six great branches of the Indo-European race, as recognized by modern scholarship, his analysis

gives us the Iranians, the Kelts and Greco-Romans; the Indians, Slavs, and Teutons are left out, unless we assume with him (p. 177) that the Slavs may be meant by the Scythians (*Magog*), and the Teutons by the Thracians (*Tiras*)—taking as proved Grimm's generally abandoned theory that the Getæ and the Goths were the same. One would hardly say that this was a sufficiently close and positive identity with ethnological science to build an argument upon. In the next chapter Mr. Rawlinson proceeds to identify the sons of Gomer and Javan (mentioned in verses 3 and 4) with branches of the Keltic and Greek races. He then adds: "Why he has taken two only of the races and omitted the other five we cannot say. Perhaps he was not acquainted with the ramifications of the others; or perhaps he regarded them as sufficiently well known to his readers" (p. 189). Again: "The writer here informs us that there were within his knowledge three nations of Cymric and four of Greek origin." "*Within his knowledge!*" Whose? Are we not arguing upon the assumption that the statement is the direct word of God? Are we not told in the preface that we are to expect "nothing incomplete," and have we not here a very incomplete genealogy? Is not Prof. Rawlinson guilty of precisely the heresy that his book is directed against—making out the authors of the Scripture account to be "simply on a par with other men equally limited in their knowledge, equally liable to error," etc.? The argument is perfectly sound on rationalistic principles, and shows in a clear and satisfactory way how to explain the discrepancies and shortcomings of the Biblical record; but as a proof of the verbal inspiration of that record it is puerile. The identity here shown between the Scripture genealogy and the ascertained results of ethnology is so incomplete, and the portion that we have rests so largely upon sheer guesswork, that no person would take it as proving the authority of that record, unless he should start, as Mr. Rawlinson did, with the avowed purpose of proving that record inspired.

Our aim has been merely to show the insufficiency of the particular argument by which Mr. Rawlinson would establish his particular theory of inspiration. It may be remarked that M. Lenormant—whose chronology is furthest removed from Archbishop Ussher's—is a devout Catholic, as uncompromising a believer in the Christian revelation as Mr. Rawlinson himself. But he does not believe that the truth of Christianity depends upon the arithmetic of the book of Genesis.

'RUSSES ET ALLEMANDS.'

Russes et Allemands. Par Victor Tissot. Paris: E. Dentu; New York: F. W. Christern. 1881.

Victor Tissot writes so concisely and clearly on the important subjects of which he treats, that we do not wonder that this book in less than a month from the date of its publication attained a fourth edition. The French public, always eager for information when it is to be obtained at no great cost of time or labor, would naturally feel grateful to a writer who gives them the pith of ponderous German works in a few amusing and well-written pages, and would fly to this volume for light on Russian affairs, which through the assassination of the Czar have somewhat thrust themselves on their notice. Nihilism and secret societies have become the favorite theme for essay and romance, yet of Nihilism proper little was known in France excepting what is to be learned from Turgeneff's novels, or from the incoherent utterances of Rochefort's followers. The "Fathers of Nihilism," the first essay in this book, contains an account of the growth and development of this sect from the teachings of Alexander Hertzen, Michael Bakunin, and Tchernyshevski, with a history of their lives and work. It was at the house of one Stankievitch in Moscow, a follower of the doctrines of Hegel, that Hertzen, after imprisonment and exile, used to meet with the men who made such a mark in Russian literature and science. Bielinski, the radical critic, Granovski, the historian, and Bakunin, together with Hertzen, formed the extreme left of this circle. Aksakoff and Khomiakoff, the founders of the Slavophil party, also belonged to the number. They believed that in the doctrine of Hegel they had found a confirmation of their own views on government and society. "We spent whole nights," says Hertzen, "in discussing every paragraph of the three volumes of Hegel's 'Logic' and the two volumes of his 'Æsthetics.'"

Hertzen began his revolutionary career by publishing two pamphlets, "Dilettantism in Science" and "Letters on the Study of Nature." After a short term of Government employment, during which he wrote stories and novels, he gave himself up to his innovative ideas, in which he had absolute faith. He was, on account of continual conflict with the men then in power, consigned to imprisonment at Novgorod; he gave up his position as councillor, and after the death of his father, a man of fortune, he left Russia for ever. The south of Europe was then in a state of ferment. At Rome Hertzen formed his programme in a pamphlet entitled "Before the Storm," in which the following ideas are prominent:

"The future belongs to socialism, which will develop itself in all its phases to its extreme consequences, to absurdity itself. Then again from the Titan-like bosom of revolutionary minority the cry of negation will be put forth; and a mortal struggle will then ensue in which socialism will take the place of actual conservatism, and will be in its turn beaten by a power to us unknown. The eternal game of life, cruel as death, inevitable as birth, constitutes the ebb and flow of history, the *perpetuum mobile* of life."

This principle of universal negation is the very basis of Nihilist doctrine. In 1848 Hertzen was disappointed with the turn of events, which led to a bourgeois form of republic rather than to a socialistic solution. He continued denouncing it—"Death to the old world! Life to chaos, destruction! Room for the Future! We are not called to reap the fruits of the past, but to be its executioners, to persecute it, to judge it, to recognize it under all its disguises, and to immolate it to the future!" Sixteen years later, in 1864, Hertzen develops the same ideas in a pamphlet published in England under the title of "The Old World and Russia," in which, with sovereign contempt for Western civilization, he declares it to have played out its past and reached the very limits of remoulding. "Our revolutionary ideas are quite incompatible with the existing state of things." The Nihilist cares not what takes the place of what he destroys: "When spring comes again over the whited sepulchres of bygone generations, a young, fresh life will manifest itself!"

It was in 1857 that Hertzen began to publish his paper, the *Bell* (*Kolokol*). He was then living in London. Notwithstanding the most rigorous prohibitions of the Russian Government, the *Kolokol*, sounding the death-knell of despotism, used to find its way into all hands—even to the very table of the Czar. Hertzen's correspondents kept him informed of the most secret mysteries of the state; he knew what was passing at court, in the senate, in the police department, in the state prisons—everywhere. He acquired an immense influence over the educated classes, and the young students were completely carried away by his philosophic and social theories. Hertzen found himself strong enough towards the end of the reign of Nicholas to work for an insurrectionary socialistic movement in Russia, aided by Kelsieff and Bakunin, who were his intermediaries with the persecuted sects. His ideas were thus diffused among the people. In 1861 a monk, Father Pafnuty, came to London to confer with Hertzen, but, shocked by the irreverence and blasphemy of Bakunin's conversation, he returned to Moscow declaring that believers in the true faith could hold no commerce with the "libertines in London." The emancipation of the serfs stopped this movement. Kelsieff sent in his submission to the Government, and Hertzen, who seems to have drawn back when it came to putting his own theories into practice, became an opportunist, leaving Bakunin alone in the field to pursue his dream of annihilation, which has become the programme of militant Nihilism.

Michael Bakunin, born in 1814, was destined, as most noble Russians are, to a military career. After receiving what was then considered an excellent education, and having distinguished himself at his examination before leaving college, he had a right to a place in the Guards. This was, however, refused him, and he was sent to serve in the miserable villages of White Russia at the age of twenty-one. No wonder he got disheartened at so dull a life; he soon sent in his resignation and returned to Moscow, which was, under the reign of Nicholas, the rendezvous of all the malcontents. Bakunin joined at once the learned clique which met at Stankievitch's, and when his friends were dispersed went to Berlin, where he studied at the University. In 1843 he went to Paris, and there fell in with several socialist chiefs, being especially attracted by Proudhon. Espousing the cause of the Poles, he had the police at his heels, and his friends advised him to go to Switzerland, a safer soil for conspirators. He returned to Paris five years afterwards, and at a banquet given on November 29, 1847, to commemorate the anniversary of the Polish revolution of 1830, he made a speech which was translated at once into several languages. In this Bakunin prophesied that the future would efface the differences existing between the two great Slav races, and that they would be united in a federative republic. The Russian ambassador in Paris was ordered to require Bakunin's expulsion from France, and M. Guizot at once complied with this demand. Bakunin remained in Belgium till the revolution of February, which he and all his friends hoped to turn into a general reorganization of Europe. When convinced of disappointment on this score, he took part in June, 1848, in the Congress at Prague, the members of which, consisting of Czechs, Slovaks, Serbs, Poles, etc., dreamed of a federative Slav empire. This scheme failed ignominiously, and Bakunin took refuge among the Berlin radicals. In Dresden he became in May, 1849, one of the leaders of the local insurrection, and himself ordered the throwing of torches of burning pitch on the heads of the Saxon soldiers. He was taken prisoner at Chemnitz, and afterwards condemned to death, but the sentence was commuted to perpetual imprisonment. The Czar Nicholas demanded his rendition as a Russian subject, and

he was eventually placed in the fortress of Peter and Paul at St. Petersburg.

During the Crimean war Bakunin was transferred to Schlüsselburg, and was amnestied at the accession of Alexander II. and sent to Eastern Siberia, whence he escaped through the indulgence of his relative the governor-general, Count Muravieff-Amurski, who gave him a passport to Nikolayevsk; there Bakunin took passage on an American vessel, and thus, through Japan, San Francisco, and New York, got to London in 1861, where he found Hertzen and Ogareff. He determined henceforth to devote his energies to the Slav cause, and redoubled his vehemence against czarism. From the moment Bakunin became a contributor to the *Kolokol*, that journal no longer demanded reform only, but absolute destruction of all existing institutions. He even defended the incendiaries of May, 1862, in St. Petersburg, and incited his adepts to the most bloodthirsty revenge. The Russian liberal party broke entirely with this journal, once its own organ, when, in 1863, it took the part of the Polish insurgents.

The *Kolokol* was then transferred to Geneva, and Bakunin again returned to his former ideas of a cosmopolitan revolution. In 1867 we hear of him as a permanent member of the Peace League, but his views were not those of his associates, and he soon parted company with them and founded a new association, "The International Alliance of the Socialistic Democracy." In a long discourse at the Congress of Bern, Bakunin demanded the abolition of the state; the abolition of marriage as a political, religious, judicial, and civil institution; absolute equality of individuals, and the substitution of science for faith, and human justice for divine justice—in a word, collectivism to replace communism. "I abhor communism, which is the negation of all liberty. I am an enemy to communism, concentrating all the strength of society in that of the state, and putting all property into the hands of the state; I desire the organization of society and property to come from below, not from above; I am a *collectivist* and not a socialist." Hundreds of people became his followers. How many young men and women have devoted themselves to teaching his doctrines to the lower orders, living a life of the greatest privation, and giving up position, friends, and relations for the sake of promulgating these doctrines! How many have been sent to Siberia and their places taken by others! Bakunin sought to justify political assassination in two pamphlets, "Revolutionary Catechism" and "A Message to Russian Officers." When the Prussians were in possession of Paris Bakunin turned his attention to helping France. During the Paris Commune he went to Lyons to try and put his doctrine into practice there, under the auspices of Cluseret and kindred spirits; but when the National Guard took possession of the Hôtel de Ville again, Bakunin returned to Switzerland, where he died at Bern in 1872.

We now turn to Tchernyshevski, the founder of scientific, as Hertzen was of doctrinary, and Bakunin of militant, Nihilism. Tchernyshevski, in his 'Letters without Addresses,' showed how the people were continually called on to fight and to shed their blood for no advantage of their own. They were forced to deliver Moscow from the Poles, to conquer Little Russia, and to turn out the Swedes and Turks. In his commentaries to his translation of Stuart Mill's works he enlarges on the division of labor and the industrial question, discusses Adam Smith's doctrine with regard to social revolution, and refutes the theory of "political economy of the middle classes" to substitute the theory of political economy of the people. Tchernyshevski soon rallied around him the younger generation, who found in his teachings echoes of the pessimist and materialistic doctrines of Schopenhauer, Feuerbach, and Büchner, which had long taken the place of Hegel's philosophy. He wrote a novel while in prison, entitled 'What is to be done?' which created the new type of woman fitted to be the companion of the new type of man. This book became the gospel of young girls, who formed themselves on its heroine. Tchernyshevski represents woman as the victim of society, and incites her to deliver herself from its bonds, asking no help from any one, earning her own bread in order to become free. "The *Vera* of this novel became the model of the short-haired, student-looking girls with spectacles and masculine habits." He completely altered family ties for the younger generation, even changing the relation between husband and wife. Tchernyshevski's conjugal system is somewhat akin to Fourier's and Owen's, though more formalistic and conventional; for many marriages are quite platonic. In this system the woman marries the cause of humanity, and not the individual.

In 1864, after two years of the strictest imprisonment, Tchernyshevski left the fortress of Peter and Paul, to be put in the pillory on a public square at St. Petersburg. The executioner read over him a sentence of fourteen years' penal servitude in the mines for inciting revolt, and after that time perpetual exile. A sword was then broken over his head. Thenceforth dead to the world, he lives as a martyr in the hearts of the people, and from his prison in Siberia Tchernyshevski has done more against Russian autocracy than Hertzen and Bakunin at large in Europe.

Tissot, after giving an interesting account of the growth of Nihilism, continues to show how it no longer follows the old programme of carrying on a war against society, but has become a positive *vendetta* of the most ferocious and sanguinary kind, whose motto is "An eye for an eye and a tooth for a tooth." The Nihilists, according to him, have no strong organization, and are continually given up to the police by the peasants they try to convert. He thinks they cannot be under the direction of any central committee, but form independent groups of four or five members bound together by similarity of aim and intention; the richest furnishes the means for the poorer, and if the group is not strong enough to strike the contemplated blow it seeks auxiliaries. People of high rank are supposed to belong to the Nihilists, but what constitutes their real strength is their boldness and heroic contempt for prison, exile, or death. Another curious fact to which Tissot calls our attention is that it is not the poorest sections of Russia, where the inhabitants are in the greatest want, that breed the largest number of political malcontents. The majority of the Nihilist men come from Little Russia, the province richest in corn, in green fields, in well-fed cattle, in vines, where life is easiest, the blood warmer, and passions more easily kindled; while, on the contrary, only the Russian women of North Russia are found in these ranks. They are less ideal in temperament and more positive than the daughters of the steppes. The liberal party demands, as in 1879, a constitution; but the terrorists, those who assassinate, will not rest contented with this even, repeating Hertzen's saying: "A constitution is merely a compact between master and slave." Social transformation by means of the demolition of everything existing will alone satisfy them. What will become of Russia in this crisis is more than our author tries to foresee.

The remaining chapters of this book are on the education of women in Russia, the universities, the Russian army, and the relations between Germany and Russia; also on the important part Germans have played in Russia, and their present influence there. Tissot's arguments go far to convince us that they are generally detested by every true-born Russian, though no doubt his own feelings have some weight on this question. The last essay is on the state of socialism in Germany. In this Tissot gives the history of the life and work of Ferdinand Lassalle. Those who read this most interesting volume will eagerly look forward to Tissot's promised 'Indiscretions de voyage' on Russia and the Russians.

GÜNTHER'S ICHTHYOLOGY.

An Introduction to the Study of Fishes. By Albert C. L. G. Günther, M.A., M.D., Ph.D., F.R.S., Keeper of the Zoölogical Department in the British Museum. Edinburgh: Adam & Charles Black. 1880. 8vo, xvi.-720 pp.

Ichthyology. (Article signed "A. C. G." in the 'Encyclopædia Britannica,' ninth edition, vol. xii.) Edinburgh: Adam & Charles Black. 1881. Pp. 630–695.

Dr. Günther has in times past done good service to ichthyology, and has given us the only tolerably complete "Species Piscium," in the form of a 'Catalogue of the Fishes in the British Museum.' This work was issued in eight volumes from 1859 to 1870, and reflected moderately well the state of science at that period. The author, however, has been unable to any considerable degree to discard what he has once accepted and to bring himself into relations with the science of the present, but adheres tenaciously to beliefs formed in a much less advanced state of knowledge, and in spite of conclusive evidence against their tenability. This mental attitude is prominently manifested in his new work as well as in his article in the 'Encyclopædia Britannica.' The 'Introduction' is really a complement to the 'Catalogue' divided into two parts, viz., a treatise on the principles of ichthyology, and a nomenclature of the genera, with definitions of all the including groups admitted by him. The curiosity with which the experienced ichthyologist will open the book must be soon subordinated to astonishment as he proceeds in the examination of it, for it is scarcely possible that any one should be prepared for the numerous errors of one kind or another that are constantly cropping out on almost every page. It is difficult to believe that one who has written so much on fishes as the author has should make so many lapses.

At the commencement of the chapter on the "History and Literature" it is alleged that "Aristotle had a *perfect* knowledge of the general structure of fishes," and in illustration of the thesis Aristotle is quoted as stating, among other things, that "all scaly fishes are oviparous, but the cartilaginous fishes (with the exception of the sea-devil [*Lophius piscatorius*] which Aristotle places along with them) are viviparous," and that "kidneys and urinary bladder are absent" (p. 2). Nevertheless, we find confronted with these statements contrary ones, to the effect that there are

certain "scaly fishes" which are "viviparous" (p. 159), and that of the cartilaginous "the majority of the Rays are oviparous" (p. 336)—which by the way, however, is also incorrect. Passing over the rest of the first chapter, which is defective in many ways, we come to the second, upon which we shall chiefly dwell. It is devoted to a "Topographical Description of the External Parts of Fishes," and in almost every paragraph there is some ambiguous or misleading statement. A notice of some of the graver errors will form the best means of conveying an idea of the work.

"In the body of a fish four parts are distinguished: the *head*, *trunk*, *tail*, and the *fins*; the boundary between the first and second being generally indicated by the *gill-opening*, and that between the second and third by the *vent*" (p. 35). Now, the boundary between the head and trunk may, in a certain sense, be said to be *generally* indicated by the gill-opening, but when we consider that all the representatives of the sub-classes of Leptocardians, Cyclostomes, and Selachians fail to have the parts so distinguished, and that even among the Teleosts the Pediculates and others form exceptions, the statement is too broad even with the word "generally" introduced. The statement that the boundary between the trunk and tail is marked by the vent is unqualified; nevertheless there are a number of forms which furnish exceptions—*e. g.*, the North American Aphredoderids and Amblyopsids (the latter comprising the celebrated blind fishes) and the South American electrical eel, and all the family of Sternopygids. In the last two the vent is just behind the chin.

"In fishes which are endowed with the power of steady and more or less rapid motion, a deviation from that form of body which we observe in the perch, carp, and mackerel is never excessive. The body forms a simple, equally-formed wedge, compressed or slightly rounded, well fitted for cleaving the water" (p. 35). The form most eminently adapted for rapid progress in the water is exemplified in tunnies and bonitos; their body is fusiform, little compressed, and boldly rounded. The form of the carp is not well adapted for rapid progress, the fish being rather a slow swimmer, and is also not what is generally known as wedge-shaped.

"The mouth is formed by the intermaxillary and maxillary bones, or by the intermaxillary only in the upper jaw, and by the mandibulary bone in the lower" (p. 37). This statement is a remarkable one to emanate from a professional ichthyologist and anatomist. Every tyro knows that the Leptocardians and the Lampreys are entirely destitute of anything like true jaws, and all the Selachians lack developed "intermaxillary and maxillary bones," and have the upper border of the mouth constituted by the palatine bones (p. 69).

"The jaws of some fishes are modified into a special weapon of attack (sword-fish, saw-fish); in fact, throughout the whole class of fishes the jaws are the only organs specialised for the purpose of attacking; weapons on other parts of the body are purely defensive" (p. 37). This paragraph caps the climax of false statements and unscientific generalizations. The implication that the "weapons" of a sword-fish and a saw-fish are both modifications of the jaws is tantamount to the assertion that the jaws and nose are the same thing. Dr. Günther himself has known this (see pp. 336, 337 of the 'Introduction'). There is possibility for difference of opinion as to what are "organs specialised for the purpose of attacking," but there is none that the saw of the saw-fish is a prolongation of the snout, and has nothing to do with the jaws. If it is conceded that any part or "organ" which is efficient for the capture of prey in active pursuit, or for active assault on another animal, is *pro tanto* specialized, there are several parts besides the jaws which are subservient to those ends. None of the sub-classes of Leptocardians or Cyclostomes having jaws, and yet all preying, the parts concerned therein are organs for attacking. (1) In the Leptocardians the fringed margins of the mouth are concerned. (2) In the Cyclostomes the suctorial and dentigerous oral disc and the tongue-like organ are the agents. (3) In the sharks the palatines bear the formidable armature. (4) In the saw-fishes of the shark order (*Pristiophorus*), as well as of the Ray order (*Pristis*), the saw, admitted by Dr. Günther to be a special weapon of attack, is not formed at all by the jaws, but by the rostral cartilage, and thus we have an exception to the generalization specified in the same line in which it is formulated. (5) Dr. Günther himself, in his 'Introduction' (p. 322), informs us, under *Alopecias*, that "when feeding it uses the long tail in splashing the surface of the water, while it swims in gradually decreasing circles round a shoal of fishes, which are thus kept crowded together, falling an easy prey to their enemy." And thus, even if we discredit the use by *Alopecias* of its tail against the whale, etc., we must consider it as to some extent a special weapon of attack. (6) The Sting-Rays (Trygonids) scarcely confine the use of their spines to defence, and these are at least offensive-defensive. (7) The Devil-fishes (Cephalopterids) are said to use the cephalic fins for seizing and grasping (see Elliott's 'Carolina Sports,' p. 58). (8) The Sticklebacks are well known to use the dorsal spines as weapons of attack, and to swim under and rip the belly of their antagonists. (9) The Surgeons, or *Acanthuri*, are credited with using their lancet-bearing tails by actively slashing therewith their antagonists, and it is difficult to surmise what would be the function of their characteristic armature save as weapons of offence as well as defence. (10) The Weevers (*Trachini*) use their opercular spines at least for offensive-defensive purposes, and Col. Montagu called them "*offensive* weapons." It therefore follows that, so far from the jaws "being the only organs specialised for the purpose of attacking," modifications therefor exist in (*a*) the mouth as a whole; (*b*) a peculiar tongue-like organ; (*c*) palatine bones; (*d*) snout; (*e*) cephalic fins; (*f*) supracaudal spines; (*g*) dorsal spines; (*h*) lateral caudal spines; and (*i*) opercular spines.

"In Dipnoi and other Ganoids, one [nostril] at least is within the labial boundary of the mouth" (p. 38). One unfamiliar with ichthyology would infer from this paragraph that one or more of several dilemmas existed, viz.: That some "Dipnoi and other ganoids" *might have* more than one nostril "within the labial boundary of the mouth"; that other existing ganoids had "one at least" or that the characteristic was of too little importance to diagnose. It is necessary, therefore, to be specific. Dr. Günther at one time contended that in the Dipnoi both nostrils were intra-oral, and even in the 'Introduction' (p. 355) asserts that they are "more or less within the mouth." It is quite safe to say that never has a fish been found in which there were (two pairs of) nostrils within the mouth, and the existence of both nostrils within the mouth would be an incredible anomaly. No other existing Ganoid has even one nostril "within the labial boundary of the mouth." The development of the nostrils in the Dipnoi is one of the most weighty and suggestive characteristics of the group, and one by which they contrast with all other living fishes.

"The *gill-opening* is a foramen, or a slit, behind or below the head" (p. 38). This statement is absolute, although we have a number of exceptions—notably all Pediculates—and, as the author himself afterwards admits (p. 39), the genus *Myxine*. These, of course, have the gill-openings behind the head (not in front), but not immediately behind, as is evidently meant.

"The margin of the gill-cover is provided with a cutaneous fringe in order to more effectually close the gill-opening; and this fringe is supported by one or several or many bony-rays, the *branchiostegals*" (p. 38). The statement so absolutely made is not true as to any of the representatives of the sub-classes Leptocardians, Cyclostomes, or Selachians, nor, among living typical fishes, of the Polypteroids and Dipnoans. The homologues may indeed exist, but not as functional "bony branchiostegal rays."

The trunk "gradually passes in all fishes into the tail" (p. 39). To this there are many exceptions, as in most rays, and especially in the representatives of the families Trygonids, in which the tail is very attenuated, whip-like, and abruptly differentiated from the trunk.

"The vent may be either close to the extremity of the tail or to the foremost part of the trunk" (p. 39). From this statement we should scarcely be prepared to learn that the vent may also be situated below the head and as far forward as the chin, behind which it is found in the Gymnotids and Sternopygids.

The pectoral fins "are always inserted immediately behind the gill-opening" (p. 42). The pectoral fins are inserted below the gill-openings in many Sharks, and in all the Rays they extend far forward beyond them. Among the true fishes, in the Pediculates their bases are in advance of the gill-openings, which are in their axils.

"In some Gobioids (*Periophthalmus*), Trigloids, Scorpænioids, and Pediculati, the pectoral fins are perfect organs of walking" (p. 45). It is certainly by the utmost stretch of language that the pectoral fins in any of the Trigloids or Scorpænioids can be said to be organs of walking. In fact, they cannot, in any logical sense of the word, be said to have that function at all.

"Scales of fishes are very different from those of reptiles, the latter being merely folds of the cutis, whilst the scales of fishes are distinct, horny elements, developed in grooves or pockets of the skin, like hairs, nails, or feathers" (p. 46). There are no such differences and relationships.

"All scales are continually growing and wasting away on the surface, and it seems that some fish at least—for instance Salmonoids—'shed' them periodically" (p. 50). This conveys the most misleading and erroneous ideas as to the genesis, development, and mode of growth of scales.

The contradictions of the generalizations just indicated are in almost all instances furnished by the same work. Unquestionably Dr. Günther has known better than might be inferred from the above enumeration of errors. It will certainly appear probable that if he has failed grievously in the treatment of a branch of his subject of which the data are most readily attainable, which is most within the general purview, and which has been the special object of his study, the chances are that he has failed at least equally in his consideration of the more recondite and less known

branches. This anticipation will be found to be fully realized. Every chapter, every section, will be found to be impregnated with errors. The mental idiosyncrasies already indicated may crop out in the most unexpected places, and there is no telling where fallacy of some kind or other may not lurk concealed. But the most apparent and radical defects are the disproportion and incongruity manifested in the systematic portion of the work. The author seems, indeed, to be destitute, to an unusual degree, of a sense of proportion and of taxonomic tact. To enter on a consideration of such questions would, however, transcend the limits of a review. Suffice it to state that he is not in accord with the best systematic zoölogists and original investigators.

Never has a score of years been so fruitful in researches and results as the period between the inception of Dr. Günther's 'Catalogue' and the present. In that interval Darwin has given to the world his immortal work and revolutionized the methods and objects of biological investigation, while laborers almost innumerable have elucidated the various branches of ichthyology—the anatomy, embryology, the past history, the systematic relations, the species, the geographical distribution of forms, the faunas of the world. All these have been in vain for Dr. Günther. One of the principal discoveries—that of *Ceratodus*—has been recognized by him simply to become a stumbling-block and involve him in one of the most astonishing mazes of errors of modern times. Unquestionably, the most prominent characteristic of the present time is the acceptance of evolution and its ramification into all the details of biological investigation and classification. But in the 'Introduction to the Study of Fishes' no allusion has been made to this principle, and the author's treatment of his subject indicates that it has been practically ignored. There is, however, no group of animals to which its application is more fruitful in suggestive and profitable results than the branchiferous vertebrates. Still scattered in the waters of the globe live here and there as solitary survivors representatives of types, once abounding in species, that enable us to trace the lineage of our branch from the humblest beginnings to the specialized Acanthopterygian and grotesque Plectognath and Lophobranchiate fishes in one offshoot, and to man in another. It is strange that evidence so striking as that furnished by the forms in question should have been so entirely overlooked by Dr. Günther. The failure to appreciate the facts doubtless results from the method pursued. A certain type has been assumed as "highest" on account of vague psychological conceptions, and with this as an initial form others are successively taken up, till the author has lost his bearings and recklessly dealt with the remainder. Had he been compelled to begin his series with the generalized, and then proceed to the more and more specialized, types the faults that now pervade his work would doubtless have been fewer.

Poetry of Byron. Chosen and arranged by Matthew Arnold. New York: Macmillan.

THE preface to this newest addition to the Golden Treasury Series is an essay on Byron by the editor (published some months ago in *Macmillan's Magazine*), including a justification of his attempt "to separate from the mass of poetry which Byron poured forth all this higher portion, so superior to the mass, and still so considerable in quantity, and to present it in one body by itself." The attempt seems measurably successful; it is certainly felicitously executed, though every one will probably, as we do, miss something or other not necessarily excluded by the scheme of selection. If any appreciable number of readers of the present generation, whose misjudgment of Byron is one of the strangest mixtures of literary ignorance and affectation, are led to read him by the present selection, from which the dross of his product is excluded, it is not to be doubted that it was worth making. At the same time we can hardly go along with Mr. Arnold in thinking Byron lends himself as happily to this treatment as Wordsworth, the same editor's volume of selections from whose works is an absolute success. Not, however, because, as Mr. Swinburne maintains, Byron "can only be judged and appreciated in the mass." Mr. Arnold seems to us to answer this objection sufficiently. But whereas very little more of Wordsworth's than is contained in Mr. Arnold's volume is worth much as poetry, a great deal that is here passed by is interesting and valuable, though it may be superfluous to a correct appreciation of Byron. In other words, the Wordsworth volume is a satisfactory substitute for Wordsworth's complete works, the Byron volume is by no means a satisfactory substitute for Byron's. "The Giaour" is undoubtedly a "string of passages," as Byron called it, but they are all of interest and value; "The Excursion," on the other hand, may have all the philosophic unity its author claimed for it, but by no means all of it is worth reading and owning. Neither does Byron's bad work obscure his good, as Wordsworth's does, it should be added.

Therefore it is for the missionary service it is likely to perform that this book is mainly important. In the same way, though to a greater degree, we think it may be affirmed, the essay which prefaces it will be found of importance. The point of view is this: "Surely the critic who does most for his author is the critic who gains readers for his author himself, not for any lucubrations on his author." Admirers of Mr. Arnold's gift of critical definition will possibly regret that he has given us so few of his own lucubrations in this essay. He borrows his statement of Byron's excellence from Mr. Swinburne, and he uses very happily the remarks upon his subject of Goethe, M. Taine, M. Scherer, Professor Nichol, and others, in order to present his view of the true portrait of the man and the poet. This view was long ago presented in brief in a few sentences of his essay on Heine, and the original "lucubrations" here are little more than an elaboration—though a powerful and telling one—of his old remarks that Byron "inevitably shattered himself to pieces against the huge, black, cloud-topped, interminable precipice of British Philistinism"; that he was "the greatest natural force, the greatest elementary power, which has appeared in our literature since Shakspere"; but that, "except for his genius, he was an ordinary nineteenth-century English gentleman, with little culture and with no ideas." The effect of the essay is, however, to our mind, enhanced by the way in which it is written, and it will not only gain more readers for Byron than an elaborate piece of special pleading and analytical examination would do, but the persuasiveness and verisimilitude of its conclusions are increased. They are, at any rate, we should say, nearly unimpeachable.

The Young Folks' Astronomy. By John D. Champlin, Jr. New York: Henry Holt & Co.

IT is always a difficult matter to put one's self in the child's place—to whom everything on the earth is new—and say what his thoughts are of the newer things he is told about in the sky, when he is beginning to study astronomy. The ideal text-book for the child's instruction would be made in some such way as this: Let the author take ten lads—separately, if possible—and put them through a course with the aid of a text-book like the one before us, carefully observing the impressions made upon their young minds by the various passages of the book, and particularly noting the sections which their frank questionings will show to be obscure or imperfectly treated. The book is then amended and afterward subjected to a similar experiment—that is, the whole method would be an approximative system of text-book building, the true scientific process. All this, of course, points directly to the fact that practical teachers would be the best able to make new text-books, unless their special knowledge were too restricted from coming at second hand. Unfortunately, this latter is too often the case, and there are evidences of it in 'The Young Folks' Astronomy.' To say that the "attraction of gravitation was first found out by Sir Isaac Newton"—a common blunder—is a good deal like saying that Benjamin Franklin discovered lightning. It is well enough, perhaps, as a general statement (though in effect a popular error), to say that the earth rotates on its axis once in twenty-four hours; but when the statement is made for itself alone, the more exact time—twenty-three hours and fifty-six minutes—should be given, unless it be expressly noted that the time is sidereal. We would not have spoken of the "edge of the earth" (in treating of twilight), of a "strong telescope," instead of a powerful one, of the "causes" (presumably meaning laws) of the movements, etc. No one read in recent astronomy would speak of transits of Mercury and Venus as giving the best means of calculating the sun's distance—if, indeed, Mercury would ever give any approach to the true value; and astronomers have pretty much given over Venus for anything accurate.

The typographical errors are few for even a small work of this sort. On page 146 reference is made to "satellites of the planets shown by dots near them," but neither satellites nor planets appear in the picture indicated; page 157, Mars, "a little less than half" should be "a little more than half"; page 186, the "distance of the nearest of them [fixed stars] is more than five hundred thousand times the distance of our sun from the earth" was probably intended for "two hundred thousand," etc. But the little book is full of good points, its typography is excellent, the illustrations are generally well chosen, and the fact that a fair share of them is taken from Newcomb and Holden's 'Astronomy' is a sufficient guarantee of their value. The book would be much improved by the addition of two or three easy lessons about telescopes, the velocity of light, the simpler methods of finding the sun's distance, etc.

The Sailor's Handy Book. By E. F. Qualtrough, U.S.N. New York: Charles Scribner's Sons.

THE matter of this manual is well arranged and carefully selected, being in great part a reprint of Bedford. It contains more useful information for the general nautical reader than any of its size heretofore published, and many of its sections are valuable to all seafaring men. By yachtsmen and captains of coasting vessels in particular it will be prized as a book of reference, but, until our naval service is more Anglicized than at present, naval

officers will find it more curious than helpful. The author's treatment of disinfectants, management of boats, and cutting and fitting rigging is not up to the standard of the rest of the work, and his terms, although professional in an English sense, are, in many cases, strange to our officers and seamen. As a whole, the book is a welcome addition to the nautical library.

A Brief History of Ancient Peoples; with an account of their Monuments, Literature, and Manners. New York: A. S. Barnes & Co. 1881. 12mo, pp. 312–xvi.

BARNES's series of school histories is, for the limited ground that it covers (only the United States, France, and ancient nations), perhaps the best there is; and it is no doubt all the better for the slowness with which the successive volumes make their appearance, arguing a corresponding thoroughness of preparation. The author has a genuine power of narration and of selection, so that the books are at once readable and accurate, and contain, on the whole, what is best worth knowing. The field of ancient history is not so well adapted to compendious treatment as that of modern times, because it is made up of the separate histories of several distinct nations, to which, when told separately, it is hard to give reality or picturesqueness of effect by reason of the necessary brevity; while, on the other hand, it is difficult to weave them into one continuous narrative. Thus the volume before us contains nine histories instead of one. It would be impossible entirely to obviate this disadvantage; especially the histories of India and China, for example, do not touch those of Greece and Rome at any point, and must be treated independently. We think, however, that if the author had fully digested Mr. Freeman's great theme of the unity of history he would have found it possible to present in one consecutive view a history of that civilization which found its seat in Greece and Rome, with just its necessary connections in Egypt, Palestine, and other Oriental nations. That is all the ancient history that our school-children want—rather a view of ancient times than of the several ancient peoples.

The author has made as good a book as the method permitted, and it is especially noteworthy for the prominence given to the history of civilization proper. We find a few surprising misprints. In the table of contents, *Medea* for *Media;* p. 16, *Ædipus* for *Œdipus;* p. 133, *Pausanius* several times for *Pausanias* (which occurs once).

BOOKS OF THE WEEK.

Amenities of Home. New York: D. Appleton & Co.
Aunt Mary's New England Cook-Book. Boston: Lockwood Brooks & Co. 60 cents.
Cooke, Prof. J. P. Scientific Culture. New York: D. Appleton & Co.
Craik, Georgiana M. Sydney: a Tale. New York: Harper & Bros. 15 cents.
Dewey, Miss J. Helps to Devout Living. 3d ed. Boston: Lockwood, Brooks & Co. $1 25.
Dictionary of Education and Instruction. New York: E. Steiger & Co. $1 50.

THE FIRST ISSUE IN
NEWCOMB'S MATHEMATICAL COURSE.

Algebra.

By Simon Newcomb, Professor of Mathematics, U. S. Navy; Supt. of the American Ephemeris and Nautical Almanac, etc., etc. 12mo, $1 90.

Elementary German.

By Charles P. Otis, Ph.D., Professor of Modern Languages in the Massachusetts Institute of Technology. 16mo (Handbook Series), 90 cents.

This little book is a novelty in the way of brightness and thoroughness. It is not, however, an attempt to set forth any new discovery or invention, but simply a rearrangement of methods of acknowledged merit, worked out with intelligence and (especially in the vocabulary, indices, and other aids) unsurpassed thoroughness. It is based on the conviction that the proper mode is to unite, with a systematic study of the grammar as a basis, actual practice with the language as talked and written. The grammar method and natural or oral method by themselves having each their excellences, but either alone seeming an extreme, advantage has been taken of the excellences in each. Each lesson treats of a topic in the grammar, and gives exercises on the same, followed by a talking exercise and a brief sample of the written language.

The Young Folks' Astronomy.

By J. D. Champlin, Jr. 16mo, illustrated, 60 cents.

☞ *Teachers desiring to examine any one of the above books, with a view to using it in a class, can receive a specimen copy by mail, post-paid, on remitting to the publishers one-half of the retail price.*

WILL PUBLISH FRIDAY, AUGUST 12:

I.

Illusions:

A PSYCHOLOGICAL STUDY. By James Sully, author of 'Sensation and Intuition,' 'Pessimism,' etc. International Scientific Series. 12mo, cloth, price $1 50.

"The present volume takes a wide survey of the field of error, embracing in its view not only the illusions of sense, dealt with in treatises on psychological optics, etc., but also other errors familiarly known as illusions, and resembling the former in their structure and mode of origin."—*From Preface.*

"This is not a technical work, but one of wide popular interest, in the principles and results of which every one is concerned. The illusions of perception of the senses and of dreams are first considered, and then the author passes to the illusions of introspection, errors of insight, illusions of memory, and illusions of belief. The work is a noteworthy contribution to the original progress of thought, and may be relied upon as representing the present state of knowledge on the important subject to which it is devoted."—*Popular Science Monthly.*

II.

A Selection from the Letters of Mme. de Remusat.

1804–1814. Edited by Paul de Rémusat, Senator. 1 vol. 12mo, cloth, price $1 50.

D. APPLETON & CO. HAVE JUST PUBLISHED:

I.

The French Language Self-Taught.

A Manual of French Idiomatic Phraseology, adapted for Students, for Schools, and for Tourists, containing *One Hundred and Eighteen Conversations*, progressively arranged, embracing and elucidating the whole mechanism of the language, rules and models for the correct use of French adverbs, etc.; all idioms used in polite society, embodied in sentences with English version; models of notes, etc. By Alfred Sardou. 1 vol. 12mo, 469 pages, half roan, price $2 50.

II.

Scientific Culture, and Other Essays.

By Joseph Parsons Cooke, Professor of Chemistry and Mineralogy in Harvard College. 1 vol. square 16mo, cloth, price $1.

III.

Amenities of Home.

Fifth Volume of "Appletons' Home-Books." 'Amenities of Home' is a most suggestive and delightful volume, written by a distinguished lady of New York society. Illuminated cover. Cloth, 12mo, price 60 cents.

"Appletons' Home-Books" now consist of: 'Building a Home,' illustrated; 'How to Furnish a Home,' illustrated; 'The Home Garden,' illustrated; 'Home Grounds,' illustrated; and 'Amenities of Home.' Cloth, 12mo, price 60 cents each.

IV.

Text-Book of Systematic Mineralogy.

By Henry Bauerman, F.G.S., Associate of the Royal School of Mines. [illegible] is a new volume in the "Text-Books of Science Series." 16mo, cloth, price $2 50.

V.

New York Illustrated.

An entirely new edition of this work, extended to more than double the [illegible]er of pages of previous editions, and including many new illustrations, making a most superb [illegible]orial volume descriptive of the great metropolis. With new cover. Large 8vo, price 75 cents.

VI.

The Dictionary of Roman and Gre[illegible] Antiquities.

With nearly 2,000 Engravings on Wood, from Ancient Originals, illustrative of the Industrial Arts and Social Life of the Greeks and Romans. By Anthony Rich, B.A. Crown 8vo, 756 pages, cloth, price $3. This work is now offered at the above greatly reduced price.

VII.

Social Etiquette of New York.

New and enlarged edition. Containing two additional chapters: "Extended Visits" and "Customs and Costumes at Theatres, Concerts, and Operas," with the chapter on "Etiquette of Weddings" rewritten in accordance with the latest fashionable usage. 18mo, cloth gilt, price $1.

For sale by all booksellers, or sent by mail, post-paid, on receipt of price.

The Nation.

NEW YORK, THURSDAY, AUGUST 18, 1881.

The Week.

THE saddest tidings that could afflict the American people are, as we go to press, being momently feared, if not awaited. Between the two classes of unofficial reports which have been current since the attempt on the President's life, the public mind, naturally hopeful, has steadily inclined to the more favorable, and latterly it might almost be said that all concern had been dismissed. The news on Monday, therefore, of the gastric difficulty which threatened to deprive the President of strength to endure even the healing wound, came with a shock hardly inferior to that of the first announcement of Guiteau's crime. Whether the stomach can recover its tone sufficiently to take nourishment again, is the grave question of the hour. There is nothing to be added to what has been already said regarding the calamity of President Garfield's death, if recovery is indeed impossible.

The Treasury drew into its vaults during the week a great deal more money than it paid out, and the result was a heavy decrease in the surplus reserve of the New York banks, leaving this surplus $2,087,500, against $5,735,225 the week before, $9,970,000 a year ago, and $1,408,500 two years ago. On the other hand, the rates for foreign exchange fell so much that at the close of the week there was a profit in importing gold. Less dependence is placed on gold imports as a resource for the autumn money market than on the heavy disbursements to which the Treasury is committed by reason of the refunding of the 6 and 5 per cent. debt at 3½ per cent. On the 12th of the current month about $12,000,000 5 per cent. coupon bonds matured, the money for which will come out gradually, and on October 1st about $30,000,000 5 per cent. registered bonds fall due, but can and will be paid before then, provided holders present them and are content to take interest up to the day of presentation. These extraordinary disbursements should prevent any stringency in the loan market, quite apart from the influence of gold imports. The difficulties between the trunk-line railroads continue unsettled, although negotiations are still pending between the respective presidents. A meeting of the Executive Committee of the trunk-line pool was held early in the week, but as important companies were not represented the proceedings were of no practical influence. The negotiations which are going on between the respective presidents of the leading roads have in view the formation of what is called a "money pool" for a term of years; that is, a lumping of the money received by all the lines for through-traffic, and its division on the basis of the relative business which the companies did last year. There is now little reason for believing that an arrangement of this kind can be made which will be satisfactory to all. The failure to come to an agreement has depressed the prices of the whole list of stocks. Another influence in the same direction late in the week was the serious relapse in the condition of President Garfield; and altogether the week at the Stock Exchange was one of depression. The price of silver continues steady at 51½d. per ounce in London. Here the bullion value of the 412½-grain silver dollar closed at about 86⅝ cents.

The only political event of the week of any consequence was the action of the Virginia Republicans at Lynchburg. There were two conventions—of the coalitionists and the "straight-outs"—the latter engineered by Congressmen Jorgensen and Dezendorf, names that have a strange sound in the politics of the *pur sang* Mother of Presidents. An attempt to harmonize these two bodies proved unsuccessful. The straight-outs adjourned without being able to find candidates who would stand. The coalitionists resolved to make no nominations except locally, where their strength permitted, and recommended the general support of the Readjuster candidates. They professed the most honorable intentions with regard to the debt, however. Aware how little there is to choose on this head between the rival factions, they accused the Funders of being opposed to free schools, a free ballot, and a fair count, and of maintaining the odious capitation tax The Mahone party has therefore its coveted alliance. A correspondent, by the way, corrects our remark last week that Lynchburg was "a Mahone stronghold." The vote last year on the Readjusters' electoral ticket was almost too small to be counted, and the town is "regarded as the debt-payers' stronghold." But what we had in mind was Mahone's material, railroad interests centring at that place.

The majority against prohibition in North Carolina increases daily. Our correspondent on another page speaks of 30,000 to 50,000; but eighty-one counties have already made the majority 110,720, and the Raleigh *News* thinks that 10,000 will still be added. It is pretty certain that the temperance movement will not achieve any considerable success in that State so long as election returns require a fortnight to "come in." The Georgia Senate has just defeated a general temperance bill by a close vote.

Mr. John Thompson, the President of the Chase National Bank, and, he says, the oldest member of the Bankers' Association, read a paper on "Panics" at the convention at Niagara Falls on Wednesday week. It was rather a warning that there would shortly be a panic here than a discussion of panics in general. He declared that "the signs of an approaching 'blizzard' are numerous, but very delicate as yet"; that "the negotiations, the issue of stocks and bonds, are fourfold what they were in 1873," and as he thinks "panics occur every decade," he evidently looks for another in about two years. But then he is mistaken about the period of recurrence in panics. It is ten years in England; in this country it appears to be about twenty years. If we are to judge from the history of American panics, the next ought not to come before 1890, or thereabouts. It is very probable that the war and the abundance of irredeemable paper precipitated that of 1873, and that in the ordinary course of speculation we should not have had it before 1877, or twenty years from that of 1857, as that of 1857 was about twenty years from that of 1837. The reason of the greater staying power of American speculators is probably to be found in the more rapid increase of population through immigration, and the greater extent and productiveness of the fields offered to capital in this country. These two things, combined perhaps with the more sanguine temper of the people, sustain speculation twice as long as in England. Just now these agencies are more than usually powerful. Immigration is going on on an enormous scale, and the effect of existing railroads in developing production in the far West is unprecedented. In addition to this, too, not only has the producing power of the South been greatly increased, but, what is perhaps of more importance in its bearing on panics, its consuming power has been greatly increased. The negroes are in the market as buyers with varied wants, and plenty of money to spend. And we must not overlook the fact that the rate of interest is for this country still unprecedentedly low, which shows that though the speculators may be already displaying great recklessness they are still a long way from the end of their resources.

Their borrowing powers, however freely exercised, have evidently thus far made little or no impression on the mass of capital within their reach. This is due very largely not only to the great drafts we have been able to make on Europe during the last few years, through the sale of our crops, but also to the restored confidence of English investors in American securities, combined with complete loss of confidence in a large class of investments of which ten years ago they were very fond. They have been thoroughly frightened away from lending to states, like Turkey and Egypt and the Central and South American Republics, which were able to borrow such large sums before 1873. Land they will not now touch except at prices which but few owners are yet prepared to accept, and are very chary about lending on mortgage except with a margin which few borrowers can now offer, so that what used to be considered one of the very safest modes of putting money out at interest is practically closed to them. The general result is a flow of capital to this country which makes it difficult, for the first time in his experience, for the American investor to get more than five per cent. for his money, and makes it easy for the American Government, for the first time in its experience, to borrow all it wants at three and a half per cent Mr. Thompson's warnings are of course not to be disregarded. The seeds of the next collapse are doubtless being actively sown by thousands at this moment, but there is every

reason to believe that it is not so near as he thinks it is, and that the American panic cycle still stands, as it has stood since the beginning of the century, at twenty years or thereabouts. If it be asked why, when the period of recurrence is so well known, the speculators do not close up their transactions before it comes, the answer is that they always come to ruin through mistakes about the length of time it will require to carry out their undertakings. They know as well as any one that things cannot go on indefinitely as they have been going, but find they cannot unload as rapidly as they thought they could, and need, say, another year or two.

The best paper read before the Convention at Niagara Falls was that by Mr. George S. Coe on "The Currency of the Future." The gradual and certain extinguishment of the public debt at a period which can now be easily computed brings up the question, How shall the circulating notes of the national banks be secured when there are no longer any United States bonds to secure them with? Shall bank circulation cease altogether? Shall the national system be abrogated and the old State-bank system revived? Or shall national banking be continued under some other guarantee for the redemption of bank notes; and if so, what sort of guarantee? Mr. Coe dismissed the alternative of an exclusive greenback circulation, deeming any greenback circulation unsound and impolitic when no longer justified by the fiscal necessities of the Government. He also dismissed the alternative of a return to the State-bank system, with its multifarious confusion and its frequent swindling of note-holders. The national system, in some sort, he thinks, must be continued, and will be demanded by public needs and public opinion, after the national debt shall have been practically extinguished. But it can continue only on condition that the people believe that the notes are secured beyond the possibility of loss to the holders. It will not be sufficient that they are so secured, but the public must be convinced of the fact beforehand. There must be no more room for doubt about it than that 25 8-10 grains of gold are equal to a dollar. If the national-banking system is to be continued at all, this is its first requisite and *sine qua non*. Mr. Coe thinks security can be obtained under the National Banking act as it is, with additional provisions that the circulation of banks be limited to one-half or three-fourths of the cash capital paid in; that in case of bank failure the note-holders shall be preferred creditors, and that the notes shall draw interest at an extra rate for every day that they remain unredeemed after presentation.

We are constrained to differ from Mr. Coe both as to the estimation which the public will put upon such security and as to the sufficiency of the security itself. The National Banking act can never be better than the means employed to enforce it. Although its system of inspection by Government officers is very nearly perfect on paper, it is often found to be bad in practice—so bad, indeed, that in some of our large cities the condition of affairs could not have been worse if there had been no public inspection at all. Perhaps we shall be asked whether we can show a case of bank failure where the assets, coupled with the liability of stockholders, would not have been sufficient to redeem all the notes the bank would have been entitled to issue, and to pay interest on them also. We can at least easily imagine such a case. The spiriting away of a bank's assets has been known to take place by design, and under the very nose of a bank examiner. The best guarantee against this sort of rascality is the watchfulness of the bank depositors and their knowledge of the character and resources of the banker—that is, neighborhood knowledge—a kind of information not within the reach of the note-holders, who are scattered over a continent. But supposing the assets would always be sufficient to pay the principal and interest on the circulating notes at the end of a receivership; that would not be convertibility—it would not prevent the notes from depreciating in value, and therefore would not prevent the people from abrogating the whole system as soon as they began to feel inconvenience from it. The national banking system is too valuable to be lost, but it will be lost beyond a doubt if the security to note-holders is exchanged for anything less trustworthy and less esteemed than the Government's guarantee. We have no doubt that when the emergency which Mr. Coe anticipates actually comes, some way will be found to preserve this guarantee, and with it the national-banking system in its entirety.

The *Times* publishes some extracts from a letter on the subject of the proposed bankruptcy law, which calls attention to one of the most crying evils which the lack of a uniform law always produces. In many of the Western and Southwestern States, where public opinion and consequently legislation are apt to be strongly influenced by a consideration for the supposed interests of debtors, the exemption of "homesteads" from liability to sale under legal process has been carried to a point unknown in any other part of the civilized world. The Kansas Exemption law, for instance, covers a quarter-section of land in the country, an acre in an incorporated city, with all the improvements, and a good deal of personal property besides. It is said, and the estimate seems rather low, that under the provisions of this statute a debtor can withhold from seizure property to the extent of $100,000. The principle of the exemption of actual "homesteads" is a sound one, but the inflation of the "homestead" to this extent is objectionable. Such a law in many cases deprives a creditor of all redress. It is curious that communities which are always in the market as borrowers should think it advisable to pass laws which can only have the effect of frightening away lenders who do not like to take great risks; it is to the existence of such laws that the high rate of interest prevailing in the communities which pass them is partly due.

The first meeting of representatives of the civil-service reform associations organized in different parts of the country took place at Newport on Thursday. It was agreed to recommend and to employ every honorable means for the purpose of securing the passage by Congress of the bill introduced in the Senate by Mr. Pendleton, providing for competitive examinations preliminary to the appointment of persons to subordinate places in the Government service, and the bill introduced by Mr. Willis, of Kentucky, in the House of Representatives, prohibiting the levying of assessments for political purposes upon persons in the employ of the Government. The former is simply the legal embodiment of the system already tested in several offices in Washington and in the New York Custom-house. As it has been and is now in actual operation, there is no longer any doubt of its practicability, and the results of its working have been such as to settle the question of its usefulness. Mr. Pendleton's bill is designed to perpetuate it and to give it a more general application. Among those who have made the condition and needs of the civil service a subject of earnest study, there is scarcely any difference of opinion as to the desirableness of the passage of such a law. Mr. Willis's bill does not limit the freedom of anybody in the public service to contribute money to a campaign fund, if he really wants to do so, but it prohibits every sort of official pressure, and imposes proper penalties upon every attempt to apply such pressure. There will scarcely be any disagreement among sincere friends of civil-service reform on this point.

A resolution was adopted recommending the holding of "local examinations at various points convenient for those who might wish to be examined, for the different States"—which meets the objection that the system of competitive examinations would fill the Government offices at Washington with persons living near that city; and that the local boards conducting such examinations should be under the supervision of the Civil-Service Commission, existing by virtue of law. This resolution was intended to express the assent of the conference to a plan now said to be entertained and discussed by members of the present Administration. Finally, a resolution was adopted inviting the several reform associations to unite in forming a National Civil-Service Reform League, of which the Executive Committee of the association at New York, together with additional members to be designated by the other associations, are to act as a provisional "Central Committee," and the existing organizations were further requested to use their best endeavors for the formation of similar bodies in every Congressional district in the country. There is no reasonable doubt that all the associations already organized will comply with this request, and that the National Civil-Service Reform League will soon be an accomplished fact.

The efforts of the Commissioners of Emigration and the steamship companies to come to an agreement upon the question of immigrant fees have failed, and the matter is to go into litigation. The Supreme Court of the United States decided that the old law of New York

which levied a tax upon every passenger was unconstitutional, because it was a restriction upon commerce, and therefore beyond the regulating power of the State. The effect of this decision was to leave the Commissioners without money to carry on their useful and necessary work. The Legislature afterwards passed another law providing for the collection of inspection fees for every passenger; and it is this act which is now the subject of controversy. The representatives of the steamship companies deny its constitutionality, but it was understood some time ago that, recognizing the importance of the work of the Commissioners, they were willing to pay a part of the money. Negotiations to this end have fallen through, and a test case is to be submitted to the courts. It is difficult to see how the decision already made can be evaded. If the State tax is an unauthorized regulation of commerce when it is called "head-money," calling it "inspection fees" can scarcely make it anything else. It is desirable, however, to settle the question finally, so that if the State has no power in the premises Congress may provide for the supervision of immigrant affairs.

The *Times* publishes an interview with a gentleman, whom it vouches for as a competent observer, giving a gloomy picture of the condition of Mr. Hughes's colony at Rugby, Tennessee. He says that the settlement is in the middle of a virgin forest; that though the land had been partly cleared there appeared to be "no real soil anywhere"; that in the "English garden," the special property of the association through which the colony was started, "corn was a sad failure, the spindling stalks bearing little if any grain." There was "alleged hay," but "tomatoes were the only things that had at all the appearance of life." The investigator next discovered "a ravine running in picturesque beauty through one of the most romantic stretches of territory" he ever saw, "but there was no more soil through that ravine than lay up in the woods, and a man would die a dozen times before he was ever able down there to earn his bread and butter," and the same "mean dead land" he "found everywhere." The colonists are "much above the average of immigrants in point of intelligence," and are for the most part "really refined and inclined to be social." They have also "beautifully mown lawn-tennis grounds," but there are not more than three hundred of them at the outside, and nobody is "intensely enthusiastic" over the success of the colony. One gentleman "prominent in Rugby" acknowledged "that there was not prevalent the fullest sense of satisfaction. He said it had been discovered that large crops, such as wheat and corn, could not be even measurably well raised on their land; then he added, with no great show of enthusiasm, that it was possible manufactories might be established or that fruit trees might be found to thrive, and he had some other 'mights' to quote. But he spoke hesitatingly, and admitted that a big blunder had been made in bringing the colony across the ocean without a definite and fixed plan and without a full knowledge of the locality chosen for settlement."

The Lords, on the second return of the Land bill from the Commons, with some portion of their amendments accepted and the rest rejected, gave over further opposition, and on Tuesday put the bill upon its final passage, reserving the right to make a formal protest to the country. The Home Rulers have bitterly reproached the Government for its surrender, attributing a farcical character to the apparent contest between the two houses. Mr. Gladstone, however, denies that there was any understanding which brought about the compromise, and the Lords have therefore the full credit of their prudence, as well as of their boldness in demanding concessions. The bill will take effect this week.

The news from Rome that the Pope is thinking of leaving the Vatican, and has made known the fact in a circular to the nuncios abroad, is hardly to be taken seriously. It is most probably a confession that the weapons of defence against the "Subalpine King," so long used both by the present Pope and his predecessor, are worn out, and that some new mode of rousing the faithful must be resorted to. These weapons consisted in almost equal parts of lamentation and denunciation—lamentation over the condition of faith and morals all over Christendom, and denunciation of divers persons not named for their machinations against the Holy See. In fact the Papal Encyclicals, ever since 1849, may be said to have constituted a new kind of literature, the like of which had never been seen before. Of course the only thing that could make them effective was miracles or "special Providences" of a penal character directed against the persons or classes whom they held up to reprobation. As these have not come, and as the Pope's "imprisonment" in the splendid palace and spacious gardens of the Vatican cannot be made to wear a very dreadful air to a badly lodged and mocking generation, he has evidently reached the end of his resources, as far as minatory pastorals go. He is probably, too, and not unnaturally, alarmed by the disgraceful disturbance at Pio Nono's funeral, followed as it has been by a meeting in favor of the withdrawal of the parliamentary guarantees by which he holds the Vatican as a sort of sovereignty.

Any how, he is evidently going to try for some time the threat of running away, in the hope that it will harm or embarrass the Italian Government. But that he really means to go it is impossible to believe. There is, to begin with, no place for him to go to in which he would not be completely stripped of the dignity he gets not only from the guarantees but from the hoary and venerable traditions which surround him at the Vatican. He would plunge any Government on whose soil he settled into difficulties with its own subjects, compared to which those of the Italian Government are trifling. There has been for years talk of the British letting him settle in Malta, but in Malta he would have to live under the law; and a Pope living under the law would be sure before long to be in trouble with heretic officers of the law. If any Power ceded him territory—a little island like Elba, for instance—he would either have to defend it against communistic and atheistic filibusters, and thus become a fighting man—which the modern world will not stand—or provide himself with an armed foreign protector, which the other Powers would not stand. Italy is probably the only Power which Europe would now see in charge of the Pope without jealousy or irritation, if he were to keep up any state; so that the probabilities are that he will now, instead of writing a denunciatory circular when he is vexed, give orders to have his things packed, as a means of bringing the subalpine usurper to terms.

In the dim light of the reports which have reached us about it, the tour of Czar Alexander III. and his family from Peterhof to Moscow and back bears a very melancholy aspect. The motive of it is stated to have been—the communication comes from Copenhagen—the discovery on July 27 of a new plot against the imperial family, in which a number of persons of high rank were involved. The court departed a day or two later, without open preparation and without any announcement of the object and extent of the journey. The arrival at Moscow was, it appears, without *éclat*, and the words publicly addressed by the Emperor to the people of the old capital were not words of cheer and encouragement, but a faint expression of affection and sadness: "Moscow has always given an example to the whole of Russia; I hope it will ever continue to do so." The newspapers explained that the Czar had come to Moscow to do homage before its holy shrines. On the 31st the imperial party left suddenly—the telegram says "secretly"—for Nizhni Novgorod. In possible explanation of this unexpectedly speedy departure, we have the news, concurrently telegraphed from two quarters, that another conspiracy against the life of the Czar had been frustrated by the police, though the would-be assassin, a lady of high rank, managed to escape. All we hear after this is that the imperial family arrived at Nizhni Novgorod on August 1, at Yuryevetz, in the Government of Kostroma, on the 2d, and at Peterhof on the 5th—the journey having been completed in a week. It seems to have been the very opposite of a new monarch's triumphal tour; if it was not a double flight, it certainly had the appearance of it. No utterance of any importance was made by the Czar or by his adviser and travelling companion, Ignatieff. No allusion to the coming coronation was made, though many believed the imperial party contemplated staying in the old capital till coronation-day. The Old Russians and Slavophils expected a strong declaration in accordance with their political theories and aspirations, and must feel disappointed and mortified by Alexander III.'s lack of courage to make it. Nor is there any distinct indication that he is inclined to choose the opposite course and follow the path of liberal reforms which public opinion in St. Petersburg demands. He apparently hesitates and wavers, discouraging all his friends, while his foes are desperately active.

SUMMARY OF THE WEEK'S NEWS.

DOMESTIC.

THE week has been one of much anxiety at Washington, inasmuch as the President's pulse and temperature kept up after the time allowed by his physicians for the effect of the last operation to pass off in. Saturday there were unauthorized rumors that the trouble lay in the retention of pus in the wound, and that it had been determined to cut for the ball at all hazards, in order to establish a clear outlet from front to rear. Sunday, however, it appeared that the wound was doing very well, but that increasing debility had seriously affected the stomach, making it impossible for the President to retain any nourishment, or even a swallow of water, and requiring the administration of nutriment by injection. The temperature declined, the pulse quickened alarmingly, as did the respiration, and sleep was only induced by opiates. The physicians admitted their anxiety with great candor, for the first time since recovery began to be hoped for. Monday night the President slept well without the aid of hypnotics, though he had another bad time with his stomach about three o'clock. Tuesday morning he was very weak, and inclined to drowsiness, and the pulse had fallen from 125, or even 130, to about 110.

The Virginia Republicans held an excited convention at Lynchburg last week over the question of nominating a straight ticket or endorsing the Readjuster nominations. The delegates who assembled in the city on the 9th inst. speedily divided into two camps of straight-outs and coalitionists, and proceeded to hold conferences and informal discussions in advance of the meeting of the convention. It was rumored that Mr. Cochrane, chairman of the State Central Committee, had announced his intention of excluding all but straight-outs from the convention hall, and accordingly a prominent coalitionist at once rented a much larger edifice, and two conventions soon appeared inevitable. The "attitude" of the Administration was the subject of heated controversy, and though the straight-outs maintained that before his illness the President sympathized with them, the large preponderance of Federal office-holders on the other side was pointed to as significant. On Wednesday two conventions did meet. That of the coalitionists was decidedly the larger. Its sessions were also marked by greater and more eloquence. A conference committee was finally appointed by each body and decided upon making no nominations and no endorsement of the Mahone ticket. This agreement the coalitionist convention refused to ratify, and the straight-outs followed their example. The former at once proceeded to endorse the Readjusters' ticket, to appoint a State Committee, and adjourn. The straight-outs adopted a strong anti-repudiation platform, nominated General Wickham for Governor and Samuel Yost for Lieutenant-Governor, and upon the declination of both gentlemen adjourned *sine die*.

The New York Chamber of Commerce held a special meeting on the 10th to consider the freight question, so prominent at present, and appoint delegates to represent the Chamber at the Utica Conference called for to-day by a number of trade organizations throughout the State. After the appointment of delegates the report of the Special Committee on Transportation was read. It closed with a number of resolutions which were unanimously adopted, and were to the effect, among other things, that thanks be tendered to the trunk-line managers for "the general reduction in westbound open or tariff rates when it became evident that large shippers could command undue influences over shippers in general"; that "the amount of watered stock has nothing to do with the cost of transportation," which alone should govern rates; that "the practice of making excessively low rates during the season of navigation and unreasonably high rates during the winter months" is discrimination against the State as the owner of the canals and detrimental to commercial interests generally; that "reasonable, uniform, and public rates" are best for both commerce and the railroads, and that "we willingly concede rates which will pay liberal dividends upon the actual cost of construction," while demanding that stock watering shall cease and the public be guaranteed against its recurrence "by adequate legal enactments." Ex-Senator Conkling is expected to attend the convention, being "in sympathy with the objects of the meeting."

The Joint Executive Committee of the trunk lines and their Western connections met in Commissioner Fink's office on the 10th instant. Thirty-one roads were represented by agent or proxy. None of the Vanderbilt roads were represented in any way except the Michigan Central, of which the General Manager was present. Commissioner Fink announced the object of the meeting to be a consideration of the causes of the break in tariff rates, and of the best means to restore and maintain them. The first step to be taken was, he thought, "to concentrate the rate-making power in the hands of fewer persons, and to hold them responsible to the committee for any violation of the agreements." After a somewhat desultory discussion, in which Vice-President Blanchard repelled attacks on the Erie Railway Company, the committee voted unanimously to restore rates on east-bound freight to 20 cents per hundred pounds on grain and 25 cents per hundred on provisions from Chicago to New York, the new rates to go into effect next Monday. Whether they will or not is, of course, extremely uncertain, as the meeting was only a conference—or at least was so described by the only Vanderbilt representative present.

A convention of the American Bankers' Association met at Niagara Falls on the 10th instant. Papers on "The Coming Panic," "The Lake Trade," "Money and its Legitimate Uses through the National Banks," "Money and the Banking System" (Ex-Governor Fenton), and kindred topics were read by or for different bank presidents of this city, Buffalo, Portland, Me., and Madison, Wis., on the first day. On Thursday a letter from Secretary Windom on the recent funding operations was read. Controller Knox discussed at length "The Banking and Currency of the Country," and Mr. George S. Coe, of this city, read a paper on "The Currency of the Future," after which he was elected President of the association for the ensuing year. Bank taxation and a number of other subjects were considered on Saturday in various short papers, and the convention adjourned.

Many of the agents of the European steamship lines held a meeting last week to discuss the movement of the Emigration Commissioners to induce the companies to pay the emigrant head tax of $1, as provided by an act recently passed by the Legislature. It was the sense of the meeting that the tax was exorbitant by fifty per cent. and was, moreover, unconstitutional. The Commissioners also held a meeting on the same day, and decided to begin separate suits against the companies for each shipload of emigrants that henceforth arrives at this port.

Representatives of the various civil-service reform associations in different parts of the country met at Newport, R. I., on Thursday last, with the design of agreeing upon certain specific objects to be promoted by popular agitation and petition to Congress, and of establishing a centre of correspondence among the different associations to facilitate needed unity of action. It was agreed to use every means to secure the passage of the Pendleton bill, and the bill introduced by Mr. Willis, of Kentucky, into the House of Representatives prohibiting the political taxation of office-holders. Resolutions were also adopted recommending the holding of local examinations at points convenient for candidates, and inviting the several reform associations to form a National Civil-Service Reform League, and subordinate organizations in every Congressional district in the country.

Services were held on Sunday at Sea Cliff, L. I., the well-known camp-meeting ground, to commemorate the heroism of the late Captain Charles P. Smith, who saved so many lives at the time of the Seawanhaka disaster. Three thousand people were present. Mayor Grace was to have presided, but was unavoidably absent, and sent a letter which was read among other regrets. Mr. S. L. M. Barlow and other survivors of the accident attended, and after prayer, the singing of a hymn, and the reading of Scriptures, brief addresses were made, and the oration of the occasion was delivered by Mr. Richard O'Gorman.

The Coroner's inquest into the circumstances of the death of Conductor Lattin, of the New Haven Railroad at Rye, some weeks ago, was concluded last Thursday, the jury censuring the officers of the road for "gross negligence of duty in not familiarizing themselves with the fact that their rules have been violated at Rye station for the past ten years."

The deaths have taken place during the week of Matthew Vassar, a benefactor of Vassar College and nephew of its founder; ex-United States Senator Orville H. Browning, of Illinois; Señor Maximo Jerez, Nicarauguan Minister to this country; Mrs. Millard Fillmore, widow of the late ex-President; and Capt. Carlile P. Patterson, Superintendent since 1874 of the United States Coast Survey. Mr. Vassar's will contains a large number of bequests to educational and benevolent institutions. The Vassar Brothers Hospital (founded by the will) is given $85,000, besides being made residuary legatee; $50,000 are left to Vassar College for educational and scholarship funds, and $80,000 for professorships, and $15,000 are bequeathed to the Vassar Brothers Home for Aged Men.

Judge James D. Colt, of the Massachusetts Supreme Bench, shot himself in his office at Pittsfield, on the 9th instant, while laboring under the depression of hypochondria.

The agent at Rosebud has forwarded to the Interior Department further details of the killing of Spotted Tail by Crow Dog. According to his account, a conspiracy has existed among the subordinate chiefs of the tribe for some time, Black Crow being at the head of it and making no secret of his intention to get for himself the position of head-chief by fair means or foul. The agent therefore arrested Black Crow as an accessory, together with the actual murderer, and sent both to Fort Niobrara; which action has had an excellent effect upon the people at large, he says. He further recommends that no successor to Spotted Tail be appointed, since the office of head-chief is "a hindrance to civilization," the main business of its occupant being to centralize all power in himself. Delegates to Washington should, in his estimation, be selected for their general intelligence and loyalty by the agent.

A destructive flood took place last week in Gilpin and Clear Counties, part of the northern mining country of Colorado. The towns of Central City, Black Hawk, and Idaho Springs suffered greatly. The flood began in a mountain storm, and in an incredibly short time was sweeping everything before it. Two lives were lost, several persons were wounded, there were many narrow escapes, and the loss of property is estimated at $120,000 in the three places.

FOREIGN.

The difference between the House of Lords and the Commons over the Land bill has created a good deal of excited speculation in England during the week. The bill was returned to the Commons on the 9th, and since then it has apparently been the Government's policy to accede to all reasonable amendments made by the Upper House, but to reject all those conflicting with the principles of the measure or in any way tending to defeat its substantial success in operation. The Liberal press has exhibited some fears of compromise and has

been full of adjurations to Mr. Gladstone to stand firm and let the consequences take care of themselves. There has been more or less serious talk of the peers remaining precisely as firm on their side, with the result of an appeal to the country by Mr. Gladstone. This course, however, commended itself to no one but the Parnellites, whose numbers would undoubtedly be increased by an election now. The *News* remarks: "If Mr. Gladstone resigns he would make the peers our masters. If the vote of a majority of the hereditary legislators could at any moment overbear the decision of the country, parliamentary government would become a farce. The same may be said of a dissolution of Parliament and a general election."

So far as "demonstrations" indicate public opinion, the peers have been shown that the press has not misinterpreted it, and Lord Salisbury probably could see nothing to gain by a dissolution. Saturday afternoon public meetings were held in various parts of the country, and on the same evening Liberal organizations, farmers' associations, and agricultural laborers' clubs everywhere assembled and denounced the peers with enthusiasm. On Monday there was a numerously attended meeting of the Committee of Federation of Liberal Associations, Sir Wilfrid Lawson and Messrs. Monk, Collings, Firth, and Barran, members of Parliament, being present. Resolutions were adopted which declared that the Lords had mutilated the Land bill in the interest of land-owners to such a degree that it was wholly unacceptable; appealed to the Government to adhere to the measure as it left the Lower House and withstand a class majority of peers; and pronounced the constitutional question raised as to "the possibility of maintaining a system which will enable an irresponsible chamber to defeat the will of the nation." Mr. Gladstone received on Monday a hundred messages from Liberal clubs and other organizations urging Government insistance, and was appealed to in the House by several of his followers to the same end.

At a recent council of the English Cabinet, it is understood that the proposition was made to drop the Coercion act, and if after the passage of the Land bill there should be a reasonable prospect of restored tranquillity, to liberate the prisoners arrested under the act after each had served a term of six months' imprisonment. Up to the 2d instant there were 192 such prisoners.

Mr. Bradlaugh has been ill with erysipelas since his encounter with the police in his attempt to enter the House of Commons. It is believed that he will take no more active measures until the next session of Parliament, when the Government will propose a resolution allowing him to take the oath, and if the resolution is defeated, will introduce a bill altering the Parliamentary Oaths act.

The British "industrial classes," or such of them as are opposed to free trade, held a large meeting in Exeter Hall, London, on the 10th instant, at which Sir Algernon Borthwick, proprietor of the *Morning Post*, presided, and to which the workmen's societies of Bristol, Birmingham, Liverpool, Leeds, Hull, Glasgow, and other industrial centres sent delegates. The chairman made a speech, in which he said that France had made the greatest advances within the past twenty years; that America came next, while England was a bad third; which state of things he ascribed to the British policy of free trade. He advocated a duty of a shilling per quarter on all imported corn. Commander Cameron, the African explorer, followed to the same effect, supporting a resolution that called for "the imposition of such revenue duties as will enable British manufacturers and workmen to compete on a fair footing with foreigners in the British home market" One of his arguments was that President Garfield had pronounced protection necessary to American prosperity, and if that was the case with "a young country and virgin soil," it was so with England. The resolution was adopted, and sent to the Government and to the opposition leaders. It is likely that the three months' prolongation asked by England of France for the commercial treaty will be granted, *M.* Saint-Hilaire evincing every disposition to grant concessions. In the House of Commons on Saturday Mr. Ritchie (Conservative) moved an address to the Crown praying Her Majesty to withhold her consent from any treaty with France which substitutes specific for *ad valorem* duties to the detriment of British manufactures. After opposition by Sir Charles Dilke, the motion was negatived by a vote of 150 to 80.

Premier Ferry has been strongly attacked by a Gambettist writer, and, with the usual credence given in Paris to such straws, it is accepted as a "declaration of war" by the President of the Chamber upon the Government. At a banquet given to M. Ferry at Raon-l'Étape, in the Vosges, the Premier prophesied the return of moderate men as the result of the election, and dwelt on the necessity of rejecting Socialist candidates and of concord among the Republicans. At a banquet in his honor at Nancy on the 10th inst., however, M. Ferry made the following remark: "The country will reply that between a moderate, partial revision (of the Constitution), such as was recently explained by the great orator at Tours, and an absolute, violent, and radical revision, which is the favorite idea of the irreconcilables, there is a gulf—an abyss"; and still more significantly he added that "should some one be found with more powerful hand than mine" to effect Republican union, "I am ready to assist him as first lieutenant." A correspondent says this is "generally understood" to indicate the complete submission of M. Ferry to Gambetta.

Meantime "the great orator" made a speech Saturday evening at Ménilmontant which "is interpreted" as a decision to accept the Premiership of the next Cabinet. He made an elaborate statement of the reforms he counted on carrying in the next Chamber. First came the reform of the magistracy and the army. The number of judges and law courts could be reduced, and something similar to the English circuit system be adopted. He believed in making compulsory army service universal, including priests and teachers, though he favored abolishing the system of three years' service. He would refuse liberty of association to religious congregations, and adopt a foreign policy of peace and firmness. "France was not isolated, but she needs no alliance." He added: "I hope to see the day when our severed brethren will once more be united to France," to which remark the *North German Gazette* takes grave exception. "It shows," says the *Gazette*, "Gambetta's anxiety to be regarded by his countrymen as one who has devoted himself to a lifelong task of effecting the realization of French projects of revenge."

The International Exhibition of Electricity was opened in Paris on the 10th instant by President Grévy, accompanied by the Ministers of Marine, Foreign Affairs, and Posts and Telegraphs, M. de Lesseps and others. The United States section was much behindhand at the outset, though the Edison display was described as "very promising." Saturday night Edison, through his agent, created a good deal of commotion by a seizure, upon injunction, of the Maxim lamps in the Exhibition, which were at once sealed up.

The London *Times* Rome correspondent says the recent statement by the *Diritto*, that the Pope intends going to Malta to reside, is true in substance, but that no immediate action is contemplated, the fulfilment of the threat (or announcement) being "dependent on circumstances." Cardinal Jacobini explains a paragraph in a subsequent circular to the ambassadors at the Vatican as intended to draw attention to the "increasing possibility of the Pope's departure from Rome."

Recent persecutions of Russian Jews have been so scandalous as to lead to a Government investigation at Kharkoff, where Count Kutisoff received a deputation of Hebrews on Monday, who ascribed the riots to a variety of other than economic causes. They were assured that the Government was determined to prevent the repetition of outrages, and to that end had instituted an enquiry into the condition, numbers, and occupations of the Jews of the western provinces. The Emperor William has also commanded special information from the local authorities as to the recent Semitic persecutions in Pomerania.

The King and Queen of Spain have been inspecting the navy at Ferrol amid local rejoicings and the customary pageantry. There is much excitement over the coming elections, which occur Sunday next. The Basques and Navarrese threaten a return of ten or twelve Carlist Deputies, and Don Carlos has sent written instructions to his party to take part in the elections and do their best. As many as are elected, however, will, of course, have to take the oath of allegiance to Alphonso in order to retain their seats. Castelar's electoral speech delivered in North Aragon is censured by the Republican press for its concessions to the conservative principles of the Government; he was very severe upon radicalism, and the candidates of his party of advanced Republicans will, it is reported, receive Government support.

There is also a good deal of excitement over the elections in Germany, particularly in the press, the *North German Gazette* having become so much heated in its attacks on the Progressist papers that the latter have "declined to notice it in any way," whereat the *Gazette* exults. The appointment of Dr. Korum to the vacant bishopric of Treves, in Rhenish Prussia, is accepted as an indication that Bismarck has, after all, "gone to Canossa." The Berlin correspondent of the London *Times* comments thus on the incident: "The Government has allowed the Catholic clergy to exercise their old influence upon the public schools in regard to their administration. Different dioceses have been again instituted, the payment of clergymen's salaries renewed, and the rights of the orders for nursing the sick enlarged. The Government took these measures in the interest of the state, but the Curia has made no sacrifices. It has succeeded only by passive resistance, and it is feared that other and greater concessions will be made to the Vatican, particularly if the elections produce a conservative majority for the Government."

The Cornell crew have again been defeated abroad, experiencing hard luck at Vienna also. Great preparations had been made for the race, which was for a trophy valued at £250, and it was witnessed by vast numbers of the Viennese. Betting was in favor of Cornell, as the Vienna crew had had but a few weeks' practice; but the latter appear to have obtained a winning lead before Shinkel, the Cornell stroke, was taken with cramps, when the visitors were obliged to stop rowing and give up the race.

The drought in Switzerland has now lasted two months with the exception of a few showers, with the result of completely burning up the grass and preventing the usual second hay crop. In most parts of the country also there is a great scarcity of water, from which and from the heat whole herds of cattle have perished in the Canton of Schwyz, in the Vaudois Alps, and in the valleys of the Jura.

The correspondent of the London *Daily News* who was imprisoned at Merv with slim chances, as he thought at one time, of ever getting away, has arrived at Meshed, and telegraphs that the Tekke chiefs before his departure desired him to deny absolutely the rumors of negotiations between them and Russia, and the presence of three Merv Elders at St. Petersburg. Persia, he declares, is anxious to secure the alliance of the Mervli, who are, however, opposed to it.

"PRESSURE."

THE utterances on civil-service reform which recent events have called out from Congressmen, leading off with Mr. Dawes, of Massachusetts, all but invariably, while deploring the position in which the present system places members of Congress, throw the blame of it on "pressure" from their constituents. We believe that during all the discussions of the last ten years not one Congressman has avowed that he liked to share in the patronage and profited by it personally. They all say they do not like it and would gladly be rid of it. Some say, however, that they do not see what could be substituted for Congressional recommendation, as long as the President has to fill places with persons, from distant parts of the country, of whom he cannot possibly have any personal knowledge. Others say it were easy enough to find a substitute for it, if "the people" were willing that one should be found, but maintain that "the people" are not willing. Their constituents, they allege, not only insist on members of Congress providing candidates for Government employment, but engage in the pursuit of Government employment, through members of Congress, with such vehemence and eagerness that Congressmen, whatever their private opinions about the spoils system, have to submit. This is substantially the position of Senator Dawes. It is the excuse which nearly every member of Congress, if driven to the wall, makes for failing or refusing to give the civil-service reform movement more active support. Nothing would please him better, he will say, than competitive examinations or any other test which would relieve him of the odious and troublesome duty of dunning the departments, but he is only a representative, and has in this as in other matters to meet the wishes of those who elect him.

That this defence produces a good deal of impression on the public mind there is no doubt. The steady and useless repetition of it for many years has created a very hopeless feeling among a large portion of the public about the possibility of any change. It has bred even among those who most deplore the evils of the spoils system the kind of resignation which one so often meets with among the enemies of universal suffrage. They dislike it, but they submit to it as they submit to bad weather, or the deceitfulness of riches, the ingratitude of children, or any other national or social phenomenon which individuals can do nothing to prevent. Many, indeed, have come to look on the spoils system, or the distribution of patronage through Congressmen, not only as inevitable, but as something peculiarly American, a national characteristic which it is now idle to inveigh against. The American people, they think, are bent on holding office. Every family wants at least one office, and the member from the district has to try to procure it; and the member generally says the truth of the matter is, that if we want civil-service reform we must begin, not by berating the President and the Senators and the Representatives, but by taking the individual American citizen into some secluded place, and convincing him of the vanity of office-seeking and of the moral beauty of appointment for merit and tenure during good behavior.

Now, a flood of light, might, we think, be let in on the subject if Congressmen would explain in detail what they mean by "pressure," and what they mean by their "constituency," when they are talking about the inevitableness of the spoils system. This is apparently just one of the cases in which facts and figures would almost close the debate. "Pressure" from constituents is not an imponderable agent, like heat or wind. Nor is it a bodily sensation, like the "sinking," or "feeling of goneness," which the patent-medicine vendors describe in aid of the sale of their bitters. "Pressure" is something tangible, visible and describable. It means a certain number of applications for Government employment from a certain number of persons, who give their names and addresses and produce a certain number of recommendations in support of their applications. They go in the flesh to the Congressman, and he keeps some record of them in the shape of memoranda or correspondence. He knows exactly how many of them come to him in the course of a year, and knows what kind of persons they are. He knows or does not know what their antecedents are, and what reasons they give for wishing to enter the public service. He knows, too, how many of the voters of his district are sufficiently interested in each case to sign testimonials, or write private letters about it. Any Congressman can, therefore, if he pleases, tell the public exactly what the "pressure" on him amounts to, and thus enable it to judge to what extent, if any, the spoils system is rooted in popular support, or, in other words, what proportion of the American people is interested in its maintenance. If it really appears that the bulk of the constituencies exert themselves even in a small degree to keep it going, of course a great deal of trouble would be saved. The civil-service reform associations would be greatly discouraged, if indeed they did not shut up shop, and the spoils system, instead of being denounced, would begin to go round the world as an American invention with gum shoes, mixed drinks, and the air-brake.

To make our meaning more clear, let us take Mr. Dawes's case as an illustration. He says he is, like other Congressmen, the victim of "pressure." Now, we do not know what this means any more accurately than if he said that he was "not feeling very well to-day." But let him furnish us with facts and figures, and all will be clear. The total vote of Massachusetts in 1880 was 282,512. This is really Mr. Dawes's constituency. But let us suppose that, for office-seeking purposes, it is only the Republicans whom he represents. His constituency then consists of 165,205 persons. They form a busy, industrious, intelligent, and well-to-do community. If any considerable number of them have been bringing "pressure" to bear on their Senators about offices, it certainly would furnish a weighty argument in favor of the spoils system. Now, what are the facts of Mr. Dawes's "pressure"? Have 200 voters pressed him in the course of the past year? Or 500? or 1,000? or 2,000? or 5,000? or 85,000? Let us know, if possible, what this mysterious force consists of.

THE RAILROAD WAR.

MR. C. F. ADAMS, JR., and Mr. David A. Wells have practically resigned their positions as arbitrators under the pooling arrangement of the trunk-line railways, each of them having addressed a letter to the Executive Committee declining to receive compensation for their services while they have no duties to perform. This action undoubtedly signifies that they look upon the present railroad war as not likely to be soon terminated, for if it had no deeper root than the jealousy and excessive zeal of local agents engaged in "cutting rates" at Kankakee, Kalamazoo, Council Bluffs, etc., they would probably conclude that the storm would soon blow over, and would therefore take no official notice of it. Whatever their opinions may be as to its probable duration, their refusal to accept money legally their due, but which they have not earned, must impress the railroad men as something novel in their experience.

The opinion has gained ground in Wall street that Mr. Vanderbilt really began the present war, and that he alone can put an end to it, but that he is not likely to do so until there shall have been a trial of endurance sufficient to demonstrate who is the strongest, and leave nothing open to doubt upon that point hereafter. Mr. Vanderbilt's recent interviews with newspaper reporters seem to confirm this view. He has assumed the attitude of a champion and defender of the trade of New York. He has taken his stand on the platform prepared for him by the Chamber of Commerce Committee three years ago, and which he then rejected as untenable and chimerical. The Chamber of Commerce contended that New York was entitled to equal rates with other seaboard cities without regard to distance; the pooling arrangement having made differential rates in favor of Baltimore and Philadelphia intended to counterbalance the advantages which New York possessed as a shipping point. It is worth remarking that Mr. Albert Fink contended at the time that New York gained rather than lost by this arrangement, since it was susceptible of proof that Baltimore and Philadelphia possessed advantages in respect of distance and cost of fuel which would enable their railways to carry at a small profit even when the New York railways were carrying at a small loss. In other words, he held that if competition were allowed to have free play, New York would lose rather than gain, so long as the issues of the fight depended upon the mere cost of carrying; *i. e.*, the wages, the wear and tear, and the fuel expended. If the rates charged on through business—from Chicago, for instance—should fall below cost (as they have recently fallen), so that the difference must be made up from other sources of revenue, or by assessing the shareholders, then Mr. Fink could not assume to be wiser than others in telling how the grain trade would be divided between the several Atlantic cities. He did say, however, that the bankruptcy of one or more of the trunk lines would not put an end

to the fight, but would rather aggravate it, since in railroad wars the victory is to the weak and not to the strong; a railroad in the hands of a receiver being under no obligation to pay dividends or even interest.

Wall street has its ideas also concerning the reasons which impel Mr. Vanderbilt to enter upon a railroad war. Zeal in behalf of the mercantile interests of New York is not one of the motives with which he is credited, since the facts are in no wise different from those which existed in 1878 when he was specially appealed to by the Chamber of Commerce Committee and declined to accept their advice. Various motives are ascribed to him which are not within the range of newspaper discussion, since none of them can be verified. When a person charged with such weighty responsibilities adopts a policy destructive not only of the property under his immediate care but of other properties equally extensive, he ought to have very good reasons for what he does, and he ought to explain them in such a way as will leave no doubt as to what they really are, however much their sufficiency may be called in question.

The public who are not shareholders in the New York Central or any rival railway are supposed to reap benefits from the railroad war. So they do while it lasts, just as they would if tea and coffee fell from the clouds in sufficient quantities to give everybody a month's supply for nothing. If we could have fiat transportation as easily as the Greenback party think we might have fiat money, the prices of wheat and corn would be no higher at the doors of a New England factory than on a Western farm, and that of cotton cloth would be the same to the Minnesota grain-grower as to the Lowell operative. This would be a temporary advantage to both, since each would have the money now bestowed upon the carrier to expend in other directions. But since the present railroad war can last but a short time, being necessarily limited by a few weeks or months, its effect upon the public will be like that of any other carousal. Markets will be deranged by the introduction of other than business principles into trade. Expectations will be excited which cannot be realized. Secrecy and uncertainty will take the place of prudent calculation. There can be little profit and no satisfaction in business which moves by a succession of jerks; and in the end the commercial community will be required to pay the expenses of the war if any means can be devised by the exhausted combatants to collect it from them. Moreover, it is not unlikely that Congress may take a hand in settling this and all other disputes to which the railways are parties, being moved to do so by their confessed inability to settle their disputes among themselves. The railroad problem will appear to be more of a problem than ever when acknowledged experts are unable to solve it, and empirics will come to the front with remedies which may prove to be worse than the disease, but which they will insist upon trying through the medium of legislation. They will be nothing daunted by the fact that rates are as much too low as they have at other times been too high; nor is there any good reason why they should be. If Mr. Vanderbilt can blow hot and cold out of the same mouth, they can accomplish the feat with equal vigor and at less expense to themselves.

THE DEVELOPMENT OF GAMES.

WHATEVER may be thought hereafter of the nineteenth century in other respects, it will be impossible for posterity to deny that it has done more for the advancement of games and sports than any century since the fall of the Roman Empire. Not only has it greatly popularized them, but it has developed them to an extent hitherto undreamed of, and in this process has greatly enhanced the dignity of the position accorded to them in the general estimation. With a large and constantly increasing class in England and America, they have acquired a place among the serious occupations of life; and this is true not merely of "professionals," but to a very great degree of amateurs as well. The constantly growing importance attributed to the whole subject is reflected, of course, pretty accurately in the press, and, to judge by the space given up to it, it would hardly be an exaggeration to say that capable men who devote their exclusive attention to racing, rowing, wrestling, running, walking, polo, rackets, lawn tennis, chess, billiards, or whist, have just at present a better chance of immediate distinction and world-wide fame than is afforded them by literature or art, or the church, or law, or politics.

The distinction, too, is rendered all the more attractive by the fact that it comes, at least in the case of all outdoor sports, early in life, when ambition and the enjoyment of applause are both at their keenest. Sidney Smith used to insist that for perfect happiness in life every man ought for three or four years at the opening of his career to be a belle. A distinguished young polo player or lawn-tennis champion or boating man has now the opportunity of enjoying many delightful sensations closely analogous to those hitherto monopolized by successful *débutantes*.

There is no better indication of the intense seriousness of Anglo-Saxondom, in this comparatively new field, than the surprising development that all the games and sports to which it has devoted itself have undergone within the last fifty years. In trotting horses, for instance, everybody can remember when the limit of extreme speed was about one-seventh slower than it is now. In rowing it is difficult to tell with mathematical accuracy what the improvement amounts to, owing to the differences created by currents, winds, and tides, and the fact that no two courses are alike; but no one at all familiar with rowing either in England or America will doubt that, if the two could be fairly compared, the performance of a crack racing crew to-day would make that of the crews of twenty or thirty years ago seem like the work of mere bunglers. In cricket the constantly increasing skill in bowling has made it necessary to diminish the width of the wicket, we believe more than once in the history of the game; and base-ball, to judge by many of the best recent games, would seem to be rapidly nearing a point at which, with two evenly matched nines, it would be impossible for either side to score anything. In long-range rifle shooting the scores have become almost incredible. In lawn tennis, a game of comparatively recent invention, an amusing excitement has been produced by the innovation introduced this summer by an English player named Renshaw, and called after him the "Renshaw Smash," as to which it seems to be a disputed point whether the game can longer be played against any one who has made himself a master of it.

Exactly the same thing is going on in regard to indoor games. The principles of whist as the game is now played by really distinguished players, or explained in treatises of recognized authority, constitute a little science which bears pretty nearly the same relation to the art of playing the game that thoroughbass does to that of musical composition. In billiards the rapid development of what is known as the "rail" game by professionals made it necessary a year or two ago to remodel the rules entirely. A delicacy of touch and a sharpness of vision had been developed which enabled a really expert player, after once getting the balls into a certain position, to continue scoring almost indefinitely. After much painful and conscientious thought had been devoted to the subject it was determined to prevent this by new rules which should make "open" playing on certain parts of the table necessary; but it is now said that the masters of the "rail" game have learned to cope with this new obstacle, and that some drastic measures will have to be speedily resorted to or the old difficulty will reappear.

It is a fact which may be worth the passing attention of social reformers and others interested in ascertaining the true place of women in modern life, that this development of games and sports should thus far have been exclusively the work of man. There is nothing in the Constitution or laws of either England or America to prevent women from devoting their time and attention to this sort of activity. Nor do the prejudices of society any longer stand in the way. No one considers it improper for a woman to row a boat, or to play ball, or lawn tennis, or billiards; but for all that they have developed surprisingly little proficiency in any of these directions, and, except as spectators, have done almost nothing for the advancement of this great modern interest. Of course in many sports their physical weakness puts them at a disadvantage if they play against men, but then they need not play against men. In this kind of contest men always prefer to be pitted against adversaries of their own sex. Why do not women like the same thing? It is notorious that they dislike nothing so much. Intelligent women always have rather a hankering for a share in the amusements of men, and their beautiful taste for self-sacrifice is seldom more touchingly shown than when they resist their longing to take part in sports which they usually spoil. Again, there are many games in which physical strength is not needed for excellence. Most of the leading billiard players now on the stage would stand a very poor chance in any athletic contest. Yet in billiards women have as yet made no mark. There are no eminent women "professionals" in any part of the world. What the true explanation of these facts may be, we will not undertake to say. Conservative sociologists, who take the old European view of the relations between the sexes, will perhaps say that the fondness of man for games and sports is connected with the inherent pugnacity of his disposition; that even civilized man is at bottom a fighting animal, and that the secret of his universal enjoyment of amusements of this sort is not the game itself, but the struggle for victory. No one, however, who knows much about domestic life will admit that the *gaudium certaminis* is exclusively a masculine trait. Whatever the true explanation may be, the fact cannot at present be disputed. If we could imagine the world carried on by women alone, one of the first results of the extinction of man would unquestionably be the disappearance from it of almost all the games

and sports which now constitute so large a part of its serious work.

THE MONARCH MUMMIES OF EGYPT.

CAIRO, EGYPT, July 25, 1881.

A DISCOVERY has just been made in Egypt which, besides being of the highest archæological value, cannot fail to arouse special interest in America. The obelisk which now stands in Central Park was hewn from the granite quarries at Assuan, in Upper Egypt, and erected at Heliopolis, the City of On of the Bible, by order of King Thothmes III., the fifth King of the XVIIIth Dynasty, who reigned B. C. 1600. The central columns of hieroglyphics of each of the four faces of the obelisk set forth the titles and honors of Thothmes III., whom Dr. Brugsch Pasha has designated as the Alexander the Great of Pharaonic history. Two hundred and seventy years later (B. C. 1333), King Ramses II., surnamed Ramses the Great (the Sesostris of the Greeks), ordered that his own titles and honors be inscribed upon the obelisk. The two outside columns of each of the four faces of the Central Park obelisk are composed of the hieroglyphics of Ramses the Great. Three thousand years later—that is to say, in the month of July, A.D. 1881—the mortal remains of these two monarchs were discovered in an almost perfect state of preservation in a cave cut in the solid rock near Thebes, where, together with the mummies of thirty other royal personages, they had been concealed by the Egyptian priests during those stormy days when Cambyses and his Persians overran Egypt and mutilated her sacred monuments.

Last June Daoud Pasha, Governor of the Mudirieh of Kench, noticed that the Bedaween brought in an unusually large quantity of relics, which they offered for sale at unusually low prices. This aroused suspicion, and by means of rewards and threats of corporal punishment the Pasha found out that what seemed to be an inexhaustible store of antiquities existed in a cave in the mountains near the Temple of Deir-el-Báhari, about four miles from the Nile to the east of Thebes. Daoud Pasha at once telegraphed the fact to Cairo, and the Khedive directed Herr Emil Brugsch, a younger brother of Dr. Brugsch Pasha (who, during the absence of M. Maspero, was in charge of the Boulak Museum), to proceed at once to Deir-el-Báhari and investigate the matter. The result is that day before yesterday Herr Brugsch returned from his mission and safely landed in Cairo a steamboat full of the most precious relics of the Theban dynasties. The following list of the principal objects of this "find" cannot fail to be of interest:

MUMMIES OF SOVEREIGNS, WITH THEIR WOODEN COFFIN CASES, JEWELS, CANOPIC JARS, ETC., INTACT.

	Approximate date (Brugsch).
1. Aahmes I. (Amosis), 1st King of XVIIIth Dynasty	B.C. 1700
2. Amenhotep I. (Amenophis), 2d King of XVIIIth Dynasty	" 1666
3. Thothmes I., 3d King of XVIIIth Dynasty	" 1622
4. Thothmes II., 4th King of XVIIIth Dynasty	" 1600
5. Thothmes III. (The Great), 5th King of XVIIIth Dynasty	" 1600
6. Ramses I., 1st King of XIXth Dynasty	" 1400
7. Seti I., 2d King of XIXth Dynasty	" 1366
8. Ramses II., 3d King of XIXth Dynasty	" 1323
9. Pinotem I., 2d King of XXIst Dynasty	" 1022
10. Raskhenen (?)	

Queens:—

1. Ra-ma-ka (Hatasou?)
2. Aa mes Nofert Ari.

Seventeen other princes and princesses, and among the latter Maut Nedjem, a daughter of Ramses the Great.

Four papyri in a perfect state of preservation. One of these, that of Queen Ra-ma-ka, is most beautifully illustrated and illuminated in green and scarlet. It measures sixteen inches wide, and, when unrolled, its length will probably be found to measure 120 or 150 feet.

A magnificent tent made of pieces of leather of different colors and bearing the cartouche of King Pinotem I., with the royal vulture and stars in red, yellow, and green.

Fifteen enormous wigs which were worn upon occasions of ceremony. These wigs are about two feet high, and are made of curled hair or wool falling in braids behind the back.

Three thousand seven hundred small porcelain funereal statuettes, each bearing cartouches and inscriptions.

Nearly two thousand other objects; such as drinking cups, baskets, vases, lamps, urns, chairs, dried fruits, boxes, etc., etc.

It is impossible to estimate the archæological value of these treasures until a careful inspection of them has been made and the papyri fully interpreted and compared with others. In the meantime the articles are carefully locked up in the Museum of Boulak, which is now necessarily closed to all visitors. M. Maspero is at present in Paris preparing for publication the texts of the pyramids of the Vth and VIth Dynasties, which were brought to light last winter. The text of the pyramid of Unas (the last king of the Vth Dynasty) will be published at Paris in the next number of M. Maspero's *Recueil*. Fragments of this text, hitherto not supposed to have had any relation to each other, have been used in many later temples and tombs. This adds force to the growing conviction among Egyptologists that the earliest Egyptian civilization we know of is the highest, and that all that we know of it is its decadence. The oldest pyramid is the largest and best built; the oldest temple—that beside the Sphynx at Gizeh—shows masonry since unapproached; the oldest papyrus —though as yet hardly understood—is the wisest, and the tombs and the temples of the Theban period are filled with extracts from ancient books not yet found complete. Three or four of these books furnish five-sixths of the texts of the Tombs of the Kings.

THE TRUE AGE OF THE MYKENÆ FINDS.

ATHENS, July 23, 1881.

IN a letter which you did me the honor to print, on the site of Troy, I alluded to the question opened by the excavations of Schliemann at Mykenæ as one which was not to be regarded as settled by the Agamemnonian theory. I have since then been over the excavations and the ruins of Mykenæ, and revisited the collection in the Patissia Museum, and find my convictions, based on previous examination of the latter, completely confirmed, and the post-Hellenic character of the tombs opened by Schliemann established beyond, it seems to me, any reasonable doubt. Had Schliemann possessed the slightest archæological insight, he would have seen that the structure he unearthed was of such utterly barbaric construction that it must have long ante-dated or post-dated the city of Mykenæ, whose walls, containing examples of nearly all the styles of structure from the earliest Pelasgic to distinct Hellenic, show from beginning to end technical skill far beyond that shown in the monument opened by Schliemann. This must then be much earlier or far later; there is not a stone in them analogous to anything of the known work of the period lying between Tiryns and Corinth. The examination of the *ensemble* of the monument shows that it cannot have existed when the walls of Mykenæ were built, as it is erected in an outer court of the citadel, and the oval bastion (which is its principal feature, and which was the place of interment, *seventeen* bodies being deposited here and none elsewhere) is built up of rough stone and supported against the inner face of the Pelasgic wall by buttresses of similar material, showing beyond any question that the city wall (to which the Lion Gate belongs in continuity and technique, material and design) existed already when the tomb was built. What is still more convincing is, that in the construction of this mausoleum there were employed stones taken from both Pelasgic and Hellenic mural structures, *indicating* that the appropriation post-dated the ruin of the Hellenic city, but *proving conclusively* that it is later than the Hellenic construction. Everything about the monument goes to show that the art of stone-cutting was at a very low ebb, as there is no attempt to work any of the harder stones, and the monumental tablets surmounting the graves are of soft sandstone, easily cut by stone or bronze implements. There was no period in Hellenic history, from the entry of the Pelasgi into the Peloponnesus until history resumes its clear thread, when Greek art was at the low state indicated by this structure. There is not an analogous stone in all the Greek cities. It is evidently a barbaric intrusion into the existence of the city. To anybody who has made a careful study of antique wall structure, the first inspection of the rude and barbaric work shows clearly that it is long posterior to the original city; but the manner in which it is adapted to the court inside the Gate of the Lions, and the use of old material most distinctly part of the walls of ancient Mykenæ, are conclusive.

Now the history of Mykenæ until its overthrow by Argos is clear traditionally and by the evidence of the walls. It came down into the period of most perfect wall structure, shown in some temple remains at the rear of the city. In the time of Pausanias and Strabo it was unrecognizable ruin. Where between these points can we place the monument in question? Earlier than 500 to 800 B. C. it cannot have been, for the latest Hellenic structure found at Mykenæ comes down to that date; and as the destruction of the city by the Argives may be put somewhere near that date, we have distinct concurrence of the evidence quite sufficient to account for the city to that time. Nor can it come in later than the Roman conquest, or we should have had historical and structural evidence of it. The occupation was clearly temporary, because it has not left any recognizable signs of residence; and it may have been indeed only the halt of a nomadic people, or one emigrating to find a permanent home. There is no other trace of it than this monument yet disclosed; but as the site is very partially excavated, we may eventually find more.

The history of the monument, as drawn from the internal evidence clearly deducible from the structure and the objects found in the graves, is this: Some barbarous tribe had penetrated to Mykenæ, and, finding the ruins and site still constituting a stronghold, adapted it to their uses and temporarily established themselves there. They had come from the pillage of many rich cities, some of which evidently possessed a far more highly developed art than did the tribe itself. But the treasures they brought with them, and of which that part which belonged to their chief was buried with him, do not show the slightest analogy with the archaic objects found in early Greek tombs, Spata, Orchomenos, etc. On this point the Greek archæologists are decided. There is one apparent exception, which I will presently explain. There are engraved stones unmistakably archaic and others unmistakably Asiatic: but, as I wrote the *Nation* last year after the first cursory examination of the treasure in the Museum, there are also engraved stones beyond any question of the Roman

epoch, cut with the wheel, one being a patent imitation of an archaic design. The objects gathered here range from the archaic to the finest Eastern art; bronze swords exquisitely inlaid with designs in gold—in my opinion Asiatic—being among them, with seal rings of similar provenance, with intaglii in the gold. Nothing is so remarkable in the collection as the heterogeneousness and chronological range of it; and wooden objects were found in a state absolutely incompatible with their having been buried in this soil, exposed to rain nine months of the year, during a period such as is predicated by attributing them to an archaic sepulture. There is a pair of large earrings which I judge to be Celtic; and the only articles from which we can draw authoritative conclusions as to the state of art with the race to whom these interments belong are the tombstones above the graves, and the thin gold plates found in numbers on the ground with the skeletons, and which are stamped with a butterfly. Of both these we can only say that the art is so primitive as to have no distinctive character unless it be barbaric, especially the tombstones, which are immeasurably beneath the lions of the great gate of Mykenæ.

Now the only time at which a tribe of this description could have so established itself in the Peloponnesus was either during the migrations of Celts, etc., about the time of Philip II., the Gothic (later), or the Slavonic (later still). But the use of bronze swords, of which there were fifty in the graves, and the absence of iron (which, however, is not conclusive, as iron in such a position might have been rusted and dissolved away, leaving no trace whatever), render the later dates exceedingly improbable, while the presence of archaic objects rather indicates a period during which archaic work was still treasured. I am disposed, on all these grounds, to place the date of the interment somewhere between 500 and 200 B.C., and most probably about the reign of Philip, in whose time we know the Celts had intimate relations with Greece and their colonies came down into Asia Minor; and though we know nothing of a colony in Peloponnesus, we can easily suppose that in the state of Greece at that time a wandering warlike tribe could work its way to a position like that of Mykenæ, and maintain itself there a long time. That it was prior to 600 B.C. is impossible; that it was later than 200 B.C. is possible, but most improbable.

That this tribe was non-Hellenic is shown by the burial entire, as there is not the slightest evidence of cremation on a single article, and tolerably conclusive contrary testimony in some articles. The use of the gold masks on the faces of the dead is an indication opposed to Hellenic customs, and only known elsewhere, I believe, in some prehistoric interments in Spain. The little circular plates mentioned were probably ornaments of the funereal robes, of which the stuffs have quite perished.

This monument I conceive to have been a dynastic burial-place, for which this court outside the citadel was chosen, and to construct which the earth was excavated down to the rock, going through the debris of early Mykenæ and throwing up many fragments ranging up to the earliest times. Among these are some moulds cut in hard stone for the casting or striking of gold ornaments, and they are the only articles except fragments of pottery, most sure to be found under these circumstances, which are analogous to those of Spata, etc. Being worthless to the invaders, they were thrown back with the earth in refilling the graves, and were thus found, the various epochs mingled in an indiscriminate confusion. These fragments, thrown into the rubbish heap of archaic Mykenæ and turned up again by the excavation down to the solid rock to bury the bodies of these barbarian chiefs, are probably the only objects found which belong to the early city. As to Agamemnon, there is as much probability that the remains are those of Nimrod as his.

The most careful reëxamination of the objects in the Museum shows nothing to invalidate my hypothesis of the nature of this tomb, and not a particle of evidence to connect it with any period of Greek history or pre-history. As with regard to Hissarlik, it is easy to see that Dr. Schliemann, carried away by his enthusiasm and with no archæological education or judgment, assumed everything that confirmed his fond theories, and utterly misinterpreted all the evidence offered by the objects found. Nothing can be more pernicious to the progress of sound archæology than the false *éclat* of this gold-and-silver-seeking archæology, which has just the relation to archæological discovery that Californian gold-digging has to geology. As one of the soundest and most authoritative English archæologists said to me within the past few weeks, "The way in which the discoveries of Dr. Schliemann have been received by the general public has retarded the progress of sound archæology fifty years." Dr. Schliemann passes for the hero of modern archæology, and those who have money to give to archæological research (rarely or never archæologists) make him their type and model; and it is not pleasant to say, what must however be said, and has been already said in private by almost if not quite every sound archæologist in Europe, that Schliemann is not an archæologist, and has not the primary qualifications to become one; and he has not thus far made a discovery of any scientific value, nor is he on the right track to do so. Wealthy men who wish to aid in archæological research must understand that between this and treasure-finding there is a relation of negative value: the more probability of finding treasure, the less of archæological discovery.

W. J. Stillman.

P. S.—I see in the *Nation* a suggestion by Mr. Davidson that if America founds an archæological school it should be at Smyrna rather than at Athens. This is, *me judice*, most sound advice. For everything but epigraphy the advantages of Smyrna are enormously greater, while the grave consideration that you must give everything found in Greece to the Greek museums will deprive our work of the substantial support indispensable to its prosecution. You not only cannot have for your museum any portion of what you find, but you must excavate under the eyes of Greek superintendents. The academies here have as much political value as scientific, and as they can take nothing away they are mainly interested in epigraphy.

Correspondence.

PROHIBITION IN NORTH CAROLINA.

To the Editor of The Nation:

Sir: As you will have learned before this reaches you, the prohibition movement in this State has met with an overwhelming defeat. Full returns enabling us to ascertain the majority against it have not yet been reported, but the indications are that it will be somewhere between 30,000 and 50,000. This result is due to the negro vote, which was nearly solid against it. The white vote was divided, but there is little doubt that a considerable majority of whites are in favor of it.

There are some things connected with this movement and its result which furnish food for reflection. In the first place, it is said by the old inhabitants here that there has never been such a campaign as that made by the prohibitionists since the celebrated "coon-skin" campaign of General Harrison. The question was discussed at every voting precinct, and at many of them as many as three or four times. It was advocated by the best men of both parties and by every leading colored man in the State but one. The anti-prohibition canvass, on the other hand, was almost entirely a "still-hunt." The only white citizen of this county (Lincoln) who made a public speech on that side was one who spent some time in jail some years ago on a charge of burglary. The man who was to have organized the "anti" association in the county died at his home in a drunken spree on the day for which the meeting was called. Colored preachers and white Republicans who have managed and led the colored people ever since the war found themselves in many places unable to influence a single vote. When Bishop Hood, the colored bishop of the Methodist Episcopal Church, undertook, after a communion service in one of his churches, to make some remarks in favor of prohibition, the greater part of his congregation, communicants and all, rose in a body and left the church.

What the final result will be it is difficult to tell. The statistics show that North Carolina is the banner State in the number of distilleries and the amount of whiskey bought and consumed, and also in the number of persons who cannot read, in proportion to population. Our wise men think they see a relation of cause and effect between these two facts, and seem determined to continue the agitation of prohibition until they succeed. If this is done it will result in a breaking up of the old party lines on State issues, and, it is to be feared, a distinct arraying of all the vicious and communistic elements of society against the virtue and intelligence of the State. There was a decided communistic tone in all the anti-prohibition speeches made in this region, a disposition to glorify ignorance, to inflame the poor against the rich, etc. With such material as abounds here for bad men to work upon, the prognostics of the future are anything but pleasant. We did not expect to overthrow in one campaign an evil which has had a hundred years to entrench itself in the habits of the people; but the question has assumed a shape in which it involves a great deal more than the simple prohibition of whiskey; and what legislative iniquities this triumphant majority of negroes and ignorant white people, ascertained by this election, may now call for only remains to be seen.

S. H. C.

Lowesville, N. C., August 6, 1881.

DIVORCE STATISTICS—A LAST WORD.

To the Editor of The Nation:

Sir: I have not the time, even if you have the space, to make all the mistakes and misconceptions of Mr. Phillips's reply to my criticisms plain to those of your readers who have never examined divorce statistics. Readers at all familiar with the statistics will readily see his errors.

The only point of any consequence in which he really corrects me is in his reference to New Hampshire, where his italicising of the word "both" points to a partial error which I readily see. That aside, and one or two minor points also excepted, I stand by each and all the criticisms, *as I made them* in my letter in the *Nation* of August 4, as substantially correct. The inability of Mr. Phillips to criticise divorce statistics is finely illustrated by his remarks on my statement that "the ratio of divorces to marriages for many years"—it was for fourteen years—"before 1870 in Connecticut was 1 to 10.4." The expression is almost invariably used

in official reports of divorces; and the fact is well known, and appears in more than one official report. Mr. Phillips is the first to be struck with its "absurdity." No man who had ever more than looked into a registration report would have failed to see its meaning instantly.

Let me add that I wrote my criticisms of his article with letters of correspondents lying before me written in criticism of some of the very statements made in his article which he tries to defend, and giving some of the proofs I used in writing. It is amusing, to say the least, to find in his reply an attempt to extricate himself by turning these authorities, on whose statements I was in part depending, against me, and in two instances on the very points they had named in their letters to me. Mr. Phillips's guesses at my "probable" opinions and the pessimistic views of the friends of divorce reform generally will strike most of those connected with the movement as laughable. The way, too, he speaks of "a lawyer in active practice instead of a minister, without the means of judging from actual experience and observation," reminds one strongly of the way the "practical politician" has of looking at certain things.

Yours respectfully,

SAMUEL W. DIKE.

ROYALTON, VT., August 13, 1881.

Notes.

JAMES R. OSGOOD & CO. will publish in October a new novel by Miss Blanche W. Howard, author of 'One Summer.'——Messrs. Harper and Appleton have both brought out editions of Mme. de Rémusat's 'Letters,' in Mrs. Cashel Hoey's and Mr. John Lillie's translation.——The Washington and Lee University, Lexington, Va., has just issued a supplement to its catalogue, in which we find both an historical sketch of the institution and an announcement of a centennial celebration, next June, of the granting of its first charter in 1782. The ceremonies will form part of the regular commencement proceedings, and at the same time it is hoped the new Library Hall and the Mausoleum in memory of Gen. Robert E. Lee will be ready for formal dedication and public inspection. What is even more to the University, perhaps, a railroad will by that date connect Lexington with the rest of the world. The movement, begun five years ago to rehabilitate the University, has borne good fruit in the shape of endowments, the late Col. Thos. A. Scott being among the most liberal benefactors.——The value of such a work as 'New York Illustrated,' of which the Messrs. Appleton have just brought out a new edition, will grow with time, and no long time either, considering the rate at which this metropolis is demolished and rebuilt. These views have the merit of fidelity, and are picturesque without undue embellishment. They may be safely commended to foreigners as showing just how the city looks and what are its characteristic sights. There is a liberal selection of samples of domestic architectural details, some of which will make the judicious smile. We miss a representation of the Farragut monument, and perhaps not enough has been done otherwise for our New York statuary, meagre as is the meritorious display. ——Vol. 2, No. 6 of the *American Journal of Philology* opens with the first of a series of articles on the new version of the New Testament by Prof. Charles Short, of Columbia College.——A forcible addition to the literature of civil-service reform is the pamphlet 'Address to the People of Missouri' just issued by the State Association, of which Mr. Henry Hitchcock is President, and Mr. John W. Dryden Secretary (St. Louis).——The *Athenæum* states that Mr. Talboys Wheeler is about to publish 'Tales from Indian History, being the Annals of India retold in Narratives'—a sort of 'Tales of a Grandfather.' The legends of India will not be neglected.——Dr. Elizabeth Blackwell's 'Advice to Parents in the Education of their Children' has appeared in a French version ('Conseil aux Parents,' etc. Paris: Germer Baillière et Cie.)——Perhaps the best collection of French classics for the use of American readers is the set of Elzevirian 16mos published by M. Jouaust in his 'Nouvelle Bibliothèque Classique.' These neat and even dainty little volumes of delightful typography allow a choice among Régnier, Montesquieu, Régnard, Malherbe, Corneille, Diderot, Racine, and La Rochefoucauld. A two-volume Rivarol is a recent addition. The latest issue is a selection from the 'Théâtre de Marivaux,' with a preface by M. Sarcey. To follow it shortly are announced the plays of Molière. These books cost but three francs a volume stitched, and only four sewn in board cases.——In the same form, the Libraire des Bibliophiles (New York: F. W. Christern) is sending forth a collection of books about hunting, some reprints of rare treatises, and others edited from the original manuscripts of the fifteenth and sixteenth centuries. This series is called the "Cabinet de Vénerie," and is edited by MM. Ernest Julien and Paul Lacroix. The same house announces a fine edition of the 'Colloquies' of Erasmus in three octavo volumes, illustrated with fifty-two etchings by M. J. Chauvet, mostly vignettes, let into the text. ——Still another volume of M. Zola's collected criticism has appeared, being the chief articles contributed by him to a Russian review at the request of Turgenef. It includes studies of Balzac, Flaubert, the Goncourts, Erckmann-Chatrian, and concludes with a sweepingly unfavorable consideration of the better-known French novelists of our time. 'Les Romanciers Naturalistes' is the title (Paris: Charpentier; New York: Christern). There is a scathing review of it in a recent number of the *Revue Politique et Littéraire*, which quotes M. Zola's remark that he does not think himself the greatest man of the century, and that he calls himself an idiot twenty times a morning; adding acidly enough, that criticism is M. Zola's strong point, although he has here exaggerated somewhat, as usual. ——Parts 29–32 of Oncken's 'Allgemeine Geschichte' (New York: Westermann) conclude the history of the Italian kingdom of the Ostrogoths and begin that of the Visigoths; continue that of Prussia; conclude that of the great English Revolution, and carry on the history of the Roman Empire to the time of Caracalla. The illustrations are, as heretofore, abundant, curious, and authentic, and engraved in the best manner.

—Mr. Lang's remarks in his 'Library' on book-buying as an investment are confirmed by the result of the auction sale of the library of Mr. G. Lewis Way, translator of Le Grand's 'Fabliaux.' Two hundred and five lots of rare old English poetry, romances of chivalry, and the like, which cost him less than £400, sold on the 1st of last month for £2,324 7s. 6d. Bodenham's 'English Helicon,' for instance, which he bought for 14s., brought his heirs 14 guineas; 'Britain's Ida,' first edition, brought £68, cost £1 1s.; Shakspere's plays, second folio, £69, cost £1 1s.; Gower's 'Confessio Amantis,' printed by Caxton, £199, cost £5 (though less than perfect, it could not be recommended by the auctioneer, as in the common story, as "A fine copy, gentlemen, and quite imperfect"); Southwell's works, £135, cost £2 12s. 6d. The greatest enhancement which we have noticed, however, is in Milton's 'Paradise Lost,' first edition, £22, cost 3s. If one could only know what to buy, books would pay as well as depositing money in a savings bank at 4 per cent. compound interest, and one would have the enjoyment of the books to boot. But how is one to avoid the fate of those who bought noted editions of the Greek and Latin classics at enormous prices a couple of generations ago, whose successors now find that their whole library is not worth an old song, not at least such old songs as Mr. Way collected?

—A writer in a late *Spectator*, in reviewing Mr. Lang's book, undertakes to give some hints to the young collector by which he shall know what line to choose, at least in the department of illustrated books. The advice seems reasonable, but after all it may not be better than "tips" on the winning horse in the Derby. A change of fashion, a new craze on the part of the public, a total loss of interest in what delights them now, may leave the present generation of collectors as high and dry fifty years hence as the followers of Dibdin are at present. Yet, if the intrinsic value of the object had anything to do with the charm of collecting, and influenced at all the higher of the prices paid—which we fear it does not—illustrated books would certainly be the best to buy. Exquisite binding and perfect typography can hardly give the amount of pleasure that good engravings in early impressions can, and nothing prevents the illustrated book from being well printed and well bound. It is not, however, only costly illustrated works that the *Spectator* recommends. "Even a clean copy of the first edition of 'Alice in Wonderland' or 'Through the Looking-Glass' will some day fetch money," it says. But this, after all, is because there will, in the nature of things, soon be almost no clean copies of such favorites. The first editions of Thackeray's and Dickens's novels, though they bring good, have never yet commanded extravagant prices. Yet their intrinsic value and the pleasure they are capable of affording are not inferior. But the editions were large, and there were many of the works, and copies have not yet become rare. When they do there will be—shall we say?—a "boom." Then, perhaps, in the sale of the library of some Way of fiction we shall read that the first edition of 'Vanity Fair,' sold for £149 4s. 6d., cost 18s.; or 'Pickwick Papers,' uncut copy, £300, bought at some previous sale for £98. That may be in the middle of the twentieth century, yet already one work of Dickens's which is really rare, 'Three Ways of Spending Sunday, by Timothy Sparks,' has lately given the lucky bookseller, who paid 3d. for it, a profit of £6 14s. 9d., and was resold for £8 8s. If any city were interested in Dickens or Thackeray as Scotland is in Burns, no doubt the result would come sooner. The Kilmarnock edition of Burns's poems (1786), published at 3s., was sold not many years ago for £5, in 1869 for £14, in 1870 for 18 guineas, in 1875, in New York, for $155, in 1881 for £49, and at the dispersion of Mr. David Laing's library a copy with some manuscript lines by Burns himself brought £94. By all means let the young collector choose the works of men who combine a genius that delights the world with nativity among a small people of strong national feeling.

—Dr. T. Sterry Hunt, in a recently published pamphlet of about one hundred and fifty pages, containing an account of the coal and iron resources of the Hocking Valley and the industries associated therewith, has furnished some interesting data concerning the quantity and the sources of supply of coal consumed during recent years in the Northwestern States,. He has also called attention to the fact, which he had already pointed out in a report published in 1874, that between this bituminous coal-producing region and the great Northwestern States there exists a

certain commercial and industrial relation, mainly based on coal and iron, similar to that established between the anthracite region of Pennsylvania and the States of New York, New Jersey, and the New England group. The region, which has come to be known as the Hocking Valley coal-field, has an area of about 250 square miles, drained by the Hocking River and its tributaries, in southeastern Ohio, and included in the northwestern portion of the great Appalachian coal basin. Within its limits there occurs a bed or beds of coal of extraordinary thickness and value, compared with which all the other coals of Ohio, excepting the Mahoning Valley, and of Illinois and Indiana, with few local exceptions, are much inferior in quality, being generally poor, watery, and sulphurous; and although these latter will doubtless be made to subserve local wants, it is clear that the great States north of the Ohio River must in future look for the chief part of their fuel supply to the Eastern or Appalachian basin. From data gathered in 1874 it appeared that, of the coal received at Chicago, three-fifths, or about 960,000 tons, came from the East; and it was estimated that the supply of coals in 1873 from the Eastern basin to the five Northwestern States—Ohio, Indiana, Illinois, Wisconsin, and Michigan—was approximately 6,000,000 tons. From 1873 to 1879 the quantity of Eastern coal received at Chicago gradually increased from 1,668,257 tons to 2,384,974 tons, and for the first nine months of 1880 to 1,949,825 tons, an excess of 264,286 tons over the receipts for the same period in 1879. The supply of coal from the Eastern basin to the Northwestern States, Ohio included, is stated at 7,000,000 tons for 1879, of which 2,000,000 comprise the anthracite, coke, and bituminous coal from Pennsylvania and West Virginia, the other 5,000,000 tons having been mined in Ohio. In 1880 and 1881 the total supply from Eastern sources is estimated at 9,000,000 and 11,000,000 tons, of which, in each year, more than 7,000,000 tons are credited to Ohio.

—The great Eastern or Appalachian coal basin includes the coal-bearing strata of Pennsylvania, Maryland, Ohio, West Virginia, eastern Kentucky, eastern Tennessee, Georgia, and Alabama, with a total area of about 58,000 square miles. On its eastern border lies the anthracite region of Pennsylvania, comprising an area of about 470 square miles, having before it to the north and east the rich and populous but coalless States of New York and New Jersey, with those of New England, which look to it for their chief supply of fuel. Moreover, in New York, in New Jersey, and in eastern Pennsylvania are immense deposits of rich iron ores, which find in the anthracite the fuel necessary for their reduction and manufacture. On the opposite border of the Appalachian basin lies the coal region of eastern Ohio, and particularly the Hocking Valley coal-field, with its 250 square miles of superior and easily-mined coal, sustaining similar relations to the rich and populous States of the North and West which must, in time to come, look to it for the supply of a great portion of their fuel; besides which, as a further resemblance between the two regions, there are the vast amounts of iron ores—not only those of Southern Ohio, but those of Lake Superior—which, with the rapidly increasing export trade in coal from this region, will find their way thither in larger quantities to be smelted and manufactured. In view of these facts Dr. Hunt predicts a future for the metallurgical industry of the Hocking Valley coal-field and its vicinity comparable to that of the Lehigh Valley and of Pittsburgh.

— The last of Bodenstedt's "Letters from America," like one or two preceding, is devoted to our German fellow-citizens; and his views are novel and interesting just from the fact that he does not regard the subject from a practical or political standpoint, but from a literary one. He has nowhere observed intellectual growth as the result of the infusion of Germans into native society, and is quite convinced that "the German sinks, morally and mentally, in proportion as he adopts the habits and views of the Yankees." He excepts a few men like "Körner, Stallo, and Schurz," who are too rare to prove the contrary, and he admits that, from a material point of view, the course of his "aping" countrymen is justifiable, but observes, as a partial explanation, that want of education is, to a large extent, hidden through the medium of a foreign tongue, "especially when one's mother-tongue is German."

"It is only the thoroughly-educated Germans who speak their native language as well as they do English. In every city which I visited I found a circle of such countrymen, and therefore supposed their number to be larger than, according to the information imparted by various well-informed booksellers, it really is. Thirty years ago, that is, the importation of German books was far larger than it is now, and in the last ten years it has decreased in a much larger proportion than before."

A cure for this intellectual estrangement, and a service of incalculable value to both nations, would result, Mr. Bodenstedt thinks, from the realization of Auerbach's plan for a German university. "This would be a light-house such as the world never saw. For as many German students would then go to America, to enlarge their ideas, as Americans now come to Germany to acquire a foundation for their culture, and American Germans would then be secure of a better future than they will gain by absorption into the native race."

—The historian of the German constitution, George Waitz, having carried his great work down to its completion (in eight volumes) in the full establishment of feudalism, has resumed the revision of the earlier portion and issued the third edition of the first volume—that which treats of the primitive Germans. The first edition of this volume was published in 1844; the second in 1865, when the publication of Roth's 'Beneficialwesen' had led him to modify his earlier views in some respects, while in others he maintained his original position against Roth's assaults. This controversial attitude belongs rather, however, to the three following volumes, upon the Merovingian and Carolingian periods. Neither does it especially mark the present revision; rather the careful and thorough examination of a large amount of discussion and controversial literature, conducted in admirable temper, with great sagacity and common sense, and with judicial fairness. Undoubtedly this volume, published under the separate title, 'Die Verfassung des deutschen Volkes in ältester Zeit,' is the best and most complete account of the primitive institutions of the Germans. It is noteworthy that the dedication to Leopold von Ranke, who was at the head of the historians of his native country when it was penned, still finds him, thirty-six years later, as actively engaged in historical composition as ever.

—"A. T." writes us:

"The newspapers are full of stories about Bleichröder, the Jewish banker of Berlin, who has just been 'decorated' by the French Government, and I am reminded of an anecdote which I heard ten years ago, but which I have never seen in print. When Jules Favre had his famous interview with Bismarck to settle the terms of peace, and the latter named the amount of the indemnity, Favre was shocked, and protested that France could never pay so much. 'Why,' he exclaimed, 'if a man had begun counting from the first year of the Christian era and counted till now, he could not have got up to such an enormous amount.' 'Very true,' said Bismarck, 'and that's why I brought my friend Bleichröder with me—he reckons from the Creation.'"

—In 1871 the French Government laid a heavy tax on paper, as a war tax, to be removed in better times. But the French have found, as we have done in similar cases, that it is easier to impose a tax than to remove it. M. Jules Simon, in a late speech in the Senate in favor of its abrogation, cited some curious facts. First, books are now printed on much worse paper—this every purchaser of French books knows. Second, M. Léopold Delisle, of the Bibliothèque Nationale, declares that the books which that library is now receiving from the copyright law will not exist fifty years hence, so flimsy is the paper, and that to preserve any record of the French literature of the present day it will be necessary to require the copyright copies to be printed on a stouter paper than the rest of the edition. Third, an increase in price to correspond with the tax has not been made on the costly books, where the rich could afford to pay it, but upon the cheap books devoted to the spread of popular instruction and primary education. The book that sold for 100 francs before the war still sells for 100 francs; but the books that were 40 and 75 and 125 are now 60 and 100 and 150. So that the French Legislature have been unconsciously pulling down the edifice of popular education which it has been their especial desire to build up.

EDMUND BURKE ON IRISH AFFAIRS.

Letters, Speeches, and Tracts on Irish Affairs, by Edmund Burke. Collected and arranged by Matthew Arnold. London and New York: Macmillan & Co.

"ALL the wise men were on one side, and all the fools were on the other, and—all the fools were right." This is the cynical joke in which Lord Melbourne summed up in his later life his opinion of Catholic Emancipation. No one would take in earnest expressions which were never meant as more than a grim jest at the vanity of human foresight; but if for Lord Melbourne's conclusion we substitute "and both the wise and the fools were in the right," we shall get a rough account of an historical paradox. For, turn the matter as one will, there remains something paradoxical in the results of Liberal doctrines as applied to dealings with Roman Catholics. The problem which needs explanation is, How it has come to pass that a course of policy so manifestly right that hardly an argument worth the consideration of any man out of Bedlam can now be produced against it, has yet borne fruits which certainly are not in the harvest which men who fought for the cause of justice, of humanity, and of tolerance expected to reap. No better mode of finding an answer to a riddle which has considerable speculative interest, and even some practical importance, can be suggested than a careful perusal of the book in which Mr. Arnold has collected and arranged the letters, speeches, and tracts of Burke on Irish affairs; for their main theme is the urgent necessity of repealing the penal laws against Catholics. On this matter Burke, from his earliest manhood to the day of his death, never varied his opinions or his tone. What he wrote in 1760 he reiterated in 1796. He in fact supplied the whole arsenal of effective arguments by which, more than thirty years after his death, the cause which he advocated was at last won. If he did not gain the battle, he armed the warriors who fought out the fight.

No one who reads Burke will fail to see why all the wise men of England had perceived long before O'Connell was heard of that the Catholics must be given the full rights of citizens. "Our

constitution," he writes, "is not made for great, general, and proscriptive exclusions. Sooner or later it will destroy them, or they will destroy the constitution." This principle lies at the basis of the whole matter. There is no single argument valid for supporting the permanent exclusion from political and civil rights of a whole class of citizens which is not fatal to the ideas of freedom and free government embodied in the English constitution. So true is this that theorists like Mr. Froude, who more or less openly condemn the policy pursued for the last fifty years towards Roman Catholics, do not conceal their contempt for the whole scheme of representative or parliamentary government. Such writers are consistent. We have no concern at the moment with the worth of their doctrines. It suffices to point out that the dogmas of which Carlyle was the chief exponent would at any date between 1760 and 1830 have been scouted by every Tory no less than by every Whig.

If one is to understand the controversy which terminated in the Catholic Relief Act, one must be careful not to import into it opinions and feelings which were unknown until years after that controversy came to a close. Burke and his disciples were in principle invincible on the ground on which they stood, and that they had a right to stand on this ground was conceded even by their opponents. But the true strength of their case lay not so much in general principles as in facts, the very existence of which is almost forgotten by the present generation. Students who hear of Catholic disabilities think mainly of exclusion from Parliament, or, if they carry their thoughts a little further back, of deprivation of the franchise. But the plan of government of which exclusion from political rights formed a part was, as Burke urges again and again, a complete system of tyranny. "For I must do it justice; it was a complete system, full of coherence and consistency, well digested and well composed in all its parts. It was a machine of wise and elaborate contrivance, and as well fitted for the oppression, impoverishment, and degradation of a people, and the debasement of human nature itself, as ever proceeded from the perverted ingenuity of man. . . . My opinion ever was (and in this I heartily agree with those who admired the old code) that it was so constructed that if there was once a breach in any essential part of it, the ruin of the whole, or nearly of the whole, was at some time or other a certainty." Thus wrote Burke in 1792. Thirty years earlier he set forth in plain language what this system really was. It broke up the domestic relations of Catholic families; it set husband against wife, child against father; it took away the right of self-defence; it "disabled three-fourths of the inhabitants of Ireland from acquiring any estate of inheritance for life or years, or any charge whatsoever on which two-thirds of the improved yearly value is not reserved for thirty years"; it struck at the root of Irish industry, and constituted as direct a "discouragement to melioration" as if the law had said in express terms, "Thou shalt not improve"; it outraged the whole religious sentiment of the people, degraded their priests, and deprived the class who could alone exercise moral influence over the mass of Irishmen of the education and training which could make this influence beneficial.

No doubt between 1760 and the close of Burke's life the system of oppression had more or less broken up. But every breach made it more difficult to defend the remaining portions of what was once a consistent scheme of government, and, as time went on, a system which had ceased to be consistent became in the eyes of every statesman a source of pressing danger. Burke's later writings are little else than eloquent denunciations of the madness of throwing the Roman Catholic population of Ireland into the hands either of France or of the party at home who were supposed to sympathize with French doctrines; and, even when the storm of the Revolution had passed, conservative statesmen felt more and more strongly the impolicy of turning into revolutionists a part of the population whose creed and sympathies fitted them to be the allies rather of conservatism than of radicalism. To all this must be added that the direct argumentative answers to the Roman Catholic claim for political equality were too contemptibly weak to be dignified with the name of sophisms. Arguments, for example, from the coronation oath played a great and practically important part in the whole discussion of Catholic claims; but these arguments now sound so weak that it is difficult to realize that they ever deserved the elaborate confutation which Burke gives them. The pleas for intolerance and the replies thereto read almost equally unreal. They might, one fancies, amuse the ingenuity of a special pleader, but could hardly deserve the attention of serious politicians. No wonder that all the wisest men in England felt assured that on the subject of Catholic Emancipation they were absolutely and entirely in the right. Reason, humanity, and justice were clearly in favor of emancipation; the pleas of intolerance were such as might influence the clergy described in the best of Macaulay's political songs, but would certainly not weigh with any men better instructed than the parsons who crammed the coach which "rattled over Trumpington stones," filled with zealots prepared to punish Peel for his apostasy from bigotry to good sense. Let it also be at once conceded that in substance the wise men were in the right. To maintain Catholic disabilities was to struggle against the nature of things. Can any one conceive the existence in the United Kingdom during, say, the commotions of 1848 of a policy which excluded the majority of Irishmen from a right to sit in Parliament? To ask the question is to answer it, but the answer is decisive in favor of Catholic Emancipation.

How, then, were the fools in the right? The answer is that the policy of complete toleration has not in the case of Irish Catholics produced exactly the results looked for by its authors. It has not blended Ireland and England into one state, united in sympathy and interest. Mr. Parnell is less loyal to the empire than was Grattan or O'Connell. It has not made the differences between Catholics and Protestants politically unimportant; the unoppressed Roman Catholic hierarchy of to-day are more oppressive, less tolerant, less amenable to considerations of patriotism or statesmanship than were the bishops and priests who a century ago met oppression with declarations of loyalty, and seemed prepared to unite with Protestants in alliance against the infidel assailants of Christianity. That this is so every candid and clear-sighted man must perceive, but the further enquiry remains: What are the causes which have made the anticipations and forebodings of bigotry and folly come at least as near to the truth as the forecasts of tolerance and wisdom? The answer to this question, though it is worth giving, is not, when the enquiry is fairly put, hard to find.

In the first place, a policy framed by the wisdom of Burke, and advocated by men who shared his views, was put into execution not by Burke or his followers, but by bigots or time-servers, who carried out good measures in the very way that was not recommended by the persons who designed these measures. Burke may well claim to have forewarned the world against every error which could be committed with regard to Catholic Emancipation, and each of his warnings was given in vain. He expressed the most unmistakable doubts as to whether the time for union between England and Ireland had arrived. He obviously would have opposed to the utmost the proposal to unite the two kingdoms without liberating the Catholics. Pitt chose to take in hand the measure which Burke had pronounced of most dubious wisdom, and to neglect the measure which Burke believed to be of pressing and immediate importance. Burke, in effect, recommended that the Catholics should be at once emancipated, and that plans of legislative union should be postponed. Pitt hurried on the union, and postponed for at least a generation the emancipation of the Catholics. Burke, again, was never tired of insisting that all concessions made by England should be conceded while they were still matters of grace. He was, throughout, true to his "old, standing, invariable principle that all things which come from Great Britain should issue as a gift of her bounty and beneficence rather than as claims recovered against a struggling litigant"; for he knew that "a concession in which the governing power of our country loses its dignity is dearly bought, even by him who obtains his object. All the people have a deep interest in the dignity of Parliament." The full import of these maxims is not yet understood; the minister who in 1829 at last gave effect to Burke's policy understood their import less than any man of equal ability. The gravest charge which can be brought against Peel is that he encouraged resistance to just claims as long as yielding could appear to be the result of bounty or of beneficence, and gave way to irresistible pressure exactly at the moment when concession was, and appeared to be, the result of fear or cowardice. Burke's statesmanlike wisdom cannot be made responsible for the effects of Pitt's weakness or of Peel's unstatesmanlike shortsightedness.

In the second place, the wisdom of the wise always is (as it certainly was in the case of Catholic Emancipation) at the best but incomplete wisdom. Burke was the wisest man of his generation, but he belonged to his generation, and shared or even exaggerated some of the errors of his age. No one can now fail to see that the whole tendency of that age was to underrate the effects, bad or good, to be produced in politics by theological differences. That "priests of all religions are the same," is a sentiment which in one man's mouth means a sneer at all religious teachers, while in another's it is the expression of the sentiment that all pious men teach in substance the same essential doctrines of sound morality; that the Catholic priest, the Anglican parson, and the Methodist minister are all at bottom exponents of the impressive and simple dogmas which make up the essence of true Christianity or of natural religion. But the sceptic who distrusts all priests, and the moralist who with perfect sincerity avows his equal respect for the priests of every form of the Christian faith, not to say of every form of Deism, each tacitly assumes that the specific differences which divide (say) Papists from Protestants are, for the purposes of every-day life, of no practical importance. That this was the sentiment of Burke's age among what would now be called "thinkers" of all descriptions, scarcely admits of doubt. Grattan's speeches are, as Mr. Lecky points out, full of intimations of this opinion. "Bigotry may survive persecution, but it can never survive toleration." "What Luther did for us philosophy has done in some degree for the Roman Catholics, and their religion has undergone a silent reformation; and both divisions of Christianity

unless they have lost their understanding, must have lost their animosity although they have retained their distinctions. It is the error of sects to value themselves more upon their differences than upon their religion." This is precisely in the spirit of Burke. The Reformation seemed to him entirely a matter of the past: "The affairs of religion, which are no longer heard of in the tumult of our present contentions, made," he writes, "a principal ingredient in the wars and politics of that time"; and his whole tone of argument is tinged with the fixed belief that the passions of that time have nothing whatever to do with the politics of "an age when men are infinitely more disposed to heat themselves with political than with religious controversies." Moreover, in Burke's mind the sentiment of religious toleration was tinged with hereditary and imaginative sympathy for Catholicism. He thought that a Catholic was as good as a Protestant, and one may perhaps add that he liked a Catholic a good deal better than any Protestant, except possibly an Anglican. Odd as the juxtaposition seems, Robespierre and Burke stood in this matter not very far from each other. The bitterest description the Terrorist could find for an opponent was that of "a Protestant and a philosopher."

The wisest statesman and the narrowest-minded fanatic of the eighteenth century happened on this solitary point to be at one. They each belonged to the same age and shared the most widespread of its illusions. For experience enables us now to say confidently that the influence of theological passion and theological belief was not dead in Burke's time, and, further, that the question is open to doubt whether the influence of theological dogmas will ever die. France, Belgium, Germany, Italy, Ireland, and Spain, even our own country, afford to thinkers of the nineteenth century sufficient proofs of the fact both that Roman Catholicism is a living power and that the views of life held by zealous Papists are with difficulty reconcilable with the principles which lie at the foundation of modern secular politics. This, which is now the firm belief of many if not most modern statesmen, was, by one of the paradoxes of history, the traditional sentiment of uneducated Protestants from George III. down to the meanest fool or fanatic who followed Lord George Gordon. "I am most afraid," writes Burke, "of the weakest reasonings because they discover the strongest passions." This sentiment is one of the profoundest which he ever uttered. It has even a more profound sense than its author fully perceived. The force of weak reasonings may be due to the power of traditional sentiments better worth consideration than the arguments by which these sentiments are defended. The "fools" felt and proclaimed that the differences between sincere Catholics and sincere Protestants were no more trifles in the eighteenth and nineteenth centuries than they had been in the sixteenth and seventeenth centuries; and the fools were right, for a man's sincere theology will, for good and bad, affect all his views of life. The wise proclaimed that the practice of justice and toleration was the only true mode of dealing with Papists; and the wise also were right both in morals and in policy.

The Exiles: a Russian Story. Translated by Geo. D. Cox from the French of Victor Tissot and Constant Améro. Philadelphia: T. B. Peterson & Bros.

MR. WILLIAM BLACK is now the author of a dozen or more novels of unequal merit, and his pen is so prolific that it has become difficult for criticism to keep abreast of his performance. Indeed, criticism has almost abandoned the task, and recognizing him as having established for himself a *status* as a writer of fiction well adapted to his market, almost hesitates to enquire what that *status* is. There is a characteristic vein of sentiment and style which runs through all his novels, but it is hard to define its exact nature. They are all love-stories, but there is nothing very individual about that. They are all modern in tone and feeling, but that does not distinguish them from a thousand others. They abound in what would twenty-five years ago have been called slang, but English fiction has been within that period so permeated by slang that a great body of it appears to have become part of the accepted language of novel-writers. Mr. Black has a feminine way of dealing with his subject which would distinguish him easily from most of his predecessors, but which is less individual when he is compared with his contemporaries. Perhaps, on the whole, the most that can be said about him is that he writes very readable stories, and that his two latest tales will unquestionably commend themselves to the very large audience which he has collected together by his earlier books.

The plot of 'The Beautiful Wretch' is essentially very simple. Miss Anne Beresford is a young and pretty English girl, who meets early in life Captain Frank King, of the Royal Navy. Captain King falls in love with her, asks her to be his wife, is refused, and goes off. Some years later he returns, renews his acquaintance with the Beresford family, and is startled at finding in Madge Beresford, a younger sister of Anne's, a sort of facsimile of his first love. The resemblance is so striking that he falls in love with Madge, or thinks he does, and becomes engaged to her (he has left the service and become a landed proprietor meanwhile). On the other hand, ever since she refused him, Miss Anne has been herself in love with Mr. King, and when she reappears on the scene he immediately finds that falling in love with a facsimile is a poor business, if the original is the real cause of the sentiment which the facsimile seemed to inspire. In short, the young man finds himself engaged to one sister and in love with the other—a heartrending situation, which, however, is rendered less wretched by the fact that Miss Madge has another lover whom she really likes better than the one she is engaged to. She and Jack Hanbury are wards in Chancery, and forbidden by the Vice-Chancellor to communicate with one another—a fact which greatly heightens the interest of the situation. Of course, in the end the two wards make a runaway match, and then Miss Anne is able to marry the man she has loved through so many vicissitudes. The story would be an awful warning against confused engagements but for the fact that everything turns out so happily as to produce the impression that the author's view of the real philosophy of life is contained in the vulgar, but once popular, distich:

> "It's no matter what you do
> If your heart is only true."

It is unnecessary to tell any one who is familiar with Mr. Black's novels that in psychological analysis he is rather weak, and 'The Beautiful Wretch' furnishes no exception to the rule.

In 'Sunrise' he has attempted a much more ambitious task than merely writing an ordinary English love-story. The heroine is the daughter of an eminent but bad Socialist conspirator, who is one of a band of Internationalists sworn to elevate and redeem mankind by any means in their power. Like most conspirators of this sort, they make little real progress in the redemption of mankind, but a great deal in the art of assassination. They are bound together by bloody oaths, and hesitate at nothing. The hero, an Englishman of a calm, cool temperament, falls in love with the heroine, and through his affection for her, and the wiles of her father, and the persuasive arguments of a weak-minded friend who is a victim of the "enthusiasm of humanity," joins the organization. To get rid of him, he is directed by the father to go upon a mission of assassination which must necessarily end in his own death; and so much does he regard his oath that he unhesitatingly sets forth. How it is that he neither assassinates nor is assassinated, how the wickedness of the father is brought to light and its threatened consequences averted, and by what subtle ingenuity the lovers are made happy in the end, we must leave the reader to find out for himself. What is most striking in the story is its unreality. It is absolutely impossible to imagine an Englishman such as the lover is represented to be getting involved in such a network of intrigue and conspiracy. To make the situation at all possible, it would have required a totally different character and mind in the hero; but, as we have suggested, Mr. Black's characters belong to him, not to themselves.

'Miss Williamson's Divagations' is the curious title of a collection of stories by Miss Thackeray, who displays in them all that delicacy of thought, feeling, and expression which laid the foundation of her first success, blended with the feebleness of grasp which has told so fatally upon it since. We do not expect from a feminine hand a masculine story, at least now that George Eliot has ceased to write; but still we are exacting enough to require even women to avoid as far as possible the sentimental commonplace. Miss Thackeray affects the pathetic, but the secret of pathos is reserve rather than redundancy.

Mr. W. E. Norris is, so far as reputation goes, a new novelist, though his hand is that of an experienced writer. He has been compared in some quarters to Thackeray; but the only resemblance consists in a vein of cynicism which, however, is very different from that half-cynical, half-pathetic humor with which the style of the author of 'Vanity Fair' is infused. Mr. Norris does not need to be compared with any one else, because he has a style of his own, and, to judge by 'Matrimony,' is likely to make a place for himself without the adventitious aid, if aid it be, of being supposed to resemble some greater writer. It is impossible to read a chapter of this novel without seeing that he is far better equipped than most novelists for the work he undertakes. We confess that it is a considerable pleasure, in these days of over-refinement and subtle delicacy, to find a new novelist who looks at the world simply from a man of the world's point of view, and does not care to conceal the fact. He "knows his world," which is a pretty extensive one, and includes among its inhabitants not only English people of all classes and conditions, but a considerable variety of Continental types as well; and, above all, he has a knowledge of the human heart and a capacity for analyzing its processes which is,

to say the least, of great utility to a writer of fiction. The scene of 'Matrimony' is laid in great part in the little seaport town of Beachborough, and chiefly deals with the loves of Claude Gervis and Nina Flemyng, on the one hand, and Genevieve Gervis and Sir Frederick Croft on the other. The story is supposed to be told by Mr. Knowles, a middle-aged bachelor, and the extreme cleverness of the author is perhaps best shown in the way this is done. The narrator is always himself, and yet he does not thrust himself upon us offensively. Readers of 'Matrimony' who have also read 'Mademoiselle de Mersac,' one of Mr. Norris's earlier novels, will see that the author and Mr. Knowles have a good many traits in common, and yet they are by no means the same person. A very remarkable peculiarity of 'Matrimony' is that the male characters are better on the whole than the women, and that in Claude Gervis the author should have succeeded in drawing a hero who is almost without faults, and yet who is not a prig. He is what men would call a "good fellow," notwithstanding that women would call him a "charming man." We cannot help liking him throughout. Freddy Croft, however, is better than Claude. His type is that of the good-natured, amusing, honest, uneducated young Briton of the present day, who "goes in" for horses and athletic sports, talks slang, takes his amusement noisily and boisterously, and reduces most mental and moral distinctions to the difference between good and bad "form." This is the type, but Freddy has a character of his own. He has a fund of racy and original humor, he is a good friend, and he has an only too susceptible heart, which leads him to fall in love not only with Genevieve Gervis, but with other young ladies as well. As an illustration of the author's combined facility of description and suggestion, which is one of his strong points, we may quote his introduction of Freddy to the reader:

"I don't know that I ever heard anybody call Freddy Croft good-looking; but, on the other hand, I cannot call to mind a single instance of a stranger having failed to be attracted by him. The word attractive, indeed, seems to hit him off better than any other; for I take it that nine people out of ten feel instinctively drawn towards a young fellow who has the conventional attributes of his age—a well-knit, vigorous frame, a clear complexion, laughing eyes, and a countenance which proclaims aloud that its owner is wholly unacquainted with care. There are certain youths who are like the very embodiment of youth: it is impossible to look at them without feeling young again one's self for the moment; and one is naturally disposed to shake hands with anybody who can bestow upon one so agreeable a sensation. Freddy Croft's fair hair, which curled obstinately, in spite of being cut as close to the head as the scissors would go, his blue eyes, and the half-innocent, half-mischievous expression of his boyish face, made him at all events a pleasant object to look upon, and went far to atone for a decided irregularity of feature; and if in stature he fell somewhat short of even the medium standard, he was too well put together for this to count as a serious defect."

The father of Claude Gervis is a cynic about whom people's opinions will differ. For ourselves, we must confess that he is wholly unnatural, and that his cynicism is as exaggerated in a different way as that of the distracted husband in "My Young Wife and Old Umbrella." He is made the vehicle for a great many acute observations upon poor human nature; but to our mind he is the least successful character in the book.

To turn to the women, Nina is a flirt, and as a flirt well drawn, though the author might with advantage have made her a less glaring case of congenital depravity. Of course, it is natural enough for an enthusiastic young poet like Claude to fall in love with any pretty woman, no matter what her character may be; but the author is bound to make the situation seem natural too; this we do not think Mr. Norris here does. The love affair of Genevieve and Freddy is, on the whole, better managed. Genevieve is a vague character, however, and except that she has strong musical tastes, we never clearly make out what sort of a person she is. If the author were of the number of those who think, with Pope, that most women have no character at all, we should have suspected him of an attempt in all the early part of this novel to illustrate the truth of the verse in the person of Genevieve. But we think the defect in definiteness of outline comes from the fact that he has a much more profound comprehension of masculine than of feminine traits. It would be too much to expect everything; and if Mr. Norris does not succeed as well with his women as his men, it is a fault which can easily be forgiven by those who have had much experience of the opposite defect. We have no space to analyze the plot of 'Matrimony,' nor would it be worth while; for the art of the story lies not so much in the plot—though there is a great deal of art in the skill with which the secret of the Russian princess's life is kept back to the end of the book—as it does in the manner of telling the story, the excellent management of all the details, the conversations, and the running comment of the narrator. A novel-reader who does not find in 'Matrimony' a great deal of entertainment must be very hard to please.

We are forced to think that Mrs. Paddock's book would have been more telling if cast in the form of a simple narrative of detached facts, like her earlier 'Life among the Mormons.' There is not only the obvious difficulty that the darker secrets of that prison-house can never be told in public print, but the author herself at least feels the necessity of substantiating the truth of the incidents by frequent foot-notes. Any effect which continuity or unity of plot might have upon the imagination is thus lost, and this is of more consequence inasmuch as Mrs. Paddock is a somewhat dull story-teller. The descriptions of scenery read too much like the pages of a geography, and even with unequalled materials—the thirst of the desert, the mother's broken heart, the agony of an outraged wife—there is still left much of the impression of watching blows with a blunted instrument. The fate of Madame La Tour—abduction under cover of alleged insanity, and close confinement for fifteen years until death—fills but one-sixth of the book; the other five give the disconnected histories of her sons and daughters, which, with their dreadful episodes, would make stock-in-trade for a whole school of realists, but which in the author's hands are hardly so much as sensational. It is a curious discrepancy, which we are unable to explain, that while Mrs. Paddock's own theory, so to speak, as one may judge from preface and appendix, is the hopelessness of the situation, in her story all the principal characters of the younger generation renounce their delusion and escape the Mormon power, some even defying it successfully in Utah itself.

'The Exiles' is a translation from the French of the story of life in Siberia from which the recent melodrama of the same name was made up. The spectators of the play have doubtless supposed it an exaggeration of the original, but that is a total mistake. Outside fairy-land or Munchausen we have never seen it surpassed. The utter destruction by *fire* of a vast forest covered with "a winding-sheet of snow, . . . like an immense glacier of the primitive epoch," is nothing to authors who carry safely a party of fugitives, including a child of thirteen, a young lady, and a French dancing-master, eighteen hundred miles northward to Behring's Straits, in the midst of an arctic winter. Of course they reach the friendly ship with bundles of rubles still untouched, pockets full of emeralds, a complete collection of Siberian curiosities, *and* the dancing-master's "pocket-violin"! As if the tragic improbabilities of the tale were not enough, they are set off throughout by the comic absurdities of the translation. Comments might have been needless but for an assumption in the preface of the great merit of "the Robinson Crusoe characteristics of the tale." We should be sorry to have this taken as a typical specimen of French work of the kind, for the French greatly excel in the real Robinson story—the simple air of truthfulness, the detail so faithful and apparently so unstudied, which make its especial charm. It is a pity that the choice ones are so little known among us. Such vivid pictures of the tropics as 'Les Coureurs des Bois,' or the beautiful stories of Xavier Marmier, have few equals in any language.

REDHOUSE'S MESNEVI.

The Mesnevī (usually known as the Mesnevīyi Sherif, or Holy Mesnevī) of Mevlānā (our Lord) Jelālu-'d-Dīn, Muhammed, er-Rūmī. Book I. Together with some Account of the Life and Acts of the Author, of his Ancestors, and of his Descendants, etc. Translated, and the Poetry versified, by James W. Redhouse, M.R.A.S., etc. London: Trübner & Co. 1881. 1 vol. 8vo, pp. xv.–135, v.–290.

THIS may be regarded as a companion to the "Sacred Books of the East" in course of publication under the editorial charge of Professor Max Müller, and would have found a fitting place in that series. Mr. Redhouse is known to philologists as the author, among other works, of a 'Grammaire de la Langue Ottomane' generally regarded as the best ever published. He is known in diplomatic circles from his having been employed for many years in the "Bureau des Interprètes du Divan Impérial Ottoman," and from his having, on important occasions, served the English Government as a Persian, Arabic, and Turkish interpreter. Few Europeans have so wide and so deep an acquaintance as himself with these three languages, and with the literature, the history, and the modes of thought of the peoples by whom they are spoken.

The first third of the present volume is occupied by anecdotes of which the compilation was commenced by Eflākī in 1310, thirty-seven years after the death of Jelāl, and continued until 1353. Mr. Redhouse accurately describes them in his preface: "Every anecdote is the account of a miracle wrought by the living or the dead, or is the narrative of some strange or striking event." In reading them one is reminded sometimes of the narrative portions of the New Testament, sometimes of the 'Arabian Nights,' most frequently of the modern "Spiritualists." They are generally very brief, and are interesting not merely as stories but as examples of what may be implicitly believed by men who, in their own country, are accounted honorable, learned, and wise.

The latter two-thirds of the volume are occupied by the translation of the Mesnevī. This word is not the title of a particular book, but it is the characteristic designation of a class of poetical compositions. It may with sufficient accuracy be rendered "rhymed couplets," and is alike descriptive of the original and the translation. The term is applied *par excellence* to the work of Jelālu-'d-Dīn. Jelāl was a contemporary of the poet Sa'dī. He was born at Balkh (the ancient Bactra) in Asia Minor, about A.D. 1205, and died in 1273. His family claimed descent from Abu-Bekr, the father-in-law and immediate successor of Muhammed. His mother was a princess of the royal house of

Kh'ārezm-Shāh, known in history as the Kharezmians. His father, a nobleman of the highest rank, was noted for his learning and sanctity, and was the founder of a college at Oonya (Koniyeh or Konieh), where Jelāl himself passed the greater part of his life, and was professor in four colleges. Jelāl visited Bagdad, Aleppo, Damascus, Mecca, and other cities, and, in short, enjoyed all the culture attainable in Asia Minor by a young man belonging to a family of the highest rank and wealth. He was the founder of the order of Mevlevī Dervishes, called by Western nations "dancing" or "whirling" dervishes. This practice had been long in existence, and was not introduced by Jelāl. He seems, however, to have been the first of the Moslems who made a systematic use of music in religious ceremonies, thinking it would render the religion of Islam more attractive to unbelievers. Probably about A.D. 1258, or fifteen years before his death, Jelāl, at the suggestion, and with the assistance, as amanuensis, of his favorite pupil Husāmu-'d-Dīn, commenced the composition of the Mesnevī. After the completion of the first volume the work was interrupted for two years by the grief of Husām at the loss of his wife—a sad yet pleasing incident in a land of polygamy, and not so uncommon as is sometimes supposed. The work was resumed in 1263, and continued until the death of Jelāl. It will be seen presently that the work, from its nature, had no particular limit as to extent.

In the estimation of the Persians themselves the Mesnevī is inferior to the Koran alone. Nevertheless the work has never been printed. A couplet will be found here and there in a Persian grammar, but practically the whole text exists only in manuscript. A selection from Jelāl's other poems, of which he wrote a great number, was published by Rosenzweig in Vienna in 1838. The great extent of the Mesnevī has perhaps prevented its publication. According to Mr. Redhouse, it consists of six volumes or parts, containing 23,660 couplets, or 57,320 lines—about four times as many as the 'Iliad.' The present translation, embracing only the first volume, contains 4,106 couplets, a little more than a sixth of the whole. The work consists of a collection of tales. Many of them are fables current in the West as well as the East; others are founded on historical events; very few, if any, are pure inventions of the author. Some readers will recognize an old friend in the second tale, "The Oil-man and the Parrot." The third, "The Jewish King, Persecutor of the Christians," borrows largely from the story of Zopyrus in the third book of Herodotus. But the incidents of the stories occupy only a small portion of the text; the bulk of the work is made up of the moral and philosophical teachings of the author. Thus, the longest and one of the most pleasing tales is the ninth, "The Poor Scenite Arab and his Wife." It occupies forty-seven pages, though the story proper might be told in a column of the *Nation*. Nor is each tale intended, as in an ordinary book of fables, to inculcate some particular moral. Reflections and discussions of all sorts are introduced, often with hardly any apparent connection with the story. These are generally unexceptionable, even in a religious point of view, and one might often easily imagine that he was listening to the exhortations of a Christian minister. Perhaps nothing in the work is more striking than the spirit of toleration which pervades it. While the author is, of course, opposed to every religion except that of Islam, it is evident that, as between Jews and Christians, he greatly prefers the latter. Mr. Redhouse, in his foot-notes, has embraced the opportunity to correct many of the erroneous notions prevalent in Europe in regard to the religion of Islam. The great number of illustrative passages cited from the Koran shows an acquaintance with that work which few Christians could claim in regard to the Bible. It is evident that Mr. Redhouse regards the religion of Islam as a phase in the history of human development which should be treated with the greatest respect and seriousness, and there is sometimes a tone of severity, perhaps a tinge of contempt, in the manner in which he corrects widespread European errors.

With the exception of a short poem in octosyllabic lines, the translation is entirely in decasyllabic couplets, with occasional lines of twelve syllables, as is usual in English heroic verse. Mr. Redhouse makes no claim to being a poet himself, and has only lately begun to practise the art of metrical composition. He thinks, however, that even such versification as he is able to present will give a better idea of the original than a prose translation. It may seem out of place to criticise versification introduced in this deprecating manner; but its faults are so numerous and so obtrusive that we fear they will seriously interfere with the reader's enjoyment of the work. Mr. Redhouse generally puts the proper number of syllables in a line, but does not seem to be aware that anything else is necessary to correct or even tolerable versification. Pages 46–47 happen to lie open before us, and we quote the following couplet:

> "All our complaints of our felt needs are indices.
> If shame we feel, of our freewill a sign it is."

It is difficult to see how this differs from prose except in the order of the words in the second line. Besides the above we have the following "rhymes" on the same two pages: "more" and "abjure," "bonds" and "vagabonds," "futurity," and "fatuity," and several others almost as bad. Frequently the two lines of Mr. Redhouse's couplets end in the same word, or in words which differ only in orthography, not in sound; like "sea" and "sea" (p. 82). It is true, the use of the same words at the end of both lines of a couplet is very common in the Persian poets. The first couplet of the Mesnevī ends in this manner. But Mr. Redhouse has not mentioned this usage of Persian poetry, and in this particular instance gives us the very imperfect rhyme of the words "tells" and "ills." So far as we can judge, the reader will be correct in inferring, as he certainly will infer, that such cases in the translation arise simply from the inability of the translator to find a rhyme authorized by English usage. We have also all sorts of awkward inversions and elisions. The latter are excusable when sparingly used and the composition is of a conversational turn; but they become irritating when thrown at us by the handful and on all occasions. For example, the use of "'s" for "is" and "has," and of "'d" for "had" and "would" is the rule rather than the exception—more frequent, we think, than most educated persons would allow themselves in ordinary conversation.

With these minor drawbacks, the book is very interesting. The translator's notes are highly instructive, and we hope that the sale of this volume may be sufficient to induce both translator and publisher to continue the work. In that case the addition to a future volume of the original text of one or more of the tales would be welcome.

BIOGRAPHIES OF GREAT MUSICIANS.

Wagner. By F. Hueffer. New York: Scribner & Welford. 1881.

Weber. By Sir Julius Benedict. New York: Scribner & Welford. 1881.

Schubert. By H. F. Frost. New York: Scribner & Welford. 1881.

Rossini. By H. S. Edwards. New York: Scribner & Welford. 1881.

Four volumes have now appeared of the series of "Biographies of Great Musicians," edited by F. Hueffer. The name of this accomplished and impartial critic is a sufficient guarantee that the life of each composer included in the series will be written by some one especially qualified for the task; and his editorial supervision will make it difficult for the reviewer to discover any error of statement. Besides Wagner, Weber, Schubert, and Rossini, by the writers mentioned above, three other volumes are in preparation, Mendelssohn, by Joseph Bennett, Marcello, by Arrigo Boito, and Purcell, by W. H. Cummings; and further contributions are promised by Dr. Hiller and other foreign and English writers of distinction. The general plan pursued throughout the series is to give within a compass of a hundred or a hundred and fifty pages a brief account of the leading events in the life of each composer, besides a chronological list of his works and mention of the circumstances under which they were written, whenever these are of any interest. Mr. Hueffer did well in reserving for himself the composer who now more than any other occupies the attention of the public, as no one is better qualified to write on Wagner. We have often heard a desire expressed for a book which, besides a biographical sketch, should contain a clear statement of the reforms which Wagner introduced in the opera, free from all newspaper and partisan misrepresentation. Mr. Hueffer not only makes clear the difference between the old opera and the new music-drama, but he also briefly traces the general development of the opera, showing among other things Wagner's relations to his German predecessors in this branch of music: Gluck, Mozart, Weber and Beethoven. The greater part of the book is devoted to analyses of the plot and music of Wagner's ten operas, in historical order.

Mr. Hueffer has not allowed himself to be deterred by cheap German sarcasm from pointing out the relations between Wagner and Schopenhauer. In their views on the relations between poetry and music, the two differ indeed as widely as possible; but this could not prevent Wagner from adopting Schopenhauer's metaphysical theory of music as the immediate expression of the "will." We do not agree with Wagner's "dream"-theory of music; but it must be borne in mind that it was quite possible to base this theory on Schopenhauer's doctrine without in the least sharing his admiration of Rossini for disregarding the words of the *libretti* he set to music. In the analysis of "Die Walküre" some sensible remarks are made about the love between *Siegmund* and *Sieglinde*, which apparently has shocked so many of the German critics. In judging of this love affair it is only necessary to note that "we are not dealing with ordinary men and women, but with the children of a god; mythical beings, that is, who have hardly yet emerged from the stage of natural forces. Who has ever been shocked at the amours of the Greek divinities on account of their being within the forbidden degree of relationship, or at the intermarriage of the children of Adam and Eve which the Pentateuch implies?"

Sir Julius Benedict's 'Weber' acquires a peculiar interest from the fact that the author was a pupil and friend of Weber for a considerable period. When he first met Weber he found him in the third story of an old house in Dresden, engaged with the arrangement of his "Freischütz" for the pianoforte; and he enjoyed the privilege of hearing the composer sing and play parts of this opera to him before it was given to the world. Although "Der Freischütz" is now regarded by competent critics as inferior to "Euryanthe," and even to "Oberon," it still remains with the people the most popular of Weber's operas, which is partly due to the simple character

of its music and partly to the dramatic interest of the plot, which is lacking in his other operas. The critics, however, did not receive "Der Freischütz" with any favor at first, and the poet Tieck even spoke of it as the most unmusical uproar ever heard on the stage. Weber's kindness of character is well illustrated by the fact that he secured for Spohr a good position at Cassel, although he was aware that Spohr had expressed a very unfavorable opinion of "Der Freischütz." It sounds almost incredible when one reads that so simple a work as this opera was at its first performances in Vienna mutilated by the omission of important characters and passages. The same operation is in our time being repeated with the later works of Weber's successor, in various German cities, and will one day be an object of still greater wonder and indignation to posterity. If Sir Julius Benedict felt more sympathy with modern opera, he would doubtless have pointed out the bonds of affiliation between Weber and Wagner, an affiliation which showed itself especially in the choice of mythical subjects for a libretto and of an occasional pregnant *motif* to characterize a striking situation, as well as in the effective use of horns off and on the stage. Had Weber lived some years longer, and not been forced by unfavorable circumstances to turn his back on that ideal of an opera which must have been in his mind when he wrote "Euryanthe," he would have doubtless anticipated still further some of the reforms made later by Wagner. But his poverty obliged him, in writing "Oberon" for London, to make concessions to the prevailing taste, since failure would have been financial ruin. While in London, which he was destined not to leave again alive, Weber had occasion to realize the difference between Continental and English treatment of artists. "In the huge *réunions* of the aristocracy artists were not expected to mix with the company: shut up, till everybody had assembled, in a small room; bid by insolent lackeys to enter the gorgeous drawing-rooms by a back staircase, even separated in some cases by a cord from the rest of humanity to avoid any contagion; commanded like any menial to sing their songs, . . . etc." In one of his letters, speaking of one of the large soirées at which he played, Weber says:

". . . Nearly all the stars of the Italian Opera Company. . . . Every kind of music was sung, but nobody listened to it. The din and noise of the throng were horrible. When I performed there was an endeavor to obtain a little silence, and one hundred persons placed themselves sympathetically round me. God alone knows what they heard, for I myself didn't hear much of it. I bore in mind, however, my thirty guineas and was resigned."

We have one criticism to add. On p. 35 the words "symphonic poems" are applied to Beethoven's symphonies. But these words can no longer be used in this general figurative manner, for "symphonic poem" is now a technical expression for a distinct form of music just as much as symphony or sonata.

Although the life of Schubert does not offer many features of romantic interest, those who know his songs and instrumental compositions will yet find Mr. Frost's little work on him quite readable. He was not a musician of the polemic or aggressive sort, nor did he enjoy much of that rich experience which comes to most musicians on their travels and at various courts. "Life for him was commonplace, dreary, and even sordid; and yet, if we dwell but for an instant on the romantic and poetical in music, the name of Schubert is the first which rises to our lips." At the present day to hear one of Schubert's songs and love it are one and the same thing. But it was not always so. Almost to the close of his brief career he was very little known outside a circle of friends in Vienna, and his finest song, "The Erl-King," was in vain offered to several publishers, and had to be ultimately published by subscription. In fact, many of his vocal and most of his instrumental works were only secured for the press long after his demise, chiefly through the efforts of Schumann and later of George Grove. When we read, therefore, that Schubert wrote no less than six hundred songs, besides being one of the most prolific composers in other fields, it becomes evident that he wrote music simply for the love of the thing; and it is that feeling which makes his best pieces always sound so fresh and spontaneous. A few of his symphonies are almost equal to Beethoven's, and had he lived as long as the latter it might even be questionable at present which of the two would have ultimately ranked as the greatest symphonist: for Schubert's aim was to devote his future labors chiefly to this and kindred forms of music, as he must have felt that he had already provided the world with the finest songs he or any one else ever could give. Schubert's genius derived much nourishment from that of Beethoven, who was a near neighbor of his in Vienna, although the two hardly knew each other personally; but in return his own fame had to suffer by being obscured by that of Beethoven for a long time. Nor was he able to promote his interests by publishing his manuscripts at his own expense, for his income never exceeded five hundred dollars a year—a fact which strangely contrasts with Rubinstein's recent harvest of forty thousand dollars, secured in England in the course of two months.

A very different sort of musician from Schubert was Rossini. He was one of the most splendid comets that ever crossed the musical horizon. For a while his brilliancy was so great that everything else was obscured by it, but now he is represented on the stage by only two or three of the thirty-seven operas which he wrote in as many years of his life. While Schubert always aimed to reproduce by his music the exact sentiments expressed by the poem, Rossini carried to its logical extreme the Italian vice of using the words of a poem or libretto merely as a peg on which to hang his songs. Nothing is more conspicuous in the records of Rossini's life than the unblushing manner in which he cut out the best melodies from his unsuccessful operas and inserted them in some new work he had in hand. Other musicians, notably Händel, did the same thing. But far from excusing Rossini, this simply shows that Händel's artistic conscience also was too lax—although in the case of his sacred compositions, in which the sentiment is one of uniform reverence and adoration, such a proceeding was not evidence of so high a degree of misdemeanor as in the case of an opera where the music, to be good, should so closely express the spirit of the words as to make the two well-nigh inseparable in the mind of the hearer. Strange to say, even the accommodating and applause-coveting Rossini at first encountered opposition in his native country, because he introduced some novel features in the opera. These novel features, however, were probably mostly copied from Mozart, who first used them. For although at the time "Tancredi" was produced in Italy none of Mozart's works had been given in Rossini's hearing, he had probably, as Mr. Edwards suggests, studied the score of these operas. Food for thought is afforded by the fact that the very things for which Rossini was blamed by contemporary critics are now recognized as his chief merits! Much cheap admiration is accorded Rossini for the fact that he could write four operas in one year, and one opera even in the course of a few weeks. Had he devoted as many years to them as he did weeks or months they would have stood a better chance of surviving the present century.

The last chapters of Mr. Edwards's book are devoted to Donizetti, Bellini, and Verdi, and on this account as well as on account of the general interest which attaches to this period of musical history, it must be especially commended to frequenters of Italian opera. Chapter IX. is on the comic in music; but although the best-known instances of comic music are briefly described, the problem as to what the comic in music really consists in is not solved; and the author significantly remarks at the end: "It is easier, indeed, to speak of comic music than to define it accurately, or to cite specimens that will bear analysis."

SELLAR'S ROMAN POETS OF THE REPUBLIC.

The Roman Poets of the Republic. By W. Y. Sellar, M.A., LL.D., Professor of Humanity in the University of Edinburgh, and formerly Fellow of Oriel College, Oxford. New edition, revised and enlarged. London and New York: Macmillan & Co. 1881.

In a notice of Dr. Sellar's 'Virgil' a few years ago we mentioned the first edition of the book before us as giving a singularly correct and appreciative estimate of the earlier Latin poets. It is not surprising that that edition, published in 1863, should long since have been exhausted. In the interval many learned and valuable discussions of these poets have appeared, and it would have been absurd to republish the work without modification, in the new light thrown by Munro's 'Lucretius,' and Schwabe's and Ellis's 'Catullus,' to say nothing of others. The present edition gives abundant evidence that the author has studied diligently what his contemporaries had to offer. He makes graceful and generous acknowledgment of his debts; and he has the manliness to maintain an independent view of his subjects without yielding his judgment to the dictation of the last English or German specialist. Perhaps we may trace this excellent and rare trait to his Scottish nationality, just as we see that love for the honor of little Denmark has helped to save the dignified independence of the great Madvig.

Besides the alterations from his first edition, Dr. Sellar has enriched the second by chapters on the Latin Comic Dramatists. He could hardly have done otherwise if his book was to retain real completeness; and yet perhaps the original instinct, which excluded Plautus and Terence from the company of Ennius and Lucretius, was truer. The first two were poets only so far as all ancient comedians had to be poets. The idea of writing plays in prose seems to be essentially modern, and in the age of the Scipios would have been an impossibility. The change from the deepest tragedy to the coarsest comedy, which Shakspere marks by a change from verse to prose, as in Macbeth's *Porter*, would have given an ancient writer a chance to introduce some new metrical system.

We cordially accept Dr. Sellar's comparative estimate of Plautus and Terence. The literary finish of the latter has given him a place *in summis* which he does not deserve on any true principles of criticism. The covert severity of Julius Cæsar's epigram is hardly perceived by many who quote it. Terence, the petted slave, had indeed learned from Scipio and Lælius to speak Latin perfectly; but to acquire their Roman manhood, even on its comic side, was morally—one is tempted to conjecture physically—impossible to him. Plautus is far more of a comedian and a poet, chiefly because he was more of a man. Undoubtedly Terence gives a correct rep-

resentation of Menander and Philemon; but it is better to be a whole Plautus than a "halved Menander." The Umbrian gave to his versions and perversions an energetic reality and cheerfulness worthy of Cato and Ennius. We cannot understand, by the way, how Dr. Sellar can call the New Comedy "cheerful" (p. 350). *Gay* it undoubtedly was; but its gayety was of that terrible kind which does not dare to be thoughtful. Healthy cheerfulness—the cheerfulness of Aristophanes or Scott—was unknown to it; and we cannot help seeing in it abundant touches of "delicious misery" worthy of Maudle himself. If we are not mistaken, Dr. Sellar analyzes too curiously both the poetical and the dramatic art of Plautus. The brave old Umbrian is all on the surface, and his charm—a very real and very rich one—almost passes away when subjected to the subtlety which does so much for Sophocles or Lucretius.

Of Ennius and Lucilius Dr. Sellar has made as much as possible; but the utmost is little. We are perfectly ready to infer, from the assertions of Cicero and Horace, and the imitations of Virgil and Persius, that these were the Latin Chaucer and the Latin Skelton. But what would be our present idea of Chaucer if our entire knowledge of him were derived from fragments, only three of them more than twenty lines long, only ten more than seven lines long—the majority of a single word or less than a line—quoted by grammarians to show how queer they were, and the entire mass less than three-quarters of the little volume of Gray? Yet this is the case with Ennius, the father of Roman poetry—the Latin Homer and Herodotus in one. With Lucilius the case is still more tantalizing. Dr. Sellar has drained to the utmost the grapes

> "Musarum quibus antrum
> Silvestris raris sparsit labrusca racemis,"

of all the Roman energy, bold invention, and rich, if harsh, music they contain; but, after all, we have to take Ennius and Lucilius chiefly on faith. It is astonishing to find that neither Dr. Sellar nor any other editor has seen that to Ennius should be ascribed the beautiful Saturnian Epitaphs of the later Scipios. Their poetry is far beyond any other writer of the time, and Ennius was the devoted friend of the family.

Of Dr. Sellar's handling of Lucretius we can speak with almost unqualified praise. He has thoroughly absorbed him, and recognizes with generous and delicate appreciation his peculiar merits, without losing himself in unwise idolatry. His intensity of moral purpose; his keen appreciation of nature in her homelier as well as her sublimer aspects; his tenacious hold, through all the allurements of fancy, of a philosophic system which at times, unconsciously to Lucretius himself, passes into a vivid pantheism not unlike that of Shelley, conjured up by the poet's inspiration; the combination of sympathy and satire with which he tries to arouse his countrymen to a higher life; the peculiar force of his poetic diction and rhythm, copied from older writers in individual points, as its own individual points were copied by Virgil, yet, as a whole, original and inimitable; the wonderful depth of his Greek scholarship, which drew upon far nobler and purer models than did most of his fellow poets*—these traits are exhibited in an orderly system, but at the same time with a very genial warmth, by Dr. Sellar. It seems to us that he is disposed to make too much of the possible connection with the old Lucretii, and, on the other hand, that he does not do justice to the truly scientific spirit of some of Lucretius's physical observations. His is not the mere surface science of Cicero, still less is it the *à priori* absurdity of Plato; he is the legitimate heir of Thales, not of Parmenides.

We find no allusion to Prof. Conington's reviews of Munro. One can hardly imagine Dr. Sellar not to have read them; but their views on the limitation of Lucretius's poetic genius he does not seem to appreciate as they deserve. He rather avoids discussing whether the poetical development of the Republic was equal or superior to that of the Empire; yet it is a most important point in the history of poetic art. At present the old opinions are at a discount; but we are convinced that the criticism which sets Lucretius and Catullus above Virgil and Horace cannot be permanent.

Of Catullus Dr. Sellar is determined to say the very best, and no doubt there is a great deal to be said that is good. When an accomplished and passionate young man, in the midst of intensely exciting society, pours out his whole heart on the themes of the hour, and in verse of unsurpassed melody, the result can hardly be other than striking.* Yet exceptions to the excellence of Catullus must be made, and those which Dr. Sellar makes are correct. He feels—he cannot help feeling—that there is something to apologize for in Catullus, but he does not get beyond particulars and tell us what the inherent radical defect is. And yet it is not far to seek: Catullus was ignoble. Whatever his blood, he had little of the spirit of the Valerii. He would have made no fit colleague for Brutus or Cato; hardly a fit victim for Pyrrhus and his elephants. He was brilliant, affectionate, and accomplished, but shallow, dissipated, and malignant. He could write lovely wedding-songs, but he never could have deserved to have one written on himself. If Lucretius as a writer rises above Cicero, Catullus as a character was a fit associate for Milo; and with both, poetry and character are inseparably intertwined.

We commend Dr. Sellar's beautiful book with entire cordiality to all lovers of poetry and criticism.

* Neither Munro nor Sellar quotes the curious imitation of Lucr. iii. 870, from Plat. Phædo, 68 B. § xiii.

* To the comparison with Burns we strongly object; Byron seems to us a much more fitting parallel.

MOTHER SHIPTON.

Mother Shipton Investigated. By William H. Harrison. London: 1881.

THAT this popular bugbear, so disquieting to many weak minds, has been gravely exploded, even a cynical philosopher, withdrawing his tongue from his cheek, may feel constrained to acknowledge to be well. As prophetess, and well-nigh as personality, Mother Shipton is now pretty thoroughly no more. If not herself quite as mythical as Remus or Arthur, at all events her predictions are seen, when examined, to dissolve into the thinnest of thin air. Those who, because she is supposed to have forecast it, look for the winding up of Tellurian affairs in the current year of grace, may therefore again draw their breath with their wonted composure.

The various traditions about Mother Shipton all agree in representing her as having been a native of Yorkshire. One authority dates her birth in 1486; another in 1488, adding, we are informed, that she died in "1651, when upwards of *seventy* years of age"! The arithmetic here followed must be that of the witches. And equally is there a lack of unanimity as to who the Mother was. According to the commonplace record of her, she began life as Ursula Sonthiel, became the wife of Toby Shipton, a builder, and was a good-enough sort of woman, for all that she could see into the future. Agreeably, however, to the heroistic account of her, not only was she not called Ursula, but she bore no baptismal designation whatever; and, seeing that she was sired by Satan and had a naughty wench, one Agatha Shipton, for mother, it may admit of a casuistical doubt whether she was entitled to any. An unscrupulous playwright of the seventeenth century, whose veracity was perhaps corrupted by her astute father for his own base ends, tries to palm off Mother Shipton as the prosaic "daughter of Solomon Shipton, ditch-digger, lately deceased." And Agatha, he further has it, was her own name, and not that of Madam Diabola. Not to us, but to the successors of Niebuhr and Mommsen belongs the task of dealing scientifically with these perplexing data and sifting out the precious truth therefrom.

Neither Dr. Dee nor, to use Sir Thomas More's phrase, any other "old sage father fool" of the Elizabethan era has commemorated Mother Shipton, of whom, indeed, it is dubious whether the world had then yet heard. At what appears to be the time when she is earliest mentioned nearly all the prophecies which have been attributed to her had been accomplished. This was in 1641. In 1645 a revised collection of these prophecies was published by William Lilly, the astrologer, "after the most exact copy," whatever that may have been. The sibyl's soothsaying "was never yet questioned, either for the verity or antiquity," we are assured by Lilly, with a sturdy confidence which only an improper intimacy with the stars can easily account for.

As lately as two years ago no slight commotion was occasioned in Mid-Somerset by a reported Shiptonian vaticination. A rumor, originating no one knows how or where, got abroad there, and was widely believed by the common people, that the Mother had fixed Good Friday, 1879, as to be distinguished by local calamity. Ham Hill, near Yeovil, was to be engulfed at noon by an earthquake, and Yeovil itself was to be inundated by an extraordinary flood. To be out of harm's way, sundry inhabitants of that vicinity betook themselves to better-omened regions as the critical day drew near, while others made preparations for retreat when duly warned. In expectation of seeing Ham Hill disappear into a chasm, crowds collected within safe distance of it. To their disappointment, the spectacle went unrealized, or, as they preferred to put it, had somehow been misdated. In Mid-Somerset, as elsewhere, the ages of faith are still running their persistent course.

With regard to the rough couplet, at which so many have shaken in their shoes,

> "The world to an end shall come
> In eighteen hundred and eighty-one,"

it has been known to readers of *Notes and Queries* since 1873 that it first saw the light in 1862, and that its author, by his own avowal, was Mr. Charles Hindley, of Brighton.

Mr. Harrison, besides exhausting—if not actually, as far as his researches have enabled him—the Shiptonian bibliography, has reproduced in full the oldest discovered work of which Mother Shipton is the subject. As interestingly illustrative of the repute which gradually came to be attached to what may have been but a mere name, he can refer to so respectable a voucher as Mr. Timbs in proof that a wax figure of Mother Shipton adorned Westminster Abbey till a somewhat recent period; sharing with its uncouth companions, effigies of realities as substantial as Queen Elizabeth and Oliver Crom well, the veneration of unhistorical hero-worshippers.

In the issue for last April of the *Palatine Note-Book*, "W. G.," writing from Harrogate, contributes a detail of numerous fulfilled prophecies of recent date, ascribed to Mother Shipton, collected in the neighborhood of her traditional birthplace, Knaresborough. One of these

prophecies relates to an occurrence which happened only last year. Mr. Harrison would advantageously supplement his little book, in a second edition, by availing himself of the article referred to.

The History of a Mountain. By Élisée Reclus. New York: Harper & Brothers. Illustrated. 8vo. 1881.

THE story of the mountain is written as if related by one who, possessed with an intense disgust for all mankind, turned his back upon their haunts and, with a single companion, a shepherd, strove to regain his vigor and peace of mind in the mountain solitudes. In dealing with nature his tone at once becomes healthy and joyous. M. Reclus is a very agreeable writer. His book is very accurate, and much more complete than would be expected from its size. To hardly any other could one turn for more impressive and at the same time truthful descriptions and definitions than many of those it gives, as in the case of landslips, avalanches, glaciers, and their attendant phenomena, moraines, etc. Exceptions may be taken to such statements as that the mountain was once twice its present height. This is possible, but improbable. Before the summit had reached the surface of the sea the forces of erosion were at work, in the winds, waves, and currents. Once above the sea level, the heat, the cold, and the rain re-enforced the activity and destructiveness of erosion to such an extent that it is not at all likely, with their slow rate of upheaval, that our highest mountains were ever very much higher than at present. The chapter on the "Destruction of the Peaks" might have been entitled the Destruction of the Mountain, since it is commonly by this means that the peaks are formed. "It is by licking the mountains," says an ancient prayer of the Hindus, "that the celestial cow [*i. e.*, the rain from heaven] formed the fields." Multitudes of peaks have been formed by the same process. The author predicts that man will soon be able to reach the highest summits of the Andes and Himalayas. "Balloons have already carried him two or three hundred thousand yards high" (p. 189). Two hundred thousand yards are more than a hundred and thirteen miles. It is considered doubtful whether any one has reached a height greater than five miles. At this height aeronauts are so distressed as to be almost crazed and incapable of determining altitudes or taking observations. Some chapters refer to places, creatures, and things belonging particularly to the Old World, but they are such as have been so woven into our literature that we of the New Continent are quite as familiar with them. "The Animals of the Mountain," "The Free Mountaineers," "The Cretins," "Olympus and the Gods," and "The Genii" are none the less interesting because they are of the Old. With these and a few similar exceptions, the history is that of our own mountains: the facts and generalizations apply everywhere. The plan of the work is very comprehensive. Aside from the direct story of the rocks, there is introduced a great deal of incident, adventure, mythology, and religion, which tends to fix the physical basis in the mind and heighten the interest in it. The whole is well finished by a chapter on man and his relations to the mountain. Among those competent to tell the history of the mountain there are few who are able to put so much life and poetry into descriptions of objects that have become commonplace. Looking at them as seen by the author, the mountaineer will recognize his old friends as if greatly improved. One who meets the mountains for the first time after reading this history will have had an excellent introduction; and the traveller who fails to see, think, and profit more in his contact with them after its perusal will probably be only a tourist.

BOOKS OF THE WEEK.

Sully, J. Illusions. New York: D. Appleton & Co. $1 50.
Townsend, Prof. L. T. The Art of Speech. Vol. 2. New York: D. Appleton & Co.

The Nation.

NEW YORK, THURSDAY, AUGUST 25, 1881.

The Week.

It is very difficult to say anything about the President's condition which has not been already said a score of times, or anything which is certainly worth saying. But the effect of all the recent saying on the public mind has been undoubtedly depressing in the extreme. The doctors are no longer able to make head against the rising tide of despondency either through their bulletins or the interviews with the reporters. Their present position may be summed up by saying that they maintain that the President's chief trouble is the feebleness of his digestion, and that if they can overcome this, all will go well. But then it cannot be disguised that this is like saying that if they can cure him, he will get well. The weakness of the stomach is of course part of the general weakness. The doctors are suffering, too, and doubtless unjustly, in the popular mind from their confidence three or four weeks ago. The public is disposed to believe that because things have not gone as the medical men were so confident they would go, they must have been mistaken both in their diagnosis and prognosis; but this by no means follows. If we try to figure to ourselves in what condition a healthy man would now be who was put to bed in the White House on the 3d of July and kept there ever since, we shall all feel more leniently towards the doctors. They are probably not to blame for not having carried him to the Soldiers' Home on the first day, for they doubtless believed, with good excuse, that he would die on the road; but all who have ever observed in war time the influence of local air in bringing up or keeping down wounded men, must now feel sadly that if he had been taken away from Washington at the outset, he might be in a very different state. A badly wounded man in a place where he has to be protected from malaria by doses of quinine, can hardly be expected to keep his digestion very long, much less get rapidly well of his wounds.

The public has, as is usual, divided into two camps about the prospects of recovery, under the influence of temperament; the hopeful being fed every day by Dr. Bliss, whose conversations seem to indicate clearly that he would not have made a bad "journalist." The despondent are fed by most of the other doctors, who, however, have not seen the patient, and therefore have to speak more cautiously. Curiously enough, too, the occasion has produced a new use for the word "conservative." A "conservative" bulletin or despatch about the President means a careful and slightly despondent account of him, and seems to be opposed, in newspaper parlance, to a sensational or demagogic account of him.

The address and resolutions of the Anti-Monopoly Conference at Utica were, upon the whole, moderate and practical. In all popular protests against public abuses there is a tendency towards extravagance; and the greater the abuses the greater is the exaggeration. The weakness of such movements is often a lavish outpouring of indignant but vague and general denunciation, amid which details of wrongs and specific measures of redress are forgotten. The proceedings at Utica incur little criticism on this score. The address indeed says that the freight charges of the railroads are impositions "compared with which the tolls exacted by the robber barons of the feudal ages were petty." It would be just as well to dispense with such rhetoric as this, not for the sake of the carrying companies, but in view of its effect upon the public mind. The people know very well that, whatever their wrong-doing may be, there is no parallel between the corporations and the robber barons. The railroads do perform a valuable service, even when they charge too much for it—an indispensable service, which must be had even at twice the price. The management of the carrying business is conducted according to the forms of law, under the sanction of statutes made by the representatives of the people. Nothing like this could be said in behalf of the robber barons. They were carriers also, but carriers only of stolen goods from the possession of the rightful owners to the robbers' haunts. People are naturally suspicious of a case which is bolstered up in this forced fashion. When they find its advocates making statements which are obviously unwarranted, they are inclined to regard with caution all facts and figures of which they have no personal knowledge, but which they are obliged to take upon trust.

The "Ponca question," which at one time caused so much heated discussion, has now been finally settled strictly in accordance with the law passed by Congress in February last, the provisions of which were based upon recommendations made by President Hayes and the Interior Department. The Sioux have given their assent to the settlement of that part of the Ponca tribe which left the Indian Territory two or three years ago, upon lands held by the Sioux under the treaty of 1868. By far the larger part of the Ponca tribe, more than three-fourths of them, declared last winter their desire to remain in the Indian Territory, and they are being provided for there, Congress having, in virtual pursuance of recommendations submitted by the Interior Department three years ago, at last made ample appropriations for their indemnification and settlement.

The defalcation of Captain Howgate, the disbursing officer of the Signal Service Bureau, is now thought to amount to $400,000. As the amount of last year's appropriation is about $450,000, and he has been at work only five years, he must have made away with about one quarter of the money which passed through his hands. What he did with it does not yet appear; nor does it appear how he expected to get out of his scrape after the first $100,000 had gone, or why he did not run away before he was found out, as it is plain that he was not watched or pursued very closely. Nor does it appear how he was able to deceive the Congressional Committee each year as to the amount of his expenditures, for he continued to receive during the four last years, for the mere conduct of the Bureau, the amount which was drawn in the first year both for equipping and conducting it. His bail has been raised to $90,000, which ought to be hard to find.

O'Donovan Rossa held a convention or "Dynamite Council" on Sunday in Third avenue, and subsequently issued a proclamation announcing his intentions with regard to the English merchant marine. The convention has decided that inasmuch as "belligerents do not usually begin their campaign by attacking the strongest and best fortified places of the enemy," it would be a mistake for "the Irish people" to begin by blowing up the war ships of England; nor is it "at all incumbent upon them" to do so, for it is just as well to begin with the work most easy to accomplish, and it will probably only require the destruction of "a few hundred English merchant vessels" to give the world the opportunity of enjoying "the beneficent sight of all the shipping merchants and insurance companies of England presenting a petition to Gladstone to reconsider the Irish question." The convention therefore kindly warns the public that "after September 1st it will be well for all peaceable people to avoid patronizing ships that sail under the protection of the English flag." The disposition of a part of the press to treat these fulminations of Rossa's as mere jokes or "scares" is very unfortunate, because it encourages him and his friends to continue them. The joke, too, is of a kind which it is very difficult for those who are immediately affected by it to understand or appreciate. Besides this it is a well-ascertained fact that a very large proportion of the "skirmishing fund," which is to be used in some way in aid of the "Irish cause," has been raised in this country, and also that infernal machines have already been sent from this country to England. Under these circumstances it would require a much keener sense of humor than most people outside of dynamite "circles" can be expected to possess, to look upon a general threat to blow up passenger vessels as merely good Anglo-Irish sport.

The loan market became stringent during the week, partly because of the continued heavy drain of money into the Treasury for customs and internal revenue taxes, partly on account of the excess of shipments of currency to the West over the receipts from neighboring points, and partly because of a manipulation of the market by stock speculators interested in lower prices for shares. The result of all this was that the surplus reserve of the New York banks was extinguished, and the banks

were left $717,700 short of a 25 per cent. reserve. The rates on loans made by the banks, trust companies, and other corporate lenders were marked up to 5 and in some cases to 6 per cent., and at the Stock Exchange such fancy rates as 1-32@1-4 of 1 per cent. per day were added to the annual rate of 6 per cent. This sudden change in the loan market weakened the rates for foreign exchange so that not far from $5,000,000 of foreign gold were started from London and Paris for New York, and a good part of that which comes from London was sent after the Bank of England had advanced its posted discount rate to 3 per cent. from 2½ per cent. Another effect of the spasm in the loan market was to induce the Treasury to order the prepayment, without rebate of interest, of the registered 5 per cent. bonds which mature October 1. The amount of these bonds is not far from $30,000,000, and the Treasury, while still accumulating a surplus, has now the money on hand to pay every dollar of them.

The only pressure on the loan market of a speculative character comes from the cliques, having their headquarters at Chicago, which are engaged in "bulling" food products. Their demand for money has been large, to support the towering speculation in which they are engaged and in which they have hitherto been successful—at least so far as marking up prices is an element of success. The speculation at the Stock Exchange has been in the opposite direction, and prices there have had a heavy fall—from 1 to 17 points. This bear speculation has forced a general liquidation of "bull accounts" in stocks, with the result of largely diminishing the Stock Exchange demand for money. No progress has been made, so far as is known, towards a settlement of the trunk-line railroad war, but it is intimated that the matter is within such easy control that one or two men can name the time when the war shall end and rates be restored, and that they are waiting for the uncertainties respecting President Garfield's life to cease before deciding. Unfortunately for the country, the condition of the President has not been such during the week as to encourage strong hopes of his recovery; and truth requires it to be said that Wall street speculators are now waiting for his death to make another move in the great game which they are playing at the Stock Exchange.

The American Bar Association has taken up the subject of legal education, and recommends a three years' course of study in all law schools, and also that diplomas granted by the schools shall entitle the holders to admission to the bar. The first recommendation will meet with general approval; with regard to the second, there would be no objection to giving a diploma this weight if the course of study were always such that the diploma really meant something. But there are many law schools which give diplomas after a very brief period of study, and without any adequate examination of the student's fitness to receive it. To permit the diplomas of such institutions to entitle the holders to admission to the bar, not only lowers the professional standard, but is unfair to other schools of established reputation. Most young men preparing for the bar are chiefly desirous of getting admitted as speedily as possible, and will be likely to select schools where diplomas are most easily and quickly obtained. The experiment has been tried in this and in other States, and it has never worked well.

Mr. David Dudley Field has been advocating the insertion in all treaties of a clause providing for international arbitration, which Mr. Lane, the Japanese representative, opposed, or rather criticised, on the ground that such a provision would be inoperative in the case of such wars as our late one, or that between France and Germany. But then it is not a good objection to any political or social arrangement that it will not completely accomplish its object. This we have occasion frequently to point out to those who oppose competitive examinations on the ground that incompetent men will often succeed in passing them, and that many a man who has passed, or could pass, a good examination, has afterwards got into the penitentiary. The objection would, in fact, if valid against anything, lie against the utility of courts and policemen, for, in spite of both, criminals abound. No agreement to arbitrate will ever prevent all wars, but any honest agreement would prevent some wars. This is exactly the way legal penalties for crime work. They prevent a great many crimes, and a great many they do not prevent; but there is nevertheless no doubt of their value. Arbitration would probably prevent nearly all wars arising out of disputes between two independent Powers of equal strength, where nothing is involved but a sum of money or a point of honor. It probably would not, as yet, prevent wars of annexation or wars of independence, but these are almost certain to be very rare in the future. It will not be long before every Power will have seized every inch of land to which it lays any kind of claim, and before every people with any craving for independence will have all the independence it cares for.

The results of the French elections are all but completely known, and they are very important. The Monarchists of both varieties have lost heavily, in fact so heavily that they may be said to have disappeared as a political party. Out of 483 members elected, they number only 80. The Republicans have gained altogether 58 seats. This is not all, however. Not only have the Legitimists and Bonapartists suffered a crushing defeat, but the extreme Radicals have hardly fared any better. Of the 403 Republicans thus far elected, 344 belong to the moderate wing, made up of what is called the "Republican Union" and the Left. The "Left Centre" numbers only 34, and the "Extreme Left," led by Clémenceau, only 25, or in other words is reduced to nothingness. This would be crushing for Clémenceau and his followers if it were not that they are able to chuckle over Gambetta's failure also. There is no doubt that he has suffered personally a severe reverse. In other words, the elections have revealed the fact, not that he has no influence or following, but that he has not one quarter of the influence or following he was thought to have. In the Belleville district in Paris, in which he polled 13,300 votes in 1877, he has this year secured only 9,400, and a majority over all of only about 20. This would not be so surprising if it had been brought about by a gain of strength on the part of the Extreme Left, which has always been his bitterest enemy; but in Paris only 9 Irreconcilables have been returned out of 22 candidates, 13 being Republicans of various shades of moderation. The same result appears all over the country. Both the Monarchists and the extreme Radicals have been beaten, horse, foot, and dragoons. This shows clearly that Gambetta has not suffered on account of his "opportunism," or, in fact, on account of anything for which the Radicals have found fault with him. It is almost certainly a rebuke called forth by his starring trip to Cahors, by his domination of the Ministry on more than one occasion, and, more than all, by his attack on the Senate when it threw out his *scrutin de liste*, and his purpose to punish it by "revising" it, almost within a week after he had held up Americans to admiration for their slowness about amending their Constitution. The rebuke is made the more pointed by the fact that the Cabinet has met with no rebuff, and will go into the new Chamber considerably strengthened.

The most striking consequence of the elections, however, is neither the defeat of the Irreconcilables, nor the check to Gambetta, nor the resuscitation of the Ministry. It lies in the fact that now for the first time in French history the Chamber contains an overwhelming majority—a majority so great as to make the minority of no account—of members who are loyal to the republican form of government, while differing about policy. In other words, the French republic has now for the first time a loyal, as distinguished from a revolutionary, Opposition—an Opposition which seeks not to overturn the established government, but simply, as in England or in this country, to administer it in a different way. This is a very great gain—in fact probably the greatest step in advance yet made in French politics, and made, too, through an election of which no one seems to dispute the freedom and fairness. The effect of it is somewhat marred by the smallness of the total vote, but "staying away from the polls" is a disease of the Latin countries which only time will cure. The abstainers are, however, usually that perfectly harmless portion of the population to whom government is still something like the weather, which man must submit to but cannot control.

Nothing in the way of imposition has been more successful of late years than the English agitation for a "fair trade," as it is called, or in other words, for a return to protection. The effect produced by it on the minds of many people in this country as to the failure of "British free trade" has been and is almost ludicrous in its completeness. The movement consists simply of a great noise made by a number of people who do not know what they

are talking about, and therefore resolutely avoid facts and figures. All they say is that the British foreign trade is going to ruin; that the poor British workingman has to emigrate to avoid starvation. There is not a word of truth in this, and yet it is apparently impossible to get them to stop and argue. The London *Economist*, which has hitherto treated the agitation somewhat too disdainfully, has just given it a blow which would be crushing if the agitators were a different kind of people. It shows that during the six years ending in 1880, the cotton, woollen, pig-iron, and coal production of Great Britain, increased from five per cent. to fifteen per cent. as compared even with the production during the exceptionally prosperous six years ending in 1874; that the British consumption per head of cocoa, coffee, sugar, tea, tobacco, and spirits, has (comparing the same years) increased in a greater or less ratio; that the number of paupers, which in 1869 was 1,167,888, and in 1874 935,176, was in 1880 only 901,737; that the deposits in the savings banks, which in 1869 were only £51,078,000, were in 1880 £77,721,000. Nor is the British workingman emigrating to avoid destitution. The emigration from the United Kingdom decreased thirty per cent. in the six years ending in 1880, as compared with the previous six years. It is in Germany, which has just returned to a high tariff, that the emigration is reaching enormously increased proportions. Moreover, in 1869, the gross value of property in Great Britain assessed for the income tax was £434,804,000; in 1874, £543,026,000; while in 1879 it was £578,046,000. If any one supposes, however, that the organs in this country which have been trying to make much of this ridiculous business, and predicting great results from it—the Boston *Advertiser*, for example—will quote these figures, he is probably greatly mistaken.

Somebody who is solicitous about the fair fame of the Cornell University ought to do something to prevent the crew which recently went to England from exposing each other, and bringing further disgrace on the college and on the country. The latest "revelation" about the Vienna race is that Shinkel, the fainting oarsman, entered into a regular agreement, before he left the country, with a retail liquor dealer, his "prospective brother-in-law," and a wholesale liquor-dealer, to "throw" all races after the first, and thus enable them to make a little money; and it is urged in proof against him, that, though a penniless man, he went abroad with $800 in cash and a suit of clothes which he had obtained on credit. It is further added, that "incriminating proof" of his mingled treachery and corruption was found in his baggage by "his infuriated associates." Our advice to his "infuriated associates" and all others concerned now is to drop the whole matter and bury it in eternal silence, and let the guilty Shinkel go free. Better ten Shinkels should escape than that the impression should be well established abroad that an American university crew may be a gang of sharpers, who arm themselves with oars simply to throw their victims off their guard.

The English press has begun to heap a good deal of abuse on Parnell and his followers of the Land League, in reprobation of their evident design of keeping up the anti-English agitation. They declare that the passage of the Land Bill must be received as full and complete satisfaction of all Irish demands, or the English people will begin to regret that they passed it, and then English hostility to Ireland will produce that undescribed and perhaps indescribable Irish woe which the *Spectator* frequently threatens as a consequence of rousing the "Berserker wrath" of the Anglo-Saxon towards the Celt. We certainly have little sympathy with Mr. Parnell or his methods, and think as highly as any one of the Land Bill. It is a great act of justice, which may fairly be regarded as the crowning glory of Mr. Gladstone's career as a legislator. But it must be admitted both by those who admire Mr. Gladstone most, and those who like the Land League least, that it comes too late to prove a complete measure of conciliation. It has the very serious political defect against which Burke so solemnly warned the English Government a century ago, of looking like a concession made by timidity to popular violence. It was not framed or even thought of until Ireland was, to use Mr. Gladstone's phrase, "within a measurable distance of civil war." It was preceded, too, by a "Coercion Bill," which, however justifiable it may have seemed in the eyes of Englishmen and of Irish Tory landlords, was condemned as impolitic by Irishmen of every other class. It helped to revive in the Irish mind, for the benefit of Irish agitators, the most odious memories of English rule. The fact that Mr. Forster and Mr. Gladstone were good men compared to those who formerly used this weapon, made no impression on the Irish mind. It is a fixed maxim of Irish politics that no Englishman means well to Ireland who appears on the scene with this in his hand.

Nothing that we hear from Ireland, therefore, justifies the expectation that the Land Bill will act as a political sedative. It will undoubtedly improve the condition of the peasantry, and this is of itself an immense gain, but there is much reason to fear that we are about to witness in Ireland a fresh illustration of the truth of the old saying, that political discontent is never so formidable as when the condition of the discontented has begun to improve. The Parnellites doubtless have this in their mind and are going to profit by it. The kind of voter which the Land Bill will create in Ireland is almost certain to be far more hostile to the connection with England in its present shape than the present constituencies are, and there is no likelihood of the anti-English agitators' trade perishing in Ireland until the Irish are allowed to manage their own affairs; until, in short, as Fox recommended nearly one hundred years ago, Ireland is governed in accordance with Irish opinions and even Irish prejudices.

The French protectionists have not been very consistent in their arguments in the debates on the new general tariff, and the weakness of their position was clearly shown by the Liberals, but without changing the result. When the tariff came before the Senate it was urged that a market for French agricultural produce could only be maintained by placing some restrictions on the importation of foreign produce; that the "discovery of agricultural America," as M. Paris expressed it, had altered the position of the French farmer, and that unless something was done to check this foreign competition the French farmer would soon be driven to the wall, as wheat and other cereals could be imported and sold for a lower price than would remunerate the home grower; that the condition of the farmer was bad and was becoming worse. On the other hand, the friends of a liberal commerce alleged that the situation of the French farmer was due to causes beyond the control of legislation. No country could bear a succession of bad harvests; the phylloxera had caused the misfortunes of the wine producers; and some misery was entailed by the chemical preparation of madder, a discovery which put an end to the culture of the madder plant. It was, moreover, shown that the grain acreage had increased, the average yield per acre was larger, and that a heavier and better grain was produced; that so far from being crowded out by foreign competition, the crop of 1880 was above the average, and, while it was asserted that American wheat could be sold in France for fourteen francs per hectolitre, the price of wheat at the seaboard remained at twenty-three francs the hectolitre.

Notwithstanding these statements, the protectionist plea was favored by the farmers, and an alliance was formed between the manufacturers and the farmers to pass a protective tariff, with the expectation, of course, that the protection would be equal for both. But the result has shown that the manufacturers have obtained the lion's share. The greater part of agricultural products is still admitted free or on payment of very moderate duties. On the other hand, the duties on all manufactured articles, with the exception of certain silks, have been increased by one-fourth when compared with duties under the commercial treaties, and unless the commercial treaties are renewed the increase will be still greater. Nor was this result due in any way to the soundness of the manufacturers' arguments. Before the Senate, the iron manufacturers claimed that they were placed at such a disadvantage that the proposed duty of six francs per ton would not enable them to compete successfully with foreign manufacturers. They even went so far as to give figures, which were supposed to express accurately the extent of this disadvantage. It cost in France, they said, to produce one ton of iron, sixty-one francs more than in England, sixty-three francs more than in Belgium, and seventy-two francs more than in Germany. Yet facts were against them, for in the period between 1860 and 1880, while the commercial treaty was in operation, importations of iron remained almost stationary, though the home production enormously increased.

SUMMARY OF THE WEEK'S NEWS.

DOMESTIC.

THE week at Washington has been an even more anxious one than the last; it has at all events been marked by a dead level of despondency, owing both to the President's continued weakness and to the occurrence of new complications. On the 16th instant his stomach began to recover its tone in some slight degree, and since then has been able to receive liquid nourishment in quantities varying from day to day. The administration of nutritive injections has, however, been constantly kept up, and there is no present intimation that the stomach can be exclusively relied upon soon. The pulse went down and the temperature rose to normal during the latter part of the week, though the febrile rise continues diurnal. On Friday the bulletins announced a swelling of the parotid gland, which has since then increased steadily, notwithstanding all attempts to reduce it, and is now expected to suppurate. Whether the septic taint in the blood which this argues will prove serious cannot be discovered till then. Meantime the swelling causes the President great annoyance, though it has ceased to create pain. It prevents the opening of the mouth more than a fraction of an inch, and on Sunday occasioned an attack of vomiting, owing to the accumulation of phlegm in the throat consequent upon it. Secretary Blaine's messages to Mr. Lowell, and one in reply to a telegram from the Pope, have been noticeably less hopeful than heretofore. According to one of the former, sent on Monday, the President has, since July 2, fallen away in weight from 205 or 210 to 125 or 130 pounds, and "his failure to gain strength is the one feature which gives special uneasiness and apprehension." On the other hand, Dr. Hamilton, who was at the outset very reticent, expresses the belief that his patient will recover.

Guiteau manifested some uneasiness on the morning of the 17th instant, enough to excite the vague suspicions of his watcher, who accordingly entered his cell to make an investigation. The prisoner immediately grappled with him and endeavored to stab him with a knife-like piece of sharpened steel which he had got possession of in some way unknown to the prison authorities. In the course of the scuffle the keeper's pistol was accidentally discharged, and the report brought assistance, and Guiteau was reduced to subjection. He has since exhibited great contrition for his conduct, which is ascribed at the jail to a desire to persuade people of his insanity.

The Anti-Monopoly Conference called by different trade organizations of this State met on Thursday last at Utica, some fifty delegates being present. The temporary Chairman, Mr. L. E. Chittenden, of this city, made an address in which he spoke of the combination of corporations as a national danger, and declared the object of the gathering to be an "effort to secure in all the districts of our State the nomination and election to the next Legislature of men—true, unpurchasable men—pledged to vote and act in the interests of the people," as opposed to the newly-arisen power of monopoly. The way to accomplish this end lay in organization; he did not care "by what name or under what flag" such organization was had. General A. S. Diven was elected permanent President, with a long list of Vice-Presidents, and at the afternoon session, besides an address from the Chairman, a series of resolutions were adopted as the platform of the Conference. This was in the form of an address to the people of the State, reciting the grievances of the people against the railroads, showing how a monopoly is created "by a system of taxation, under the guise of tolls or charges for transportation, compared with which the tolls exacted by the robber barons of the middle ages were petty"; declaring that each year $3,760,000 are "extorted from the public" to meet the dividends upon $47,000,000 "fictitious stock" of the New York Central Railroad; exposing the practice of "discrimination"; and reciting the legislative action on the Hepburn Committee's report. The address pronounced against Senators McCarthy, Stevens, Halbert, Madden, Braman, Rockwell, Sessions, Wagner, Woodin, Robertson, Seebacher, Eidman, Jacobs, Birdsall, Fowler, Baker, Loomis, Wendover, and Mills, who "were usually found voting with the corporations and against the public interests." Various "specific results" to be secured were mentioned as well as a few "general principles," and among the resolutions with which the document concluded was one disclaiming any intention of making warfare upon "corporations as such."

The American Bar Association began its annual convention at Saratoga on the 17th instant with the reading by President Phelps of the annual report recounting the principal changes in statutory law on points of general interest made by the different States and by Congress during the year. On Thursday Mr. Clarkson N. Potter, subsequently chosen President of the Association for 1881-2, delivered an address on Chief Justice Taney. After Friday's session the Association adjourned. Among the most important business transacted was the appointment of a committee of nine to consider and report upon the general question of relief of the appellate courts from the onerous pressure of their business.

The exhibition of the New England Manufacturers' and Mechanics' Institute in Boston was opened on Thursday. Governors Long of Massachusetts, Plaisted of Maine, Littlefield of Rhode Island, and Farnham of Vermont, and the Mayors of most of the prominent New England cities were present. Commissioner of Agriculture Loring delivered an address, in the course of which he expressed his conviction that the protective policy of the American Government was so firmly fixed by the popular voice and legislative enactment that "controversy over the general principle has virtually ceased."

The thirtieth annual meeting of the American Association for the Advancement of Science began on the 17th instant at Cincinnati, and has lasted through the week. About two hundred members were present, and it was expected at the outset that not fewer than one hundred and fifty essays would be read or submitted.

The Odd Fellows of this State and the Photographers' Association of America held their annual meetings in this city last week.

The first meeting of the County Committee of the New York County Democracy, as reorganized by the Committee of One Hundred, was held at Chickering Hall on Friday evening. Mr. E. Ellery Anderson opened the session with an address in which he gave the history of the organization of the committee, and urged that no bargain or combination be made with any faction whatever for the sake of mere temporary advantage. Corporation Counsel Whitney was chosen temporary chairman, and in returning thanks for the honor expressed similar sentiments and read a letter from Mr. Abram S. Hewitt, who characterized the meeting as "the culmination of the long and patient labors of the Committee of One Hundred, representing the Democratic masses of the city of New York, to secure an organization of the party in which there will neither be 'bosses' nor serfs." A series of resolutions in this sense was passed and permanent officers elected; of these Mr. John McKeon was chosen Chairman and Mr. C. C. Baldwin Treasurer, and among the Vice-Presidents were Messrs. Hewitt, Cooper, Allan Campbell, Voorhis, and R. B. Roosevelt. On the same evening the Irving Hall faction of the party met and adopted an address referring to both Tammany and the Committee of One Hundred in highly uncomplimentary terms, and arranged for primaries of its own.

The *soi-disant* Hartmann returned on the 17th instant from Hamilton, Ontario, and immediately announced the fact in a long letter to the *Herald*, in which he discussed his right of asylum in the United States with much *aplomb*, and declared that "to finally set the question at rest" he had "determined to come forward as I now do, ready to test the matter." His letter is supplemented by an interview of equal length, in which he says that he intends a lecture tour of the States, a statement that is naturally taken to explain much. Meantime Mr. Wendell Phillips has also written to the *Herald* controverting Mr. Blaine's seemingly unassailable deliverance in the same matter. He says the State Department can no longer remain silent since it has already been compromised by the uncontradicted "babble of its underlings." "Of course no one believes," he adds, that Mr. Blaine is about to "join in a slave hunt more disgraceful than those which followed the Fugitive Slave bill of 1850." Why then, he asks, "allow Europe and two or three hundred muddled editors to believe in its possibility for the next six months?"

On the 13th instant a package was sent to Fuller's Detective Agency, in this city, which, being opened, was found to contain a rudely-colored landscape, with an unpainted spot in the centre in the shape of a grave, on which were written the words, "Stewart is buried here." Photographs of the picture were taken and sent to different cemeteries, and a part of Cypress Hills Cemetery was identified as the original. Detective Fuller and a party visited it, and discovered that the ground had been recently disturbed. The owner of the plot is the controller of the cemetery, who says he lately told his foreman that he should never sell it, which statement he regards as "a sort of guarantee that the ground would not be disturbed for some time." He noticed some time ago that some pickets were missing from the fence near by. On Saturday morning, Detective Fuller having notified Judge Hilton (who manifests but a slender interest in the discovery) that he should share with no one his possible reward, digging was begun and has been carried on since on a large scale to the delectation of considerable crowds, but with barren results. Detective Fuller's hopes are largely based on his confidence in the number 13. Whenever that number has appeared in a case he has "secured complete success." He was born on the 13th of the month, his agency was founded on February 13, the number of his office is 841, which figures added together make the mystic number, and he has had many similarly striking experiences of its mysterious potency. On the other hand, Mr. Stewart is said to have cherished a particular animosity against it, and to have regarded it as a "fatal" rather than a "lucky" number. Now the details of the present discovery swarm with 13s.

Mr. Coats, of Paisley, Scotland, sent his small yacht *Madge* to this port as part of the freight of the Anchor steamship *Devonia*. His intention was to match her with the New York yachts of her size in a few races, and then take her back in the same way. The yacht was, however, at once seized by the Custom-house authorities, and, being entered on the *Devonia's* manifest, held subject to duty (in this case prohibitory, of course) as "wooden ware." On appeal to the Department at Washington the vessel was last week ordered admitted as an article of merchandise for exhibition, but for which happy thought Mr. Coats would have immediately ordered her return. The Secretary of the Treasury, by the way, has cancelled the contract for furnishing the labor in handling goods in the Appraiser's office, and this will hereafter be performed under the Collector's direct supervision, which is very gratifying to the men at the public stores.

The new Cunarder, the *Catalonia*, broke down when six days out from Liverpool on her first voyage, her main shaft parting about three hundred and seventy-five miles east southeast of Cape Spear, N. F. A schooner was near her at the time of the accident, and took off two of her passengers, of whom there were one hundred and twenty in the cabin and two hundred in the steerage, and arrived with

them at St. Johns, N. F., on the 18th instant. When they left her the *Catalonia* expected to meet with head winds and to be compelled to return to Liverpool; but she arrived at this port Sunday evening after a voyage of but little over a fortnight.

The bursting of a steam pipe on the *Plymouth Rock* on the 17th inst. frightened some hundreds of passengers on their way to Long Branch, but seriously hurt no one, and the steamer was towed to town by a tug and another steamer that luckily happened to be in the neighborhood. A special examination of the vessel has been ordered by Secretary Windom.

The agreement between the Sioux and those of the Poncas who wish to return from the Indian Territory to their old lands in Dakota, was formally signed on Saturday at the Indian Office in Washington. The document provides for the cession by the Sioux of as much of their present reservation as may be necessary for the settlement of the portion of the Ponca tribe under Standing Bear, to the extent of as many tracts of 640 acres each as there are heads of families and male members of age and unmarried. The title is in fee simple, not subject to alienation, lease, or incumbrance, and the land exempt from taxation for twenty years. The agreement has yet to be ratified by the Sioux tribe, but there is no doubt that it will be, as twelve chiefs, representing the Ogalla, Brulé, and Standing-Rock Sioux, have already affixed their names. Secretary Kirkwood reminded Red Cloud that he must be responsible for any scarcity of food at the agency owing to the presence of more Indians; to which the chief replied that he would "kill a horse or a dog," or contrive in some way to provide for the new comers.

New Mexico despatches last week reported a sharp conflict between United States troops, under Lieutenants Burnett and Valois, and a band of Indians who attacked on the 16th inst. Mexican ranches near Canada, Alamosa. The troops were driven back, but the Indians altered their evident design of attacking Canada and moved away. According to a despatch via San Marcial of the same date, General Hatch was to have left Fort Craig on the 17th to take command at Canada in person. At least 150 Indians are said to be on the war path in New Mexico. Captain Parker, with nineteen men, had a fight of an hour and a half with the Apaches under Nana on the 12th inst. without notable results.

Captain H. W. Howgate, late disbursing officer of the United States Signal Service, was arrested last week, charged by General Hazen with having embezzled, during his official term, $40,308.12. The accused was arraigned before Commissioner Bundy at Washington on Thursday and held in $40,000 bail, the prosecution declaring that the amount of the defalcation would probably be found to reach $80,000 on investigation.

Three of the Cornell crew accuse Shinkel, the fourth member, of having sold the recent race with the Viennese. According to the cable reports, their grounds are chiefly a sudden "flushness" of the accused after the race. Since then it has been reported that there were vague suspicions of Shinkel in Ithaca before the race. Every one who knows him, on the other hand, is said to speak of him in high terms, and the charge is denounced by his friends as scandalous and utterly unsubstantial.

General Leslie Combs, of Lexington, Kentucky, best known, perhaps, as an ardent Whig politician and supporter of Henry Clay, but possessed of a very creditable military record, died on Monday, at the advanced age of eighty-eight years. The death of Frederick W. Gunn, at Washington, Conn., last week, should also be chronicled. Mr. Gunn had made a recognized reputation as a teacher and as an anti-slavery advocate. Among other deaths during the week were those of ex-Chief Judge Seymour, of Connecticut, and ex-Judge Seth Ames, of the Massachusetts Supreme bench.

FOREIGN.

At a large meeting at Belleville on the 16th instant M. Gambetta was prevented by the hooting and generally unruly conduct of his audience from delivering his third and last oration of the campaign just closed. Great preparations had been made by the Republican committee to ensure the success of the occasion, and a gathering of several thousands assembled in response to invitation by ticket. The Intransigeants, however, had packed enough of their followers into the hall to make speaking impossible, and as soon as M. Gambetta entered he was greeted with a storm of groans and hisses, as well as cheers. He made repeated efforts to make himself heard, but failed for the first time in his career. After a time he is said to have lost his temper and to have exclaimed, "You are cowards paid to act in this manner. You want to stifle discussion because you are unable to reply to our arguments. I shall meet you on Sunday. Justice will have its day." The next day the Radical Republican Committee denounced the interruptions at the meeting, and the *Temps* remarked: "M. Gambetta could not have a better electoral platform, as he is now the representative of liberty of speech and resistance to revolutionary violence."

On Sunday he did meet his opponents, and was very nearly worsted by them. He was a candidate in the two districts of Belleville, in one of which he was elected by a slender majority; the other is at this writing doubtful, Gambetta having a majority over his opponent, but not a majority of the poll if blanks are to be counted as ballots. In 1877 he polled about 13,300 votes against 9,400 this year. Clémenceau, Gambetta's former intimate, and present rival in popular influence, declares in *La Justice* that the result has put an end to "the policy of expedients, delay, and occult influences, and has mortally wounded M. Gambetta." The *République Française*, according to Paris despatches, admits the loss of its chief's prestige. *Le Soleil* says: "M. Gambetta's fall is not terrible, but only humiliating. It will lessen his authority, and put an end to the capricious making and unmaking of cabinets."

The elections generally resulted in an overwhelming Republican triumph. Out of 547, 483 members are elected, there being a necessity for a second ballot in 64 instances. Of these 483 the Republicans have 403, leaving but 80 for the Bonapartists, Legitimists, and Orleanists to divide between them. The total Republican gain is 58. The 403 are divided as follows: Republican Union, 187; Left, 157; Left Centre, 37; Extreme Left, 25. The defeat of the Bonapartists is called "the great feature of the election." In Paris one moderate, thirteen advanced Republicans, and nine Irreconcilables are elected, four second ballots being necessary. Of the old Chamber 303 of the Left and 61 of the Right have been returned. Among them are Ministers Ferry and Cochery, Mgr. Freppel, M. de Choiseul and M. de Marcère. M. Keller, the celebrated Clerical, was defeated in the Haut-Rhin Department. M. Clémenceau was successful in Arles as well as in Montmartre. De Cassagnac is among the Bonapartists returned. There was but one disturbance reported, three persons being arrested in Turcoing for breaking windows.

In Spain, where the elections were also held on Sunday, the Government candidates were almost universally successful. The next Cortes will probably stand as follows: Liberals, 280; Moderate Republicans, 14; Independent Democrats, 9; Radicals, 12; Conservatives, 35—the parties represented by Sagasta, Castelar, Moret, Zorilla, and Canovas del Castillo, respectively. The followers of Castelar and Moret will support the Liberal Government against the Radicals and Conservatives, which gives the Sagasta Cabinet a clear majority of 256. Señors Canovas del Castillo and Romero y Robledo obtained two minority seats by a vote of 1,450 against 3,000 polled by the Ministerialists. According to report, the Conservatives had arranged for a different result, at least in Madrid, two hundred and fifty persons having been bribed to vote successively under false names in every district of the capital for the Conservative candidates. The Governor of the city made a sudden seizure of the conspirators' false certificates and voting papers, and warrants were issued for persons of rank as well as others, and two hundred arrests made forthwith. The despatch which reports this plot declares that "the fraud was so ably prepared that all the participants were brought from the country and secreted under the care of the Conservative agents." In these circumstances of course "the press protests absolute ignorance of such attempts at fraud." Indeed, "the opposition papers of all shades of opinion" just before the election were complaining of "Government pressure and undue influence," and Señor Canovas del Castillo only predicted the election of fifty Conservatives.

The British House of Lords accepted the amended Land bill on the 16th inst., and it received the royal assent on the 22d.

At the meeting of the Land League last week subscriptions of £783 were acknowledged, of which £500 came from Australia. On Friday Mr. Forster made an analysis of the League's funds as follows: Receipts this year, £10,707, of which £4,800 are from the *Irish World*; other American subscriptions, £4,543; Great Britain, £81; Ireland, £162. These figures are impugned by the *Irish World*, which says it sent £20,000 itself. Mr. Parnell attacked Mr. Forster in the House on the 17th, alleging that the Coercion Act had not been administered in accordance with Ministerial pledges. The debate became general, but was brief. On Thursday Mr. Forster replied at length, and was followed by Mr. Gladstone, the House refusing to agree with Mr. Parnell by a vote of 83 to 30. The *Times* regrets the Government announcement during the debate that the time for releasing the "suspects" has not yet arrived. On Saturday Mr. Parnell moved the release of Davitt, and Sir William Harcourt made what is described as one of his unwise speeches. Only nineteen members voted for the motion, but the *Pall Mall Gazette* says, "The Government could hardly have come worse out of a debate." It is also reported that, though there will be no general release, Father Sheehy, Mr. Kettle, and some six other prisoners will be liberated before Parliament rises.

Lord Dufferin has made "serious representations" to the Porte in favor of reforms in Armenia, according to an announcement by Sir Charles Dilke in the House of Commons.

A conference of the Association for the Reform and Codification of the Law of Nations convened at Cologne on the 16th instant, and held daily sessions until Saturday last, when it adjourned. The subjects discussed were: "Public International Law," "International Commercial Law," "International Maritime Law," "Arbitration," "Disarmament," and so on. "Assassination" was excluded by resolution from the political category.

The Grand Council of Zurich having prohibited the Socialist Congress announced to be held there in September, the Socialists have issued an address saying they have lots of dynamite, and will begin with Switzerland. The ensuing conflagration will "burn up the world."

Petroleum springs have been discovered near Hanover, which has created a sensation and a hope that Germany will no longer need to import this oil. Last year she imported 2,703,109 gallons of raw and 64,979,932 gallons of refined petroleum from this country.

An anti-Semitic riot occurred in Stettin last week, and forty persons were arrested. The damages at the recent outbreak in Schievelbein, Pomerania, will reach 150,000 marks.

GROUNDLESS FEARS.

The precarious condition of President Garfield during the past few days has again caused people to ask themselves what is likely to happen to the common weal in the event of his death. While no one can point out any particular harm to material interests as either a necessary or a probable consequence of the fatal termination of his illness, there is so general an apprehension of something baneful to the body politic that business shrinks as before a coming blast, and men go to their daily vocations with a vague sense of approaching calamity—something over and above the sorrow which touches the heart—some unexplained fear which beclouds the mind and gives a deeper hue to our sympathy for the suffering chief magistrate.

Yet Presidents have died in office before. Once this calamity overtook us in the midst of the greatest commotion of the century, with a million of men under arms, with a public debt nearly double its present proportions, and with problems of unknown magnitude, both political and financial, to be solved in the crucible of universal suffrage. The person who then succeeded to the powers and duties of the President was a man of imperfect education and stubborn temper, reared in the midst of slavery, and though born a freeman, yet born to most of the social disabilities which appertain to the condition of slavery. He was not destitute of patriotism, but this phrase, as he understood it, meant anything rather than government according to the wishes of the majority constitutionally expressed. He soon found himself without a party either in Congress or out of it, and his want of training, and the badness of his early surroundings, prevented him from gaining or creating one. Instead of accepting the situation he defied it. Instead of accommodating himself to facts he threw himself against them, and was in a political sense dashed in pieces. He not only ruined himself but all those, few in number, who adhered to him. Even Mr. Seward, who entered office at the beginning of the war with a larger political capital than any other man of his time, came out with scarcely any personal following. Apparently every evil thing that could happen as a consequence of the President's death did happen. The "ship of state" was sailing three years or more in one direction, while the "man at the helm" was steering in another direction. In short, the worst fears of everybody were more than realized. Nevertheless the country prospered during the whole of Andrew Johnson's administration—even while he was under impeachment. That impeachment trial, by the way, was perhaps as severe a test of our institutions as they had ever undergone in time of peace. The country prospered through it all, and the public debt was reduced by honest payment, although the President recommended in a solemn message to Congress that the whole of t be repudiated at the end of sixteen and one-half years.

Looking at the past we have no occasion for despondency, even though our worst fears as regards President Garfield are realized. There is nothing in the present condition of the country that can be called critical, as compared with the situation in 1865. Nor have we any reason to suppose that Mr. Arthur would fail to appreciate the responsibilities of his office, and the duties he would owe to a people so lamentably bereft of the President of their choice. There is more reason to apprehend that the confidence necessary to a successful administration would be withheld from him without much reference to his own merits and capabilities; in other words, that he would not have a fair chance. He would enter upon his office amidst almost universal regret that he was there at all. His immediate friends would be looked upon by many as a faction, seeking to make profit out of a stupendous public calamity. His enemies would take courage from the general grief. The utmost conservatism on his part would be necessary to ward off the most unjust aspersions. Circumstances have conspired to put him in a hostile attitude towards President Garfield—or rather, having put himself in such an attitude, circumstances have conspired to put this fact in a conspicuous light and to make it more irksome for him than for any former Vice-President to undertake the duties of the higher office. His pathway would be a thorny one at best, and could only be made tolerable by keeping himself as nearly within the lines marked out by President Garfield as circumstances might permit.

We believe that these facts will have due weight with him. He is as different from Andrew Johnson in temperament and training as the circumstances of the country are different from those of Andrew Johnson's time. He is a man of education as well as of affairs, of an amiable and yielding disposition, and hence more likely to be impressed with the responsibilities of his new station, and the fatality through which it fell to his lot, than a person of narrow mind and headstrong temper would be. The duty of the people to him in the event of President Garfield's death will be no less imperative and binding than his duty to them. He will be entitled to the forbearance and confidence due to one who has neither sought nor expected the Presidential office, but who assumes it in obedience to law and under very trying circumstances. Mourn as all may and must for our elected chief if he be lost, the country has still higher claims upon us. To see that the republic receives no detriment is the first command laid upon every citizen. The sobriety and reasonableness which carried us through the crisis of a disputed Presidency will not fail us in the emergency now so painfully apprehended. Indeed, there would be no occasion for these words but for the long, lingering strain upon public feeling which has produced a morbid and unwarranted apprehension of evils which nobody can define, but which manifest themselves in the haunts of traffic as well as in the walks of social life, and are felt the more keenly, perhaps, because they are undefinable.

ASSASSINATION AND THE RIGHT OF ASYLUM.

Mr. David Dudley Field moved a resolution at the Conference held last week at Cologne, providing for the exclusion of assassination from the category of political crimes in all extradition treaties, and for the denial to assassins of the privilege of asylum. The fact that the resolution was carried with but little, if any, discussion, by acclamation, shows what a deep impression the recent attempts on the lives of high political personages have made even on the minds of the very reflective class who frequent conferences on international law. Mr. Field is further reported by the telegraph as having endeavored to stimulate them into decided measures by mentioning that there was a strong feeling in America that "assassination should be stamped out." In this he is probably correct, but the existence of this feeling is quite compatible with the existence also of strong disinclination to disregard any of the old precautions against giving the aid of American law to any sort of tyranny or oppression. We must not lose sight either of the past or the future of free government because political assassins happen to be just now unusually active, and if Mr. Field's resolution is reported correctly the members of the Conference seem to have done so.

This will, we think, appear plainly enough if we ask ourselves and try to answer the question why we refuse to surrender political criminals. What is the sentiment which has made England and America for ages so reluctant to give up to his own government a man who has tried to overturn it? We refuse to do so even when we think the attempt unjustifiable and the government a very good one, and the reasons are two in number: the first is that we assume that any attempt to overturn a government grows out of some sort of discontent of the justifiability of which no foreigner is competent to judge. Inasmuch as if the attempt had succeeded we should have acknowledged the rebels to be respectable men, and have treated them as the lawful rulers of their nation, when the attempt fails we infer nothing from the failure except that those who made it had not sufficient physical force at their command. We do not infer that they were in any way morally culpable. The morality of their acts, we say, is not our affair for the purposes of any official action; this must be settled, for all practical purposes, by their own countrymen, who have the materials for a moral judgment under their hand. We refuse, therefore, to treat rebellion as a crime, no matter how much atrocity in the way of killing and burning may have marked it. We have Mègy here among us, who was the prime mover in the murder of the Archbishop of Paris and others in the Rue de Haxo during the Commune in 1871. To most Americans in their capacity as private citizens, he is a villain who ought to have been shot; to American voters, he is a runaway politician of whose merits or demerits either in war or peace they have no adequate means of forming an opinion.

The second reason why we refuse to surrender political criminals is that, guilty or innocent, we fear they will not in their own country receive a fair trial. They are, by the very fact of being political criminals, enemies of the government which puts in motion the legal machinery by which they are tried. The judges and the bar, if there is a bar, are likely to be prejudiced against them. The trial is

likely to be hasty, and to be conducted under the influence of a foregone conclusion. If found guilty they are likely to be punished with extraordinary severity, because they have not only disturbed the public peace but angered men in power and hurt their dignity.

Now it may be said that assassination is wrong under all circumstances, and that the assassin is, therefore, an enemy of the human race like the pirate, and that nothing can ever justify the murder of the chief officer of a government. This is doubtless a safe principle for all communities with which international law has any concern. The rise of a gloomy despot like Tiberius or Caligula, or like the Sultan or the Dey of Algiers at the beginning of this century, without a conscience and with unlimited military force, is not likely, perhaps is hardly possible, in the modern civilized world. The Emperor Nicholas made the nearest approach to it which our age is ever likely to see. So that the question whether a man whom such a ruler was sending to the block or forcing to walk barefooted to Siberia because he did not like him, would be justified in saving himself and delivering his country by murdering the tyrant, is not a practical question. We are not likely to be ever called on to answer it. We can safely say with Mr. Field and the International Conference, that political as well as other assassination is wrong, and ought to be "stamped out." But it does not follow from this that we ought to exclude assassination from the category of political crimes, or surrender to his pursuers every person accused of assassinating or attempting to assassinate a ruler. No amount of Nihilist or Communist savagery should lead us to forget the fundamental principles of our own jurisprudence. A political fugitive is not in our eyes a person who has committed a political or other crime. He is a person *accused* of having committed it by political enemies. When we agree by treaty to surrender non-political criminals, we agree to surrender, not guilty persons, but persons against whom a good *prima-facie* case is made out, and what we surrender them for is not punishment but trial, and we surrender only those who we think, from the nature of the accusation against them, and what we know of the government of the country claiming them, are likely to have a fair trial. Now, the reasons drawn from the improbability of a fair trial are even stronger for not surrendering persons accused of political assassination than for not surrendering persons accused of other political crimes. A person accused of assassination is likely to be pursued with tenfold greater virulence and unscrupulousness than a person accused of rebellion or sedition. He is not sure by any means of a fair trial. He is not sure even of any trial at all. During the past two years thousands of persons have been subjected in Russia to horrible punishments not only without trial or investigation, but often without being made acquainted with the charge against them. If we surrendered an alleged political assassin to the Russian Government at this moment we should have no guarantee whatever that he would have his offence fairly proved against him, or that if it were not proved he would be liberated, or indeed that he would ever be heard of after he had landed.

No horror of assassination, and no brutal confession of fellows like Hartmann, can ever make it safe or sound for us to aid in upholding, directly or indirectly, such a system as this. We can never enter into any treaty for the indiscriminate surrender of criminals to a Power which, like Imperial Rome, acknowledges no law but the will of the Prince, or gives the force of law to whatever the Prince wills. We do not allow our citizens, no matter how black their offences, to be tried by the Turks, Chinese, or Japanese, or any other nation which we recognize as in any degree barbarous; because we think they will not receive fair play, or may, if convicted, be subjected to cruel and unusual punishments. We trust civilized Christian nations, though they may not possess our jurisprudence, so far as to surrender to them persons accused of certain offences, which we recognize as *mala in se*, and which we think will be duly investigated by the pursuing country without passion or prejudice. But we trust no nation to investigate political crimes without passion or prejudice, no matter how pure its administration of justice may be, especially no nation with a despotic government. If we are to make an exception to this rule in the case of assassination it ought not to be made in favor of any country the government of which is above the law, and which, like Russia or Turkey, is ruled by the Prince's will. Neither our laws nor our morality allow us to treat any man as guilty until he has been proved to be so under rational rules of evidence. We surrender criminals, therefore, assassins as well as others, for trial, not for punishment simply; and we surrender them to judges, not to enemies. We do not give the thief up to the man whom he has robbed, but to the officers of justice. We cannot give even an assassin up to the man whose life he has attempted, even if he be a sovereign, let attempts on the lives of rulers be never so terrible or so frequent. We cannot, in short, surrender any criminal to any states that are not law-governed, or in which the meanest man can be deprived of his life or liberty by an executive order.

NEWSPAPER HOAXES.

PRACTICAL jokes have seemed for a long time to most people to represent an obsolescent if not almost extinct form of humor. The art of playing practical jokes upon or hoaxing your friends was for a considerable time in English society recognized as an elegant accomplishment, which greatly added to any one's social attractions, like the knack of writing verses in albums, or singing "second," or sketching. It is hard for most people to understand nowadays how it was that this form of humor was once so much relished, or how the wags who made a habit of resorting to it got through life without more serious punishment at the hands of their victims than they seem to have received. Here and there a positive genius for hoaxing and practical joking seems to have been developed, and we cannot suppose that this could have been the case except in a thoroughly sympathetic atmosphere. The career of Theodore Hook, for instance, would not have been possible except in a society in which a great many people were always trying to do what Hook himself was so successful at. The great popularity which the heroes of Lever's and Marryat's novels once enjoyed can only be explained in the same way. They seem now rather noisy and underbred persons, whose idea of wit and humor generally involves an ingredient of brutality and insult.

Most people regard the change which has come over the world in this respect with satisfaction, and it is often pointed to as an evidence of our superior refinement of manners. How much more refined our manners are on the whole than our grandfathers' and grandmothers' may be open to question; but the low estimation in which practical jokes and hoaxes are nowadays held must, in part at least, be attributed to the decline of mere animal spirits, which is so marked when we contrast the society of to-day with that which, roughly speaking, held possession of the world before the period of railroads began.

Curiously enough, however, this practice, though tabooed by society, and nowhere more tabooed by society than in the United States, has made its appearance again in an unexpected quarter, where it is having new and remarkable development. Journalism affords the opportunity of playing jokes upon and hoaxing not mere private victims, but the public itself; but it is only recently, and chiefly in this country, that any disposition has been shown to take advantage of it. In England and on the Continent the view taken of journalism makes the systematic hoaxing of the public impossible. According to the conservative notions prevailing there on the subject, the business of a newspaper is to concern itself only with facts and events, and to comment upon them. According to our more advanced ideas, a newspaper need not confine itself to actual facts and events, but is required to publish anything, from a rumor to an absolute falsehood, which, as the matter is generally put, is at the time "exciting popular interest." But as one of the chief means of getting up a sudden "excitement of popular interest" is to be found in the machinery of the newspaper itself, it is obvious that a wide field is opened both for invention and humor as well. In many respects the public form a better sort of victim for this form of humor than private persons could ever have done. Men taken in the mass are more credulous than the same men taken separately, and, moreover, the tradition that journalism is a serious business, of which imposition upon the public cannot be treated as a recognized branch, greatly adds to the zest of the occupation, as it assures the perpetrator of the hoax of a receptive condition of mind on the part of his victims.

In the earliest stage, the newspaper hoax was little more than what sailors would call a "yarn," and was chiefly perpetrated in the Western press, in a spirit of pleasant and harmless rural exaggeration. The habits of such domestic animals as the dog or cat, or such wild ones as the rattlesnake, were the common material, and in process of time they have come to be generally recognized as such, so that no anecdote relating to them, however interesting or curious, is believed by the really experienced reader. In this early period to which we refer it was only at rare intervals and at considerable risk to himself that the journalist perpetrated hoaxes relating to serious subjects. The hoax purporting to give an account of an Englishman's adventures on a railroad journey through the South, in the course of which he was the victim of some and witness of numberless other atrocities supposed to illustrate the social con-

dition of the South—the conductor, among other things, stopping the train for half an hour, with the complete approval of the passengers, in order that two of them might have an opportunity to fight a duel—led to a serious outburst of indignation in England, and to the necessity of elaborate explanation in the United States, to say nothing of a most profound resulting conviction in both countries that neither had any real sense of humor.

Serious matters do, however, present to the journalistic humorist a much more interesting field than that of ordinary anecdote or narrative about indifferent matters can ever afford, and accordingly within the past few years there has been a growing disposition to extend it to them. Not only in domestic but in international concerns the newspaper hoax now begins to play quite an important part, and internationally it is at its best, because, as we have said, English and European newspapers assume that public questions will be treated in newspapers seriously, and there is nothing so exquisitely ludicrous as to see the victim of an elaborate hoax seriously weighing and considering it, while those who are in the secret are in roars of laughter. Just at present nihilism and dynamite seem to furnish the best materials for jokes of this kind. Sometimes of course these are too transparent to be successful, but generally they contain some facts which are really true, and this makes the deception or at least confusion of the public victim almost certain. The account published by a Western newspaper of a visit to a local dynamite brick factory, the products of which were to be used for the destruction of London, is a recent illustration of bungling hoaxes of the first class. The bricks were to be shipped to England, and simultaneously all the Fenians were to cross the ocean and set up brick-yards. They were then to take Government contracts at the lowest rates, and were to go to work with their bricks upon all the public buildings in London. As an instance of the second kind, who can tell what the basis of fact is in the Hartmann case? or the story of the torpedo ram? or the plot to blow up English passenger vessels? or to kill "objectionable members of the royal family"? or, to return to domestic subjects, the search for Stewart's bones? Of course the public in the long run finds out that it is victimized; but as long as journalism continues to exist, it will continue to offer itself as a ready victim. Individuals here and there attempt a feeble sort of retaliation by denouncing newspapers as mere engines for the distribution of fiction, and by affecting not to believe what they find in them; but their incredulity is just as apt to be wrong as their credulity, and as they are dependent upon the press for information they are really helpless. Pity for their defenceless condition is the only feeling to which they can appeal, and pity for the victim of a hoax is a feeling rarely shown by its perpetrator.

THE LATE DEAN STANLEY.

LONDON, August 6, 1881.

THE last seven months have witnessed the disappearance from England of a greater number of famous names than the seven years that had preceded. George Eliot, Thomas Carlyle, Lord Beaconsfield are now followed by Dean Stanley, who, if less great in literature than the two former and less known to the whole world than the last, was in English life and English society quite as characteristic and interesting a figure, and scarcely less known and probably as much admired on your side the ocean. England is the only country in Europe where such a career as his is possible—where a man may hold a great ecclesiastical position and yet be regarded by the nation not specially as an ecclesiastic, but rather as a distinguished writer, an active and influential man of affairs, an ornament of social life. Bishop Wilberforce was all these things, but then he was also conspicuously an ecclesiastic, with so many clerical traits about him that he was distrusted by a large part of those who watched him and admired his gifts, whereas no one ever accused Dr. Stanley of being warped by his profession. His personal character was even more peculiar and unique than his position. No one could have found any one else like him, or can now imagine any one likely to arise who will recall him, or fill the place which he has left. It was rather in the intensity of his nature and the nobility of his sentiments than in either the compass or the strength of his intellectual faculties that the charm and the force he exercised lay. In some directions he was curiously deficient. He had no turn for abstract reasoning, no liking for metaphysics or any other form of speculation. He was equally unfitted for scientific enquiry, and could scarcely work a sum in arithmetic. He had absolutely no ear for music, and very little perception either of color or of scent. He learned foreign languages with difficulty and never spoke them well. He was so short-sighted as to be unable to recognize a face across the street. He was apt to be heedless and inaccurate in details. Yet with these shortcomings he was a born traveller — went everywhere, saw everything and everybody worth seeing—always seized on the most characteristic features of a landscape, or building, or a person, and described them with a freshness and penetration which made one feel as if they had never been described before. Of the hundreds who have published books on the Desert of Sinai and the Holy Land, many of them skilful writers or men of profound knowledge, he is the only one who is still read and likely to continue to be read, so vivid in color, so exquisite in feeling, are the pictures he has given.

The largest and best part of his literary work was done in the field of ecclesiastical history, a subject naturally congenial to him, and to which he was further drawn by the professorship which he held for eight or nine years at Oxford. It was work which critics of a school like Mr. Freeman's could easily dissect, for, as has been remarked already, there were many small errors scattered through it; and the picturesque method of treatment he employed sometimes passed into scrappiness. But it had some great and rare merits which have not received from professional English critics the whole credit they deserved. In all that Dean Stanley wrote there appears a certain largeness of view, a sense of the unity of history, of the constant relation of past and present, of the similarity of human nature in one age and country to human nature in another, of the permanently valuable truths which history has to teach. Nothing was too small to attract him, because he discovered a meaning in everything, and he was therefore never dull—always lighting up his narrative or his reflections by some happy anecdote. With this he possessed a very keen eye, a poetical eye, for human character, and a power of sympathy that extended itself even to those whose principles and policy he most condemned. Herein he was not singular, for the sympathetic style of writing history has become fashionable among us. What was remarkable in him was that his sympathy did not betray him into the error of extenuating moral distinctions. His charity, wide as it was, never blunted the edge of his justice, nor prevented him from reprobating the faults of the very personages who had touched his heart. There was one sin only he had little historical tolerance for: it was the sin of intolerance; and one only which ever led him to speak severely of any of his contemporaries: that of untruthfulness.

His fondness for studying human character happily coincided with an abundance of dramatic feeling to make his pictures of historical scenes brilliant and effective. It may indeed be maintained that nothing was wanting to make him a great historian but more leisure and specialization. He was throughout life keenly interested in every current ecclesiastical question, usually ready to bear a part in discussing it, either in the press—for he sometimes wrote in the Edinburgh *Review*, and often sent letters to the *Times* under the signature of "Anglicanus"—or in Convocation, where he had a seat during the latter part of his career. These constant interruptions not only delayed the progress of his studies, but gave to his compositions an air of haste, a certain want of system and of finish. The habit of rapid writing for magazines or other ephemeral purposes is telling injuriously upon all our literary men: it told the more upon him because he had also a great deal of rapid work to do in the production of sermons; and sermon writing breeds a tendency to the making of rhetorical points, and the subordinating of sober enquiry to the enforcement of some impressive moral lesson, which affects even the wisest and most earnest writers. Yet when one considers how much a historian gains, not only from an intimate knowledge of his own time, but also, and even more largely, from playing an active part in the events of his own time, from swaying opinion by his writings and his speeches, from sitting in assemblies and organizing schemes of attack and defence, one hesitates to wish that Dr. Stanley's time had been more exclusively given to quiet historical investigation. The vividness of his historical presentations is in great measure due to the sense he constantly carried about with him of moving in history and being a part of it. He never mounted his pulpit in the Abbey or walked into the Jerusalem Chamber when Convocation was sitting without feeling that he was doing something which might be recorded in the annals of the country. Nor was this personal vanity or self-importance; he felt just the same about other people, and would describe to his friends some doing or saying of a contemporary statesman or ecclesiastic with the same eagerness, the same sense of its being a fact to be noted and remembered, as the rest of us feel about a personal anecdote relating to Cromwell or Washington.

His sermons, like nearly all good sermons, will be inadequately appreciated by those who read them, not only because they were not meant to be read, but also because the best of them gained so much by his delivery. The present writer asked him, not long after he had been promoted to the Deanery of Westminster, whether he found it easy to make himself heard in the enormous nave of the Abbey. His frame, it ought to be stated, was spare as well as small, and his voice thin. He answered: "That depends on whether I am interested in what I am preaching. If the sermon is on something I care greatly about I can fill the nave; otherwise not." When he had got a worthy theme, or one which stimulated his own emotions, the power of his voice and manner was wonderful. His tiny body seemed to swell, his chest vibrated as he launched forth glowing words.

In civil politics he was all his life a Liberal, belonging by birth to the Whig aristocracy, and disposed on most matters to take rather the Whiggish than the Radical view, yet drawn by his popular sympathies towards the working classes and warmly valued by them. One of his

greatest pleasures was to lead parties of them round the Abbey on public holidays. However, he never took any active part in general politics, reserving his strength for those ecclesiastical questions which seemed to lie more directly within his province. Here he had two leading ideas: one, that the Church of England must at all hazards continue to be an Established Church, in alliance with the State and recognizing the Crown as her head; the other, that she must be a comprehensive church, finding room in her bosom for every sort or description of Christian, however much or however little he believed of the commonly accepted dogmas. This latter view exposed him to the fire not only of those who, like the High Churchmen and the Evangelicals, attach the utmost importance to these dogmas, but also to that of the opposite party, who hold that a man ought not under any circumstances to sign formulas or use words which do not express his own convictions. Of course Dr. Stanley would have greatly preferred that the laws of the Church of England should be so relaxed as to require little or no assent to any doctrinal propositions from her ministers, and he continued to hope that this might be ultimately won. But he conceived that in the meantime it was a less evil that men should be technically bound by subscriptions they objected to than that the National Church should be narrowed by the exclusion of those whose belief fell short of her dogmatic standards. It was remarkable that not only did he maintain this unpopular view of his with unshaken courage on every occasion, pleading the cause of every supposed heretic against hostile majorities with a complete forgetfulness of his own peace and ease, but that no one ever thought of accusing him of any selfish or sinister motive in the course he took. It was known that his own opinions were what nine-tenths of the Church of England would call unorthodox. But the honesty and uprightness of his character were so patent that nobody supposed that this fact made any difference, or that it was for the sake of keeping his own place that he fought the cause of others.

As ecclesiastical preferment had not corrupted him, so neither did the even more dangerous influences of royal favor. It says little for human nature that so few people should be proof against what a philosopher must consider the contemptible fascinations of a court. His simplicity, his elevation of mind, were proof. Not only did he never refer to his own relations with the reigning family by way of boasting, he never seemed to be in any way altered thereby; to care a whit more for the pomps and vanities of power or wealth, a whit less for the friends and the causes he had learned to care for in his youth.

In private life the two main intellectual impressions one received from him were of an imagination wonderfully active, yet rather active than powerful, and of an extraordinary eagerness for knowledge. His delight in visiting a new country was like that of an American youth landing for the first time in Europe. A friend met him just a year ago at a hotel in the north of England, and found he was going to see the Isle of Man. He had mastered its geography and history, and talked about it and what he was to explore there as one might talk of Rome or Athens. When anybody told him an anecdote his susceptible imagination seized upon points which the narrator had never noticed, and discovered a whole group of curious analogies from other times or countries. Whatever you planted in this fertile soil struck root and sprouted at once. Morally, he impressed those who knew him not only by his inexhaustible kindness, but by a remarkable purity and nobleness of aim. Nothing mean or small or selfish seemed to harbor in his mind. You might think him right or wrong, but you never doubted that he was striving after the truth. He was not merely a just man; he loved justice with passion. It was because justice, goodness, honor, charity seemed to him of such paramount importance in life that he made little of doctrinal differences, having perceived that these virtues may exist, and may also be found wanting, in every form of creed or philosophy. For friendship he had a genius. When the Convocation of the Anglican Church met at Westminster, it was during many years his habit to invite a great number of its leading members to the deanery—the very men who had been attacking him most hotly in debate, and who would go on denouncing his latitudinarianism till Convocation met again. He delighted to move about among them, introducing opponents to one another, just as in all his parties he loved to bring the most diverse people together; so that some one said the only people you met at the deanery besides statesmen and duchesses were poor curates and briefless barristers. His own cheerfulness and animation, although to some extent revived by his visit to America and the reception he met with there, were never the same after his wife's death in 1876. But the sweetness of his disposition and his affection for his friends knew no diminution. He remembered everything that concerned them; was always ready with sympathy in sorrow or joy; and gave to all alike, high or low, famous or unknown, the same impression, that his friendship was for themselves, and not for any gifts or position or worldly advantages they might enjoy. The art of friendship is the greatest art in life: to enjoy his was to be educated in that art. Y.

THE LATE FRENCH CHAMBER.

PARIS, August 5, 1881.

THE Chamber of Deputies, which has just ended its session, was elected after the dissolution of the 16th of May, 1877, a date which will not be forgotten in France for a long time. It is the first time since 1848 that France has had a Chamber elected by universal suffrage and with a Republican majority; and it must be remarked that the Chamber of 1848 was constituant, as it was assembled after the Revolution of 1848. The Chamber elected after the 16th of May was not constituent; it as well as the Senate had only legislative functions.

If we look back over the last few years, and undertake to describe the work of this first Republican Chamber, we are somewhat embarrassed. It was chosen as a protest of the electors against Marshal MacMahon's decree of dissolution; but it was really chosen without a programme. Its programme, if you like, was purely negative. M. Thiers, who was still alive at the crisis of the 16th of May, had determined that there should be no programme. The Republican deputies, to the number of 363, who formed the majority dismissed by Marshal MacMahon, had not had time to organize themselves. The 363 were a mixed army, which was composed of the admirers of M. Thiers, of the followers of Gambetta, and of the Radicals who clasped hands with the Communists. They all fought the battle of the 16th of May together, and they won it. They came back to Paris with the spirit of the lion seeking whom he may devour. They could not get rid of Marshal MacMahon at once, as he had only ordered the dissolution with the consent of the Senate; but the new Cabinet soon placed him in a situation which was too difficult for him, and he took the first opportunity of resigning. Gambetta, during the electoral campaign, had said that after the popular verdict the President would have to "se soumettre ou se démettre." The President did both—he submitted and he resigned.

The nomination of M. Grévy gave to the Chamber the whole weight of the political responsibility, as he at once took the position of a constitutional President, expressing no opinion on any question, accepting Ministry after Ministry from the hands of the majority. He has ever since preserved this position. He is at the Élysée very much what King Leopold is at the Royal Palace in Brussels: he may have opinions in the circle of his friends, but before the country he has none, and he stands like an enigmatic arbiter.

What use did the Chamber make of the power thus placed in its hands? It first vented its wrath against the monarchical deputies; it appointed a Parliamentary committee which reported on all disputed elections, and ninety-three members of the new Opposition were mercilessly invalidated. This invalidation *en masse* left the Opposition almost helpless. It had no great leader; it has never been able to act as a check on the majority. It was, besides, like all beaten armies: there was no union among the Conservatives; they accused each other of their common defeat.

There never was a better opportunity for a Republican Chamber; it was in reality as omnipotent as if it had been constituent; it could organize the country on a sound Republican basis, reform everything, correct everything. The presidency of the Chamber was given to Gambetta, a comparatively young man. He became the great ruler of opinion; in the Chamber he made and unmade Cabinets. His will became the will of the majority. If we look back, however, on the last four years we cannot find that the Chamber did much positive work. The deputies seemed especially busy at first in getting rid of all their enemies; each of them had a sort of proscription list; every administration was disembarrassed of all the enemies, or even of the doubtful friends, of the republic. There never had been before such a holocaust of functionaries. At one time it was thought necessary to prosecute the ministers of the 16th of May. A long inquest was made on all the acts of their administration; but it was found, after all, that they had only committed such acts as have always marked electoral campaigns in France. The dissolution in itself had been legal, and the ministers had not exercised on the electoral body an extravagant degree of pressure, since, with all the arms which are given to the Government in a centralized country, they had been signally defeated.

The Chamber, however, wanted to assert its strength, and it soon assumed what will remain in history its chief characteristic—it became violently anti-clerical. "Le cléricalisme, c'est l'ennemi," said Gambetta at Romans, and clericalism became the chief enemy of the Chamber. It seems extraordinary to a witness of events in France since 1870 that the Republican party should have begun this curious war against clericalism, but its younger leaders are men imbued with positivist or materialistic ideas—doctors, medical men, philosophers. They have a curious aversion to the Church, which they look upon as the instinctive and natural enemy of all progress. At the same time, they dare not make open war on the Christian religion; they know that ideas cannot easily be conquered by laws. They must feel that the great mass of the French nation cannot in a single day be converted to the ideas of the new philosophical school; that the peasant especially (and the peasants form the majority of electors) living in his village still regards the Church with a feeling of reverence, of gratitude, and of awe. The leaders of the movement made a distinction

between religion and clericalism, between the common clergy and the congregations. They found in the old legislation of France a whole arsenal of regulations, which they revived.

The war against the Jesuits and the congregations will remain the chief, I may almost say the only, exploit of the Chamber which is now disappearing. This war, in its various phases, filled its existence, and gave a certain unity to all its efforts. At first the Chamber merely attempted to deprive the Jesuits and the members of all the non-recognized congregations of the right to open schools. But the opposition of the Senate to the famous Article 7 induced the Chamber to redouble its hostility to the congregations; they were not only deprived of the right of teaching, but of the right of existence. Whatever may be thought of the rights of the state in matters of education, it will never be easy to defend the conduct of those who, amid the peace of the nineteenth century, began new *dragonnades* and sent soldiers against the convents. In Paris the forcing of the doors of the congregations was done at night, and the painful scenes which accompanied these executions will not soon be forgotten.

An impartial observer of facts must acknowledge, however, that all these acts, being covered by the authority of the administrative tribunals, sanctioned by old decrees, and supported by the Chamber, did not create a profound disturbance in the country. Those who suffered were the devout Catholics only and the true Liberals, who believe in the power of truth and have a horror of force. The country at large remained indifferent; the peasants saw no change in their villages; the Pope, animated by a spirit very different from that of Pio Nono, did not incite the French clergy to rebellion—on the contrary, he attempted to negotiate with the French Government. He reminded the clergy that the Church lives in a higher sphere than governments; that monarchies, republics, constitutional legislation are worldly matters; that Cæsar must receive what is due to Cæsar in all times and in all countries. The submissive character of the French clergy was well shown, and the persecutors of the congregations must themselves have been astonished to find how utterly indifferent the French clergy was in reality to merely political questions. Nevertheless, the movement which had begun could not be stopped, and the anti-clerical spirit would be satisfied. The *laïcisation* of all the schools, high and low, became one of the objects of the leaders of the Chamber. The non-recognized congregations had been suppressed by a single decree; the recognized teaching congregations were *de facto* turned out of many places; the schools of Paris, with one or two exceptions, are now all lay schools. The Chamber passed a final law making primary education gratuitous and obligatory, and separating primary education from religious education.

If we look at the action of the Chamber in all other matters, we find but very little. A new law on the magistracy was talked of for three years, but this law, which was to take away the irremovability of the judges, was not even begun. The Chamber manifested a great desire to take all the railways of France out of the hands of private companies and to turn them over to the state; but this plan has now evaporated. The Chamber merely ordered the building of many sections of railroads by the state. Half this network is now finished, and when the whole is done nobody knows what will be the fate of the lines built by the state. In all likelihood the old companies will be obliged to work them. The Chamber was unable to finish a single commercial treaty with Italy or with England. Its spirit was somewhat, but not boldly, protective, and it could never make up its mind with any decision on matters connected with trade and industry. It was, in short, a defensive Chamber, with a negative character. It was elected as a protest, and it had in itself no great elements of creation. It simply ignored all diplomatic and foreign questions, and was found as submissive on matters which were not domestic as any Chamber ever was under the Second Empire.

CONSULAR PREROGATIVE IN THE LEVANT.

CAIRO, EGYPT, July 20, 1881.

Now that the civil-service and the "boss" systems are beginning to be pretty well aired in the United States, it may not be an altogether Quixotic attempt to call public attention to the situation in which a combination of these two systems has placed American citizens residing in the Levant. To be sure, there are not very many of us here, but we are constantly increasing in number. Perhaps only fifteen per cent. of us are native-born Americans. Some of us became citizens by serving in the Mediterranean squadron; some of us by residing for a short time in the United States, and not a few of us acquired United States protection by hook or by crook. As an instance of the hook-or-by-crook class, I may mention that several years ago the consul in Palestine sold more than three hundred United States passports to the highest bidder. The prices ranged from $1,000 to $75 apiece. The consul in question has since been removed from office, but the effects of his misdirected zeal for increasing American "trade" have not yet been effaced. This is, however, *Neben sache*. The essential fact is that we are here, and that the Government of the United States has recognized its obligation to govern and protect us; and when any one of our number comes into conflict with the local authorities the United States is obliged to come forward and say to the Sultan or to the Khedive: "An ill-favored thing, sir, but mine own." It is not *our* fault, however, that we are so unlovely. The fault lies with the civil-service system of the United States, and it must be borne in mind that the dramatic incidents of our case have nothing whatever to do with those principles in accordance with which we have a right to be governed.

Although last year "substantial justice" was rendered in the trial for murder of Mirzan, a naturalized citizen, yet the precedent which that case establishes for a United States minister to sit alone and without associate or jury to try an American citizen for a capital offence, is regarded by all Americans here as an unwarrantable usurpation of executive authority. What have we done that we should be liable to be tried by a tribunal more arbitrary than that of a drum-head court-martial (for *there* there must be at least three judges)? And how is it that the decision of an executive officer of the Government, who is merely incidentally clothed with judicial authority, can deprive us of rights and privileges which those of us who are native-born Americans have ever regarded as our sacred birthright? The action of the minister in disregarding the Constitutional provisions for trial by jury in capital cases was based upon his decision that the Constitution does not extend beyond the geographical limits of the United States. It would here be obviously impertinent to demonstrate the fallacy of this proposition by legal reasoning; but the distance by which Egypt is removed from American public opinion, and the importance of the principles involved, warrant your correspondent in stating that the three leading objections which Mirzan's counsel made to this proposition were neither answered nor even so much as alluded to by the prosecuting counsel or by the Ministerial Judge. These objections were:

First. The Ministerial Court was bound by the Constitution, because the treaty-making power (the President and two-thirds of the Senate) and the legislative power (Congress)—the only *raisons d'êtres* of the Ministerial Court—are both absolutely subordinate to the Constitution which created them; and neither of them possesses—nor both together—one iota of power that is not expressly granted to them by the Constitution. The treaty and the act of Congress are the mere agents, as it were, of the Constitution, and these agents cannot be greater than their principal, and they cannot authorize the executive or judicial branch of the Government to exercise a power which the Constitution itself has not granted (viz., to try a citizen for a capital offence without a jury), and much less can they authorize the executive or judiciary departments to do that which the *Constitution itself has in express terms prohibited them from doing.* (The Fifth Amendment to the Constitution declares that "no person shall be held to answer for a capital crime, etc., unless on a presentment or indictment of a grand jury," etc.)

Second. All executive and judicial officers of the United States are required to take an oath to support and obey the Constitution of the United States; and so long as they are acting in their official capacities they are not absolved from that oath by the mere fact of their happening to be outside the geographical limits of the United States.

Third. That if the minister has any judicial capacity whatever, it is as a United States judge, and the Third Article of the Constitution declares that all United States judges *shall hold their offices during good behavior.* That is, that they shall be irremovable *quamdiu se bene gesserit*, and that the President cannot displace them as he can the diplomatic and consular officers of the United States in the Ottoman dominions, who are consequently not qualified to act in a judicial capacity.

These three objections to the precedent established by the Mirzan case have never been answered, and, as they apply to the jurisdiction of our consular courts not only in the Ottoman Empire, but in China, Japan, Siam, and elsewhere, the matter should at an early day be urged upon the attention of Congress. Mirzan's death-sentence has been commuted to imprisonment for life, and this sentence he is now undergoing at Smyrna. The whole matter might be brought up again by an application for his release on a writ of *habeas corpus;* but, as he is utterly destitute of pecuniary means, the question in his case may be considered as finally settled.

One word as to the *personnel* of our consular system. Few persons are aware of the extraordinary authority vested in American and European consuls in the Levant. We have in Egypt a Diplomatic Agent and Consul-General, who is paid a fixed salary by the Government. We have besides a Consular Clerk, who is likewise paid for his services. These two gentlemen reside permanently in Cairo. We have also in Egypt a Vice-Consul-General and some dozen consular agents, who extend from Alexandria and Port Said up to Khartum. None of these officials receive any pay whatever from the United States. With the exception of one Englishman (the Consular Agent at Port Said), these gentlemen would all be Ottoman subjects were it not for the consular office which they hold under the United States Government. Public opinion, whether rightly or wrongly it is impossible to say, has connected the names of several of these United States consular agents with

some of the most notorious swindling operations that have ever been performed even in Egypt. These men, as a rule, possess large fortunes; they entertain most hospitably American tourists on the Nile, and it is always pleasant for the eye to rest upon the "stars and stripes" in an out-of-the-way Egyptian village; but would it not be well for the United States to remember that if services are worth having at all they are worth being paid for, and that it damages the prestige of the United States in the eyes of Europeans as well as of Turks and Egyptians when they see us accepting as a gift consular and even diplomatic services which other countries pay for? A wealthy Chiote merchant is our consular agent in Alexandria. Under the existing system it would be impossible to find a more worthy incumbent, or one who would be willing to spend out of his own pocket some $1,500 per annum solely for the *beaux yeux* of the United States. But it should be remembered that Alexandria is now the second port in the Mediterranean, and that consular representation there and at Port Said is in the hands of merchants whose direct interest it is to hinder instead of promoting American trade and the introduction of our manufactures into Egypt. It would perhaps be better if the United States were to do as Switzerland does—make an arrangement with England, France, or Germany to take American citizens under her protection, and abolish the United States consular representation here altogether; or else appoint a sufficient number of consuls and pay them for their services. At the present moment, the Consul-General being absent, any civil or criminal suit arising between Americans in Egypt would be decided off-hand by the Vice-Consul-General, a gentleman for whom I have considerable personal esteem, but who, were he not the United States Vice-Consul-General, would be an Ottoman subject, who has never even visited the United States, and who does not pretend to possess any knowledge of American law.

There is another danger into which our consular system is likely to lead us, and that is, to interfere in matters with which we have no concern. The higher consular authorities of the United States are men who have received favors from the ex-Khedive. They have not yet accepted the new political situation of Egypt. As I have already indicated in a previous letter, the Anglo-French Protectorate in Egypt is a *fait accompli;* nevertheless, the United States representatives in Egypt never let an occasion go by to hamper the action of these two Powers, and particularly the action of England. The course of the Consul-General and of the American Judge, who are members of the Judicial Reform Commission, has been persistently to oppose the plans of the English delegates, forgetting that they were thereby allowing their personal feelings to lead them into a course directly opposed to American interests; for I suppose there can be no doubt that it is for our interest to have the English language and the English system of law prevail in Egypt as against any other European language or system of law. Our representatives are also apt to forget that England has the same interest in Egypt that the United States will have in Panama as soon as the canal is cut, and that our true policy in Egypt is to recognize and support the Anglo-French protectorate which now by the consent of Europe exists in Egypt, just as we shall expect Europe to recognize and support our protectorate in the Isthmus of Panama when the De Lesseps canal becomes a *fait accompli.*

Notes.

HARPER & BROTHERS will shortly publish the 'Franklin Square Song Collection,' words and music, including songs for children. It will make a volume about the size of the *Magazine.*

——It may aid in the recovery of Malbone's water-color painting on ivory, known as "The Hours," lately stolen with other paintings from the Providence *Athenæum,* to refer to the wood-engraving made after it in *Harper's Monthly* for November, 1879.——Roberts Brothers' fall announcements embrace 'Stories of Adventure, Told by Adventurers,' collected and edited by the Rev. E. E. Hale; 'Around the Hub,' a boy's book about Boston, by Samuel A. Drake, with profuse illustrations; other children's books, by Louis Rousselot, "H. H.," and "Susan Coolidge"; new volumes of poems by D. G. Rossetti and Christina G. Rossetti; 'Massachusetts in the Woman's Suffrage Movement,' by Mrs. Henrietta Robinson; and 'My First Holiday, or Letters Home: Sketches of a Trip to Colorado and California,' by Mrs. Caroline H. Dall.——A 'Popular Science Reader,' "for intermediate classes," prepared by James Monteith and published by A. S. Barnes & Co., is a curious medley in prose and verse. It is surprising to find among the selections in natural history no extract from Darwin.——Parts 13-15 of Prof. Ebers's 'Egypt: Descriptive, Historical, and Picturesque,' conclude the chapters on Cairo, add one on the regeneration of Egypt after the French conquest, and begin another (now timely) on the resurrection of that country's antiquities. The beauty of the illustrations will bear mentioning once more.——Mr. M. D. Conway, in a letter from London, reports that the Rev. O. B. Frothingham will, on his return to New York, undertake a Life of the late George Ripley.——The twenty-ninth annual report of the Boston Public Library alludes to the urgent need of preparing plans for the new building, which must be begun in two years, on the site allotted by the State; shows, in common with similar reports, a falling off in the use of books; discusses the question of fiction *per se* and in view of recent reproaches because of insufficient censorship in the purchase and circulation of novels, and states that "at least 60 per cent. of the circulation of this class is furnished from the novels printed within two years." Only one book in twelve thousand was lost during the year, and one book which had been "out" for at least twenty-three years was returned.——Dr. L. Sauveur has compiled a volume of fairy-tales, 'Contes Merveilleux,' from the collections of the Brothers Grimm, Charles Perrault, and Xavier Saintine, as a text-book for students in his system who need, after practice in conversation, to be exercised in narration. The print being large and the paper good, this volume will be generally welcomed. Dr. Sauveur's notes at the end are explanatory of shades of meaning, of idioms, and of etymologies, and add much to the value of the work.——Christian Kaiser, in Munich, has published the first instalment of Professor Sophus Bugge's long-promised 'Studies on the Origin of the Northern Sagas of Gods and Heroes,' translated into German, by arrangement with the author, by Dr. Oscar Brenner, of the University of Munich. The work, which is to be completed in three *Heften,* will constitute the basis of a discussion among mythological students the end and result of which cannot be foreseen.——A new, revised, and largely augmented edition of the Swedish ballads published by Geijer and Afzelius in 1814-16 ('Svenska Folkvisor') has just been brought out in Stockholm in three volumes, and will receive a hearty welcome from every lover of ballad literature. It is printed on the finest paper, with beautiful borders and a charming frontispiece. The first volume gives the text, and contains 568 pages; the second is devoted to notes and commentaries, and contains 464 pages; and the third furnishes the music, harmonized chiefly by L. Höijer, and fills 232 pages. Mr. R. Bergström's thorough scholarship in this field and his remarkable devotion are best seen in the excellent notes, where much has been added to the original edition, especially in tracing the history of the ballad and its variations, and in pointing out its sisters and cousins in other countries. In the musical volume not less than sixty melodies have been added by Mr. Höijer, who has also written new harmonies for the greater part of those found in the original edition.

—There is little in the September *Harper's* or *Scribner's* which has a decided claim upon the reader's attention. The seasonable articles in *Harper's* are Mr. Rideing's "English at the Seaside," Mr. E. H. Ropes's "Summering among the Thousand Isles," and Olive Thorne Miller's "The Girls' Sketching Camp"—the last an unsubstantial account of a very substantial incident in the lives of the fourteen young ladies who went picnicking in Maine, carrying their art with them. Mr. W. A. Rogers has cleverly illustrated this paper. "An Old Fort, and What Came of It," by Mr. N. H. Egleston, is the story of the founding of Williams College. The transcendent result, if we may trust this writer, is President Mark Hopkins's "construction of a system of philosophy so broad and self-consistent, and so completely in harmony with fact in all departments of knowledge, that it may well be termed a universal philosophy." An excellent engraving of Dr. Hopkins, by the way, is one of the chief illustrations of Mr. Egleston's article, as one of Dr. J. G. Holland is of Mr. Ropes's, mentioned above. Prof. Herbert Tuttle's "German Empire," in which some slips might be pointed out in the historical portion, and the use of "*in petto*" for "*en petit*" is not to be commended, gives a useful view of the constitution of the present transitory form of German unity in comparison with our own Government.

—Mr. John Muir's "Coniferous Forests of the Sierra Nevada" introduces us, in *Scribner's,* to some noble varieties of the pine-tree, whose characteristics are well set forth both textually and by means of drawings from nature. Mr. Ernest Ingersoll treats of the star-fish, particularly as the inveterate enemy of the oyster. Mr. Charles H. Farnham takes time by the forelock in giving practical instructions how to build an ice-yacht. Other illustrated articles are: Mr. Richard Whiteing's "A Russian Artist" (Basil Vereshagin); "The Society of Decorative Art," in which the engraver's attempt to translate into black and white Mrs. O. W. Holmes, jr.'s embroideries is signally unsuccessful; and Miss Gordon Cumming's "The Wheel as a Symbol of Religion." Victor Hugo's dramatic achievements are reviewed in order by Mr. Brander Matthews. Mr. Albert Stickney concludes his presentation of "The People's Problem" with an endeavor to show from the history of the Constitutional Convention of 1787 that the American people, once impressed with the emergency of action, can make novel experiments in government at short notice. He admits that the present crisis is far inferior in gravity to that which confronted our fathers after the breakdown of the Confederation; and in fact it is so much inferior in everything except principle that it has never yet become consciously "the people's problem" at all. For this reason we are decidedly in favor of promoting legislation which may or may not end in the adoption of Mr. Stickney's

radical changes, but which will pave the way for them by educating the public mind to his views of the ends of government, and which can be secured with the minimum of effort and of innovation.

—The instalment of "Dr. Breen's Practice" which introduces the September *Atlantic* is Mr. Howells at his best in his most successful and characteristic vein. Dr. Grace Breen is a young homœopath, and, finding the nearest physician "regular" and indisposed to consult with her, brings herself to surrender to him the case of her friend, Mrs. Maynard, who has pneumonia. The situation has obvious possibilities, of which Mr. Howells makes the most. The two chapters of Mr. James's "The Portrait of a Lady," furnished this month, also touch high-water mark, and apparently, though it is difficult to divine the movement of this story, forward the catastrophe in some measure. The political article is on "The Attempt on the President's Life," and points out, as an important part of the moral to be drawn from it, the danger of establishing a precedent of profiting by assassination, which, in the event of the President's death, would or would not be incurred, as Gen. Arthur might determine. Mr. John Fiske pursues his consideration of Aryan myths and their origin, but, as his exposition is strictly popular, it is perhaps to be criticised for the matter-of-course air of such a statement as, "It seems to have puzzled Max Müller that, in the myth of the Trojan war, the night-demon Paris should appear invested with some of the attributes of solar heroes." It need not be added, by the way, that such a trifle as this does not puzzle Mr. Fiske. "The Katrina Saga" is "Part I." of one of "H. H.'s" lively and entertaining "bits of travel." "Housekeeping Hereafter" is discussed with daringly specific vaticination by J. V. Sears, who says it is "the next problem to engage the attention of intelligent minds." Dr. Holmes's "Post Prandial, Phi Beta Kappa, 1881," is a trifle, but an agreeably characteristic one. The literary articles are Mr. Matthews's "The Dramas of the Elder Dumas," and an interesting sketch of Dostoïevsky, the Russian novelist, by some competent hand, which is buried in the "Contributors' Club," where it is to be picked out from the midst of reflections on the "Individuality of Dogs" and declarations like this: "I suppose I express the feeling of hundreds of your readers in saying that I was intensely interested in Mr. Richard Grant White's article 'On the Acting of Iago'; nay, more, that I was absorbed and fascinated by it."

—A new American industry has sprung up in connection with the press, the origin and excuse of which are, to us at least, somewhat obscure. Any one in the habit of reading a large number of country newspapers speedily learns to recognize the "patent outsides," and now it would seem as if there were a bureau engaged in peddling illustrated biographies. Directly after the end of the Albany senatorial contest we were surprised to find that Mr. Elbridge Gerry Lapham was thought worthy of a portrait and a laudatory sketch by several widely separated journals, which enjoyed the privilege of using the same woodcut and the same caption—"Men of the Hour"—and exhibited a remarkable uniformity of opinion about him and knowledge of his past career. Mr. Warner Miller, however, presently came in for a similar attention, being likewise dubbed a Man of the Hour, and having a flattering tale told of him, always in the same words. A third physiognomy now adorns "Our Portrait Gallery of [Political] Celebrities," as it is sometimes called—that of Mr. W. H. Vanderbilt, "the Rothschild of America"—and the list threatens to be endless. The ingenious inventors of this traffic in the faces and fortunes of our conspicuous fellow-citizens have satirized their own performance by supplying the regulation motto from Shakspere—"Some are born great, some achieve greatness, and some have greatness thrust upon them." Here and there a country and even a city editor, blessed with a little sense of humor, has cut this motto out of the stereotype plate; but the eminent persons celebrated in this manner, and who may be thought to bear part of the expense of it, appear strangely indifferent to the imputation that their greatness may be factitious and ridiculous.

—A recent bulletin from the Census Office, by Mr. R. P. Porter, gives a statement of the outstanding indebtedness of all incorporated cities of any considerable size in the country. It includes cities having a population of 7,500 and upwards. The total bonded debt of these cities was $632,096,460; the floating debt was $28,439,464; and the sinking fund, $117,191,506; leaving as the net debt $593,344,418. The bonded debt was contracted, in part, for the following purposes:

Bridges	$20,809,431
Cemeteries	272,912
Fire department	2,214,824
Harbor improvements, etc	16,726,064
Parks and public places	40,490,636
Public buildings	25,516,929
Railroads and other aids	68,306,493
Schools and libraries	13,882,915
Sewers	21,335,434
Streets	81,502,817
War expenses	28,722,787
Waterworks	141,797,828
Refunding old debts	71,071,140
Funding floating debts	122,864,804

These bonds bear interest at various rates, ranging from 3½ to 10 per cent. Nearly one-half of the amount is at 6 per cent., nearly $200,000,000 at 7 per cent., while at 3½ per cent. there are but $13,500,000, and at 10 per cent. only $6,400,000.

—Census Bulletin No. 245 contains a preliminary report upon the salt production and manufacture of the country, by W. L. Rowland. Salt is produced to a greater or less extent in fifteen States and Territories. California produced, in 1880, 878,093 bushels, from sea-water, by solar evaporation; Louisiana, 312,000 bushels, from natural deposits, the principal of which is at Petite Anse, near the coast. Michigan produced 12,423,885 bushels, evaporated from subterranean brines by solar or artificial heat, mainly the latter. The product of Nevada is 182,408 bushels, obtained from lakes and subterranean brine; of New York, 8,748,203 bushels, Ohio, 2,650,301, and Pennsylvania, 851,450, all from the latter source. The salt lakes of Utah furnished 483,800 bushels, while from subterranean brines Virginia produced 425,895, and West Virginia 2,679,438 bushels. Besides the above, there are several States which produced small quantities. The total salt product was 29,800,298 bushels, of which 888,958 were produced from sea-water, 944,158 from inland lakes or natural deposits, and the remainder, 27,967,162 bushels, which is by far the largest proportion, from natural subterranean brines. As to the method of production, it may be briefly stated that 24,969,172 bushels were produced by artificial evaporation, the rest by solar evaporation.

—It will probably be a surprise to most people to learn that the most important feature of civil-service reform—security of tenure—is already fully established in the city of New York by the provisions of the charter, as construed by the Court of Appeals. This fact has been brought out in a paper read before the New York Municipal Society by Mr. Douglas Campbell on the 7th of February last, and since published. The charter says that "no regular clerk or head of a bureau shall be removed until he has been informed of the cause of the proposed removal, and has been allowed an opportunity of making an explanation; and in every case of removal the true grounds thereof shall be forthwith entered upon the records of the department or board." Mr. Campbell gives a full account of three test cases under this provision, two of which were carried up to the Court of Appeals. In 1877 Mr. Joseph A. Munday, a regular clerk in the Fire Department, was served with a notice of removal, the ground assigned being that "the duties pertaining to the position can be more efficiently performed by another person." Mr. Munday applied to the Supreme Court, which issued an order restoring him to his position, and this judgment was affirmed by the Court of Appeals. The cause assigned was declared insufficient, "it being a mere conclusion which no one could explain." The next year the Commissioner of Public Works gave notice of removal to the chief-engineer of the Croton aqueduct for neglect of duty in allowing bad workmanship and materials in the construction of an arch. The bad construction was admitted, but the engineer showed that he was not responsible, as the duty of inspecting the work in question devolved upon another person appointed by the commissioner, and over whom the engineer had no control. In this case the Supreme Court sustained the commissioner, on the ground that "as the cause alleged for the removal was on its face sufficient, they could not interfere with the decision"; but the Court of Appeals reversed this decision, on the ground that "there must be some evidence to justify the removal"; and in this case the irresponsibility of the engineer was clearly made out, so that the ground of removal was insufficient. A third case was the attempt of the Mayor to remove one of the Police Commissioners for neglect of duty, justifying the act by his own knowledge of the condition of the streets. Here, again, the commissioner was restored to office by the Supreme Court, it being held "that he was entitled to a formal hearing, at which he might be represented by counsel." Finally, by the new code, which went into operation last September, the procedure upon the return to a writ of certiorari—which was purely *ex parte*—is changed, and "the court can now in a proper case permit the return to be contradicted or explained by affidavit, and is to judge whether, on the whole, the removal should be sustained."

—In February, 1877, the *Nation* called attention to a history of America in three volumes published in the Norwegian language by the Chicago *Skandinaven*, the leading Norwegian paper in the United States. We now have the pleasure of noticing a history of the United States written in the Swedish language for the large Swedish population in the Northwest, by John A. Enander, editor of *Gamla och Nya Hemlandet*, the most widely circulated Swedish paper in America. The present work is in four handsomely-printed volumes, reflecting credit on Mr. Enander both as author and publisher. The first of these volumes is devoted exclusively to the pre-historic races of America and to the pre-Columbian discoverers. Under the head of Norse voyages to America, the author takes occasion to give a condensed sketch of the Norsemen, their customs, religion, and institutions in heathen times. The second volume begins with the discovery by Columbus, and ends with the establishment of the thirteen colonies. The third volume carries the history forward to the year 1763, and the fourth down to the year 1881. The author is master of an excellent Swedish style, and the work bears throughout the marks of careful, thorough, and extensive research. It is in no sense a translation or compilation, but an original production. We are disposed, however, to criticise Mr. Enander's tendency to

overload the page with foot-notes in fine print. They will be apt to repel many of the readers for whom his book is intended. This objection applies, however, mainly to the first two volumes, where in some instances more than two-thirds of the page is occupied with notes. We are gratified to notice the genuine patriotic spirit with which the whole work is imbued. It will surely tend to make good and intelligent citizens of its readers, and, when we reflect that the Swedes in the Northwest number several hundred thousand, the importance of an undertaking like this, politically and socially, is not likely to be overestimated. To the fourth volume is added a supplement containing a Swedish translation of the Declaration of Independence and of the Constitution of the United States. We commend this enterprise as an example worthy to be followed by publishers for other foreign nationalities in this country.

RAWLINSON'S ANCIENT EGYPT.—I.

History of Ancient Egypt. By George Rawlinson, M.A. In two vols. London: Longmans, Green & Co.; New York: Scribner & Welford. 1881. Large 8vo, pp. xx.-554, xiii.-567.

PROF. RAWLINSON comes before us with a very modest preface. The *raison d'être* of this history is simply, he says, the need in English literature of an account of ancient Egypt, addressed partly to the eye, combining its antiquities with its history—a need not met by existing works. Possessing only a rudimentary knowledge of the Egyptian language and writing, he has "made it his aim to consult, as far as possible, the best translations, histories, and monographs," and trusts "to find in England and America a sufficient body of readers to justify his present venture, and prevent his publishers from suffering any loss through him." He feels that the present work "would never have seen the light" if he had known in 1876, when its plan was conceived, that Birch's edition of Wilkinson's 'Manners and Customs' and the English translation of Brugsch's 'Geschichte' were forthcoming. He is quite right as to the need of a book on Egypt for the general English reader. We have travels and sketches in abundance, but no complete, well-digested history. The older works are antiquated. Kenrick wrote over thirty years ago, since which time much has been learned. In eighteen years, said Brugsch in 1876, there had been such progress as made it necessary for him to recast his sketch of the Pharaohs from the monuments. Birch's work does not aim at completeness; the Oriental histories of Lenormant, Duncker, and Maspero are not full enough, are without illustrations, omit the antiquities, and give the political history of the various nations in fragments; the recent editions of Wilkinson and Brugsch do not fill the gap—the former is too bulky for general use, and its historical part is meagre; the latter has no antiquities or illustrations. There is room, therefore, for a book which shall give a clear, well-considered, and sufficiently full narrative of the political and social history of ancient Egypt, together with a description of its geography, customs, art, literature, and religion.

In several respects Rawlinson has fulfilled his task in a very satisfactory manner. The arrangement of material is the same as in his former histories. In the first volume he describes the land, the climate and productions, the people and their neighbors, the language and writing, the literature, agriculture, architecture, mimetic art, the science, religion, and manners and customs; in the second volume is given the history proper from the earliest times to the Persian conquest, B.C. 527. His style and manner are so well known that it is unnecessary to say more than that the present work does not fall below its predecessors in that respect; the style is easy and pleasant, sometimes finished and vigorous (see, for example, ii., 327). A not unimportant point in the arrangement is that the foot-notes, made up of references to authorities and short explanatory remarks, do not interrupt the narrative, and there are no portentous appendices or excursus. The social, artistic, literary, and religious history is rightly given along with the political, and the narration is enlivened by characterizations of prominent persons, and comparisons with the contemporary condition of neighboring nations and with the Egyptian past. It is an intensely interesting picture that he draws for us, as he traces that wonderful history from the great pyramid-building fourth dynasty on through the unification of the country from the Delta to Elephantine under the kings of the southern sixth dynasty; the culmination of the civilization and its subsequent decline; the disintegration of the monarchy, which lasted till the eleventh dynasty; the rise of a new centre at Thebes; the Amen-em-hats of the prosperous twelfth dynasty, which instead of pyramids produced beneficent works like the artificial lake Moeris and opened new avenues of commerce and new fields of industry; then through the following decline of vigor and the Middle Kingdom of the Hyksos, to the rise of the New Empire under Aahmes, the founder of the eighteenth dynasty; the brilliant career of Thothmes III., who led his victorious armies as far as the Euphrates on the north, and to the further extremity of Nubia on the south, while his fleets commanded the whole eastern shore of the Mediterranean; the exploits of the Rameses of the nineteenth dynasty, the grandest period of Egyptian history (about B.C. 1400–1280). After this the glory of Egypt slowly sinks; the house of Rameses is succeeded by a priest-dynasty (the twenty-first); then a line of Ethiopian princes govern the country (twenty-fifth dynasty); and, finally, out of the disintegration comes the revival under Psamatik (Psammetichus) and the twenty-sixth dynasty, when the old heroic spirit flashes up for an instant to expire for ever under the heel of Cambyses (B.C. 527).

The verdict of the public will without doubt, we think, be that the literary and what may be called the mechanical parts of this work are very satisfactorily executed. In respect to the more solid features of the historian's task, we have to give a more guarded commendation. It goes without saying that Prof. Rawlinson shows industry, carefulness, and sound judgment. He seems, unless it be in his chapter and other remarks on the Egyptian religion, to have consulted the best authorities, and where they differed to have weighed the evidence and arrived at a decision only after due deliberation. Perhaps he is in certain cases biased by the fact that he regards the Old Testament narrative as final authority; but one is not disposed to blame a historian for assuming an intelligently sceptical and negative attitude towards novel results. He is on his guard against the weaknesses and errors of modern writers, and is determined boldly to expose them. Thus, on the question of Egyptian morals, he says (ii., 253): "Modern Egyptologists have for the most part glossed over or ignored the crimes and cruelties, the defilements and abominations which deformed the civilization of Egypt. It is not the wish of the present writer to give them undue prominence, but the interests of historic truth require that, when the occasion offers, they should be noticed"; to which last proposition certainly no objection can be made. He penetrates still deeper into the spirit of our times, saying (ii., 331) of a certain theory that it "has naturally great attractions for many minds in an age when novelty is more esteemed than sobriety of judgment, if not even than historic truth"—among the persons seduced by novelty being in this case De Rougé, Chabas, Lenormant, and Birch, while our author himself may be supposed to represent "sobriety and truth." It has apparently not occurred to him that tradition is sometimes as seductive as novelty, or that it is unnecessary to suppose, every time that a writer embraces an unsound opinion, that he has sacrificed truth to the love of the new.

Much of Egyptian history is still so far involved in mist that cautiousness in forming and modesty in announcing conclusions respecting its events are always in place. New facts are constantly coming to light. Many points must be left undecided by reason of the insufficiency of the data. We must do Prof. Rawlinson the justice to say that he recognizes this fact and writes cautiously, except when he is controlled by prejudgments. We have space to mention only one or two of his positions on controverted points. He thinks it probable, with many Egyptologists, that the Hebrew Joseph was the minister of Apepi, the last of the Hyksos, about B.C. 1600, and that the Israelitish exodus occurred under Menephthah, about B.C. 1350, making 250 years for the abode in Egypt; of the 430 years of Exodus xii., 40 he says nothing. As to the ethnical character of the Hyksos, he leans to the belief (which is that of Mariette) that they were Hittites. His reasons for this opinion are that the Hittites were the most powerful of the Canaanitish nations, and that the leader of the invasion bore a name (Set) identical with that of the god chiefly worshipped by the Hittites (ii., 191). As to this last fact, Set was an old Egyptian deity, and the Hyksos leader may have adopted his name. However this may be, a serious objection to this Hittite theory is that the Egyptian language "was to a considerable extent Semiticized" by the Hyksos (ii., 195, 181), and recent investigations seem to have shown that the Hittites were not Semitic in language or in race. Sayce (Transactions of the Society of Biblical Archæology, vii., 2) suggests that the statement in Numb. xiii., 22 that the Hittite Hebron was built seven years before Zoan in Egypt, may point to a Hittite origin of Zoan or Tanis, which was a principal seat of the Hyksos. But it is by no means certain or probable that Tanis was built by the Hyksos, or Hebron by the Hittites. What we know of the history of the latter does not favor the supposition that they made an expedition so far from home as Egypt. The Hyksos problem still awaits solution. Rawlinson seems to us to be right in rejecting, with Birch and Brugsch, Lenormant's view that Thothmes III., by his fleets, subjected to his sceptre the islands of the Southern Archipelago, a considerable portion of the seaboard of Greece and of Asia Minor, and even perhaps the lower extremity of Italy (ii., 249). In another interesting question we must doubt his sobriety. In the invasion of Egypt under Menephthah (B. C. 1350) by Libyans, the latter were accompanied by auxiliaries, who are thought by Brugsch to have been Caucasians, but are regarded by De Rougé, Birch, and others as Europeans occupying the northern Mediterranean. It is this last opinion that calls forth Rawlinson's above-quoted severe reflection on our novelty-loving age. Yet he offers no reason for not accepting it. He says simply: "The names certainly appear at first sight to lend themselves to this view. . . . The first appearance of European races upon the stage of history must have the greatest interest for the modern world, in which Europe plays the first part; and if the identifications of M. de Rougé are allowed, it must be granted that here

Europe first steps upon the scene, exhibiting herself as a great aggressive power in the fourteenth century before our era, a hundred years anterior to the earliest traditional date for the Trojan war, and in the actual lifetime of Moses. So extraordinary a revelation has naturally great attractions," etc. Here we fail to see how the crossing of the Mediterranean by a company of adventurers from Greece and Italy exhibits Europe as a "great aggressive power," or what there is astounding in the supposition that such an expedition occurred a century before Moses and the Trojan war. We do not think De Rougé's interpretation of the names in question established, but we can understand how that eminent scholar might have adopted it without laying his sobriety of judgment a sacrifice on the altar of this fascinating novelty. Much better, as it seems to us, are Rawlinson's arguments against Brugsch's theory that the twenty-second dynasty was Assyrian (ii., 416, 417). Brugsch relies for proof of this on the names Takeloth, Usarkon, and Nemaroth, occurring in this dynasty, which he takes to represent the "Assyrian" Tiglath, Sargon, and Nimrod, and on an Abydus inscription in which Shashang (the Shishak of 2 Chron. xii., 2) is called the great King of Mat; that is, as Brugsch understands it, Assyria, "the land" by excellence. To this Rawlinson replies that there is no proof that Mat means Assyria, and that the names in question are not Assyrian. Tiglath never stands by itself as an Assyrian proper name, but is always defined by another noun (as in Tiglathpileser), the phonetic identity of Usarkon with Sargon is improbable, and Nimrod is not Assyrian, but Chaldean or Accadian. He urges also that the Assyrians were too weak at this time to attempt such a conquest, and that the Egyptian records make no mention of a foreign invasion. This last consideration is not of very great value, perhaps, but the others appear to be sound. Here again, however, it is wise to wait for further light before coming to a decision.

In his treatment of the vexed question of the Egyptian chronology (chap. xii.) Rawlinson is very cautious and conservative. He states at length the case against Manetho and against the possibility of exact computations in the Middle and Old Kingdoms, insists on the differences in the estimates of modern authorities, and brings down the figures as much as possible. The chapter would have been more satisfactory if he had described all the Egyptian sources (as the Abydus tables) and attempted to educe from them a consistent chronological scheme. We do not suppose that the question has gained anything from his *ex-parte* statement. Of general considerations derived from the art and writing of Egypt he says nothing, though they lie on the surface. Thus he puts the great pyramid at about B. C. 2500, and sees in it proof of the "employment of very highly skilled labor" (ii., 51), while of this period he declares that it "carried its own proper style of architecture to absolute and unsurpassable perfection" (p. 786). But this fact has no other effect on him than to excite "profound astonishment that in Egypt, almost at the commencement of its history, among a people living by themselves and deriving no instruction from without, a king . . . conceived and carried out a design so vast," etc. (pp. 50, 51). He takes it for granted that this splendid work must have been executed almost at the commencement of Egyptian history, holding apparently that sobriety of judgment and regard for historic truth require such a conclusion. This naïve adherence to a theory in the teeth of all known laws of cultural development is pathetic. The hieratic writing is found on the Great Pyramid—as early, therefore, as B. C. 2500. He does not ask how long it took to develop this writing from the hieroglyphic, or how far back we must put the latter, which seems to be purely Egyptian.

The first volume of our history, devoted to the arts and life of Egypt, is in the main excellent. Rawlinson is happy in geographical description, and his account of Egyptian plants and animals, architecture and painting, literature, religion, manners and customs and industries, may be pronounced to be, on the whole, the best popular guide on these subjects. He is less happy in his treatment of the language (chap. v.). Grammatical details seem out of place in a work like this, and his remarks, besides being very general and nearly useless, are frequently lacking in scientific precision. His linguistic characterization of the language (p. 115) is particularly bad. To say that Egyptian grammar is "predominantly Semitic" is a serious exaggeration; there are resemblances to the Semitic in some of the personal pronouns, the feminine sign *t*, the formation of a causative stem by prefixing *s*, and the dependence of one noun on another; but otherwise the structure of the verb, the treatment of the article, and the mass of the pronouns are unsemitic. We do not know what is meant by the statement that the "main analogies" of the Egyptian vocabulary are with the Accadian, Mongolian, and other Turanian tongues. There is no demonstrable identity of roots in these languages, and of other analogies we are not aware. Still worse is the comparison between Egyptian and Indo-European, based on Bunsen (p. 97). Rawlinson's singular statement on the same page that the Egyptians are nearly allied to the Canaanites, Accadians, and Himyarites, though introduced by a vague "therefore," is simply an interpretation of Gen. x., 6–10, and has no scientific value.

The estimate of Egyptian morality seems to us not quite fair. The people were guilty of immoralities, but it does not appear that they were worse than other peoples. To say that they "combined an extraordinary degree of theoretic perfection with an exceedingly lax and imperfect practice" (i., 104), is to say what has been true of all great nations of ancient and modern times. There is not a count in our author's indictment against the Egyptians that may not be proved against ourselves, except that which relates to the immodesty of the women. And to declare, from some stories in Herodotus and Diodorus Siculus, two Egyptian romances, and the story of Joseph, that the "Egyptian women were notoriously of loose character," appears to be somewhat strained. Such a view does not accord with the respect and affection that the kings so often show for their wives and mothers, or with the picture of a well-ordered family life that the monuments exhibit. The future historian who should get hold only of certain stories of English, French, and American life might draw strange conclusions from them.

THOMSON'S CENTRAL AFRICA.

To the Central African Lakes and Back. By Joseph Thomson, F.R.G.S. Two vols. 8vo. Boston: Houghton, Mifflin & Co.

KEITH JOHNSTON, the only son of the well-known geographer of Edinburgh, and himself a geographer of repute, was accepted in 1878 as the chief of the expedition despatched by the Royal Geographical Society to the head of Lake Nyassa. The object of the survey was the exploration of the mainland lying to the south of the Island of Zanzibar, and to consider the practicability of constructing a road between the coast and the lakes. For this purpose the sum of £1,500 was placed at Mr. Johnston's disposal, and he was enjoined to keep strictly within the amount appropriated. He selected as his companion and as naturalist to the expedition a recent graduate of the University of Edinburgh, Joseph Thomson. The travellers arrived at Zanzibar in January, 1879, and at once prepared for their work. The account given of Zanzibar differs in some important respects from that communicated by most other visitors, both as regards the healthfulness of the island and the character of the native population. Owing to the clearing away of the mangroves and the dense vegetation which formerly covered the island, the rainfall has been much diminished in amount, and all diseases have grown less severe.

After a time passed in the acquisition of the Swahili dialect (the means of communicating between the widely-separated tribes of the coast and the interior), a brief preliminary trip was made for the sake of seeing whether the outfit was in good condition. The success of it warranted speedy departure, and in May the journey was begun. The party numbered one hundred and fifty men, and was considered by Dr. Kirk to be "the best organized caravan that ever left the coast for the interior." Six months afterwards Johnston succumbed to the effects of the severe toil and his many anxieties, and died of exhaustion at the village of Behobeho, in the first quarter of the distance from the sea to the lake. Near the thick forest where he died there is a huge prismatic mountain, appearing at a short distance like a monument; to this natural obelisk the companion of Johnston gave the name of the dead explorer, and turned with heavy heart to complete the unfinished task.

In order to understand the difficulties which now faced Thomson, it must be said that he was only twenty-one years old, and wholly unpractised in African travel. He was now at the head of an undisciplined troop of servants, and by no means assured of the fidelity of his guides. He plainly had the choice of trying to make his way back to the coast, or to push on and finish the exploration. He did not allow any of his followers to see that there was any hesitation, but, encouraging them by his bearing and words, this plucky fellow decided to go on. He carried through the entire expedition. The party was led by him through a vast tract of country visited for the first time, and this was done "without desertions, plundering by the porters, battles, bloodshed, or other disasters hitherto supposed to be inevitable adjuncts of African exploration." The expedition did not once come into warlike collision with the natives, and upon no occasion did the chief find it necessary to fire a single shot at them either offensively or defensively. In all respects Thomson was able to carry out the plans of the Geographical Society, and the objects of the expedition were fully attained. The chairman of the committee on African exploration has publicly declared that he does not know "that there has ever been a more successful exploration in Central Africa, or one more complete in all its parts." The president of the geographical section of the British Association meeting of 1880 has also described it as the most successful and brilliant on record. Mr. Thomson has given a modest and readable account of the adventures of his party, and has frankly stated the reasons for occasional discouragement. The manner in which he met them shows clearly that he was well qualified to deal with the many difficulties of African journeying. For example, the following incident will indicate the skilful way in which he oiled the wheels of caravan life:

"When the idea of having a day's rest took possession of the men, they were in the habit of manufacturing as many sick men as possible, and then insisting that it was impossible to get on without a day's halt to give the invalids an opportunity of recovering. One morning I observed this dodge in process of execution. Loud grumbles of 'Si wezi, si wezi sana' (I am very

sick) were heard on all sides, and a large number congregated in the rear, declaring they were unable to carry loads. After much trouble we got the bales arranged. I took no notice of these preparations, and in my usual manner marched away in front. I was not surprised to find myself an hour before my men in camp, or to observe the miserable string of porters marching in the most woe-begone fashion, holding themselves as if they had the gripes, and groaning in the most heart-rending manner and looking inexpressible agonies. I at once saw that there would be no march the next day if they were not instantly cured. But I was determined to get on, and I resolved to put an end to this oft-recurring nuisance. Calling up the sick men, I asked in the most sympathetic tones at my command what their ailments were. They all tenderly rubbed their stomachs with a lugubrious chorus—'My stomach, master; my stomach is very bad.' I rejoiced to hear that that important though vulnerable part of the constitution was out of order, for I had a very simple remedy. Smiling benignantly upon them, I told them to be of good cheer, as I would soon put them all right. Going into my tent, I brought out two large handsome bottles of castor-oil. Now mark the effect that the mere sight of that simple maternal medicine had upon these broken-down creatures! Groans were hushed. Their hands dropped from their affected part, and every one tried to look all right, though a glance of alarm passed from patient to patient; for, be it understood, there is nothing that a native detests more than European medicines. Strange and marvellous to relate, they were all inclined to retire cured by the very sight of these bottles. This was, however, not going to suit my purpose. So, with parental sternness, I ordered them to sit down and open their mouths. Not without difficulty I administered a large dose to each man, letting him know that if it did not prove an immediate specific the dose would be repeated next morning. There was no dancing or singing in the camp that night, though many of the men were astir. Next morning every man was convalescent, and on my doubting the fact in some cases, they at once rushed off and showed me how vigorously they could pick up their loads. Thus, not having the usual excuse for a halt, we marched out of camp most merrily" (vol. i., p. 290).

The following incident shows that young Thomson was far more conciliatory in his treatment of the men than most recent travellers:

"In the evening I had an unpleasant insight into the temper of the men. Seeing a porter offering beads of a kind suspiciously like my own to a woman to pound rice for him, I asked Chuma where the man got them. The latter, who heard what I said, immediately went off among the men, telling them I was accusing them of stealing beads. A dreadful row was at once raised; the drums were beat frantically, and the horns blown to call the men together. From all sides they came rushing, bringing their guns, etc. These they laid down at my feet with the air of injured innocence. They had never been accused of stealing before! 'Here are our parcels!' cried they; 'look and see if we have anything belonging to you. Now give us our tickets of discharge, that we may go back to the coast, for we cannot go with you to be looked upon as thieves.' Every one was in the utmost excitement. Personal articles were packed and preparation for a general return made, as if an unpardonable aspersion had been cast upon their unsullied honor which as immaculate men they were bound to resent.

"I explained what had really occurred, and represented that I had accused no one of stealing. But my explanations had no effect. Then I became apologetic, and appealed to them to remember that I was but a boy, wholly inexperienced, and therefore liable to make mistakes. They should be fathers to me, and tell me quietly and gently when I went wrong, so that I might be put right; and not rush off wildly beating drums, throwing down their guns, and declaring they would return. I was but their pupil, and that was a bad way to teach me how to do right and learn to travel with them.' This harangue took immediate effect, and they became so enthusiastic in my favor that they at once commenced a dance of universal good-will. I was more careful of touching their tender feelings of honor in future."

The reader of Thomson's volumes is struck by the paucity of anthropological details, but this is frankly referred to in his introduction:

"My account of native customs may be thought to be somewhat meagre, and this I admit at once. My travelling experience has convincingly shown me that no one can hope to become genuinely acquainted with African society without a long residence among the people. The traveller passing through the country sees practically very little. Many people will be astonished to learn that during the fourteen months I was in the interior I never saw an African marriage, or the burial of a native, or the ceremonies on such occasions as the birth of a child. My aim has been to *describe only what I myself saw.*"

In reading the account of the interesting features of the natural history of the country through which he passed, we are filled with wonder that a boy, burdened with the care of a caravan, and without the slightest help from companions, could have brought together so many useful and novel facts. The contributions are a good deal larger in the botany than in the other departments of natural history, but valuable additions have been made to our knowledge of the conchology and geology of the region of the great lakes. The opinion held by Mr. Thomson regarding the feasibility of roads through the regions which he traversed is decidedly gloomy from a commercial point of view. He does not believe that roads can be made to pay, except so far as they may affect the natives. The coast road is cited as a case in point. The beneficial social effect which the construction of this road has had upon the neighboring natives is very marked indeed. Dr. Kirk, who has recently visited it, has expressed himself as greatly astonished at the revolution it has occasioned. It has produced greater peace and security, developed more steady and industrious habits, and otherwise given a distinct impetus to material advancement and helped on the work of civilization.

PARLIAMENTARY ANECDOTE.

An Anecdotal History of the British Parliament, from the Earliest Periods to the Present Time. With Notices of Eminent Parliamentary Men and Examples of their Oratory. Compiled from Authentic Sources by George Henry Jennings. New York: D. Appleton & Co. 1881.

The anecdotes collected in Mr. Jennings's volume begin with Sir Thomas More and come down to the Marquis of Hartington and Sir Stafford Northcote. Within this period Parliamentary anecdote, like Parliamentary oratory, has been developed, has flourished, and has betrayed symptoms of decline. The flourishing period of the two closely coincide. Roughly speaking, the cream of Parliamentary anecdote is to be found in the last quarter of the last and the first half of the present century. It was during this period that the House of Commons became a great modern school of wit as well as debate, and created an intellectual atmosphere of its own, more stimulating and invigorating than that of any similar body of which we have any record. Critics who have observed the changes which have come over it since its constitution was fundamentally altered by the Reform bill of 1832, and the sweeping legislation which the Reform bill brought in its wake, are inclined to think that the old House of Commons has ceased to exist, and that its proceedings are getting to be more and more like those of other modern parliamentary bodies, which, however valuable they may be to the world, will never leave behind them a treasury of wit and humor such as is to be found in Mr. Jennings's pages. A glance at the part of his volume which deals with contemporaneous politicians, will rather confirm this view. Disraeli, whatever his faults, did a great deal to make English politics amusing, almost down to the day of his death; but Disraeli after all belonged to a by-gone generation, and was trained in an old-fashioned school. Of the post-Disraelitish generation, there are few names to be found recorded here as those of men who have contributed anything substantial to the common store of anecdote; nor does it seem likely that the old days are ever to return. The tendency of English public life in the future, with its large constituencies, the constantly growing influence of outside "pressure" of all kinds, and the decreasing individual independence of politicians, must be to the production of public men whose "anecdotal history" will be less and less interesting. An atmosphere of anecdote implies leisure, independence, and cultivation, all of which the House of Commons once had in greater abundance than it is ever likely to have again.

Mr. Jennings has done his work well, though by no means completely. He has collected much valuable information, from various sources; but to make a real "anecdotal history" more is needed. Again, a good deal of the contents of his volume is not, properly speaking, anecdote at all, nor in any necessary way connected with the history of Parliament. Moreover, he has not in all cases succeeded, as he might easily have done, in making his anecdotes reveal the important traits of character or points in the career of the persons to whom they relate. More than four pages—to take an instance at random—are devoted to Lord Melbourne, and yet we get no very clear idea of what sort of a man Lord Melbourne was. The story of his expressing great relief at the death of an eminent literary man, because he could now "bind him up," or the anecdote of his begging to be informed on which side of some important bill his own Government was to be, throw more light on the fundamental traits of his character than anything that Mr. Jennings tells us. Perhaps the best thing in his collection about Lord Melbourne is an account of the latter's reading to his colleagues, in order that they might "know where they stood," a memorandum of a conversation between Lord Gosford and the King (William IV.). The conversation was as follows:

"'Mind what you are about in Canada. By ——, I will never consent to alienate the crown lands, nor to make the council elective. Mind me, my lord, the Cabinet is not my Cabinet; they had better take care, or, by ——, I will have them impeached! You are a gentleman, I believe; I have no fear of you; but take care what you do!'"

This, however, is rather an anecdote of William IV. than of Lord Melbourne.

In looking through Mr. Jennings's volume one is struck with the fact that the entertainment afforded to the world through the medium of the House of Commons in its prime was greatly increased by the presence among its members of a number of gentlemen whose extraordinary dulness helped to keep the atmosphere in an exhilarating condition. Anecdotes about Lord Castlereagh, for instance, always have the flavor of novelty, often as we may have heard them; but what must it have been to meet in the House of Commons as a regular debater a minister who introduced into his speeches remarks about "the ignorant impatience of the relaxation of taxation," "sets of circumstances coming up and circumstances going down," and "the Herculean labor of the honorable and learned member, who will find himself quite disappointed when he has at last brought forth his Hercules!" The story that he once talked for an hour on what subject nobody could guess, and then suddenly exclaimed, "So much, Mr. Speaker, for the law of nations," is probably a happy exaggeration; and the declaration imputed to him, that he had "now proved that the Tower of London is a common-law principle," is probably apocryphal. Lord Granville says of him that he "never spoke above the level of a newspaper." But no news-

paper in its wildest flights ever reached the level of Lord Castlereagh. Few people have ever had what might be called the courage of their ignorance to so marked an extent, and the world at large owes a debt of gratitude to him and to those like him. In the same way, how could we spare Addington? He is as necessary to us as he was to Canning and Sheridan. The story of the Tory nobleman who rubs his hands and exclaims, "Well, thank God, we have at last got a ministry without one of those confounded men of genius in it," throws a vivid light on the mental structure of the Conservative of the day—and on the Conservative of our own day too, for that matter. As a dinner party is always made pleasanter by the presence of one or two dull people, so the House of Commons in its best days was always the better for the sprinkling of dull men it contained. The 'Rolliad' is still almost as amusing as when it was written; indeed, it is difficult to imagine how it can ever be anything but fresh. And the wit of the 'Rolliad' was, in a sense, the result of the dulness of the politicians who figure in it. When the young Marquis of Graham solemnly observed, "If the honorable gentleman calls my honorable friend goose, I suppose he will call me gosling," and was shortly afterwards elected chancellor of Glasgow University, the "significant cheers" with which his remark was received, and the verses of which they were the occasion, put the whole incident so vividly before us that we can hardly believe that it is not a recent occurrence.

The record of great dulness can in fact only be preserved by great wit, and in the art of immortalizing stupidity the great wits of the House of Commons were masters. Drake, the memory of whose remarkable peroration, "Behold, sir, another feature of the procrastinating system; not so the Athenian patriots—sir, the Romans—sir, I have lost the clue of my argument—sir, I will sit down," is preserved in the line,

> "Drake, whose cold rhetoric freezes in its course";

Sir Joseph Mawbey, who was the occasion of the lines,

> "There Cornwall sits, and oh! unhappy fate,
> Must sit for ever, through the long debate;
> Painful pre-eminence! He hears, 'tis true,
> Fox, North, and Burke, but hears Sir Joseph, too";

Beaufoy and Sir Richard Hill, immortalized in the following verses:

> "Lo! Beaufoy rises—friend to soft repose,
> Whose gentle accents prompt the House to doze;
> His cadence just a general sleep provokes
> Almost as quickly as Sir Richard's jokes"—

owe their long salvation from oblivion to the vivacity which their own stupidity did much to stimulate.

Mr. Jennings might, by extending his range of research, or at any rate by working his field with more pains, make his volume a really valuable contribution to the history of parliamentary government. As it stands, it is full of interesting matter of one kind and another. References to authorities are given throughout, wherever they are of importance; and Mr. Jennings has the "historical spirit" to an extent sufficient to save him, in the selection of his anecdotes, from the temptation to favor unduly any one political party at the expense of its rivals.

Select Essays of Arthur Schopenhauer. Translated by G. Droppers and C. A. P. Dachsel. Milwaukee *Sentinel* Co. 1881.

THERE is something apparently paradoxical in the character of Schopenhauer's philosophical writings. No author ever took more pains than he to make his meaning clear to all readers by the use of short and pregnant sentences, of iteration of his thought in a different key, of figurative language, and other marks of a good literary style. And yet the reader will often find a knowledge of Kant, Plato, and other predecessors of Schopenhauer almost indispensable. Schopenhauer even asserts, that to grasp the full meaning of his doctrines one must read them in the light of a previous perusal of all his works—in other words, one must read twice over everything he has written. This, however, is an exaggeration, though it partly holds true of the purely metaphysical portions of his writings. But Schopenhauer's metaphysical views are perhaps the least important of his contributions to philosophical literature. They run like a thread through almost all he has written; but this thread might be removed without much impairing the beauty and value of the pearls of psychological analysis he has strung on it. However, the thread is there and the random reader will not know what to make of it. This makes it so difficult to select single chapters from his works for translation, even when these chapters are not constituent parts of one connected treatise. Nevertheless, a selection of bright paragraphs from his works, called 'Lichtstrahlen aus Schopenhauer's Werken,' has already passed through some five editions in Germany, and there is no reason why a similar work should not become popular in this country.

A beginning in this direction has been made by the translation now before us. The five essays selected are on the Misery of Life, the Metaphysics of Love, the Æsthetics of Poetry, on Genius, and on Education. This selection must be called a good one, not only because these essays contain some of Schopenhauer's favorite doctrines, but because they are comparatively free from the usual *obligato* metaphysical accompaniment. The first essay is a brief statement of the pessimistic view of life, and abounds in bright things: "Whatever may be said to the contrary, the happiest moment of the happiest mortal is still the moment he falls asleep, as the unhappiest moment of the unhappiest mortal, the moment he wakes up." "If life in itself were a valuable possession and decidedly preferable to non-existence, the gate need not be occupied by such terrible guards as death and its terrors. But who would persevere in life if death were less terrible? . . . However, death carries with it still the good of being the end of life, and we console ourselves about the sufferings of life with death, and about death with the sufferings of life." In many of these epigrams the sophistry is so subtle and clever that it assumes the form of pure wit, or a grim sort of humor. The chapter on Genius gives an admirable account of some leading traits of that rare gift, mixed up with some of Schopenhauer's peculiar fancies. The essay on Poetry, among other things, contains a brief statement of Schopenhauer's theory of the tragic, on which some German has recently written a ponderous volume. According to Schopenhauer, Aristotle was wrong in making fear and pity the final object of tragedy. Our pleasure in tragedy is rather owing to the fact that it brings the misery and inexorable fate of life so vividly before our eyes that we become fully aware that life is not worth living, and accordingly avert our wills from it. Schopenhauer's theory of love will not commend itself to lovers, as he himself admits. He represents love as a blind instinct, and an illusion which makes its victims believe they will find greater happiness together than in a union with any other individual; whereas in truth it is the child alone—that is, the race—for which any real advantage is secured through this illusion, since passionate love springs up usually only between two young people whose virtues and faults are of opposite kinds, and will therefore be neutralized in the child. On Education Schopenhauer's leading thoughts are that it should proceed from the particular and intuitive to the general and abstract; that memory is the faculty which should be first cultivated in youth when it has most tenacity, and that all subjects wherein great errors are possible, such as philosophy and religion, should be postponed till after the sixteenth year, when the judgment has acquired some strength and independence.

Of the present translation it may be said that it generally gives the meaning of the original correctly, but that it is not elegant. Schopenhauer's works deserve to be as elegantly translated as 'Wilhelm Meister'; but for that we should need a second Carlyle. If the present translators had borne in mind the pages of abuse Schopenhauer heaps on some one for inserting the word "is" in a quotation from him where he had left it out, they would not have translated the statement quoted from Philo (p. 133) "that usually *one more* belongs to the great mass than every one thinks," by "that usually *one belongs more* to the great mass than every one thinks."

The Amenities of Home. [Appleton's Home-Books.] New York: D. Appleton & Co.

A BOOK in the main so sound in theory and always so admirable in intention as 'The Amenities of Home' must do good, even though sometimes smart rather than clever By "sound in theory" we mean as to what a true home should be. Of the estimate of the American homes of to-day, which is pessimist to the extreme, there may be doubts. Perhaps this is to suggest a limitation rather than a fault in the book. Whatever may have been the author's own experience, she has chosen to describe the life of the easy-going newly rich, and a very unpleasant picture it is; but by as much as it is faithful to the original it is unjust to the sweet and modest homes which make so large a part of our towns and villages. True, the city hotels and the summer watering-places will supply countless examples of all that the author deprecates—the want of respect, the selfish idling, the fast talk and faster manners—but are they not found among people who are *without* homes? and, on the other hand, what is it but love of home and a desire for its amenities that within the last ten years has scattered the pleasant summer homes all about the seashore and the mountains wherever railroads make quick coming and going possible? What is it but the growing sense of the dignity of a home of one's own, of the fitness of it, that has wrought the change in one generation by which so many ladies alone, the unmarried even, now prefer to keep house by themselves—a thing unknown in our country twenty-five years ago? The answers to some such questions might prove that this looseness of family ties, of household bonds, is not, as the author would have us infer, a deterioration from elder virtues. It is the transition state of people who have been, as the French say, "disclassed" by their new and rapid wealth. In such cases the first loss is always of the characteristic virtues of the earlier position, the first acquirement always of the faults of the new. The granddaughters of the Copley beauties who rightly serve as models in this book are much the same manner of women as their forebears—witness the lawns of Stockbridge, the shades of Lenox; but the Daisy Millers have no grandmothers.

One word which should describe the ideal home, we do not find—that is, *interesting*. Nothing so surely binds the daughters and still more the sons to the home as to make it interesting. This is the more true, because there can be no pretence about it; no outsider can contribute this element to the home. Architect

and upholsterer can make it healthful, bright, and attractive to the eye, but nothing but a full, interesting *life* within can make home interesting. This leads to what seems a higher plane than the author reaches. Doubtless the *parvenus* to whom the book seems addressed are beneath it, and it is easy to fall into sentimental views on the subject; but the fact remains that, after our idea of the divine, there is nothing we have so precious as the home. It is the best, the highest outcome of all our manifold civilization. In this view, and this only, is justified its costliness—costly because to make it, to maintain it, requires the time, the force, the mind of all women. Take them from it for pleasure or for work, and just so much is lost: is it for bread-winning, it is the pity of it; is it for pleasure, for folly, it is the shame of it.

An issue might be joined upon some dogmatic statements in the book, such as: "It is the man's prerogative to decide upon religion, politics, business, social position, expenditure." Is not this to make "the good wife" a mere echo? Is not harmony a finer music than mere unison? Does not such an assertion imply that it is possible to have known only women who can but follow a guide, who have no individual life, no wise judgment when to insist and when to yield?

Poems and Ballads of Heinrich Heine. Translated by Emma Lazarus. To which is prefixed a Biographical Sketch of Heine. New York: R. Worthington. 1881.

Miss Lazarus is the latest, and we wish we could say the best, also, of Heine's English translators. Scrupulous fidelity to the original metre, and all the literalness that can be demanded, mark the specimens of her skill here made public. But in neither direction is the highest success to be attained in the case of this poet, whose rhymes, metres, and diction must all be freely modified in order to save the essence of the charm inherent in his mother-tongue. Mr. Leland has shown how easy it is to be at once stiff, unidiomatic, and vulgar by too close an adherence to the model. Miss Lazarus's rendering is never vulgar, it is seldom unidiomatic; but it too frequently reminds us that it is not spontaneous English verse. Her literalness occasionally forsakes her unnecessarily, as in the excellent translation of "Solomon" (p. 47), where for

"Behold! a frown across his brow they view,"

"And if a frown," etc., would have been closer and less abrupt ("Und zieht er," etc.). On page 178,

"'Tis long since I left the town and its people,"

is a serious error for "*she* left" ("Sie hat schon längst," etc.). Page 93,

"We crept into the hencoop,"

describes a feat of some difficulty for two children. "Hühnerhäuschen"—hen-house—is Heine's word. In the poem "Tannhäuser" Miss Lazarus shifts the accent of this name to suit her convenience. On page 95 we have "at six and sevens," which is less than English. On page 140, "clashing" is made to rhyme with "passion." The trying pun,

"Ein Thor ist immer willig,
Wenn eine Thörinn will,"

which Leland takes by the horns in this manner,

"Oh! a wicket is always ready
To ope when the wicked will,"

Miss Lazarus gets over by a change of sex:

"A door will always open
When the adorer knocks."

Perhaps as favorable a sample of our author's work as we can cite briefly is the following contribution (p. 161) to the many attempts to English "Ein Fichtenbaum":

"There stands a lonely pine-tree
In the north, on a barren height;
He sleeps while the ice and snowflakes
Swathe him in folds of white.

"He dreameth of a palm-tree
Far in the sunrise-land,
Lonely and silent longing
On her burning bank of sand."

And we conclude this notice with a comparison in criticism of Miss Lazarus's method. Here is her version of "Sie liebten sich Beide, doch Keiner" (p. 48):

"They loved one another, but neither
Confessed a word thereof;
They met with coldest glances,
Though pining away with love.

"At last they parted; their spirits
Met but in visions rare.
They are long since dead and buried,
Though scarcely themselves aware."

Beside it we place the following from the little volume of selections published anonymously three years ago by Macmillan & Co., and still, to our mind, the best, for its range, of any translations from Heine we have met with:

"These two, they loved each other well,
But neither would the secret tell;
They seemed like enemies, and yet
Their hidden love was passionate.

"At last they said farewell—and then
They met not, save in dreams, again.
They both were dead—dead long ago,
Yet scarcely knew that it was so."

Sketches of Longer Works in English Prose and Verse. Selected, edited, and arranged by Henry Morley. London, Paris, and New York: Cassell, Petter, Galpin & Co.

This is a quarto volume of some 450 pages, the fifth in Prof. Morley's series of works having to do with English literature. The title sufficiently indicates its scope, and its editorship is sufficient guarantee of judicious execution, in the main. Necessarily the "longer works" presented are more or less abridged, and of course some works lend themselves to such treatment far more readily than others. Those of Beowulf, Gower, Lydgate, Occleve, Daniel, for example, may be subjected to curtailment at the hands of a competent editor without any loss which the reader is likely to feel, or at least which he is not likely to regard as more than recompensed by the convenience of having them in cyclopedic form. Even such a work as 'Hudibras' loses little by presentment in a series of long extracts. Whether the same may be said of 'The Faerie Queene' and the 'Venus and Adonis' is much more doubtful. It is probable, however, that only on these terms will they ever be "sampled" at all by many readers; and if everything written by Shakspere and Spenser deserves to be read not only for its merit but because of its authorship, a merely speaking acquaintance is certainly preferable to none whatever. The 'Paradise Lost' and 'Tom Jones' fall into quite another category. One might just about as well know nothing at all of them as to know only parts. On the other hand, again, there is perhaps no rule to be laid down in this respect concerning such a work as the 'Absalom and Achitophel,' and different people will differ as to 'Robinson Crusoe' and 'Gulliver's Travels,' though there is no question as to 'The Vicar of Wakefield' and 'Clarissa Harlowe'—completeness being essential to an appreciation of Goldsmith's novel and intolerable in Richardson's. On the whole, there are more advantages than disadvantages in Prof. Morley's scheme, and in our judgment the latter are counterbalanced by the way in which the reader is introduced to works of the second or third class, but of great reputation and rarely read. Omissions are inevitable as a matter of course, but the fifty-odd pages devoted to the nineteenth century might, we think, have been sacrificed to secure the inclusion of extracts from such a work as 'Tristram Shandy,' say.

A "feature" of the volume, and one which adds greatly to its value, is its large number of illustrations—nearly 150—which consist of facsimiles from original manuscripts and other authentic sources. Thus the portions of 'Hudibras' contain many reproductions of Hogarth's plates; the 'Canterbury Tales' are introduced with a quaint initial from John Stowe's Folio of Chaucer in 1561, and contain cuts of the different personages who figure in the pilgrimage, from the Ellesmere manuscript; Lydgate is illustrated by, among other cuts, a representation of "Old Canterbury," from William Smith's 'Description of England,' Landsdowne MS.; in More's "Utopia" there is a cut of the plan of that happy island drawn for the edition of 1518; Robinson Crusoe appears in a stylish frock coat of skins as he was depicted in the first edition of 1719; "Mr. Burchell's Pocket-book" is a particularly engaging bit of *genre* drawn by Dodd to illustrate Harrison's edition of 'The Vicar of Wakefield' (1780); and among the most curious are the frontispieces to Hobbes's 'Leviathan' (1651) and to the 'Novum Organum' (1620). The book is in wide double columns, well printed, and abundantly indexed.

Count Agénor de Gasparin. By Thomas Borel. Translated from the French by O. O. Howard, Brig.-Gen. U. S. Army. New York: G. P. Putnam's Sons. 1881. 8vo, pp. 126.

The Count de Gasparin is one of the men who deserve to be remembered by this republic for the good and bold words spoken in our behalf at a time when they were worth much to us. His biography by Thomas Borel will well repay the brief time it will take to read it. It is rather a eulogy than a biography, giving very few events, not presenting the reader with the words of the man himself as the best picture of his individuality, but dwelling upon the several features of his character in that encomiastic, not to say rhapsodical, style of which the French are so fond, and which in truth is so well adapted to the genius of their language. It sounds rather flat in English, it must be acknowledged, especially in the clumsy and unidiomatic English of this translation. Take, for instance, the following passage: "That sensibility which affected him in meeting a solicitous countenance or chagrin was extended to everything which had breath. He did not forget the day in which, seeing at his feet the partridge which he had wounded, he had to do violence to himself in order to finish it. He gave no more shots except the blank, and he never regretted it," Considering that M. de Gasparin was a public man, the book contains surprisingly little information upon public events and parties in France; it is purely a personal memoir.

Sea Mosses. A Collector's Guide and an Introduction to the Study of Marine Algæ. By A. B. Hervey, A.M. Boston: S. E. Cassino. 1881.

This is a handy octavo volume of very modest pretensions. It professes to give chiefly the more obvious characteristics of our commoner seaweeds, and this part of the work is well done. The descriptions are clear and the plates are remarkably good; rightly used, they will serve a very excellent purpose in enabling amateurs to identify some of the prettier forms of algæ which are thrown upon our beaches. We hope that a second edition may give also more than an inkling of the proper classification based upon the organs of reproduction. This may be done by a

few short keys scattered through the work and by an accompanying glossary of the terms used in the microscopic examination of sea-weeds. We are much in need of a popular work which can form an easy introduction to Professor Farlow's new work on algæ. It may be added that a portion of the present volume could be sacrificed without detriment, to make room for more important matter.

Book of the Black Bass. By J. A. Henshall, M.D. Cincinnati: Robert Clarke & Co.

THE black bass is a fish which until lately has been very much neglected by sportsmen and naturalists, and only within a few years have the first generally known that as a game-fish it is fully the equal of the book-trout, or the latter been able to tell us with certainty the seasons or places of its spawning. The first half of Dr. Henshall's book is chiefly devoted to the scientific description of the varieties, ranges, and habits of the black bass, and is not especially interesting to the lay reader. The general division he makes in the two species of his fish is the large-mouthed bass and small-mouthed bass, and no names could better indicate them, although there are other differences in shape, color, and size of scales and fins. Both varieties frequent the same waters and have the same habits, and, Dr. Henshall thinks, are equally gamy, although he admits the existence of the contrary belief among anglers. Speaking of the habits of the black bass, the Doctor says, on p. 170: "A well-attested fact is that the largest bass are found in the largest bodies of water, or where the range is most extensive." We think if he had said they are found where the best supply of proper food exists he would have been more correct; and this may or may not be where the range is most extensive. The largest black bass we have ever seen taken were in a small lake, not two miles long, in northern Michigan, where the average weight of one day's catch was nearly six pounds. This large growth is doubtless greatly attributable to the unusual abundance of small shell-fish and minnows in the lake. Every angler knows that the largest bodies of water do not always yield the largest fish. The trout of the Rangeley waters in Maine are larger than those of Lake Superior, and those of the Thames the largest of their kind in Great Britain. The same is true of anadromous fishes, especially of the Salmonidæ. The Grand Cascapedia River of New Brunswick, although a rather small stream, breeds much larger salmon than the Restigouche of four times its size, or indeed than any other river of the Atlantic coast; and the sea-trout of the Nouvelles, hardly more than a brook, are larger than those of most of the rivers falling into the Bay of Chaleurs.

Part second treats of "tools, tackle, and implements," and contains many useful instructions to those contemplating bass-fishing; one chapter on "knots" especially will well repay careful study. The illustrations of this part, though poor, are very useful in explanation of Dr. Henshall's directions as to tackle and the paraphernalia of fishing. Part third is entitled "Angling and Fly-fishing," and contains minute and thorough instruction as to fly and minnow casting, the way to approach the bass, to fish for him, and to land him. Regarding the last operation, our author says: "Don't be in a hurry to land him; the longer he resists the better for your sport. Take your time, and only land him when he is completely exhausted." This advice we think very bad. Any fish should be landed just as soon as practicable after being hooked, of course with due regard to the strength of the tackle. If he is well hooked, he is certain to be landed. If very lightly hooked, we think the chances are better for his escape if long on the line than if got ashore as soon as possible. He will probably get off whichever course is adopted.

We are sorry Dr. Henshall has not been able to avoid the sentimental side of fishing rather more, and leave "good old father Izaak Walton" to his needed repose. He is not a poet, as can be proved by reference to p. 382 *et seq*. On the whole, however, the book is by far the best of any recent American publication on fishing; it supplies a great want, and is the only one we know which gives full and reliable information on the habits and the pursuit of one of the finest of American fresh-water fish.

Young Folks' History of America. Edited by Hezekiah Butterworth, author of 'Zigzag Journeys in Europe,' etc. Illustrated with one hundred and fifty engravings. Boston: Estes & Lauriat. 1881.

WE cannot think Mr. Butterworth's history of America so successful as his books of travel, which, with some faults of style, are on the whole very attractive to young people, both in the story and the illustrations. The history is in a style too heavy and formal for the class for whom it is intended, and the pictures are for the most part "made up," instead of genuine illustrations of history. We except, of course, the portraits and the views of real scenes—for example, Breed's and Bunker's Hills (p. 259), a very striking view, especially if it is a genuine reconstruction of the original ground. The best part of the book is the stories that are inserted here and there, many of them unfamiliar ones—as, for instance, the story of Annawon (p. 131). Of course what children want is these picturesque and suggestive stories, and so far the work is well done. As a consecutive history it is less successful. On what principle is the story of Acadia sandwiched in (p. 84) between the early histories of Virginia and of New England? And why is the chapter on "Salem Witchcraft" placed (p. 157) before that upon "Persecution and Religious Liberty," including the story of Roger Williams? On page 234 we meet that odious quasi-word "misses": "the patriotic spirit was shared by the boys [why not *masters?*] as well as by the misses." It is discouraging to see it make its way from school reports and shoe-dealers' advertisements into a formal history published by a reputable house.

Rome and Carthage. The Punic Wars. By R. Bosworth Smith, M.A. New York: Charles Scribner's Sons. 12mo, pp. 239. [Epochs of Ancient History.]

THIS is a welcome addition to the "Epochs" series, giving us in a brief space the substance of the author's larger work in the field in which he is an authority. The present work is indeed distinctly stated to be an abridgment of the other. Its point of view is therefore Carthage rather than Rome, and in this respect it differs from all other histories of this period. This fact must be borne in mind by the reader. Taken by itself, the sketch of Roman history and institutions here given is inadequate, even as a sketch subordinate to the main purpose of the book, while Carthage receives full and sympathetic treatment. At the same time the author accepts the result, the triumph of Rome, as on the whole a gain to civilization and humanity.

The book contains an accurate and interesting history of Carthage, especially during the time of the wars with Rome. It is not the plan of this series to have elaborate discussions of controverted points; such points abound in the period under review, and we always find a clear and forcible presentation of the best-sustained view. The chief question of this sort is Hannibal's route over the Alps, which Mr. Smith assumes to have been by the Mont du Chat and the Little St. Bernard, undoubtedly the correct view. Curiously enough, the illustrative map of Italy mixes up the two opposing opinions, by extending the Taurini so far north as to occupy the valley of the Dora Baltea, into which this pass enters. Kiepert, it may be remarked, makes the same blunder, saying that the pass of the Graian Alps (Little St. Bernard) led into the territory of the Taurini, that of the Pennine (Great St. Bernard) into the territory of the Salassi; while a glance at the map shows that these two passes meet nearly at right angles in the valley of the Dora Baltea. Now this confusion must arise from an endeavor to reconcile Livy's narrative with the theory which carries Hannibal over the Little St. Bernard—a useless endeavor. Livy's account is confused in many particulars, but is perfectly clear in the main thing, that he conceives Hannibal to have crossed by the Cottian Alps or Mont Genèvre. He makes him pass from the valley of the Isère to that of the Durance, which leads directly to the Mont Genèvre; it would have been the height of absurdity from this point to carry him north again to the Little St. Bernard or even Mont Cenis (which again is out of the question, as not in use in ancient times). Moreover, he states positively that Hannibal crossed into the territory of the Taurini, that is, the upper Po valley. If we follow Livy we must accept the Mont Genèvre route, as most of the Roman writers after him did, and as M. Réville has done in a recent number of the *Revue des Deux Mondes* (May 1, 1880). But the authority of Livy on a point like this is absolutely worthless against that of Polybius; and Polybius is at variance with him on the two vital points—he says nothing of the Durance, but carries the march directly up through the country of the Allobroges; and he leads Hannibal into the country of the Insubrians, to whom the Salassi, who occupied the valley of the Dora Baltea, were vassals. His testimony is almost as explicit for the Little St. Bernard as Livy's for the Mont Genèvre.

Another point of controversy is the position of the Romans and Carthaginians respectively at the battle of the Trebia. This controversy, too, hinges on an alleged discrepancy between Livy and Polybius. Livy's account certainly places the Romans on the left bank of the river, and this is the view adopted by most writers, and followed by Mr. Smith. Mommsen, claiming the support of Polybius, places the Romans upon the right bank, but we cannot see on what ground. The narrative of Polybius, while not quite so explicit, perhaps, as that of Livy, seems to us to be perfectly consistent with it, and inconsistent with any other view. Mr. Smith gives a good plan of the battle-ground, but fails to indicate the points of compass.

A third question is as to several localities in the city of Carthage. Mr. Smith has studied this subject upon the spot, and his conclusions agree with those of Kiepert, but differ from those of the explorer Dr. Davis. He describes the topography clearly and well, and places the Byrsa on the Hill of St. Louis, at the south, the Megara northwest of it, and the artificial harbor on the coast of the open sea, southeast of the Byrsa.

Demosthenes: With extracts from his Orations, etc. By L. Brédif, of the University of France. Translated by M. J. MacMahon, A. M. Chicago: S. C. Griggs & Co. 8vo.

So much honest, hard work has been put into this book by both author and translator that one

cannot nelp sincerely regretting that the product is not more worthy of commendation. The book goes over the facts of the public life of Demosthenes minutely, treats of his peculiarities as a man, as an orator, and as a statesman, discusses particularly the trial which gave us the Oration on the Crown, and gives a view of the history of Greek oratory. It abounds in illustrations and parallels, mostly from Roman and French history and literature, and in quotations from orators contemporary with Demosthenes. But, after all, the book will be of little use to any one desiring to get a clear and true idea of the man and his policy. Its arrangement is very confused, in spite of a great show of system. It seems to ignore all the German study of the author. It builds opinions on the foundation of single passages, and treats rhetorical exaggerations like sober history. To one who can correct its errors as he reads, it may be of service in suggesting new combinations of some of the orator's separate expressions, or in putting in a forcible form some familiar view, but the unlearned reader would probably find himself more muddled than helped by it. The translator has evidently striven to be faithful, and often expresses the thought of the original happily, but almost every page bears witness to his want of exact scholarship or of command of his own language. The proof-reader, too, must have taken some pleasant naps during his work. It is really a pity to see so much labor and expense put into a book without a more profitable result.

NEW LEISURE-HOUR BOOKS.

16mo, $1 each.

One of Three.

By JESSIE FOTHERGILL, author of 'The First Violin.'

THE

Lutaniste of St. Jacobi's

A Tale. By CATHERINE DREW.

"We can only express our sense of obligation to the writer who has enriched our literature by this sound, sweet, tender, wholesome book."—SPECTATOR, LONDON.

HENRY HOLT & CO., New York.

The Portable Bookcase manufactured solely by Lockwood, Brooks & Co., 381 Washington Street, Boston, Mass., is the most perfect thing of the kind, it being easily moved, and adjustable for books of all sizes. Send for circular or call and see it.

NORTH GERMAN LLOYD

STEAMSHIP COMPANY,

FOR SOUTHAMPTON AND BREMEN.

The steamers of this Company will sail every Saturday from Bremen Pier, foot of Third Street, Hoboken.

RATES OF PASSAGE TO LONDON, HAVRE, AND BREMEN.

First Cabin, $100; Second Cabin, $60. Steerage, $30. Prepaid Steerage Certificates, $28.

For freight or passage apply to

OELRICHS & CO., AGENTS,
Bowling Green.

THE HYGEIA HOTEL, Old Point Comfort, Va., situated 100 yards from Fort Monroe. Open all the year. Equal to any hotel in the United States as a Summer Resort or Cold Weather Sanitarium. Send for circular describing hygienic advantages, etc.

Antiques.

A new, large, and rapidly-changing collection of Antique Furniture, etc., restored, when required, with intelligence and skill.

New York is the best and the worst market for such. It buys liberally, but sells dearly.

Our prices are not more than two-thirds.

JOHN WANAMAKER.

1313 Chestnut Street, Philadelphia.

Books—Cheap.

Complete sets of American Archives and State Papers. 47 vols. folio, half Russia, clean and sound, $80.

CHAS. L. WOODWARD,
78 Nassau Street, New York.

C. F. Bickford Feb 27 1882

The Nation.

NEW YORK, THURSDAY, SEPTEMBER 1, 1881.

The Week.

THE President's condition has of course occupied the public mind during the week, almost to the exclusion of all other topics. On Friday and Saturday the deepest sensation was created by the apparent despair of the doctors, owing to a sudden and decided aggravation of the worst symptoms. This was followed by equally sudden improvement, and at this writing he is holding his own, if not advancing. But one thing is plain, and that is, the longer the case lasts the more difficult does it become to obtain accurate information, owing partly to the inevitable effect of the prolonged strain on the nerves of the attending doctors, and partly to the growing dithyrambic tendency of the newspaper descriptions.

The "international struggle for gold" which has exhibited itself in the several advances of the rate of discount by the Banks of England, France, and Germany, can hardly have the effect to check importations of that metal by this country while there is a balance of unliquidated indebtedness due to us and a continued demand in foreign countries for our products. This demand bids fair to be not only continued, but imperious. The recent destructive rains in Great Britain will necessitate large importations of breadstuffs and at higher prices than those of last year, and while our exportable surplus will be less than that of the two preceding years, the advance in price will perhaps more than compensate our farmers for the difference. The amount of American securities abroad available to take the place of gold in the settling of international balances is relatively small, though probably greater than last year at this season. The advance of the rate of discount by the Bank of England will have the effect more or less to cause holders to realize on these securities by sending them home to be sold—the proceeds to be invested at the higher rate of interest now offered in London. Aside from this the advance in the Bank rate, unless it be raised to a figure high enough to attract American capital to England for investment, can have no effect upon the movement of gold hither.

A fortnight ago the British wheat harvest was reported as about ten per cent. below the average, and as likely to produce 10,000,000 quarters, while the oats were estimated as twenty per cent. below the average. This would not have made up for the losses of the last five years, but it would have enabled most of the farmers who have held on till now to hold on still longer, if not to pull through. A fortnight's rain has, however, destroyed even these moderate expectations, and it is supposed, although within the last day or two the weather has improved, that the wheat crop will fall short by one-third. This means the ruin of a large proportion of the remaining farmers. Its effect in sustaining our exports of produce, about half of which go to Great Britain, will of course be great, but this is insignificant compared to the effect it is likely to have on English politics. It means a still further decline in the great social and political force known as "the landed interest." Many people on this side of the water fancy it will help the agitation for "fair trade," but we advise them not to build much on this movement till some one of its promoters produces, in black and white, his scheme for bringing "fair trade" about. None of them has done this yet, or is likely to do it.

The Bank of England early in the week raised its posted discount rate to 4 per cent. from 3 per cent., making an advance of 1½ per cent. in two consecutive weeks. This was done for the double purpose of drawing gold to London from the Continent and of stopping the outflow from London to New York. The latter it failed to do; for, since the advance as before, the rates for sterling exchange here have warranted gold imports. During the week, about $1,500,000 gold arrived here, and it is estimated that about $7,000,000 more is now afloat bound for this port. The United States Sub-Treasury here again took in more money than it paid out, and the New York banks, as the result of the movement in and out of their vaults for the various accounts, again lost heavily, so that on the statement of average condition for the week they lacked $2,568,025 of a 25 per cent. reserve. The redemption in advance of maturity of the $28,500,000 United States 5 per cent. bonds, due October 1st, is made at the Treasury at Washington instead of at the Sub-Treasury here; some $9,000,000 to $10,000,000 of these bonds have already been presented for prepayment, but on account of the delay incident to the formalities of redemption little or none of the money reached New York during the last bank week. Besides the money which will come out of the Treasury on this account, reports have been current that Secretary Windom will further use surplus income either to purchase the long 4 or 4½ per cent. bonds, or to redeem $20,000,000 to $25,000,000 of the bonds which earlier in the year were extended at 3½ per cent. and any part of which he can by the terms of the extension pay at any time. These reports were generally credited.

At the Stock Exchange the tone of speculation changed from "bear" to "bull," and in the latter part of the week there were rising prices for railroad and telegraph stocks. There is no change in the condition of trunk-line railroad affairs, the war appearing to be as bitter as at any time; and rates certainly have not been lower. But it is known that a few men can at any time close this war, so that appearances are not implicitly trusted. The wheat and corn harvests indicate a larger yield in this country and smaller returns in foreign countries, excepting Russia, than had been estimated. The outlook for the money market is no better than it was, except for the supposed disposition of the Secretary of the Treasury to release surplus revenues in sufficient amount to prevent the Treasury operations from making the loan market stringent.

Since the President's improvement the stock market has continued strong and rising. The theory is that leading stock speculators have been waiting for the termination of the suspense respecting the President (knowing well that his death or his recovery would not logically or properly affect the material interests of the country), to change the current of their operations, and then to change such events as they can control, like the railroad war, from "bear" to "bull" influences. However this may be, there was an "improved feeling" at the Stock Exchange late in the week. The talk that the Treasury is about to resume bond purchases advanced the price of the long United States bonds ⅛@1 per cent. The price of silver bullion advanced in London to 51⅞d. per ounce from 51¼d., and the bullion value here of the 412½-grain silver dollar advanced to 87 cents.

Senator Edmunds has written a letter to the Massachusetts Republicans giving his views as to the proper future policy of the party. He thinks that its duty is to preserve and improve the laws for the security of national civil rights; to make as effective as possible provisions for the purity and fairness of Congressional elections; to establish by law the methods of ascertaining the result of Presidential elections; to "so improve the civil service as to diminish and, if possible, remove the evils of place-hunting and the interchange of favors between the members of the legislative and executive branches of the Government, and to free the tenure of a great number of officers from dependence upon political favor or political opinion"; to readjust the revenue laws upon the basis of producing the greatest revenue with "the least and nearest equal burden to the people," and of "developing and encouraging the industrial pursuits of every calling of our citizens"; to bring both the theory and practice of the Government in regard to the currency to the point of a fixed and uniform metallic standard of values, making coin only a legal tender in the payment of debts; and to promote, so far as the national Government can lawfully do so, the increase and diffusion of education.

Mr. Edmunds's position in the Senate and his experience and ability make such a forecast as this valuable; at the same time it must be said that in some respects it lacks that definiteness and point which we should have expected from him. We should like to know, for instance, what legislation he would recommend to "improve the laws for the security of national civil rights." We have heard a great deal about the necessity of doing something effective for civil rights for many years, but when we ask what it is that ought to be done, we invariably fail to get any reply. So with regard to the revenue laws: what Mr. Edmunds says, amounts to no more than a declaration that we ought to have reve.

nue laws of the right sort, as to which there is no difference of opinion between Democrats and Republicans. The most important plank in his platform, it will be seen, relates to the civil service, and it will be gratifying to all friends of the movement to reform it to know that they are to have hereafter the assistance and support of the Vermont Senator.

The Greenbackers held conventions on Wednesday week in this State and in Massachusetts. Their hearts still beat warmly for greenbacks, and they hate "monopolies" of all kinds, but on some new subjects which they have recently taken up it is difficult to make out from their resolutions what they are after. In both States they have taken up the civil-service question with considerable vigor. In New York they declare that "we recognize the fact that all chief executive officers should have entire control of the selection and appointment of their assistants, to the end that the administrative machinery may work harmoniously; but for the purpose of relieving both State and National politics from the odium of executive interference, we demand that all persons performing executive service for the State or General Government shall be deprived of the elective franchise during the period of such service." In Massachusetts, on the other hand, they have reached the conclusion that "in appointment by the President lies the chief evil of our present civil service; therefore, in frequent elections by the people of the largest possible number of Government officials, giving frequent opportunity for the people to pass judgment upon their acts as their servants, will be found the best possible solution of the problem of civil-service reform." These proposed reforms would undoubtedly effect sweeping changes in the service, but they seem to be founded upon somewhat divergent views as to what the civil-service problem is.

The remainder of the platforms is of a highly miscellaneous character. Thus the Massachusetts Convention seems to have had among its members some one interested in the tax-mortgage abuse, and accordingly we find that it resolves very sensibly "that the holder of mortgaged property should only be taxed on the amount of his interest therein." On the other hand, it would be hard to say why the New York Greenbackers should insist "that the Government should exchange its legal-tender notes for any of its interest-bearing debts at par on demand, and for gold or silver bullion or coin at their legal-weight values," or precisely what the resolution means. There seems to be no immediate connection between the Greenback movement and an amendment of the Massachusetts Jury law "so that at least one-half of the legal voters of each city and town shall be on the jury list," nor should we have expected to find in a Greenback platform a plank insisting that "all halls owned by towns and cities" should be "free of all expenses for political or educational purposes." This seems to be directed against the abuse of "hiring a hall" so commonly reprobated, no less among the politicians of the two old parties than by the Greenbackers. The purchase of the telegraphs by the Government we might have expected to be recommended by anti-monopolists, but the Massachusetts Greenbackers insist that the Government should after this undertake one function never until now, we believe, suggested in this country—that of collecting and distributing news. "We demand," they say, "that the daily news be publicly bulletined at every telegraph office and given to every newspaper free of charge, in the interest of a broader dissemination of intelligence."

The reported discovery that Lieutenant Flipper, the colored officer, had been defrauding the Government is said to have created "wild excitement" among the garrison at Fort Davis, Texas. At first the rumor was not believed, the lieutenant having hitherto borne a high character, and being popularly supposed to be above suspicion. For several months he has been Acting Commissary of Subsistence, but since the 9th of July last the story is that he has not transmitted his funds to the Chief Commissary at San Antonio. On an explanation being demanded no reply was received, but on further enquiries being made Mr. Flipper stated that he had sent the funds by mail, but had kept no record of the fact, and consequently could not prove it. This is said to have been regarded as careless, but nothing more, until one evening, shortly after, some of the officers and ladies out driving were surprised at finding outside the post Lieutenant Flipper's horse, with a pair of saddle-bags, fastened in front of a store. Mr. Flipper was immediately brought back by the adjutant. The funds which he reported to have been sent by mail consisted in part of checks on different banks, given him by the officers of the fort in payment of their monthly bills. A description of them was forwarded to the banks, and it was learned that they had not been presented for payment. Lieutenant Flipper was now placed under arrest, and a search set on foot, which resulted in the discovery of what are said to be the missing checks upon the person of a woman servant.

Such is the story sent out from Fort Davis, but what is Flipper's side of the story? Is he unfamiliar with the Whittaker case? Does he not know that the prejudice in the army against colored officers is so intense that there would be nothing unnatural in "putting up a job" of this kind? Did he never suspect anything when they pretended to like and esteem him very much, and craftily made him commissary, and entrusted him with funds, well knowing that the negro race is not accustomed to complicated pecuniary transactions, and can easily be confused about them by means of accounts, vouchers, and the like? When he was suddenly called upon to account, and stated that he had mailed his funds, did it never occur to him that his servant might have been bribed, and checks carefully prepared to look like those which have disappeared placed in his hands? Then the poor defenceless boy is locked up, prevented from communicating with his friends, and stories are spread abroad that his "most intimate associates of late have not been the best." And this, too, at a distant post, surrounded by army officers who loathe him, graduates of an institution where prejudice against his race is cultivated by officers of instruction, and where the mutilation of negro cadets is regarded as a pleasant pastime. It is pretty evident that Flipper has not "retained counsel."

"Colonel" Cash of South Carolina, who shot "Colonel" Shannon of the same State in a duel recently, because he had, as a lawyer, alleged a fraudulent transfer of the former colonel's property to his wife, has published a defence of himself in the newspapers. His account of the affair does not differ materially from that which has already appeared. But he says of "Colonel" Shannon, that "no braver man ever bit the dust," and adds figuratively that "he died upon the ramparts of the enemy, and with a smile on his face fills a hero's grave." He denies that he addressed the crowd on "the field of honor" before the duel. There were about two hundred colonels, white and colored, there, when he arrived, but he declares he made no remark to them whatever. Having given due credit to the memory of his dead foe, he next turns his attention to the editorial colonels who have expressed disapproval of his conduct, one of whom, he says, is "an imported flunkey and notorious cuckold," and the others "vampires" who "disgrace the once proud title of editor." It is almost impossible to believe that when these colonels read this they will not seek "satisfaction" on "the ramparts of the enemy." We may be thankful if there is not more dust-biting among these hot-tempered officers.

The British Parliament was prorogued on Saturday, after one of the most remarkable and exciting sessions in its history. Nevertheless, it may be said to have accomplished little beyond the passage of the Irish Land Bill and the Coercion Bill. The Land Bill is one of the great measures of the century, but it is not great enough to be the sole product of nearly nine months' work of the most powerful and oldest legislative body in the world. The Coercion Bill may in one sense be said to have been a condition of the passage of the Land Bill, because Mr. Gladstone would probably not have succeeded in retaining for it the support of the English and Scotch constituencies if he had not accompanied it by the creation of extraordinary penal machinery for the maintenance of law and order. To be sure, the Coercion Bill led to obstruction by Mr. Parnell's followers, but their obstruction was, after all, a trifling misfortune compared to what the alienation of the English and Scotch would have been. Every one admits that nobody but Mr. Gladstone could have carried the Land Bill under any circumstances; but even he could not have carried it if no attempt had been made to check the Irish "outrages." But the Coercion Bill did not check them; in fact, it increased the exasperation which led to them, and, in the opinion of some of the best judges of Irish affairs, was a sorry substitute for the vigorous enforcement of the ordinary law.

It satisfied, however, the now long-standing and, in spite of all the progress of the last fifty years, deeply-rooted English prejudice which considers "troops" an essential part of every remedy for Irish discontent. Even the most advanced English Liberals are not fully prepared to give up "troops" in dealing with Ireland, however satisfied they may be of the inefficacy of this medicine as a remedy for discontent elsewhere. So Mr. Gladstone had to put a little of it in the cup of conciliation, and apparently considers himself obliged to adhere to it until the Land Bill has fully got into operation. It has, however, been a great misfortune, because it will deprive the Land Bill of a good deal of its power as a means of reconciling the country to the English connection.

That the anti-English agitation is not ended by the passage of the Land Bill is plain enough. We tried to foreshadow last week the direction it would now take, and what we predicted has received a good deal of confirmation from the recent declaration of so moderate an Irish malcontent as Sir Charles Gavan Duffy, that "the price of peace in Ireland is the concession of not only their own Government and their own Parliament, but their own military and naval forces and their own distinguishing flag." These are things which probably neither he nor anybody else will ever see; but there will be a powerful Irish group in the House of Commons trying for them through the means to which they find Englishmen most susceptible—disorder in Parliament. In spite of all the discussion of the subject during the last year, no adequate means of dealing with this has been hit upon. The Continental "clôture," the American previous question, and the "urgency" machinery which was furnished in the House of Commons last winter, are efficacious enough in preventing too much debate of a particular motion; but they cannot suppress a party or group of members determined to impede all business and bring the Legislature itself into contempt, and with Mr. Gladstone no longer on the scene to keep the English temper down by the weight of his character and authority.

There are strong indications that the English Tories, in default of anything better, have determined to advocate a return to protection, and have made or are making an alliance with the Parnellites, whom they join in denouncing "coercion," so as to make an inroad in the Liberal boroughs in England, where the Irish vote is strong. But no programme of what they propose to do about "protection" has appeared from any quarter; that is, they carefully refrain from saying what imports they would tax if they had their way. The nearest approach yet made to it comes from Sir George Elliot, who is preparing to contest North Durham. He says that commercial intercourse with the colonies should be "perfectly free." But as far as England is concerned, it is free already. Such obstacles as exist are imposed by the Colonial legislatures, so that Sir George, if he has any clear meaning at all, must mean that Parliament should take away from the Colonial legislatures the control of their own import duties, which is absurd. No ministry would attempt such a thing, and no colony would stand it. Mr. James Lowther, a scion of the Lonsdale family, and a very ridiculous person, who was Lord Beaconsfield's Irish Secretary, and is running for North Lincolnshire, seems to confine himself to vaguer phrases. He says, if correctly reported by the telegraph, that "agricultural and commercial depression points to the necessity of effectual measures against a ruinous foreign competition." If this means anything, it means that there ought to be import duties on food; but even he knows very well that this, too, is impossible.

There is no doubt the Parnellites have made one good point against Mr. Forster. He declared that the Coercion Bill was intended to enable him not to silence the political agitators of the Land League, but to arrest certain "village ruffians," who, he said, were the terror of their neighbors. Now he has not arrested any "village ruffians," so far as is known, while he has arrested a good many of the Land League orators. This does not look well for him, and he has, though a most conscientious and humane man, become thoroughly detested in Ireland. He has, as Mr. Labouchère points out in *Truth*, one capital disqualification for his place: he is an Englishman, and no Englishman ought to hold the Irish Secretaryship. The thing is a scandal, and the Liberals ought to put a stop to it. The queerer the Irish seem in English eyes the more necessary it is that the Cabinet officer charged with Irish affairs should understand the Irish in some degree, and in looking for such a person England is the last place to go to.

The attack on the House of Lords, which has grown out of its public attempt to stop the Land Bill, is carried on by the *Pall Mall Gazette* and the *Daily News* by means of a very effective retrospect of its labors in arresting or marring nearly all the beneficent reformatory legislation of the last fifty years. The position of the Lords, it is now clear enough, is likely to be seriously injured by Lord Salisbury's leadership. Under the late Lord Derby or Lord Beaconsfield, they crept along without exciting too much notice, but their present chief is likely to get them into a world of trouble. The worst of it is that arguments showing the value of a Second Chamber are of no use to them, for on this point their enemies agree with them. But the question, Why should the Second Chamber be hereditary? is a very crushing one, inasmuch as the only possible answer is the one known as a "woman's reason"—because it should.

There could hardly be a stronger illustration of the tendency of ceremonial worship to become mechanical than the recent flogging of a choir boy in an English cathedral by the organist for a mistake in his singing. The organist, who is a Doctor of Music by the way, forbore to punish the boy in anger. He waited awhile and then flogged him in cold blood. He defends himself now by the plea that such floggings are common in other cathedrals. As the only thing which distinguishes singing in a cathedral from singing in the theatre is the supposition that the former is an act of worship, dependent wholly for its value on the spirit in which it is performed, using a whip to make the worshippers sing in tune is one of those absurdities which are too absurd to be laughed at. They are food for reflection rather than for mirth.

Of course there is a variety of explanations of Gambetta's failure—for this is what it comes to—at the late French elections, but the favorite one, and apparently the one he himself accepts, is his prolonged retention of the position of a critic simply. The country apparently does not relish his incessant production, with an air of authority, of schemes of reform which he shows no disposition to carry out in person. It is now said that he does not intend any longer to shirk taking office, and has begun to prepare for it by denouncing "Utopian and reactionary policies," or, in other words, taking up the rôle of a practical man. His paper, the *République Française*, seems to confirm this impression, and he is to produce some sort of political programme in a speech on the 4th of September, the anniversary of the downfall of the Bonapartist dynasty. European opinion has apparently settled down on the conclusion that the Republican success, great as it has been, will do little to form a compact Republican majority unless Gambetta forms a ministry. He is the only man in public life in France who is capable of dominating all "the groups."

It is reported by cable that on Thursday at the conference of the orthodox evangelical clergy at Berlin, as well as at several meetings of the Conservative party, more violent speeches were made against the Jews. The argument advanced by a member of the clergy that, as the Jews are not content with equal rights but aim at absolute predominance over the Christians, the rights of the former must be curtailed for the protection of the latter, appears intensely comical considering the fact that the Jews form a smaller part of the population of Germany in proportion than the negroes form of that of the United States. It is almost incomprehensible how any intelligent and self-respecting people, as the Germans are, can permit it to be said, or even to be suspected, that the Jews are so greatly their superiors in prudence, enterprise, industry, and general cleverness that barbarous demonstrations of force and legal disqualifications must be resorted to to prevent them, a feeble minority as they are, from gaining "absolute predominance" over a great people. It is said that the dissatisfaction recently expressed by the Emperor of Germany and also by the Crown Prince with the anti-Jewish movement has put a stop to the worst excesses. If this is true it is creditable enough to the Emperor and the Crown Prince, but it shows also that those excesses would never have happened, or at least would not have continued so long, had not the Government permitted its feelings with regard to the anti-Jewish movement to remain in doubt.

SUMMARY OF THE WEEK'S NEWS.

DOMESTIC.

THE condition of the President has varied this week more than in any week since his wound was received. On the 23d his retaining nourishment gave the physicians great hope; the granulation of the wound was progressing favorably, and the glandular swelling giving comparatively little trouble. The last, however, was lanced on the following day, and though some relief was obtained no substantial improvement was noticeable, and the question of removing the President from the White House was seriously mooted. Dr. Agnew was sent for and agreed with the Washington physicians, who unanimously opposed Dr. Hamilton's proposal of removal, according to report. On Thursday the doctors were inclined to give their patient up, and announced to the assembled Cabinet that the case was extremely critical. Secretary Blaine cabled Mr. Lowell that the sole hope of reaction rested upon the retainment of nourishment, and announced that the brain was affected. On Friday the pulse went up to 140, the President was frequently delirious, the bulletins expressed alarm, and Mrs. Garfield was warned that but little hope of recovery remained. On Saturday a favorable reaction began. The President asked for and ate a small quantity of toast; the mental disturbance disappeared, and the parotid gland broke into the outer canal of the ear, relieving somewhat the tension. A slight increase of respiration was the only alarming symptom. The next day this disappeared also, and since then improvement has been plain, though of course exceedingly slow. The gland was lanced again and began to discharge more freely, the discharge from the wound, which had for some days been extremely unsatisfactory, improved in character, and when Dr. Hamilton left Washington he announced his confidence in the ultimate recovery of the President. The favorable symptoms continued Monday, and in justifying his confidence Dr. Hamilton explains that he regards them as the effect rather than the cause of the improvement.

At the time of greatest danger, when every one had abandoned hope, the guards of the jail where Guiteau is confined were doubled; in connection with which precaution may be mentioned a rumor that a large organization of "reputable men" has been formed, "without any nonsense of pass-words and grips," to see that Guiteau is punished as they think proper.

The Mississippi Republicans and Greenbackers held their Conventions at Jackson last week, and nominated the following joint ticket, the head of which is an Independent Democrat: For Governor, Benj. King (Ind.); for Lieutenant-Governor, J. B. Yellowby (Gr.); for Auditor, A. T. Wimberly (Gr.); for Superintendent of Education, Professor W. D. Hawsee (Gr.); for Secretary of State, J. J. Spellman (Rep., colored); for Attorney-General, W. F. Fitzgerald (Rep.); and for Treasurer, J. N. Bynum (Rep.). Several gentlemen who had "formerly affiliated with the Democrats" made speeches, and the Bourbons now in power were warned of their approaching downfall and the succession of honest government and fair elections.

The Greenback Convention of New York assembled at Elmira on the 23d instant: The formation of a temporary organization was all the business done on the first day, owing to the scarcity of delegates, but on Wednesday there were too many for concord, and a grand quarrel preceded the permanent organization. The following ticket was nominated: For Secretary of State, Epenetus Howe; for Comptroller, John Hooper; for Attorney-General, Dennis C. Fealey; for Treasurer, Allen G. Woods; for Surveyor-General, J. H. Gould; and for Associate Justice of the Court of Appeals, L. G. McParlan. The platform announces that seventeen years of peace prove the inability of both the great parties "to restore harmony, confidence, and good feeling between the people of the North and the South," demands "the overthrow of all monopolies by the resumption by the Government of the power to issue and control the money of the people, and by a Government control of railroads and other transportation corporations," and, in short, echoes the national platform of the party adopted at Chicago a year ago last June.

The Massachusetts Greenbackers met at Worcester on the 24th instant, 406 delegates being present. The platform adopted is substantially the same as that of the New York convention. A resolution advocating the giving of factory hands a share of the profits in proportion to their wages, when the profits amount to more than six per cent., the corporations to make annual returns of their business to the Secretary of State, was somehow or other lost. The following ticket was nominated: For Governor, Israel W. Andrews; for Lieut.-Governor, George Dutton; for Treasurer, George Foster; for Secretary of State, A. B. Brown; for Auditor, W. T. Whitney; and for Attorney-General, D. O. Allen.

General William C. Wickham, one of the leading Republicans of Virginia, has written a letter to the editor of the new Republican paper of Richmond, the *Debt Payer*, in which he declares his intention of supporting the ticket of the Funder Democrats "as far less hurtful to the best interests of the State and of the country than the Readjuster candidates," to vote for whom he regards as an abandonment of "one of the most vitally important principles of the Republican party." "Suppose they [the Readjusters] succeed in their efforts against the credit of Virginia," he continues, "will it not have a demoralizing effect on the tone of the whole country?" The repudiation of the debt he calls the "one distinctive principle" of the Mahonites. As to their being "liberal Democrats," he is extremely sceptical, and has "no confidence in their professions." If they succeed this fall, "the Republican party will cease to exist in Virginia for all time thereafter." General Wickham argues that a straight Republican ticket supported by the party would have been successful, and says that when the canvass is over he will put forth all the zeal he possesses to "resuscitate and reunite" the Republican party in the State.

Mr. Loren B. Sessions was defeated in the Senatorial Convention of his district on Friday, Mr. Norman M. Allen receiving the nomination, partly owing to bad "tactics" of the friends of Sessions, who overreached themselves by voting for Allen, whose small following they expected on the next ballot to reciprocate the courtesy out of a sentiment of gratitude. The anti-Sessions men, however, proved ungrateful, and a "stampede" for Allen was the result of the "movement." The nominee was a Democrat until 1855, since which time he has been twice in the Senate from his present district, and was a member of the Constitutional Convention of 1867, besides having held various local offices.

At a meeting of the Anti-Monopoly League of the Twelfth Assembly district on Thursday evening, Mr. F. B. Thurber made an address reciting and explaining the proceedings of the recent Utica Convention. He was desirous of having it understood that the Anti-Monopolists proposed to work no injustice to capital. On the other hand, they desired to protect it in every legitimate way and to conserve its interests in every proper manner. He announced that in the way of organization far greater success than had been expected had already been met with. A subordinate league is proposed in every Assembly district in the State, its members to vote for legislative candidates who will pledge themselves to support their views, whether they happen to be Democrats or Republicans.

A convention of representatives from forty-four oil refineries throughout the country was held in Cleveland, O., last week. The proceedings were secret, but at their conclusion it was announced that the Independent Oil Refiners' Association had been organized, and would probably be joined by all the oil refiners in the United States except the Standard Company. The object of the association was declared, however, not to be opposition to the Standard; on the contrary, "the Standard is a help to us in that it believes in holding up prices and keeping a respectable state of the market." The true motive for organization is "to create harmony in the ranks of the smaller refiners," and "the proper way to fight the Standard is in quality, not price."

A civil suit was begun by the Government on the 24th instant against Captain Henry W. Howgate, the alleged signal-service defaulter, to recover something over $100,000. The suit is based upon affidavits reciting the result of an examination of the accounts of the accused when disbursing officer of the service.

Official notification was sent to the Adjutant-General of the Army on the 24th instant that Lieutenant H. O. Flipper had been put under arrest at Fort Davis, Texas, charged with embezzling $2,300 Government funds. Lieutenant Flipper was Acting Commissary of Subsistence at Fort Davis, and thus entrusted with considerable amounts of money. He is the only colored graduate of West Point, belonging to the class of 1877, in which he stood 43. He wrote a book after his graduation, relating his experiences at the Academy. A court-martial will be held.

Mayor Grace, last week, decided to remove Police Commissioners French, Mason, and Nichols, whose long trial terminated some time ago, and communicated his decision to each of the Commissioners and to the Governor, with whom the case now rests. Accompanying the notification sent to the Governor is a *résumé* of the voluminous testimony taken before the Mayor, interspersed with comments which make it the justification of the removals. The document concludes: "The duty imposed upon them was a plain one and one of the very first importance to the city. They understood what the duty was and undertook its performance. At the same time they failed to perform it." Mr. Bliss, of counsel for the Commissioners, expresses no surprise at the Mayor's course, which is "what, in fact, I told him he would do when I summed up the case before him." He expects a hearing before the Governor, and has already applied for one. If at its conclusion the Governor's decision also is adverse to his clients, "we shall take it into the courts and we shall fight it in the courts as long as there is any law for us to stand on."

Judge Gilbert M. Speir, of the Superior Court, has resigned his seat upon the bench, his resignation to take effect December 31. His successor will be appointed by Governor Cornell, his term not expiring till 1883. Had he resigned three months instead of two before the next election, his successor would have been chosen by the people, and his course is accordingly "severely commented upon" in City Hall circles.

The Commissioners of Rapid Transit last week fixed the route of the new east-side elevated railway beyond the Harlem River in the annexed district of the city. It is probable that there will be an elevated road to Fordham, and a surface one thence to the Bronx River.

Lieutenant-Commander B. L. Edes and Lieutenant L. G. Spaulding, of the United States Navy, lost their lives by a torpedo explosion at the Newport Station on Monday. They were engaged in planting a torpedo, which they had taken out in a small boat with them for the purpose, but the connection with the firing-post had not been broken in accordance with instructions, owing to which negligence the explosion occurred. Lieutenant-Commander Edes leaves a wife and two children.

The steamer *State of New York*, of the New York and Hartford Line, struck on a large stump in the bottom of the Connecticut River, near East Haddam, on Monday night, and stove

a hole in her bottom. She was beached and the passengers taken off by a ferry-boat. No lives were lost except that of the baggage-master.

A West India cyclone, of which the Signal Service had given warning, struck the South Carolina and Georgia coast on Saturday. At Charleston the spray from the sea breaking against the sea-wall reached forty feet in height, and the damage done to buildings is roughly estimated at $140,000. Four persons lost their lives in consequence of the gale. At Port Royal a ferry-house was blown into the water and many people—variously reported from twenty to forty—drowned. The most serious damage was apparently done at Savannah, although no figures of the money loss are given. A large part of the city was under water for several hours, the City Exchange badly injured, the Georgia Infirmary wrecked and many of the patients bruised, and the shipping in the harbor disastrously knocked about. The loss of life among the colored population on the rice plantations and along the river is said to be very great. At Shad Island all the people were drowned.

"General Budlong A. Morton," more generally known as Marvin, who is charged with having married fourteen successive wives before the death or divorce of any of them, as well as with forgery, was arraigned at Richmond, Virginia, on Monday, but remanded and the hearing postponed.

The deaths of George W. Riggs, banker, of Washington; Jas. F. D. Lanier, banker, of this city; S. B. Ruggles, long a prominent member of the Chamber of Commerce and responsible in a great degree for the success of the State canals; ex-Congressman De Jarnette of Virginia, and Colonel J. G. Benton of the Ordnance Department, U. S. A., have occurred during the week.

The Apache chief Nana's main band has crossed the Sonora line into Mexico, after a hard flight before the soldiers, who were five hours behind them. A San Francisco despatch from Tombstone, Arizona, says all the citizens of Eureka, N. M., numbering about seventy, have been killed by Indians. A doubtful rumor comes from St. Paul that one hundred and fifty young bucks have left the Standing Rock Agency, after procuring in some way plenty of arms and ammunition.

FOREIGN.

The House of Commons was prorogued on Saturday, Lord Selbourne, the Lord High Chancellor, reading the Queen's speech. The speech notes the cession of Thessaly to the Greek kingdom; says satisfactory assurances have been received from France in regard to English rights secured by treaty with the Bey and also in regard to the relations between the Regency and Tripoli; mentions the signing of the convention which gives "Europeans in the Transvaal, subject to important conditions therein set forth, complete internal self-government"; chronicles the withdrawal of the British troops from Kandahar, declares that Ayub Kahn's revolt does not disturb the peace of the northwestern frontier of India, and announces an intention, "while respecting the independence of the Afghan people, to promote by friendly offices, as opportunity may arise, the restoration of peace"; says the commercial negotiations with France have been suspended, but great efforts will be made to secure a treaty "on terms favorable to an extended intercourse between the two nations"; recognizes the "zeal and assiduity" which have been evinced by Parliament in passing the Land Bill, and expresses an earnest desire that the condition of Ireland may so improve as to permit the abandonment of "the temporary and exceptional provisions" of the Coercion Act.

Sir Charles Gavan Duffy advises his countrymen to accept the Land Bill, but adds that "the price of peace in Ireland is the concession of not only their own Government and their own Parliament, but their own military and naval forces and their own distinguishing flag," a suggestion described by an English journal as "slightly seditious." Mr. Parnell and Mr. T. P. O'Connor will probably visit this country after the Land League Convention has been held, to raise more money. The former has issued a manifesto to the electors of North Durham which ignores the Land Bill, and pronounces it impossible for the Irish party to enter into an alliance with any section that "allows itself to be used in support of the coercionist Ministry, who banished personal liberty from Ireland and reduced it to a worse condition than that of Russia under the Third Section." The cost of the recent trials of Mr. Parnell and others was £9,800. The Land League at its last weekly meeting in Dublin reported subscriptions during the week to the amount of £1,315, of which £900 comes from the *Irish World* of this city. The Kilfinane branch of the League has pronounced in favor of the Land Bill, despite current Irish opinion that such action should await that of the Convention.

For this Convention great preparations had been made, and it was opened at Newcastle on Monday, with about two hundred delegates from different branches of the League throughout Great Britain. Mr. Joseph Cowen, M. P. for Newcastle, moved a resolution denouncing the continued incarceration of "suspects," and condemning the Land Bill. Mr. Parnell was absent. In Dublin, on Monday evening, a banquet was given to Mr. John Dillon, who referred at length to the present situation, and expressed himself "very strongly of the opinion that the passage of the bill would immediately increase the difficulty, if it did not render impossible the carrying on of the Land League movement on the old lines." He feared "the yoke of landlord ascendancy" would be so altered that the people would be content "once more to bow their heads beneath it." As for himself, he could not agree with what he believed would be the League's policy—namely, that of "trying the bill"—and would therefore retire from public life for a few months, and leave those who did agree with it to carry it out unembarrassed.

Rev. George Granville Bradley, M. A., Master of University College, Oxford, has been appointed Dean Stanley's successor.

In speaking of the Belleville elections the Paris *Temps* says: "M. Gambetta has become the representative of a large majority in the country. The elections have placed him almost under the necessity of assuming power, and will necessarily result in the formation of a Ministry with Gambetta at its head." To judge from indications in the *Republique Française*, Gambetta has come to the same conclusion, and is prepared to succeed M. Jules Ferry, who has already announced that such an event would please him. It is predicted that the Chamber will be more than ever at variance with the sentiments of the Senate. The Committee of Enquiry into the election in the Twentieth arrondissement have announced that M. Gambetta was elected in the First or Belleville district, but failed of a majority in the Second, where a new election must be held. This will result in a walk-over for Tony Révillon, Gambetta having withdrawn. Since the election Gambetta has written a letter to some leading statesmen of the Italian Left deprecating an Italian alliance with Germany and Austria, of which there is believed to be little imminent danger, owing to the hostility of Premier Depretis, and has presided at an anti-clerical lecture by M. Paul Bert, whose sentiments he applauded in some subsequent remarks of his own.

The Paris Municipal Government has changed the name of the street on which Minister Morton lives to the Place des États-Unis.

Affairs in Tunis and Algeria continue disturbed, but it is impossible to tell from the despatches precisely what, or whether any, active movements are going on. Enormous fires are reported in Algeria, started by Arabs, it is feared, and Stora, the port of Philippeville, has been destroyed. The French destroyed the tomb of the Marabout at Saïda, and though they paid every honor to its illustrious occupant, the Arabs are said to be irritated at the sacrilege of the demolition just the same. The occupation of Susa has been decided upon. Sickness prevails in the French camp at Goletta. Engagements of trifling consequence are reported between the Arabs and French.

Complete returns from the Spanish elections show the election of 235 or 240 followers of Sagasta, with 70 of Marshal Campos's, upon whom in any event the Government can rely. General Blanco telegraphed from Cuba that the "Constitutional candidates" were successful in a majority of districts of the island, the Autonomists securing but six seats in Cuba and two in Porto Rico. The "Constitutionalist" ticket was the result of a fusion between Conservatives and moderate Liberals. All the persons arrested in Madrid charged with attempted fraud on the ballot-box have been released on bail.

The Swiss Federal Council has expelled from the country Prince Krapotkin, the Nihilist, and a member of one of the oldest and noblest Russian families. Several recent arrests in St. Petersburg are reported, including that of an official of the general staff. The post of Town Commandant of St. Petersburg, now held by Count Baranoff, is to be abolished, it is announced, and General Kobloff, now Commandant of Moscow, is to replace Baranoff, with the title of Chief Director of Police.

The latest supposed conspiracy against the life of the Sultan is being investigated by the Constantinople authorities. An Ottoman Greek has been denounced as having formed a plan to kill the Sultan with dynamite on his recent visit to the palace of Top-Capou. The Greek, being "examined," denounced his two brothers-in-law, Samians, but Italians subjects, who had, he said, received explosives from Athens. They were accordingly arrested; against one no evidence was found, and he was liberated; but ten dynamite cartridges with fuses were found in the other's possession. They were for fishing purposes, he said, and a number of fishermen said so too; consequently it is now firmly believed that no conspiracy at all existed.

Ayub Khan's forces are reported to be much diminished since his victory over the Amir, his eight regiments not numbering over four hundred men each, and the Kabulis being especially discontented. The Amir has arrived within some miles of Khelat-i-Ghilzai, and Ayub, it is rumored, is contemplating a retreat to Herat.

News from Lima, bearing date of August 2d, reports the presentation of his credentials by the new United States Minister, General S. A. Hurlbut, to the Provisional President, and the withdrawal of Mr. Christiancy on July 26th. In bidding adieu to the latter, President Calderon declared that Peru could never forget his efforts to bring about a termination of the fatal war with Chile. The new Minister recognized the Calderon Government as provisional, having for its object the re-establishment of a regular and constitutional Government. The ex-Dictator Pierola and his *Montaneros* are still irreconcilables, but Pierola is reported to be very unhappy—"disgusted with everything and everybody." No one obeys his orders, and bands of his followers ravage the country to such an extent that the inhabitants in some districts have been compelled to call upon the Chilians to protect them.

A Panama despatch of August 16 reports the settlement of the long-disputed boundary question between Chile and the Argentine Republic. Among other provisions of the treaty is a guarantee of the perpetual neutrality of the Straits of Magellan, which are to be for ever free to the flags of all nations. Any difference arising as to the interpretation of the treaty is to be settled by the arbitration of some friendly power.

TUESDAY, August 30, 1881.

SOME LESSONS OF THE CRISIS.

It has been frequently remarked that the attempted assassination of President Garfield has brought about a better understanding between the North and the South, and has perhaps rendered it impossible for the two great sections of the Union ever to view each other in exactly the same light as they did before they were softened by a common grief. Separated they may be by opposing ideas, prejudices, training, but they can hardly ever again approach any controversy, each holding the preconceived idea that the other is incurably bad, wilfully blind and desperately sinful. Any party or considerable mass of the people which habitually entertains the opinion that its opponents love evil for its own sake, and that there is no good in them, is not only unable to appreciate the force of argument, but contributes to produce in the opposing faction or section the hateful qualities which it ascribes to them. In the long watch at the bedside of the President, the door of the household, North and South, has swung open and has disclosed to view genuine patriotism in places where only evil had been looked for, and that continually. It is not that facts have changed, so that what was true on the first of July became something different on the second, but that our opportunity of discerning the truth has been enlarged. We are not inclined to "gush" over this much-needed and now evident softening of asperities between the two sections. Whether the President recovers from his injuries or not, parties and party differences will survive, being an integral and necessary part of rational free government. President Garfield's wound will by and by cease to be the object of chief interest, and society will resume its wonted activities as though no such persons as Guiteau and Wilkes Booth had ever lived to afflict mankind. The important thing now is not that party or even sectional animosity should cease, but that the people of the whole country should hereafter be slower to think ill of each other on account of old animosities, and should give the reflecting and reasoning faculties a better chance to perform their office in political controversy. Thus much of permanent good, we think, these weeks of soberness and anxiety have wrought for us. If by this means we have learned that no part of our country is wilfully wrongheaded and hopelessly bad, then President Garfield, even if he die of his wound, will not have died in vain. If he shall recover, the same lasting benefit will accrue from the peril and pain which he has so manfully endured.

But this is not the only lesson we have learned from the catastrophe. American society has changed somewhat since the close of the war. There has been great accumulation of wealth side by side with much poverty and wretchedness. Discontent has grown up here and there, which has exhibited itself in Greenback-Labor movements, in Socialist organizations, in strikes of a more or less riotous character, in anti-Chinese mobs, Sand-lot agitation, Molly Maguire outrages, etc. The extent of this social pyæmia has no doubt been much exaggerated by the fears of those whose rights of property have been menaced. It is most reassuring to find that no organized body or group among us, however revolutionary in theory, has uttered any other sentiment than that of detestation of the crime of Guiteau, and that no individual has been allowed to express satisfaction at the deed without exposing himself to social reprobation if not bodily chastisement at the hands of his nearest neighbors. General Garfield represents for the time being social order in America. It is this fact which makes his attempted assassination different from that of any other reputable and useful citizen. To strike him down is in one sense to strike at existing institutions. If there were any body of opinion among us bent upon assailing the institutions of the country, and of sufficient magnitude to be worth a moment's attention it would have shown itself by its indifference to the President's fate, if by nothing more positive. The evidence is clear that we have no nihilists among us, no socialists to speak of, no Irish tenantry, no dynamite men who have any hostile intent towards us, no class whose discontent threatens an assault upon the constitution of society, whose temporary head the stricken President is. This negative testimony to the permanence of our form of government is supplemented by positive testimony overwhelming in its fulness and extent, which the press has not chronicled and which everybody has felt and witnessed during the vicissitudes of the President's illness. For aught that now appears our institutions may last forever.

A third indication is that the division of the Republican party denominated Stalwart has lost ground irreparably since the shooting of the President. This phrase was once supposed to signify particular views as to the condition of affairs at the South, but when General Grant acknowledged himself satisfied by personal observation with the temper and loyalty of the Southern whites, and when the names of Senators Blaine and Edmunds and Secretary Sherman, all pronounced Stalwarts, were found arrayed at Chicago against the faction calling itself Stalwart, the original signification of the phrase was lost. By degrees it came to mean hostility to General Garfield's Administration. This was its popular definition at the time of the shooting, and Guiteau adopted it as the handiest justification of his crime. It was the misfortune perhaps more than the fault of the Stalwarts that they were thus identified with the ill-will towards the President at an unexpected and terrible crisis. Mr. Conkling had the same right to oppose the confirmation of Collector Robertson that the President had to appoint him, and if his method of doing so was theatrical and absurd, he took his own risk and has paid the penalty, and the account might properly be called square. But it is far from being so considered by the public. Opposition to President Garfield, whether justly or unjustly, has been thus discredited in the public mind by his suffering and his fortitude and by the general alarm, so that what would have been passed over and forgotten in a short space under other circumstances will not be soon effaced, whether the President recovers from his wound or finally succumbs to it. No dexterous handling of patronage by Mr. Arthur, if he should be weak enough to resort to such means of balancing accounts, would avail the Stalwarts. The removal of President Garfield's appointees would look like a fresh assault upon himself, and the wing or division of the party which should support such a policy, and profit by it, would speedily be reduced to the condition of the John Tyler Whigs and the Andrew Johnson Republicans.

THE TROUBLES IN AFGHANISTAN.

The Gladstone Ministry is receiving much help in an indirect way from the doings of Ayub Khan in Afghanistan. The folly of the invasion of that country set on foot by the Beaconsfield Ministry was, to be sure, amply shown before it went out of office. But the demonstration needed a few finishing touches, which Ayub Khan seems to be giving it. The contention of the Liberals with regard to Afghanistan was all along simple enough, and rested mainly on the British experience in the invasion of 1839–41. Afghanistan is not a consolidated state or nation, and never has been, in historic times at least. It is a collection of tribes torn by fierce internecine feuds and separated from each other by high mountains and sandy deserts, but nevertheless with sufficient cohesion, through blood, religion, and language, to be able occasionally to bear a common ruler, though never very long at a time. The ruler is apt to be the man, from one of two or three dominant families, whose character and prowess make him most attractive to the fighting men. As long as he can keep an army together at Kabul he reigns peaceably. But then an Afghan army is a very loose body. The men are fickle and turbulent; the discipline is always poor, and the pay irregular, and if they get dissatisfied they either mutiny or go home. Nothing appears in the course of Afghan history to have had such a powerful effect in producing mutinies and revolts against the reigning Amir as the suspicion that he was subject to foreign influence or took orders from foreigners; for, as Dost Mahomet assured the British envoy in 1839, they will submit to anything but a master. It was this which made it impossible for the British in that year to set up Shah Soojah in Dost Mahomet's place; it was this which led the unfortunate Shir Ali to refuse in 1877 to receive a British envoy; it was this which ruined his successor, Yakub Khan; and it is this which must always make it impossible for any foreign power to rule Afghanistan through a native Prince. Lord Beaconsfield thought he could do it through Shir Ali, but Shir Ali knew better, and ran away when he found the experiment was about to be tried in his person. Lord Beaconsfield then thought he could do it through Yakub Khan, but Yakub also failed him, let the British envoy be murdered, and then abdicated.

The Liberal Ministry, as the easiest way out of the difficulty, allowed Abdurrahman Khan, as apparently the strongest of the chiefs, to set himself up in their stead, when they proposed to leave the country last year. They gave him as little help as possible, and would probably never have fired a shot in his behalf if Ayub Khan had not come up from Herat

and attacked and defeated General Burrows's force outside Kandahar. This compelled them to chastise him, and his overthrow seemed for the moment to be pure gain to his rival, Abdurrahman, at Kabul. But as a matter of fact, and in strict accordance with all Afghan traditions, it was to Ayub a blessing in disguise, for it made him seem to the people a better Afghan than Abdurrahman. They said, as they have always said, that the man who was fighting the foreigners, whether he won or lost, was the man for them; while the man whom the foreigners favored, and who profited by their victories, must be a bad Afghan and, what is still worse, a bad Mussulman. Accordingly, no sooner had the British withdrawn after handing over the forts to Abdurrahman, than Ayub, who had retired after his defeat by General Roberts to Herat, where he was reported to have passed a thoroughly Afghan winter—fighting three days in the week with rebels and quelling mutinies the other four—sallied out once more with a very respectable force, met Abdurrahman near the scene of Burrows's disaster, and routed him. It would not have been a real Afghan fight, however, if the men on both sides had remained true to their colors. Accordingly we find that during the engagement a third, or thereabouts, of Abdurrahman's forces went over to the enemy, and a portion of Ayub's occupied itself in plundering his own baggage train.

He was very slow after his victory in advancing on and occupying Kandahar, while poor Abdurrahman went back to Kabul, whether to raise another army, or to prepare for complete flight, nobody could tell. It would, however, also have been contrary to all Afghan experience if Ayub had been able to follow up his success. Afghan troops are never, as the saying is, "flushed with victory." On the contrary, like the old Scotch Highland clans, when they have won a battle they are apt to think that it is time to go home and engage in some other enterprise. It is not surprising, therefore, that the latest telegrams from the Viceroy of India should announce that "Ayub's forces are much diminished," and that some "trouble" had broken out in Herat which compelled him to send thither both troops and money. The picture would still be incomplete without the additional news, which comes through the London *Times*, that Abdurrahman had got another army and was on his way to Kandahar, and that there was no likelihood that Ayub would resist him, inasmuch as he thinks of going back to Herat.

A more instructive illustration of the criminal folly of Lord Beaconsfield's enterprises than the manœuvring of the two rivals furnishes, the Liberals could not desire. It shows, too, how insensate is the Tory dread of Russian influence in Afghanistan. If Russia seeks to exercise influence through an Afghan ruler, she ruins him, just as British influence would ruin him. If she seeks to occupy and hold the country, she enters on an undertaking to which the resources of no European Power are equal. No treasury and no army could bear the strain of it. It would require a force far larger and far more difficult to maintain than the Russian force in Turkistan. Indeed, it may be said that the subjugation of Afghanistan—that is, not simply the dispersal of the armed force of the country, but the preservation of peace and good order in it—is a task to which no civilized state is yet equal.

CITY GOVERNMENT IN MASSACHUSETTS.

An interesting contribution to the question of municipal reform has been made in a recent movement of the city of Newton, Massachusetts, for a revision of its charter. Newton, the youngest, and probably the most rural of the chartered cities of Massachusetts, appears to feel the inconveniences and shortcomings of the municipal constitution more keenly than do its sisters, more compactly inhabited, and having longer experience of the high taxation, and exclusion from a direct share in the management of affairs, which always attend the transition from the town to the city form of government. The committee (of five) to whom the question of revision was referred have reported a much simplified scheme of government; and an even simpler plan has been presented in a minority report, signed by two of the five. Further, one of the minority, Mr. Francis J. Parker, has published, as a sort of commentary upon his plan, a pamphlet entitled 'A Study of Municipal Government in Massachusetts.' Although the problems of municipal government in New England differ somewhat from those in other parts of the country, these three documents will be found instructive wherever the desire for improvement in this matter exists.

The two reports agree up to a certain point. Both aim to make the form of government more simple and self-consistent, by carefully separating the executive and legislative powers, and by concentrating each of them in the hands of a single authority—Mayor and Council respectively. The minority report goes further in the same direction, and proposes to extend logically the same principle of differentiation, by reducing the Council to one chamber, prohibiting standing committees, and abolishing the School Committee (the majority abolish all other bodies co-ordinate with the Council, such as Overseers of the Poor). The School Committee, elected by the people, and thus wholly independent of the Council, is retained by the majority plan; the minority contemplates the appointment of a school board, but wish it to be appointed by and wholly responsible to the Council. In their plan the Mayor and the Council make up the entire frame-work of city government; all other authorities—boards, commissioners, and heads of departments—are strictly subordinate to these. The propositions of the majority are, in the main, such as will very generally commend themselves to all who take an intelligent interest in this subject. So far in reform we are all prepared to go; the question is, what to think of the more radical propositions of the minority. As these are the questions really at issue, our remarks will be chiefly confined to the minority plan.

First, as to the question of the single chamber. Here we have no doubt that they are in the right, and indeed the majority report contemplates the possibility of this result. The "double-headed City Council"—Board of Aldermen and Common Council—is said by the minority to be almost peculiar to New England, being found nowhere else except in Philadelphia and Baltimore. The experience of the country at large is against them. It is true the experience of all countries favors legislatures of two houses, although the basis upon which the two houses should be respectively organized is subject to controversy; but a municipal council is not a legislature in the strict sense of the word, as a municipality is not a true government. It exercises none but delegated and subordinate powers, which range within a quite limited field of action. These powers, moreover, are rather administrative than legislative. The acts of the Council are not laws, but *ordinances*, or rules of a temporary and limited nature. These being essentially administrative, and bearing immediately upon executive action, there would be no fitness in hedging them about with the checks and delays which are requisite to law-making proper. For this reason (the essentially administrative character of municipal business) it appears to us that the minority are wrong in insisting upon so complete a separation of executive and legislative authority—a separation more complete than is found practicable even in the State and national governments. This separation is in no government carried out to its logical results, and we doubt whether it would be possible to do so. The minority—leaving the Mayor his veto—forbid him to preside in the Council. We doubt whether this is wise.

The proposition to abolish standing committees of the Council is connected in theory with this strict division of the departments. Here, however, a distinction needs to be made. Committees invested with administrative power—that is, encroaching on the functions of the executive—may be very mischievous, and are certainly inconsistent with the proper division of powers; but standing committees are so characteristic and universal a feature of American institutions that, like all institutions which have been naturally and spontaneously developed out of the experience of any live community, they should be dealt with cautiously and intelligently. The fact of their existence and universality is a proof that they meet a certain need, not necessarily in the best possible way, but at any rate in a way corresponding to the genius of the people. And if abuses have grown out of it, as they certainly have, the first question should be, not whether we should abolish it, but whether it is capable of amendment. The system of standing committees arises from the absolute necessity a legislative body is under of having every measure laid before it examined by some disinterested and competent authority before action is taken. The English Parliament, acting always in co-operation with the Government, receives its proposals of law from the ministers; our Congress, jealously guarding the independence of the departments, refers such proposals to committees of its own members. And this would seem altogether the safest and best plan if the jealousy spoken of did not go so far as to cut off all direct intercourse between the two departments, so that the work of legislation is deprived of the assistance of the executive, and is frequently done against its judgment.

The abuse of the institution of standing committees consists, therefore, in diverting them from their original function of deliberation upon propositions laid before them to that of originating, shaping, and directing all legislation, of which these bodies are practically the sole source. Hence the conflicting and ill-considered legislation which emanates from twenty independent committees, with no superior authority to harmonize it and put it in shape. This is in legislative bodies. In bodies which are essentially administrative, like the City Councils, the evils are still greater. But if these committees could be deprived of the power of *acting*, and given simply the power of *deliberating*, inspecting, and reporting to the Council itself, it seems to us that they would serve a useful purpose. An example of their mischievous action is given (p. 10) from the experience of Boston:

"The Committee on Paving order A Street to be repaved, and it is done; but it is hardly done before the Committee on Drainage, finding it necessary to repair the sewer in A Street, the new paving is removed, and must be again relaid. Soon afterwards there appears a gang of men who tear it up again, by order of the Water Board, in order to increase the size of the water-mains; and about the time when the pavement has been again restored the Street Commissioners announce their intention to widen A Street; and after them there must be a new grade and a new pavement, and still other changes in pipes and drains."

Both reports agree in placing all the legislative authority which is conferred upon the city in the hands of the Council, except as to school matters, for which the majority report would retain the present independent board, while the minority would make no distinction between this and other branches of legislation, but, if a school board is established, would have it purely the creation of the Council, responsible to it, and under its control. It is intimated that this is the one subject upon which the majority and minority differed so radically as to necessitate two reports. The arguments of the minority upon this point are certainly very strong, and it appears as if, under the present system of school superintendents, all general regulation of the schools, under the authority of the State Legislature, and superior to that of the Superintendent, might well be left to the Council itself. But the minority do not propose to leave it in this simple form. They institute a school board, yet would have it responsible to the Council instead of independent of it. Of this we can see no need. If the schools are not to be left under entirely independent control, we can see no advantage in having two authorities below the Council. Properly-constituted committees seem to us better than inferior boards. The Council exercises all legislative authority, the Superintendent all direct administrative authority; what room is left for a board?

A valuable innovation is proposed by the minority report, in adopting Mr. Bradford's plan of allowing direct intercourse between the executive and legislative branches. Heads of departments are allowed to appear on the floor of the Council in order to give information, and even to take part in the discussion upon questions affecting their own departments. Both reports introduce the principle of civil-service reform, by making the tenure of certain offices dependent only upon good behavior; but the minority report extends the principle to "the treasurer, the clerk, the auditor, the assessors, and all the school-teachers." The last will probably meet with considerable opposition, as the custom of annually electing the teachers is almost universal in this country. Taken in connection with the abolition of the school committee, it amounts to an almost complete revolution in the system of school administration. The City Council exercising general legislative authority over the schools as well as other municipal affairs; a School Board wholly responsible to the Council; a Superintendent, appointed for good behavior, with the entire management of the schools under the general legislation of the Council; and a corps of teachers appointed also for good behavior—this would be a very radical change. All we need say now is that it requires and promotes the existence of a body of thoroughly-trained professional teachers, such as at present we hardly possess anywhere; and, moreover, it must be understood that appointments would at first be made on probation, and the permanent tenure contemplated by the plan earned by satisfactory work for a certain period of time.

We have passed over a number of recommendations of each report which would be very well worth considering, but those we have already touched upon seem the most important. A single large body, such as the minority propose, elected in such a way as to represent fairly all elements and large interests in the community—on the principle of personal representation, if possible—with public sessions, and possessing all the legislative power which is conferred upon the city, and a Mayor invested with large and substantial executive authority—these make a sound basis of a city government. If then, in the different departments of action, single commissioners or superintendents are appointed, in order to exercise well-defined and responsible administrative powers, it seems to us that the responsibility would be made most real and effective by placing each department under the supervision of a well-selected committee of the Council itself.

THE PRESERVATION OF NIAGARA.

NIAGARA FALLS, N. Y., Aug. 22.

THAT part of the doctrine of the relativity of human knowledge which appeals most forcibly to the ordinary mind is the fact that things are never seen in such a clear light as when they are contrasted. In New York, hotel-bills and hack-fares are exorbitant, innumerable peddlers accost you, a handbill is forced upon you every few minutes, and yet it is not customary to speak of the impositions and impertinences of New York. Is not this because one has not been trained to expect anything else? There is no such thing as an ideal New York, no permanent artistic background which one would keep unobstructed. On the other hand, the homage of the world has thrown a halo round Niagara for those who have not seen it, and Niagara has left its own impress upon every thoughtful person who has seen it. Every unpleasant feature is therefore brought into bold relief. "Where the carcass is, there also will the eagles be gathered together." A continuous stream of open-mouthed travellers has offered rare opportunities to the quick-witted money-makers of all kinds; the contrast between the place and its surroundings, perceived at first by the few, has been for years trumpeted throughout the country by the numbers of correspondents who write periodical accounts of the season; and to-day every sane adult citizen may be said to know two things about Niagara: first, that there is a great waterfall there, and second, that a man's pockets will be emptied more quickly there than anywhere else in the Union.

The first impression of the traveller arriving at Niagara is profound astonishment that so many distinct and separate sights with corresponding fees can have been found in any one place. A list of them is interesting; to many readers of the *Nation* it will doubtless seem like a half-forgotten *Via Mala*. They are as follows—or rather, so far as discovered up to the time of writing, they are as follows:

Goat Island, admission	$0 50	
Cave of the Winds	1 00	
		$1 50
Prospect Park, admission	$0 25	
"Art Gallery"	25	
Inclined Railway	25	
Ferry to Canada	25	
Shadow of the Rock	1 00	
		$2 00
To go behind Horse-Shoe Fall		1 00
Museum		50
Burning Spring		50
Lundy's Lane battle-ground		50
Whirlpool Rapids		50
Whirlpool		50
Suspension Bridge		25
Railway Suspension Bridge		25
		$7 50

Besides these fees there are, for the lovers of old English customs, two toll-gates on the Canada side. $1 50 an hour is the legal rate of hack hire. From the above list the Horse-Shoe Fall and the Museum may be omitted; all the other places are well worth seeing—the Burning Spring solely because of the beautiful drive. And it may be added that without paying these fees there is nothing to be seen.

So much for preliminary information; now for the conclusion. Niagara is being destroyed. This broad statement is true in two senses. First, Niagara is being destroyed as a summer resort. It has long since ceased to be a place where people stay for a week or more, and it is now being given up to second-class tourists, and excursionists who are brought by the car-load. The constant fees, the solicitations of the hackmen, the impertinences of the store-keepers, have actually been so potent that it is a rare thing to find any of the best people here. The hotels are not to blame: the Cataract House, for instance, is a quiet, comfortable hotel, excellently managed, and in the hands of gentlemanly proprietors, and it is probably by no means alone in this respect. The hotel-keepers are aware of the state of things; they do not encourage the excursion traffic. Some even seek to avoid the patronage of the excursionists. From all over the country—from places as far as Louisville—the railway companies bring these people by thousands; they pour out of the station in a stream half a mile long. Of course, like locusts, they sweep everything before them. Several places—Prospect Park, for instance—cater to the tastes of this class alone. Several evenings in the week Prospect Park is filled with a crowd of free-and-easy men and women, selling their own tea and coffee and provisions, and enjoying a rollicking dance in the Pavilion. And all this within fifty yards of the American Fall! For their entertainment there is an illuminated spray fountain, and their appreciation knows no bounds when various colored lights are thrown upon the Falls. Then a crowd of fifty swoops down upon one of the hotels—men, women, and children—all in brown-linen dusters; all hot, hungry, and careless. These people must not be deprived of their recreation. Heaven forbid! None have a greater right than they to the influences of Niagara. But this way of visiting the place is all wrong; they derive little benefit, and they do infinite harm.

In the second sense, the destruction of Niagara is making rapid strides in a far more dangerous direction. The natural attractions of the place are being undermined. On the American side the bank of the river above the Falls is covered for a quarter of a mile with structures of all kinds, from the extensive parlors and piazzas of the Cataract House to the little shanty where the Indian goods of Irish manufacture are sold. For the purposes of securing bath-rooms and water-power, dams of all kinds have been built; these are wooden trenches filled with rough paving-stones. Some of the structures project over the Rapids, being supported by piles. The spaces between the various buildings are used to store lumber, and as dust-heaps. One of them contains a great heap of sawdust, another a pile of scrap-iron. The banks and fences bear invitations to purchase Parker's hair balsam and ginger tonic. The proprietor of Prospect Park has made a laudable attempt to plant trees upon his land; these extend for a few yards above the Falls. In return, however, he has erected colored arbors and a station for his electric light, which are almost as unpleasant as the other buildings. Just below the Suspension Bridge the gas-works discharge their tar down the bank into the river; a few yards further on there are five or six large manufactories whose tail-races empty themselves over the cliff. The spectator on Goat Island, on the Suspension Bridge, or on the Canada side sees this mass of incongruous and ugly structures extending along the whole course of the Rapids and to the brink of the Fall. Of course, under these circum-

stances the Rapids are degraded into a mill-race, and the Fall itself seems to be lacking a water-wheel.

One half of Bath Island—which lies between Goat Island and the shore—is filled with the ruins of a large paper-mill which was burned last winter. It is now being rebuilt and greatly enlarged. Masses of charred timbers, old iron, calcined stones and bricks, two or three great rusty boilers, the dirty heaps surmounted by a tall chimney—such are the surroundings of a spot which, for grandeur and romantic beauty, is not equalled in the world. A short distance below Bath Island lies Bird Island, a mere clump of trees in the midst of the rushing water, a mass of dark-green foliage overhanging its banks and trailing its branches carelessly in the foam. This little spot has been untrodden by man; the most fearless savage would not risk his birch-bark boat in these waters. But what those who profit by it call the rapid strides of commercial industry, or possibly the development of our national resources, will soon destroy this little piece of Nature; already the owners of the paper-mill have built their dam within twenty yards of it, extending through the waters like the limb of some horrid spider, slowly but surely reaching its prey. Let the connection be made, and a couple of men with axes be turned loose in this little green island, and before long the rattle of a donkey-engine or the howl of a saw-mill will swell the chorus of this *soi-disant* civilization.

This incident is a fair specimen of what will soon take place on a large scale. The following sentence is taken from a paper on "Niagara as a Water-Power," presented at the recent Bankers' Convention: "Hence it is that we are soon to see a development of this peculiar power at Niagara, which will stand unrivalled among motors of its class in the world." Already people talk of the storage of electricity, and quote the opinions of scientists about the possibilities of the future. A few days ago a prominent gentleman reminded your correspondent that Sir William Thomson had said that it would be perfectly feasible to light London with electricity generated at Niagara. There is no assurance that Goat Island may not be sold at any moment for the erection of a mill or factory. Indeed, if a rapid development of the mechanical application of electricity should take place—no extravagant supposition—thus enabling speculators to offer very high prices for the immense power that could be controlled from Goat Island, it is almost certain that such a sale would result. And with its accomplishment would disappear the last chance of saving Niagara.

This state of present degradation and future destruction has not existed without calling forth some efforts to remedy it. By the labors of several distinguished men—principally of Mr. Frederick Law Olmsted—a bill was passed in the Legislature of New York instructing the Commissioners of the State Survey to prepare a report on the condition and prospects of Niagara. This report was prepared by Mr. James T. Gardner, the Director of the New York State Survey, and Mr. Olmsted. It protests strongly against such waste and degradation of the scenery as have been described; sets forth the dangers of ultimate destruction, and makes an eloquent appeal in favor of State action to preserve this natural treasure. The report strongly urges the establishment of an "international park," and gives details of its construction, with maps and views. It is proposed that a strip of land a mile long and varying from 100 feet to 800 feet broad, together with the buildings on it, should be condemned by the State, appraised by a Commission, and purchased. Much of this land is already public property in the form of streets. Besides this, the erections on Bath Island and in the Rapids are to be swept away. All buildings are to be removed from the land thus acquired by the State; along the edge of the river, trees are to be planted of a kind and arrangement to resemble the natural growth upon the opposite shore; roads and footpaths are to be appropriately laid out. In addition, the State is to acquire the right to plant and preserve a row of trees along the bank beyond the park reservation, and to restore the growth of shrubs and trees on the slopes from the top of the cliffs to the water's edge. The permanent moisture of the atmosphere renders the growth of vegetation very rapid and luxuriant. If this plan were carried out, the village would be hidden from view, and the great cataract with its surroundings would be restored in some degree to that beauty which struck with awe the first white man who stood upon its banks, and which had drawn forth the worship of the savages for ages before.

Like all propositions which are made to-day, this one will be met first of all with the question, Is the game worth the candle? Is it worth while to spend a million dollars—to take twenty-five cents out of the pocket of each taxpayer in the State of New York—in order to destroy a lot of good buildings and plant trees in place of them? and, moreover, to do this for the sake of a few persons whose nerves are so delicate that the sight of a tremendous body of water rushing over a precipice is spoilt for them by a pulp-mill standing on the bank? This is the common question, and no intimate acquaintance with American society is needed to know that many will be found to answer it promptly in the negative. What else is to be expected when it is stated on very good authority that Governor Cornell himself, after listening to a description of the present surroundings of the Falls, remarked: "Well, the water goes over just the same, doesn't it?"

What marvels of beauty and grandeur are yet to be discovered in the interior of Africa, no one knows; it is safe to say that the civilized world does not contain another spot so impressive as Niagara. A mistake constantly made by those who have but a superficial acquaintance with it is to suppose that the only attraction, or at least by far the greatest, is the cataract itself. It would be difficult to fall into a greater error. Let the visitor sit for an hour on the extreme end of Goat Island, watching the Rapids sweep by him on either side, now shooting silently past, now roaring hoarsely as some great boulder stops them. Let him walk home through the quiet woods of Goat Island. On the morrow let him stand and watch the Whirlpool Rapids, and see how all the water of Niagara tears its way through a rocky chasm a few yards wide, in its struggle rising ten or fifteen feet higher in the middle than at the sides. He is sure to leave the spot with a curious feeling of healthful fear. Then let him stroll down to the whirlpool and seat himself by its edge. In a half-circle behind him towers the cliff in its fantastic outlines, with its dense growth of foliage; in front of him, the river winding down between those wonderful banks, the green of the water being at last indistinguishable from the green of the trees; to his right, the chasm and the fearful Rapids; at his feet, the whirlpool, carrying its prey for ever round and round. Nowhere else is there a scene so wonderfully varied, and yet it leaves one distinct impression: that of rest, of rest after anxiety, of sleep after struggle. And if as he sits watching, the heavy shadows of the cliff come one by one and fall on the eddying waters, it will seem to him as though some strange peace came and cast its shadows over the uneasy places of his soul. Then, when next he stands before the waterfall, he will realize that it is but a part of the great Niagara.

One brilliant moonlight night, about two o'clock in the morning, I succeeded in climbing over the gate which leads to Goat Island without disturbing the watchman. I might tell of the walk through the woods or the view of the American Fall; but time limits me to one incident. On the brink of the Horse-shoe Fall lies a great stone, around which the waters dash, and which they seem to be trying to push over the edge. On this stone I stretched myself, and, tired from a day's walk and soothed by the noise of the waterfall, I fell asleep. When I woke, all feelings of alarm at my dangerous resting-place were lost in wonder at the scene before me. In the moonlight the Rapids were like flowing silver; each jet of spray sparkled as it rose, and the whole ocean seemed to be hurrying to pour itself into the misty gulf; and, most beautiful of all, the famous lunar bow stretched in a perfect arch from side to side. Anything so strange and so delicate I have never seen; all the weird beauty of the moonlight seemed concentrated in that one circle. In the stillness of the night every sound was magnified. Overhead the endless stars, the awful cataract underneath—no one can live long in such a scene and remain an unchanged man. In Matthew Arnold's verse the sentiment of the place is well expressed:

> "'Ah! once more,' I cried, 'ye stars, ye waters,
> On my heart your mighty charm renew;
> Still, still let me, as I gaze upon you,
> Feel my soul becoming vast like you.'"

This is the place we are asked to preserve. Surely no one to whom beauty is worth more than pulp and paper, and character of more importance than stored electricity, can ask if it be worth while. A million dollars—a few cents from each taxpayer—is all that is needed. With the influence of the word of every man who cares, the bill will pass the Legislature. It needs not much insight to prophesy that the tastes and preferences of future generations will be different from those of the present one; if we have received aught from our fathers, we owe it as a debt to our children; if we have any interest in the welfare of the human race, we are under obligations. Let us act so that it may not be said of us in years to come that we were either too ignorant or too careless to preserve the most beautiful thing that nature gave to our country.

THE LAST STAGE OF THE LAND BILL.

LONDON, August 17, 1881.

WHEN the Irish Land Bill, after having been debated in committee from the last weeks of May till the beginning of August, finally passed its third reading and went up to the House of Lords, it was pretty generally understood that the Lords would not reject it altogether. Of course they disliked it; there were not a dozen among them all who could have believed a year before that such a measure would ever be submitted to them by a Government. If the Tory leader had told his followers to reject it, they would have done so, and that by a large majority, for the peers, or at least the Conservative peers, are singularly obedient to their chiefs, not only because they are united by strong bonds of interest, but also because comparatively few of them attend the sittings of the House, or trouble themselves to exercise their own judgment on political affairs. They are country gentlemen, or capitalists, or men of pleasure, and are contented to follow wherever the standard of the party is carried. But the Tory leaders did not venture on so bold a course, much as they would have liked it. Not only were they unwilling to declare war on the House of Commons in such an open way as the rejection of the bill would have implied, but they felt the seriousness of the crisis in

Ireland, and did not see, as no one else saw, how it could be met without some kind of legislation. The Executive Government having declared that, unless the island were to be placed under martial law, some large concessions must be made to the claims of the tenants, they would have been obliged, if they refused these concessions, to point out how else Ireland could be governed, and, if Mr. Gladstone resigned office, to attempt to govern her themselves. As this was out of the question, they could only accept the principle of the bill, and give it a second reading, which they did after only two nights of debate. Then came the tug of war. Amendments were carried in committee which drew the teeth of the bill completely. Provision after provision, which had been framed in the tenant's interest, was struck out; provision after provision inserted to strengthen the position of the landlord. The Ministry were placed at a great disadvantage, not only because their best debater, Lord Granville, was absent through illness, not only because they received on the flank the fire of two Liberals who had quitted the Government owing to its land policy—the Duke of Argyll and the Marquis of Landsdowne, the former of whom is the most powerful speaker in the Upper Chamber—but also because the advocates of the bill did not venture to defend it on its true principles. Those principles, broadly stated, would have offended the feelings of the Lords so greatly that it became necessary to suppress them, and to rely on grounds that were felt to be superficial. Thus the Opposition had, or seemed to have, the superiority in argument as well as in numbers, and were thereby encouraged to maul and maim the bill in its most essential points. Considerable disquietude was produced in the country when these mutilations became known, since no one expected Mr. Gladstone or the House of Commons to put up with them. But it was thought that the Lords were only indulging their feelings, and would ultimately yield. When their amendments came to be considered by the House of Commons, all the important ones were disagreed with, just a few of the minor changes being agreed to at the instance of the Government, in order to respect the *amour propre* of the peers, or in some cases because their criticisms had improved the measure in point of form. However, even as to these minor changes, a strong feeling of antagonism to the Lords was shown by the more advanced section of the Liberals, some fifty or sixty of whom voted pretty steadily with Mr. Parnell against the Government whenever the latter proposed to concede anything to the Upper Chamber.

Thus restored to its original character, the bill went a second time up or rather across the great central hall and gallery which divides the two Houses. Curiosity was keen; excitement was just beginning to appear. The action of the Lords soon quickened it. In the course of a single evening they disagreed with nearly all the more important of the Commons' amendments to their own amendments, so bringing the measure back to the shape in which they had previously sent it down. The work was done by Lord Salisbury, who, as you know, leads the Tory party; the Duke of Argyll, and other Whig malcontents having now drawn themselves out of the fray. It was done by majorities that were still large, for the Tories have a vast preponderance of strength in the Upper House, and it was done with a smartness and an air of unconcern which sometimes bordered on contempt. When about midnight the operation was despatched, in the presence of a great crowd of members of the House of Commons who had gathered at the bar and in the galleries to witness it, a mingled feeling of astonishment, alarm, anger, spread through the building. Anxious groups formed in the lobbies; the men who haunt them were in preternatural activity; every one talked of "the crisis." Had the bill then or even next morning come before the House of Commons, there would probably have been an explosion of wrath. But Mr. Gladstone, with great judgment, moved that the Lords' amendments, which were to have been considered on the Saturday forenoon, should not be taken up till Monday, and thus gave passion two days to cool down. Next morning, however, things looked no better. Our newspapers, not merely by their comments, but by reporting the sentiments of people all over the country, tend to intensify the excitement of those who are at the centre, and make them feel that the pulse of the nation is beating hourly faster. All that Saturday wild rumors were flying about the political quarter of London. Some sage old observers refused to believe that things would come to a deadlock. They argued that, in all similar crises before, a way out had been found; that it was not the interest of the Lords to fight on this particular ground; that the conduct of the Tory leaders in the House of Commons had never betokened a resolute resistance; that Lord Salisbury, with all his vehemence and reckless airs, was not really a firm or resolute person who would stand to his guns under fire. But the majority, excited by the situation, and pointing to the very strong and decided language which the Tory chiefs had held in the House of Lords on Friday night, were fully persuaded that the weak point of our Constitution had been disclosed, and that nothing remained but an appeal to the people to say whether or no the will of the Commons should prevail.

The question then came to be how this appeal should be made. Mr. Gladstone might dissolve Parliament, and force the Lords to yield to the vote of a new assembly. But it was felt that not only would this be an injury inflicted on his own supporters, but it would increase the difficulties of governing Ireland in the meantime. Or he might resign, and throw the responsibility of settling the question on the adversaries who had forbidden him to settle it. As this would have been practically an invitation for them to dissolve, since they could not have held office against a hostile majority, it was a no less improbable course. Or, thirdly, Parliament might be called together in October, the bill passed afresh, and the Lords challenged once more to take the responsibility of rejecting it. Finally, since such a prorogation, with a new autumn session, would involve passing the bill afresh through all its stages, and exposing it thereby to the dangers of obstruction, Parliament might be merely adjourned for a few weeks, in which case the bill could be taken up just where it had been left, the Lords' amendments disagreed with, and the opportunity given to them of considering whether, after those weeks of meditation, they would still hold to their objections. By neither of these two latter courses would any formal appeal to the country have been made; but it was obvious enough that the interval of time, whether counted by weeks or by months, would be spent in popular agitation, in holding mass meetings all over the United Kingdom, denouncing the action of the Lords, and calling on them to submit to the representative House. As the agitation would have become in substance an agitation against the House of Lords rather than in favor of the Land Bill (which, indeed, it would have been hard to explain to an average English elector), the prospect of it was very attractive to the more ardent spirits among the Liberals, who openly thanked God that the Lords had been delivered into their hands, and talked of nothing less than an immediate reform, if not an extinction, of that chamber. While these things were being discussed in Westminster, the party managers all over the country were at work. Meetings of Liberal associations were convoked in the large towns, resolutions passed denouncing the conduct of the Lords and calling on Mr. Gladstone to be firm. In three or four days more we should have been in the full stream of agitation.

Sunday wore away in the same excited disquietude, but on Monday it was felt that the wind had changed. What precisely had happened, or whether anything definite had happened, could not be made out, though of course there were plenty of quidnuncs, each with his story of conferences between Mr. Gladstone and some emissary from the Tory chiefs. But it was known that peace was at hand, and all the members who had countermanded preparations for going to Scotland or Switzerland took heart again, and telegraphed to their wives or friends. When the House of Commons met, everybody was cheerful, not so much at the prospect of preventing a strain to the British Constitution as of getting away after an unusually long and laborious session—everybody except Mr. Parnell and his friends. To them the collision of the Houses had been an unlooked-for piece of good fortune. It promised to delay, perhaps to prevent altogether, the passing of what they regard as an unsatisfactory bill; it would strengthen their hands in agitating against the interference of England in Irish affairs, and would show that government by an Irish Parliament, with no English land-owners putting their veto on what Ireland demanded, was the only possible solution. However, it was soon clear that they must submit to the inevitable. Mr. Gladstone, who through all the stages of the bill has shown singular tact and self-command, showed, by the quiet way in which he moved that the Lords' amendments be considered, that he did not apprehend and was anxious to prevent any contest. He treated the occasion as a perfectly ordinary one, and so calmed down men's minds that the debate, except for an occasional outbreak from Mr. Parnell's followers, was one of the least exciting of the session.

You know the sequel: how the Lords next day, after an hour's debate, accepted the Commons' amendments, and how the bill passed accordingly, with no further trouble. The crisis, however, has not been without its permanent importance, and it is for this reason that I have supposed your readers likely to desire a sketch of its progress. It has brought before the minds of our people, more forcibly and more clearly than any other event since the passing of the Reform Bill of 1832, the possibility under our Constitution of an absolute deadlock, when neither House will yield to the other, and great mischiefs may ensue before a compromise can be effected. And it has brought into strong relief the character which the House of Lords has now assumed of a chamber of land-owners, whom one must expect to be influenced by what they conceive to be land-owning interests. While the House of Lords contained a nearly equal number of Whigs and Tories, party feeling prevented class feeling from becoming supreme. But now, when the Whigs are hardly one-fourth of the whole number, and when even Whig peers, like the Argylls and Lansdownes and Sutherlands, are found obeying class sentiment rather than party sentiment, men are driven to ask what are the grounds on which the present composition and powers of the Upper House rest, and whether collisions such as that from which we have just escaped, are not more and more likely to recur. Philosophical politicians have of course been pointing this out for

many years past. But our people do not listen to theoretical arguments: an evil must actually arise and make itself felt before they will trouble themselves to remove it. No ministry, no body of experienced men, would undertake the task of reforming the House of Lords unless forced to it by some practical need or some strong popular cry, for, in a delicately balanced old machine like our Constitution, you can never be sure that in changing any one part you are not disturbing the working of the whole. And no popular cry will arise unless the House of Lords provoke it by obstructing the passage of something which the mass of the nation desires. They have now given a considerable handle to their enemies, and it is far from improbable that we shall hear for months to come a good deal more argument and abuse directed against them than could otherwise have found a hearing. Most reforms have with us to go through the stage of being considered as questions, subjects to be talked about, for years, perhaps a good many years, before any practical solution is proposed by a responsible statesman. It seems as if the reorganization of the House of Lords might be now entering that stage. How long it will stay there nobody can guess. But the crisis showed one thing plainly, that the House of Lords has no very strong hold on the affections even of the Conservative party. While the crisis lasted, no newspaper of any weight in the country urged the Lords to resistance, or promised them popular support. The best Tory journals either counselled compromise or preserved a discreet silence, feeling that the cry of "Lords against Commons" would be a bad cry to go to the country with, a cry which Tories would resent almost as much as Liberals. This sense of weakness was increased by the feeling that the Lords had not chosen a good battle-field, since their conduct could easily be represented as being dictated by selfish motives, not by patriotism, and that Lord Salisbury, who led them, was neither fighting nor yielding with dignity. In hacking the bill to pieces, he was thought to have shown too much insolence in professing to accept a compromise when he was really laying down his arms upon hardly any conditions extorted from the victor. Many said that he was making his House appear ridiculous, and that it would have been better to say frankly that as his counsels were rejected, he must yield to the will of the Commons, and throw upon them the responsibility of a measure which he utterly condemned.

It need hardly be added that the Lords' surrender was very largely due to those Irish influences which have all along embarrassed the Conservative opposition. The Conservative party in Ulster would have been ruined if the bill had been defeated. The Conservative landlords in the other three provinces of Ireland, who have received but little rent for the last two years, would have lain out of their money for months to come, and perhaps ultimately lost nearly the whole of it. Their instances pressed upon Lord Salisbury even more than did the fear of exciting an agitation against the privileges of his House. Y.

Correspondence.

THE SEXUAL THEORY OF GAMES.

To the Editor of The Nation:

Sir: Perhaps a few thoughts suggested by your article on "The Development of Games" would be of interest.

"If we could imagine the world carried on by women alone, one of the first results of the extinction of man would unquestionably be the disappearance from it of almost all the games and sports which now constitute so large a part of its serious work."

I would add that another result of the condition imagined by the writer would be the disuse of stimulants, and I believe this to be a more general statement, including the former. Games are stimulants; and while a woman sometimes enjoys a game as she occasionally takes a glass of wine, yet the fact remains that for the great majority the stimulant is unnecessary—that is, uncraved. Therefore, their "self-sacrifice" in resisting the "longing to take part in the sports which they usually spoil" seems to me less "touching" than to the writer.

Men have few resources of pleasure within themselves. Take for instance their enjoyment of nature. Long before science corroborated the fact, women have known that the majority of men have no fine perception of color. The "blue violet" of the poets is one evidence of this. If we consider the sky blue, the violet is not only not blue, but a color which does not harmonize with blue. The "blue violet" is therefore an *untruth* and a *discord*. George Eliot compares Rosamond's eyes filled with tears to "*forget-me-nots* under water." The resemblance is perfect, and for a fair blonde like Rosamond the forget-me-not is, so far as I know, the only flower with which her eyes could be compared. Imagine the man who mixes his greens and browns trying to "enthuse" over a landscape! Who could blame him if he soon wearied of it?

I believe men to be equally obtuse with regard to *forms*, and I would propose as a test a fern. It is impossible to say what is the most beautiful thing in nature, but I believe many women will agree with me that for delicacy of form nothing exceeds a fern. How seldom does a boy notice a fern without having his attention called to it. The girl never needs to be told that it is beautiful, and she who knows by experience the wonder and joy that a fern can bring to a little girl's heart, would never wish to exchange such memories for those of the boy's successful game of ball.

Men love nature—that is, they love to be in the open air; they love to feel themselves moving; but nature alone cannot satisfy them because its finer vibrations find no corresponding chord in their natures. They must have something to make them forget themselves—that is, a *stimulant*—a game to be won, a mountain to be climbed, a hunt perhaps after some wild animal—for alas! this too is included under the term "sport." Humane societies justify this kind of "sport," and the anti-vivisection agitators pass it over in silence, though I believe that there are few operations performed on living animals in the interest of science which for unmitigated cruelty can be compared to that of hunting an animal to death.

There is much talk at present of educating boys in the perception of color, in order to fit them better for certain practical duties. It seems to me that there are other reasons for it. The highest aim in education is to increase the child's resources for happiness, and in proportion as this is accomplished his desire for stimulants will decrease. Let us, then, hope that a time will come when the salutation, "It is a fine day; let us go out and *kill something*," will no longer be heard among gentlemen. C. D. M.

[We are afraid that some of the criticisms made by "C. D. M." on men are open to objections. If men have few resources of pleasure within themselves, why is it that they always manage to have a good time together, while women themselves admit that a similar meeting of their own sex is apt to be somewhat stupid? We were not aware that science had shown that the majority of men have no fine perception of color. What science has shown is that a larger percentage of men than of women are color-blind; but the number is only four per cent. No proof is offered that it was a man who first called a violet blue, and besides, such false nomenclature may be due to a confused use of adjectives and not to a defective perception of color. As to form, it may be true that the young male athlete *par excellence* does not care so much for ferns as the average girl; but all young men are not athletes *par excellence*. The vast majority of the great painters, sculptors, and architects of the world are male, and they, it may perhaps be asserted, have shown a delicacy of perception of which not even a woman need be ashamed. And, to crown the whole, there can be no question that the most beautiful thing in the world, so far as form is concerned, is not a fern—a "maiden-hair"—but a maiden herself. Schopenhauer, indeed, says that men are more beautiful than women; but few men would agree with him, and certainly not women until they tire of hearing themselves alluded to as the fair sex. But now, to whom do women owe their superior beauty? To no one else than man. He has in the course of thousands of years continually selected the most beautiful women for marriage, until the law of the survival of the fittest has given woman the superior beauty she now has. Had women shown the same discrimination as men, the latter would not now be so inferior to them in beauty. And as among all the lower animals it is the male, and not the female, that is the most beautiful, it would seem that among them the females have a better perception of beauty of form than among human beings.—Ed. Nation.]

A GERMAN UNIVERSITY IN AMERICA.

To the Editor of The Nation:

Sir: In No. 842 of the *Nation* there is a "note" on the latest of the letters of Bodenstedt, in which he urges the realization of Auerbach's plan of a German university in America. Now, I would suggest a modification of the plan which will make its execution practicable.

The sad condition of things complained of by Bodenstedt is not overstated. It is true that the influence of German science, as exercised by its living representatives in this country, is almost naught, and that nowhere has any considerable intellectual growth resulted from the influx of Germans into native society. These are bitter truths for us Germans in America to consider! But I must go one step further still towards stating the whole truth in this matter, before we can say what the remedy ought to be. Another very gloomy fact is the decadence of the German book trade in this country; not as regards quantity, perhaps, but certainly as to quality. Every German bookseller will bear me out in this statement, and will add that what people read nowadays is chiefly the illustrated periodicals, such as the *Gartenlaube*, *Ueber Land und Meer*, etc., and very little else. I might name still other significant facts, all pointing to the same truth, that German culture in this country is declining. But enough!

If we had to-day a German university in this country, fully equipped with the best professors, library, etc., we should still want the most necessary of all things for the purpose; viz., the students. A university proper admits, or ought to admit, no students except such as have passed the examination of "maturity" required in Germany of all (except foreigners) who would enter

upon a regular course of study in one of the three "upper" faculties. Now, where should we find the young men so thoroughly versed in the ancient languages, and so well acquainted with at least three modern languages and with history, etc.? Every one who knows what difficulties our better colleges experience in getting students properly prepared, can foresee the consequences.

On the other hand, an institution which should lay the *foundation* of thorough German culture would now be in its proper place in any one of our large cities. A true German gymnasium might now exist in each of at least six of our large cities, and might prosper. The all-important condition, however, under which prosperity alone would be possible is this, that the idea must never be entertained that a gymnasium could be made self-sustaining. The tuition ought to be a mere trifle, almost a nominal sum, and if the crowd of scholars should then become too great, it might easily be reduced by more rigorous examinations. There ought to be a fund large enough to pay the salaries of the teachers—such fund, of course, to be raised among those of our wealthy Germans who take an interest in this important matter. The dangerous idea also ought to be carefully avoided which has baffled the noble intentions of many founders of institutions of learning in this country—the idea, namely, that first of all there ought to be *grounds* and *buildings*. It is a much cheaper and by far more expeditious method to *rent* the buildings. The whole yearly cost of a gymnasium of six classes, with six teachers of the highest order, need not exceed fifteen to twenty thousand dollars.

If we had in each of our large cities a German gymnasium, we should soon perceive a revival of letters among us and an increased appreciation of the treasures of German science and art. Soon a generation of young men would arise fully prepared to become students of a German university worthy of that proud name.

W. S.

St. Louis, Mo., August 24, 1881.

Notes.

Houghton, Mifflin & Co. make the important announcement that they will undertake a series of volumes entitled "American Men of Letters," and another entitled "American Statesmen," to be begun during the coming season. The former will be under the editorial charge of Mr. Charles Dudley Warner; the latter, of Mr. John T. Morse, jr. The list, as far as made up, embraces Irving, by Mr. Warner; Noah Webster, by Horace E. Scudder; Hawthorne, by Prof. Lowell; Willis, by T. B. Aldrich; Thoreau, by F. B. Sanborn; Cooper, by Prof. Lounsbury; Simms, by G. W. Cable; Hamilton, by H. C. Lodge; J. Q. Adams, by Mr. Morse; Randolph, by Henry Adams; Madison, by S. H. Gay; Monroe, by President Gilman; Calhoun, by Dr. Von Holst; Jackson, by Prof. Sumner; Clay, by Carl Schurz; Gallatin, by John Austin Stevens; Patrick Henry, by Prof. Tyler; and Franklin, by T. W. Higginson. Each biography will occupy but a single volume, 16mo.——D. Appleton & Co.'s fall announcements include volume second of Bolles's 'Financial History of the United States,' 1789–1860; 'History of the Formation of the U. S. Constitution,' 1783–1789, by George Bancroft, in two volumes, 8vo; 'The Elements of Economics,' by Henry Dunning Macleod, in two volumes; 'Ralph Waldo Emerson, Poet and Philosopher,' by A. H. Guernsey; 'Selections from Arguments, Addresses, and Miscellaneous Papers of David Dudley Field,' edited by A. P. Sprague; 'Homes and Haunts of Our Elder Poets,' by R. H. Stoddard, F. B. Sanborn, and H. N. Powers, illustrated with portraits and otherwise; 'Florida, for Tourists, Invalids, and Settlers,' by Geo. M. Barbour; 'In the Brush; or, Old-time Social, Political, and Religious Life in the Southwest,' by Hamilton W. Pierson, D.D., ex-President of Cumberland College, Ky.; 'Clearance and Entrance of Vessels in the United States of America,' by Richard Wynkoop, of the N. Y. Custom-house; 'The Wit and Wisdom of Benj. Disraeli, Earl of Beaconsfield'; 'The Ancient Bronze Implements, Weapons, and Ornaments of Great Britain and Ireland,' by John Evans; 'Volcanoes,' by Prof. J. W. Judd; 'The Sun,' by Prof. C. M. Young; 'A World of Wonders: Marvels in Animate and Inanimate Nature,' illustrated; 'Essays on the Floating Matter of the Air, in relation to Putrefaction and Infection,' by Prof. John Tyndall; 'The Verbalist,' by Alfred Ayres; 'Wild Work,' a novel, by Mary E. Bryan; 'The Bloody Chasm,' by J. W. De Forest; Cherbuliez's 'Saints and Sinners' ('Noirs et Rouges'); 'Half-Hours with Greek and Latin Authors,' from various English translations; 'The Poems of Vergil,' with a complete dictionary, and notes, by Prof. Henry S. Frieze, of the University of Michigan; and an 'Historical Reader,' by Prof. H. E. Shepherd.——Harper & Bros. will have ready in November 'Harper's Cyclopædia of United States History,' by Benson J. Lossing, in two volumes, profusely illustrated.——Geo. H. Ellis, Boston, will shortly publish 'Ecce Spiritus'; 'A Study of the Pentateuch,' by R. P. Stebbins, D.D.; and 'Man's Origin and Destiny,' by Prof. J. P. Lesley.——'Shakspere for the Young Folk,' by Prof. R. R. Raymond, announced by Fords, Howard & Hulbert for publication during the present month, will consist of three typical plays made over into tales.

—The *Publishers' Weekly* engages to perform the great service of giving a monthly or quarterly record of books, pamphlets, etc., published by the Government, and will as far as possible announce their forthcoming.——The publishers of *Wide-Awake* (Boston: D. Lothrop & Co.) have organized a Reading Union for American and English young folks.——The Messrs. Harper have brought out a beautifully clear edition of the Revised Version of the New Testament in large type. The size is octavo.——T. B. Peterson & Bros. put forth a reprint of Gliddon's 'Ancient Egypt,' which, it is safe to say, partakes of the antiquity of its subject.——The current numbers of the Essex Institute *Bulletin* (1–6 of vol. 13) are noticeable chiefly for the memorial meeting in honor of Jones Very, the eminent poet now departed, and for an abstract of a paper by Rev. Geo. F. Wright, touching the question of man's antiquity in the valley of the Delaware. Perhaps we ought to allude to the statement of Prof. E. S. Morse that he has patented a device "for using the sun's rays as a means of heating and ventilation," which he has tested in the hall of the Peabody Academy of Sciences.——Four of the six page-plates in the August *American Art Review* are reproductions of pictures and studies by Mr. Shirlaw, which, with several others in the text, accompany Mr. T. H. Bartlett's concluding article on this painter. The number may almost be called a Shirlaw number, indeed, and the work of the artist is set before the reader satisfactorily as well as copiously. Mr. Davidson also concludes his article on the Monte Cassino frescos, and Prof. Norton contributes a note on an Etruscan unguent jar presented to the Boston Museum of the Fine Arts a few months ago by Mr. W. J. Stillman. There is an etching by Peter Moran and one by Chas. A. Platt.——An admirable nucleus for a much-needed work is to be found in Mr. George C. Mason, jr.'s preliminary report on "Colonial Architecture" in the *American Architect* for August 13 and 20. It is illustrated with spirited pen-drawings after the ample material which Newport supplies.——In *Le Livre* for August M. Léon Degeorge concludes his description of the Plantin Museum at Antwerp, which he rightly declares one of the most curious in the world. Among its bibliographic treasures are the prices-current of the works issued by the Alduses in 1592 and by several other great contemporary printing-houses, and a 'Theatrum typographicum plantinianæ officinæ,' or chronological list of all the works printed by Plantin down to the year 1576. Vastly interesting is the gallery of engravings by the masters of the Antwerp school, exhibiting seven or eight thousand coppers, mostly in a perfect state, ready for reimpression; and the *salle des bois gravés*, containing no less than fifteen thousand woodcuts of every variety, with as many as thirty or forty fancy alphabets, beautifully conceived and executed. In its news column, the same number of *L'Art* reports the discovery by two Lyonnese of a mode of stamping copper type from the cold metal, assuring the greatest durability with a relatively slight enhancement of the cost. A similar invention was shown in Paris in 1849, and actually received a silver medal at the hands of A. Firmin-Didot. But the promise of the machine was not realized.——We read in the *Rassegna Settimanale* that Prof. Ruggero Bonghi will shortly begin the publication of a critico-bibliographical review of the moral sciences, letters, and arts, called *La Cultura*. It will appear fortnightly.——Bodenstedt's Letters are finished, and he announces that he will now devote himself to writing an exhaustive work on America after the model of his 'Tausend und Ein Nacht im Orient.'

—A. Williams & Co., Boston, have made a handsome volume of Dr. Samuel Abbott Green's Centennial Address before the Massachusetts Medical Society at Cambridge last June. The author's well-known antiquarian habit and literary skill assured an interesting production for others besides those supposed to be immediately concerned with the "History of Medicine in Massachusetts." Two-thirds of the address deal with this history prior to 1781, at which date the Society in question was incorporated with a charter signed by Sam. Adams as President of the State Senate, and John Hancock as Governor. The moot point as to the nature of the great plague among the Indians "which made room for the Pilgrims at Plymouth," Dr. Green was inclined to settle in favor of the small-pox rather than of yellow fever; but in his appendix he prints a letter from Dr. J. H. Trumbull, who clearly leans the other way—on the ground that the Indians themselves distinguished the small-pox from the great plague, and that Roger Williams cites their word for the latter, 'he hath the plague,' which literally means 'he is *badly* yellow.' The first unmistakable and historic occurrence of yellow fever in the present United States was in Boston in the year 1693, by importation from the West Indies. On another point of some curiosity, Dr. Green identifies the Boston "eruptive miliary fever with an angina ulcusculosa," of 1735–36, with diphtheria. Massachusetts was the first State to practice inoculation and vaccination, and, if she did not invent ether, introduced the use of it. She was also the first to legalize the study of practical anatomy, in the face of popular prejudice. It was some time before the differentiation of pursuits in the colony drew a line between clergymen and physicians. The name of doctor was slow to be applied to the practitioner. The first recorded instance discovered by Dr. Green is in the Roxbury Church Records

of 1668, where "Doctor Emery" of Salem is referred to. From 1667 to 1730 so large and important a town as Northampton had no physician or surgeon. The barber long retained his surgical functions, his pole, says Dr. Green, being for the patient to grasp in order that the blood might flow more freely, and being painted red in case of staining. White linen swathing-bands encircled it when not in use. Dr. Green remarks that in this country since the war "a blue stripe is frequently added, making the patriotic combination of the 'Red, White, and Blue.'" Those who know Mary Dyer and Anne Hutchinson only for their respective religious enthusiasms and hardships will find here some singular obstetrical details about both. The following extract from a Boston dentist's advertisement just a hundred years ago (Oct. 8, 1781) shows that people were already asking themselves why the teeth were so perishable in America:

"Many people blame the climate, &c. for the loss of Teeth,—But it is too often the case, as I've observ'd in the course of my practice on the Continent, that but few people take care of their Teeth till they become defective. The Europeans are remarkable (particularly the French) for their good and beautiful Teeth, owing to their own care, and knowledge of the art."

Washington's false teeth were made in New York, by John Greenwood, whose father, Isaac Greenwood, was in 1780 an ivory-turner in Boston, and as such held himself ready to manufacture teeth, legs, hands, fifes, German flutes and hautboys, and to repair "umbrilloes."

—In connection with the statistics of the delinquent classes, the Census Office has prepared a tabular statement showing the machinery of justice in each of the States. It is an extremely condensed account of our means of dealing with suspected persons, and has been collated by Mr. F. H. Wines, of Springfield, Ill., with the utmost care from the statutes of the States and critically examined by competent legal authorities. It appears from this statement that there is at least one high court in each State, variously denominated: in most States it is called the Supreme Court, in others the Court of Errors and Appeals, Superior Judicial Court, etc. The number of judges differs widely, and there does not appear to be any sectional uniformity in this respect. In the following States this court has three judges: Alabama, Arkansas, Colorado, Florida, Georgia, Kansas, Minnesota, Mississippi, Nevada, Nebraska, North Carolina, Oregon, and South Carolina; in three States, Michigan, Kentucky, and West Virginia, there are four judges; in Indiana, Iowa, Louisiana, Missouri, Ohio, Rhode Island, Tennessee, Wisconsin, Connecticut, Virginia, and Delaware there are five; in California, Illinois, New Hampshire, Pennsylvania, Vermont, Massachusetts, and Maine there are seven, and in Maryland and Texas there are eight. In New Jersey there are a Supreme Court with nine judges and a Court of Errors and Appeals with sixteen. In New York there are also two high courts—a Supreme Court with thirty-four judges and a Court of Appeals with seven. As to mode of appointment and tenure of office, in twenty-eight States they are elected—in Vermont for two years, in Ohio for five, in Georgia, Indiana, Iowa, Kansas, Nebraska, Nevada, Oregon, South Carolina, and Texas for six; in Minnesota for seven, in Arkansas, Kentucky, Michigan, North Carolina, and Tennessee for eight; in Colorado for nine; in Missouri and Wisconsin for ten; in California, Virginia, and West Virginia for twelve; in New York for fourteen; Maryland, fifteen; Pennsylvania, twenty-one; and in Rhode Island for life. In the other States they are appointed—in New Hampshire, Delaware, Florida, and Massachusetts for life; in Louisiana for twelve years; in Mississippi for nine; in Connecticut for eight; in Maine for seven; and in New Jersey for six years. One term of the highest court is held annually in each of the States, with the following exceptions: in Connecticut, nine terms are held; in Iowa, eight; Illinois, six; Massachusetts, five; Michigan, Nevada, and Pennsylvania, four; New Jersey, Tennessee, Virginia, and West Virginia, three; and in New York at the discretion of the court.

—The power of the highest court in nearly all cases seems to be to issue remedial writs. In the States of Connecticut, Georgia, Kentucky, and Oregon they have appellate jurisdiction only; in Massachusetts this court tries capital offences; in New Hampshire and New York it has original criminal jurisdiction, and in Rhode Island the same, excepting such offences as are triable before justices of the peace. Appellate jurisdiction depends upon the character and jurisdiction of the Courts of Appeal. In Illinois there are four Courts of Appeal, having twelve judges; in New York, fifty-nine Courts of Sessions; in Ohio, eighty-eight Courts of Common Pleas and forty-six Probate Courts having criminal jurisdiction; in Pennsylvania, sixty-seven Courts of Quarter-Sessions; in Rhode Island, one Court of Common Pleas in each county; in South Carolina, a Court of General Sessions; in New Jersey, a Court of Oyer and Terminer, with a branch in each county. Massachusetts, Connecticut, and Pennsylvania have each a Superior Court, and Delaware, New York, Georgia, and North Carolina have courts of Oyer and Terminer. The next lower courts seem to be those known in different States as Circuit, District, or County Courts. In sixteen States there are Circuit courts, namely: Alabama, Arkansas, Florida Illinois, Indiana, Kentucky, Maryland, Michigan, Mississippi, Missouri, New Jersey, Oregon, Tennessee, Virginia, West Virginia, and Wisconsin. In these the number of courts ranges from five in Oregon to forty-two in Indiana, and there is usually one judge for each court. In ten States—Colorado, Iowa, Kansas, Louisiana, Massachusetts, Minnesota, Nebraska, Nevada, Ohio, and Texas—there are district courts, and in nine States, several of which have also circuit or district courts, there are county courts, one in each county. In every State there are justices of the peace, who are mostly elected, and whose tenure of office is limited. Their powers usually cover the trying of petty offences, making preliminary examinations, issuing of search warrants, etc. Besides the above, there are in all the large cities of the country municipal and police courts for trying offences committed within their limits and above the jurisdiction of justices of the peace.

—Of the large number of valuable papers read at the recent session of the International Medical Congress at London, those of Professor Huxley and Professor Virchow were the most interesting; while that read by Professor Pasteur, in French, was doubtless the most original and important. Professor Huxley's discourse was on the connection of medicine with the biological sciences. Beginning with the times of the "oldest hospitals," the temples of Æsculapius, he traces the history of medicine—which he thinks is more complete and fuller than that of any other science, except, perhaps, astronomy—down to our own times, in which "the search for the explanation of diseased states in modified cell-life, the discovery of the important part played by parasitic organisms in the etiology of disease, the elucidation of the action of medicaments by the methods and the data of experimental physiology," appear to him to be the greatest steps which have ever been made towards the establishment of medicine on a scientific basis. Much of this recent progress is due to the intimate relations which now exist between medicine and the biological sciences, whereas Hippocrates and his successors knew very little, indeed practically nothing, of anatomy or physiology. He thinks that, so far as medicine is concerned, physiology, such as it was down to the time of Harvey, might as well not have existed, and that it is hardly an exaggeration to say that, within the memory of living men, justly renowned practitioners of medicine and surgery knew less physiology than is now to be learned from the most elementary text-book. It appears to him that the essence of modern as contrasted with ancient physiological science lies in its antagonism to animistic hypotheses and animistic phraseology. Some interesting remarks are made on Descartes's plan of regenerating mankind by a new and improved medical science which would make men wiser and better and teach them to avoid an infinity of diseases of the mind as well as the body. Throughout the lecture are scattered some of those admirable philosophical generalizations which Professor Huxley knows so well how to express in terse language, and of which one or two may be quoted here: "All true science begins with empiricism, though all true science is such exactly in so far as it strives to pass out of the empirical stage into that of the deduction of empirical from more general truths." "It is a peculiarity of the physical sciences that they are independent in proportion as they are imperfect; and it is only as they advance that the bonds which really unite them all become apparent." Perhaps the most striking thing in the lecture is the reference to the state of pharmacology at the present time as compared with that which existed forty years ago. At the present rate of progress it will sooner or later "become possible to introduce into the economy a molecular mechanism which, like a very cunningly contrived torpedo, shall find its way to some particular group of living elements and cause an explosion among them, leaving the rest untouched."

—Professor Virchow's address in part covers the same ground as Professor Huxley's. That part of it, however, which seems to have caused the most excitement among English journalists is the defence of vivisection for scientific purposes, and the statement that "killing is more than torturing." The *Times* says the true question is not so much whether mankind be in the abstract entitled to submit cats and dogs and rabbits to vivisection, as whether the human sentiment of self-respect and sympathy with pain and suffering have sanctioned or will sanction it. It admits, however, that where philosophers like Mr. Darwin and Dr. Virchow pronounce the practices essential to the advance of medical science, nations will hardly be induced to choose darkness. After Professor Huxley's lecture the following resolution, supported by the physiological section, was read, received with loud cheers, and declared carried without a single dissentient: "That this Congress records its conviction that experiments upon living animals have proved of the utmost service to medicine and are indispensable for its further progress; that, accordingly, while strongly deprecating the infliction of unnecessary pain, it is of opinion that, alike in the interest of man and of animals, it is not desirable to restrict competent persons in the performance of such experiments." This being, therefore, one of those uncommon cases where doctors do not disagree, the sentimental objectors to vivisection would do well to note the fact. The objectors to the practice of vaccination indirectly received in M. Pasteur's address no less a rebuff than did the anti-vivisectionists in Dr. Virchow's. The result of

vaccination, it is well known, is simply to give the person vaccinated a mild and innocuous form of the same disease which, in its more virulent form of small-pox, in a majority of cases proves fatal if the patient has not been previously vaccinated. Now, Professor Pasteur has shown that at least four other infectious diseases, two of which he describes, can be met, like small-pox, by a process similar to vaccination. These two are chicken cholera, and splenic fever or Siberian pest (*Milzbrand*). The vaccine virus which counteracts these diseases can be prepared by a method which "is based simply on the action of the oxygen and the air—that is to say, of a cosmic force existing everywhere on the surface of the globe." As soon as this method became known it was extensively used in France to prevent the splenic affection, a disease which causes the annual loss to France alone of sheep and cattle to the value of twenty million francs. In the course of two weeks some twenty thousand sheep were vaccinated, besides a large number of cattle and horses. Professor Pasteur thinks that we may here be in presence of a general law applicable to all kinds of virus, and in conclusion expresses his satisfaction at being able to announce this great discovery in the native land of Dr. Jenner, the discoverer of the principle of vaccination. The germ theory of diseases, which has already so many supporters among eminent medical authorities, has thus received a new and powerful argument in its favor.

—In the August number of the *Deutsche Rundschau*, Professor Max Müller has an article entitled "Language and Languages," a "call in distress," as he terms it, first sent to a Rumanian journal, where his words fell unheeded. He laments that in these evil times it is not sufficient to be able to read books written in German, English, French, Italian, Spanish, Portuguese, Modern Greek, Danish, Swedish, and Dutch: a poor tormented scholar is unable to keep abreast with the times in his field of study if he cannot also read works published in Russian, Polish, Hungarian, Finnish, Icelandic, Rumanian, or Servian, nay even in Sanskrit, Bengali, or Hindustani. In view of this fact he thinks the time has at length come to fire a signal of distress. In Rumania, for instance, a charming, indigenous national literature is now being developed. Why not? The more the better. But why, asks Max Müller, should the proceedings of a scientific academy in Bucharest appear in the Rumanian language? Is it in order that no one shall read them but the home members of the Academy, if indeed all of these are able to read Rumanian? The same is true of the scientific publications of the Russian, the Hungarian, the Finnish, and several other academies and learned societies, although they do occasionally publish some of their more important articles in French, German, or English. The time was when Latin was the *lingua franca* in which every one wrote who desired to be read by contemporary scholars; but the only person who still writes Latin is the Pope. Latin has been supplanted by English, French, German, and Italian, the four great living languages of the world. Max Müller's proposition is that every scholar, every philosopher, every statesman who wishes to take part in the discussion of cosmopolitan questions ought to be able to speak and write in *one* of these four languages, and that every person of culture should thoroughly understand them all. It is no hardship to require a scholar to learn one language besides his mother tongue sufficiently well to be able to express his thoughts in a tolerably exact and elegant manner. What has been done can be done, and English and French are certainly not more difficult than Latin, a language which every man of culture could write in the centuries of darkness and ignorance.

—Max Müller also holds that it is time the alphabets were made uniform, and that the angular letters of the Germans should give way to broad, fluent Roman letters, though he does not expect to see these reforms realized in his lifetime. "What is more *reasonable*," he asks, "than the now so much talked of and ridiculed bad spelling in German and in English? But nothing progresses more slowly than—reason. Reason is the true tortoise," which nevertheless wins the race with the hare. He ridicules the well-nigh universally accepted doctrine that it is treason for a people to sacrifice its language, and lauds the example of Japan, where English has been introduced in all the schools in order that the growing generation may reap the benefits of intellectual intercourse with England and America, and through these nations with the whole world. Besides the world-literature produced in one of the four great languages he encourages the continued cultivation of the lesser vernaculars. He does not want them exterminated, but favors their continuance as the homely and familiar speech of the family. Finally, he suggests that the time may come when there will be but one world-language, in which nations, churches, and learned bodies will talk together. The languages of Babylon, of Jerusalem, of Athens, and of Rome have expired (*sind vorklungen*); are English, French, German, and Italian so much better than they?

—A return laid before Parliament on the subject of the ransoms of persons captured by brigands contains some interesting statistics. The acts of brigandage with which it deals cover Mexico, Italy, Greece, Spain, Sicily, and Turkey. The Mexican brigands seem to put a low price on their prisoners, $3,400 and twelve muskets being all they got for Mr. Rabling, captured in 1863, and even this paltry sum was the result of the "higgling of the market," for the original price demanded was $6,000. Another prisoner had to pay only $2,000. In 1869 a Mr. Furber was captured, and on the following day his body was found, with a notice that he had been murdered for having refused to ransom his life for $5,000. In these cases the home Government did not interfere in any way, but left the matter to be regulated entirely by the natural laws of trade. In Europe the value set upon tourists is higher, sometimes no doubt because ladies and even children are captured with the party, which must seldom happen in Mexico. Five thousand pounds does not seem to be at all an uncommon price to exact; while the Greek brigands who bagged Lord and Lady Muncaster and their friends in 1870 demanded at first £50,000, which was afterwards reduced to £25,000 and an amnesty. In Spain $37,000 was paid in one case and £6,000 in another. In the two recent cases of Colonel Synge and the Suter family the sums advanced by the British Government were £11,000 and £14,000 respectively. The British Government has made no explanation of its reasons for abandoning its practice of advancing ransoms and then making reclamations upon the brigands' Government; but perhaps their action may have been caused by a suspicion that the chief effect of it was to raise the price.

EDGAR QUINET.

Edgar Quinet: His Early Life and Writings. By Richard Heath. London: Trübner & Co.; Boston: Houghton, Mifflin & Co. 1881.

MR. HEATH'S book consists of an ill-digested sketch of Quinet's youthful life, curiously interlarded with abstracts of his earlier works. The Life, further, considered as a specimen of biography, has the terrible defect that the biographer shows no capacity whatever for presenting anything like a picture of his hero. Whether Mr. Heath ever knew Quinet in the flesh we cannot say; if he did, he makes no use of his knowledge. Probably he knew Quinet only from his works, and has fallen into the error of fancying that strong and perfectly justifiable admiration for an author's character and mode of thought is a sufficient qualification for writing his biography. Still, though Mr. Heath will certainly fail to interest any large part of the public, either in England or in America, and will, we fear, do little to spread the reputation of a very noteworthy writer, who ought to be far better known than he is out of France—still, 'Edgar Quinet: His Early Life and Writings' will interest, and even deeply interest, the limited circle of students who, having admired and imbibed some of Quinet's leading ideas, have long wished to know what manner of man was the author of a treatise on the Revolution fully as impressive as Carlyle's well-known history.

This natural curiosity Mr. Heath satisfies. We should have been heartily glad could he have told us more about the every-day facts of Quinet's existence. In this work he appears something like a disembodied spirit; he seems to have lived on ideas. One longs to know whether he ate and drank like other men. Did he care to make money? Had he the least wish to get on in the world? Had he any moral faults, and, if so, what were they? Above all, did he ever make a joke or did he ever laugh? To all these enquiries and the like one would wish to have an answer, and from Mr. Heath we get no answer whatever. But, though of Quinet's outward, commonplace, daily—so to speak, flesh-and-blood—life only a glimpse here and there can be gathered from Mr. Heath's pages, we can, happily, learn from them what is assuredly well worth knowing, that the moral beauties, and indeed all the qualities, of Quinet's writings were reproduced in his life, and, what with such a man was the same thing as his life, in his whole mode of thought and feeling.

Quinet was, we take it, an avowed freethinker; yet of all the writers on the French Revolution with whom we happen to be acquainted he is the most religious. If the word "spiritualist" had not been vilely perverted from its true sense, we could express our meaning by saying that Quinet wrote of the greatest historical crises of modern times as a spiritualist. It is not only (though this is itself a very marked trait) that the religious difficulties of the Revolution have for him an interest which they do not possess for other writers, and that he traces the failures of the Revolutionists to their utter incapacity for understanding or solving religious problems, but that he never for a moment loses sight of the fact that the spirit in which men act, their view of truth, their view of the relation of man to God, has a fundamental influence on the whole of their political and social theories and the mode in which they attempt to put their theories in force. Hence Quinet has assuredly an insight into some aspects of the revolutionary convulsion which are hidden from as painstaking investigators as Taine or Ternaux, or even from a thinker as subtle and profound as De Tocqueville. Quinet, for example, never forgets that the failure in France of the struggle for religious truth at the time of the Reformation was both a presage and a cause of the failure of the struggle for political freedom at the time of the Revolution; he, again, does rare justice to the position of the priests who, like the Abbé Grégoire, were true both to their religious convictions and to their belief in freedom. He points to the spiritual deficiencies which lay at the very bottom of the revolutionary creed, and shows,

what a writer such as Taine never understands, that the Jacobins adopted the worst traditions and in many ways reproduced in their government the worst features of the monarchy, just because they (and, we may add, the mass of Frenchmen) retained in their souls the ideas which underlay the vilest institutions of that monarchy which the Jacobins meant totally to destroy. Quinet's work, again, though it has marked defects of its own, displays no trace of the delusion, which mars a good deal of De Tocqueville's speculations, that men are morally the creatures of institutions, rather than institutions and social arrangements themselves the creation and result of each generation's moral state and condition. Quinet could never for a moment have used language of which you may certainly find specimens in the 'Democracy in America' or the 'Ancien Régime,' that "self-government" was the cause of all the manly virtues, and that a country in which every parish managed its own affairs was necessarily a country filled with village Hampdens.

Quinet, in short, is in his historical writings a spiritualist. His defect is the fault, rare among his countrymen, of underestimating the importance to be attached to the mechanism of society and to the formal parts of political life. He hardly, indeed, estimates highly enough the influence on mankind of their material interests. Doniol's elaborate treatise on the abolition of feudalism, and especially on the agrarian revolution initiated but not completed by the National Assembly, supplies not only facts but ideas which Quinet indubitably overlooked. The point, however, to be noted by one who reviews Quinet's biography is that this ingrained tendency to turn towards what one must call things spiritual is the one predominant characteristic of Quinet's life. The sorrows of his boyhood; his passionate fervor almost as a child for Napoleon, who represented to him the cause of national independence; his bitter, not to say morbid, indignation at the baseness with which men forgot the Emperor whom they had idolized; his vehement affections—all tell of a soul to whom the spirit was everything and the letter or form nothing. With the spiritual side of his character is closely connected a trait which assuredly affected every line that he wrote—his keen sympathy with his mother's hereditary Protestantism, as also with her admiration for the freethought of the age which had preceded the Revolution. A spirit like Quinet's was, further, certain to search till it found its proper nutriment. It was in Germany, not in France, that Quinet discovered the ideas for which his soul hungered. Mr. Heath is assuredly right in insisting on the fact, as Quinet himself would no doubt have done, that the latter's translation of Herder gave the tone to his whole system of moral and religious thought. Nor was his connection with Germany of a purely literary character: his love for Minna Moré, the daughter of a German Protestant minister, has a singular appropriateness when viewed in connection with his relation to German literature and sentiment.

Moreover, if Mr. Heath is painfully chary of facts, no one can fail to see that the whole of Quinet's early life was a sacrifice of interest to a high ideal. His contest with his father, in order that he might devote himself to literature; his passionate application to the pursuit he had chosen; his utter incapacity for bending his convictions to his interests, which made him almost without a thought give up every chance of promotion by Guizot rather than subscribe to the Orleanist creed, are all the sure and certain marks of a man who lived in the spirit. Of the few individual traits we can gather from Mr. Heath, as touching a one as can be found is his reply to the mother whom he adored when she rallied him on leading as a young man the life of a recluse:

"If you knew the harm your sarcasms do me when they come from you, you would for ever renounce such a poisoned weapon. What is the use of loving if it is not to spare one another? It seems to me it is preparing for ourselves vain regrets if we should have to confess sooner or later that, instead of using all our faculties to embellish this short life or mutually to console each other, we sometimes disenchanted it or dried it up at the source."

Every line of Quinet's writings breathes an ardent love of liberty. With freedom of thought, freedom of speech, freedom of action—with freedom in all its forms, he displays burning sympathy. This is the characteristic which makes him such a marked contrast to an author with whom he had stronger points of contact than the fact of their having both dealt with the problems raised by the French Revolution; for, in truth, it would be easy to enumerate a large number of resemblances between Quinet and Carlyle. They were both severe, and yet not altogether unsympathetic, critics of the Revolution. They were both rather moralists than mere historians. They both tried, and each with great success, to trace out rather the ethical than the material aspects of the revolutionary movement. They were both deadly foes to materialism. They both distrusted every kind of mechanical solution of events which they felt to be the result rather of spiritual than of physical influences. The Frenchman, again, no less than the Scotchman, utterly detested any theory of history which ignored the influence of great men or of original genius. Quinet's critique on Strauss—one of the most interesting portions of Mr. Heath's work—is a keen exposure of the absurdity involved in attempting to explain the origin of Christianity without giving weight to the character of Christ; and, as we understand Mr. Heath, Quinet's belief in the influence of individuals went so far as to excite his disbelief in the validity of the views held by the whole school of German historical critics. This, however, certainly did not arise from any aversion to German literature; for Quinet (in this, too, like Carlyle) found among Germans the men whom he acknowledged as his principal teachers. Quinet, lastly, like Carlyle, looked at European history from an essentially Protestant point of view, and would probably have re-echoed every expression with regard to the Reformation used by an author who to the end of his life remained in sentiment, if not in opinion, a Scotch Calvinist. Yet with all these points of resemblance between the opinions and attitude of Quinet and of Carlyle, the spirit of the Frenchman is totally different from the spirit of the Scotchman. The difference lies mainly, if not wholly, in their different sentiment as to liberty. Carlyle, even when he passed with others, and probably with himself, as a democrat, was never really an admirer of freedom, democratic or otherwise. Quinet, even when as a child he admired Napoleon as the saviour of the country, was really filled with enthusiasm for liberty. He belonged in a good sense to the Revolution, just as truly as Carlyle belonged also, not in a bad sense, to the reaction. And at every step of Quinet's career, from the time when he left his father's home to pursue what he felt to be his vocation, down to the day when he was a victim of the *Coup d'état*, you find that he was in his life as in his works the devotee of freedom.

Mr. Heath's book stops at the point where his hero, after having apparently sacrificed his prospects through his refusal to ally himself with the Orleanists, was at last, to the disgust of Louis Philippe, raised to the professorial chair which he had every claim to occupy. One cannot but wish that the rest of Edgar Quinet's career may be placed before the English reading public, and—without disrespect to Mr. Heath be it said—by a writer who is not under the delusion that to give abstracts or renderings of an author's works is the same thing as to provide an account of his life. Yet Mr. Heath is not utterly without excuse. Quinet was, we conjecture, one of those men who lived in his thoughts. His life, therefore, was to be found, not in outward actions, but in the history of his thoughts and beliefs.

THE WOMAN'S-RIGHTS MOVEMENT.

History of Woman Suffrage. Edited by Elizabeth Cady Stanton, Susan B. Anthony, and Matilda Joslyn Gage. Illustrated with steel engravings. In two volumes. Vol. I. 1848–1861. New York: Fowler & Wells. 1881. 8vo, pp. 878.

THERE is force in the objection which has been brought against this book, that as woman suffrage is not achieved it has no history. But, on the other hand, it may be said that in some of the Territories women are allowed to vote at all elections, and in several States for school officers, and that the tendency is unmistakably towards the political equality of the sexes. If, therefore, a work like this could show the inception of the agitation, describe the opposition overcome, record the successive triumphs and their intervals, and leave on the reader's mind a cumulative impression of invincibility, it would need no justification, for it would undoubtedly hasten the completion of the reform. In the nature of the case, however, such a weapon can be forged only by one brain, capable of marshalling the facts in their proper sequence with telling effect. There is no evidence that any one of the three editors of the volume before us has any such capacity, and it is certain that all together they have produced one of the most disorderly and ineffective works ever dignified with the name of history. It is, in its entirety, absolutely unreadable, and the last thing to be derived from it is a feeling of the steady progress of the cause which its authors have at heart. In fact, were the reasonableness of this cause to be judged by the clear-mindedness, coherency, and sense of proportion manifested in the so-called editing of this bulky retrospect, the verdict must infallibly be adverse.

Except in the resolutions and speeches of woman's-rights conventions, here given at tedious length, suffrage cuts but a small figure, and the net outcome of the agitation is exhibited in the amelioration, or more or less thorough abrogation, of the common-law status of married women. Had even this been systematically set forth, it would have been worth the while, for in the present chaotic state of the law no layman and few jurists can get an intelligible idea of the drift of the legislation of the past half century. It would, too, have fallen in with the otherwise bad arrangement of the chapters by States instead of chronologically. The thesis is distinctly propounded in the Introduction (p. 16):

"While the laws affecting woman's civil rights have been greatly improved during the past thirty years, the political demand has made but a questionable progress, though it must be counted as the chief influence in modifying the laws."

Dates are obviously of some importance here. On p. 52 we read: "Above all other causes of the 'Woman Suffrage Movement' was the Anti-Slavery struggle in this country"; and on p. 62: "The movement for woman's suffrage, both in England and America, may be dated from this World's Anti-Slavery Convention"—in London, namely, in June, 1840. This is historic

truth, and it need only be added that the first woman's-rights convention was held at Seneca Falls, N. Y., in July, 1848. Now if we turn to Dr. Henry Hitchcock's review of "Modern Legislation touching Marital Property Rights," in the *Journal of Social Science* for March, 1881, we shall find that "the first step towards the new legislation appears to have been taken by the State of Mississippi, by an act passed in February, 1839," more than a year before the World's Convention and nine years before the convention at Seneca Falls; that Maryland came next in 1841; that between 1844 and 1846 Maine, Michigan, Rhode Island, Connecticut, Massachusetts, New Hampshire, Kentucky, Arkansas, and the Territory of Florida joined in the movement with unequal radicalism; and that in the next four years (1846–1850) Vermont, New York, Pennsylvania, North Carolina, Alabama, Tennessee, Wisconsin, and California likewise "wheeled into line." From this it is evident that the dissatisfaction with the common law had manifested itself and rapidly acquired strength in fully half the States of the Union before the political doctrine of Mrs. Stanton and her colleagues could have begun to have any appreciable influence on the public mind—in many slaveholding States, too, alike abhorrent of abolitionists and of woman suffragists; and that the credit of it must be given to the tyrant man himself. We do not deny that the movement was accelerated by the general discussion of human rights which the suffrage agitation involved, as well as by the accessibility to legislative committee hearings which woman's speaking in public unquestionably secured. But this must be measured by more dispassionate and punctilious observers than the ladies whose compilation we are considering.

We shall be asked what value, if any, have these crude and ill-digested pages, and our answer must be, that of their defects and something more. There is, to begin with, no other single volume containing so much of the current reports of proceedings at the various woman's-rights meetings, or so many biographical sketches of prominent workers. The reminiscences by Mrs. F. D. Gage, Mrs. Emily Collins, Mrs. Nichols, Mrs. Stanton, and others; the tributes by the last-named to the late Mrs. Angelina Grimké Weld, Mrs. Lucretia Mott, and Mrs. Paulina Wright Davis; the account of Mrs. Ernestine L. Rose; the history of the Bloomer costume; the picture of the World's Anti-Slavery Convention, and of the World's Temperance Convention in New York—all these can be read with interest and profit. Nor can the most careless reader fail to be struck with the glimpses of the social and civil inferiority of women against which the woman's-rights movement was a protest; or to be amazed at the public opinion which regarded an assembly of women outside of a church as a fit object of mob violence. A special curiosity attaches to the valuable paper by Mr. Whitehead on female suffrage in New Jersey at the close of the last century and the beginning of the present. Finally, the arguments themselves for political equality will repay study, whatever conclusion they may lead to. Altogether, a sense of the profound change in public sentiment within a generation must arise from a perusal of this work. This may be briefly illustrated under three categories. "I remember," says Mrs. Collins (p. 88), "in my own neighborhood [in Western New York] a man who was a Methodist class-leader and exhorter, and one who was esteemed a worthy citizen, who every few weeks gave his wife a beating with a horsewhip. He said it was necessary in order to keep her in subjection, and because she scolded so much." On page 108, Prof. Timothy Walker's 'Introduction to American Law' (probably the second edition, of 1844) is cited to this effect: "In Ohio, but hardly anywhere else, is she [the wife] allowed to make a will, if haply she has anything to dispose of." Miss Anthony, at the State Teachers' Convention held at Troy in 1856, made a report as chairman of a committee on co-education. "The President, Mr. Hazeltine, of New York, congratulating Miss Anthony on her address, said: 'As much as I am compelled to admire your rhetoric and logic, the matter and manner of your address and its delivery, I would rather follow a daughter of mine to her grave than to have her deliver such an address before such an assembly" (p. 515).

Mrs. Stanton's relations with Miss Anthony, as narrated by herself, are among the amusing features of this history. In regard to so important an event as their first acquaintance, however, there is a censurable error of detail, for it is antedated by three years, if we may trust the statement that Mr. George Thompson was at Mrs. Stanton's home at the time (1851, instead of 1848). The pranks of this writer's "savages," as she calls her boys, are thought worthy of a foot-note filling half a page. But her colleague, Mrs. Gage, affords rather more entertainment in the chapter on "Preceding Causes" of the suffrage movement, among which Harriet Martineau, "Eliza Lynn, an Irish lady," and Catharine II. of Russia are enumerated in what must be called a screaming juxtaposition (p. 34). On p. 37 we are told that "in ancient Egypt the medical profession was in the hands of women, to which we may attribute that country's almost entire exemption from infantile diseases, a fact which recent discoveries fully authenticate." And a little further on there is a wonderful perversion of fact and confusion of times in a sentence which we quote literally:

> "Lady Montague's discovery [!] of a check to the small-pox, Madam Boivin's discovery of the hidden cause of certain hemorrhages, Madam de Coudray's invention of the manikin, are among the notable steps which opened the way to the modern Elizabeth Blackwell, Harriot K. Hunt, Clemence S. Lozier, Ann Preston, Hannah Longshore, Marie Jackson, Laura Ross Wolcott, Marie Zakrzewska, and Mary Putnam Jacobi, who are some of the earlier [!] distinguished American examples of woman's skill in the healing art."

The second volume of this work is somewhat vaguely announced to consist of "several chapters of contemporaneous history, . . . contributed by friends in the Old World"; but it is reasonable to expect that the history of the suffrage agitation in this country will be carried on from the year 1861 to the present time, and that we shall at least have an *ex-parte* narrative of the serious and unhealed breach in the ranks of the woman-suffragists, with its causes and results. Meantime, we regret the taste which, under the rubric "Woman in Newspapers," permits mention, among serious and reputable journals conducted by women, of "*Woodhull and Claflin's Weekly*, an erratic [perhaps erotic was intended] paper, advocating many new ideas."

RAWLINSON'S ANCIENT EGYPT.—II.

History of Ancient Egypt. By George Rawlinson, M. A. In two volumes. London: Longmans, Green & Co.; New York: Scribner & Welford. 1881. 8vo, pp. xx.–554, xiii.–567.

A POPULAR history is necessarily controlled in the treatment of its subject both by its limited space and by the character of its public. It is not expected that such a history should go into long discussions of the sources or disquisitions on abstract or disputed questions that can have interest only for specialists in history or philosophy; and we feel that Professor Rawlinson, so far, shows good sense when he says, in his chapter on the Egyptian religion, vol. i., p. 313, that he will avoid "mere speculation . . . as far as possible," and set forth "only those conclusions . . . with regard to which there is something like a general accord among the persons best acquainted with the Egyptian remains, whether sculptured or literary." But, in the first place, it seems to us that in fact, instead of avoiding speculation, he has only selected the topics on which to speculate, and that he has not always chosen wisely his "persons best acquainted" with the material in hand; his choice being, indeed, determined mainly by a writer's agreement with his own religious philosophy. In the second place, it would not be out of place, in a work that devotes over a hundred pages to the description of a religion, to try to go beneath the surface, seize its spirit, and infuse life into the dry and queer details of its pantheon, its worship, and its ceremonies. There is a mean between barren speculation and dull literalness; we wish we could say that our author had found it.

The external details of the cultus are given by Rawlinson at sufficient length, and, with some important exceptions, satisfactorily. We have the names, titles, and figures of the several deities, the ideas they are supposed to represent, and the places and ceremonies of their worship; the general features of the cultus, the hymns, sacrifices, and festivals are described—the self-glorification of the worshipper and the absence of a deep sense of sin being especially insisted on—and there is some discussion of the worship of animals and of ancestors. The constitution of the priestly class is described in the chapter on "Manners and Customs" (i., 433–442), as well as the process of embalming the dead (510–514); the account of the literature (vol. i., chap. 5) includes various religious books, with an outline of the contents of the "Ritual of the Dead"; and in the second volume the varying aspects of the religious life and cultus are noted from period to period. The real, practical religion of the primitive period, says Rawlinson (ii., 39), was worship of ancestors. It would seem that from the first there lay at the root of the Egyptian religion the belief in a future life and of happiness or misery beyond the grave, and in these early times the Ritual of the Dead had its origin. Alongside of this worship, however, existed also that of the reigning monarch. In succeeding periods we see an expansion of the pantheon and a progress towards unification of the local cults. Under or before the XII. dynasty (about B. C. 2,000) Amen is elevated to the headship of the pantheon, and some centuries later a curious religious revolution is effected by Amen-hotep IV., who establishes the worship of the sun's disk as the state religion, a position that it enjoys only for a couple of reigns, after which the old religion is restored. With the conquest of the Hyksos, Set comes to the front, and with their expulsion he falls, and thenceforward we have to trace only the continued elaboration of polytheism and the formulation of the various doctrines of religion, the power of the priesthood increasing as the virility of the nation diminishes. This constant regard to the historical development of the religion is a valuable feature of the book.

The omissions which we have noted in this part of Rawlinson's discussion, and which seem to us important, relate to the constitution and future of the soul, and to myths and legends. Of all peoples of antiquity the Egyptians dwelt most on the future life, and made the most earnest efforts to represent to themselves the anatomy of the immortal part of man. Maspero has made some valuable contributions to this subject in the *Journal Asiatique* for 1880. Rawlinson does not refer to him, or to Le Page Renouf's Hibbert Lectures, and seems not to have con-

sulted the latest authorities on Egyptian religion —his principal guides are Wilkinson, Bunsen, and Lenormant. The opinions on the future life held by the most ancient of civilized nations (so the Egyptians are, unless the Chinese may dispute with them the precedence) are not merely matters of curious enquiry, but furnish important material for a general history of religious thought. Rawlinson has passed these over lightly. He has nothing to say of the ceremonies of interment, or of the fortunes of the soul after it leaves the body, or of the deification of the dead man and his identification with Osiris (he barely mentions in a foot-note that every dead man was called an Osiris). Yet these things are at least as interesting in our times as processes of embalming and processions of the sacred animals. He contents himself with commonplace remarks, appropriate to the ordinary religious newspaper, and makes no effort to find out what were the deeper problems that the Egyptian religious consciousness was trying to solve. Granted that the subject is a difficult one, and that further light from the monuments is much to be desired, yet a historian who writes for the general public of to-day would do well to examine carefully points of the inner religious life in which all men are interested.

There are similar omissions in the mythical and legendary material. The Osiris legends are given in part, but not those relating to Horus and Ra. The latter, which tell how the first men revolted against the god, and how he destroyed them, have enough points of connection with similar myths among other nations to give them a peculiar interest. To examine these would not be to indulge in useless speculation, but to help us to an understanding of the earliest cosmogonical and religious ideas of the Egyptians. In the interpretation of myths there is room for considerable difference of opinion. One thing, however, seems to us to be clear, that in the original form of such stories we are not to look for refined ethical and religious ideas—these are the additions of later times. When Rawlinson says (i., 359) that "the truth seems to be that little more was aimed at in the Osirid legends than to teach and illustrate the perpetual opposition and conflict between good and evil," he is confounding the earlier and later forms of the myth. His remark that "the ideas of an incarnate god, a suffering god, a god who dies and is restored to life again [Osiris], . . . the connection of evil with the form of the serpent [Apepi], and the ultimate bruising of the serpent's head by the Divine benefactor," all found in the Osiris myth, "may be echoes from the far past of that primeval revelation which God vouchsafed to the human race, or may be merely thoughts natural to man, arising out of the constitution of his mind and its broodings upon God and nature" is undoubtedly true—for how should such ideas come to man, except from his own soul, or from a Divine revelation?—but it does not advance the solution of the question one jot. It is a mere helpless statement of an obvious dilemma, beyond which the author seems to be afraid to go.

The general remarks with which the chapter on religion opens are lacking in chronological discrimination. Rawlinson calls attention in his second volume, as we have said, to the changes that took place from time to time in the outward form of the religion, but the fundamental ideas he here comprehends under one chronological head as if they had been always the same. This can hardly have been the case—there must have been a progress, which, though it may be difficult to trace, must nevertheless be kept in view. The distinction between the exoteric and esoteric faiths, to which he first refers, is doubtless well founded, and has existed in all religions. It is possible, however, to exaggerate it, by unduly magnifying the grossness of the popular belief on the one side, and the purity of the creed of the initiated on the other. The people were probably more or less familiar with the Ritual (or Book) of the Dead, which certainly taught doctrines very different from gross polytheism. On the other hand, while there seems no reason to doubt that the creed of the priests and other instructed persons was far purer than that of the people (as was the case, also, with the Hindu priests and bards, and the Hebrew prophets), it may be doubted whether it can properly be called a system of "strict monotheism." In the sacred hymns there often appears a sort of henotheistic doctrine; the position of supreme, omnipotent Deity being assigned to one god or another, according to the feeling of the worshipper. An illustration of this henotheism may fairly be found in the Hymn to the Nile ('Records of the Past,' iv., 107), of the time of the XIX. dynasty, in which the Nile-god is identified with Num, and is put into the same category with Amen, Ra and Ptah, while he is called "creator of all good things," and it is said of him that "he is not beheld, he is not adored in sanctuaries, his abode is not known, there is no building that can contain him"; further on he is identified with Ptah, the demiurge, and with Kabes, and it is declared that his name is unknown in heaven; that he does not manifest his forms; that mortals and the cycle of gods extol him. Here we have the belief in a great, all-controlling Presence, manifesting itself in various forms—such a half-pantheistic henotheism as is found in the Veda, but not the strict monotheism of modern thought. How far back this scheme of faith goes, and what its historical relation to the national polytheism is, it may not be possible now to determine from the Egyptian literary remains. The question does not belong to Egypt alone, but comes up in the history of every highly developed ethnic religion, and is to be solved not by *a priori* reasoning, but by the widest comparison of all the known facts. The purest monotheism of ancient times, that of the Hebrews, seems to have sprung out of polytheism: the history of the movement has been preserved in the national records. In Egypt there is no such history in our possession. Elevated religious conceptions go back to almost the remotest antiquity of the nation, and we have at present no means of deciding whether, as some facts in the religious life of other peoples would suggest, there was at first a dim, unreflecting consciousness of one power in the universe, which developed into polytheism, out of which then the desire for unity in phenomena led at last to a more or less pure reflective monotheism.

Rawlinson's view of the Egyptian religion seems to be that it was originally a pure monotheism, the various members of the pantheon being merely personified attributes or aspects of the One, and that the duller feeling of the people converted these personifications into deities. He has no sympathy with the theory of a phenomenal, polytheistic origin of the gods; he prefers to find in their names the expression of refined religious ideas. Thus Amen is, according to him, the "hidden" god, the mysterious, inscrutable, supreme deity; Kneph is the divine "spirit," as in Genesis i., 2, and then the creator, especially of mankind; Ptah is the "opener," the manifester of the hidden Amen, the demiurge; Osiris was perhaps originally a personification of the divine goodness, and afterwards came to be regarded as a form of the sun of the lower world. He, however, admits (i., 342) that a large part of the Egyptian religion was connected with the worship of the sun. His definitions of the names above given appear to us to contradict all that we know of the origin of such names elsewhere. Whatever high ideas may be attached to them in later times, it is commonly, we may say universally, found that the original signification relates to some simple physical thing. It is mere speculation to assign to the names of these Egyptian deities meanings that are in sharp contrast with the great body of facts. In the Egyptian scheme itself the large number of names that obviously refer to the sun and moon at least suggest the propriety of looking for a similar origin for those whose signification is less obvious. We may hope that the growth of the Egyptian dictionaries will clear up many such points that are now obscure. For the rest, it must be borne in mind that the purity and loftiness of any system of religion are not diminished by the fact that it has grown to greatness from small beginnings. If it be shown that Egypt started from polytheism, it will not be the less true that she developed a system of faith and morals that is worthy of the profoundest admiration.

The Egyptian worship of ancestors has not been satisfactorily studied, and our author adds nothing to our knowledge of its nature (i., 423). That the dead were exalted to a quasi-divinity, and yet had continued need of the supports of earthly life, he thinks self-contradictory, but consoles himself with the reflection that the Egyptians were not a logical people, and that their entire conception of the condition of the dead was "strange, abnormal, and irrational." The same illogicalness is found in the Roman parentalia, and among the Chinese. One is at a loss to know what "irrational" means when applied to views of the future life, and would gladly learn what nation it is that has worked out the rational view. As to the origin of the animal worship, Rawlinson mentions the two theories that it grew out of fetishism and that it was a product of the Egyptian exaggerated symbolism. A third theory, held by some writers, is that it came in part from accidental identity or similarity of names. Thus, according to Renouf, Tot or Tehuti signifies both "measurer" and "ibis"—he is the moon-god, and the ibis is sacred to him; and Seb means the earth-god and a goose. Possibly we have to take all three modes of origination into account.

In conclusion, while we accord to Rawlinson's work the praise of clearness and judiciousness as a compilation of the more obvious material of Egyptian history, we cannot credit it with the higher qualities of candor, breadth, and thoroughness. It is an interesting, neatly arranged, superficial, sometimes prejudiced, account of the old Egyptian life. It cannot be said to be an addition to the scientific literature of the subject. In fact, the author did not mean to offer any such scientific contribution, but only a readable second-hand digest of the facts, under the guidance of English good sense. We are glad to have a readable book for the general public, while we regret the narrowness that is often misleading and always benumbing.

COLVIN'S LANDOR.

Walter Savage Landor. By Sidney Colvin. [English Men of Letters.] New York: Harper & Brothers. 1881.

"Few men have ever impressed their peers so much, or the general public so little, as Walter Savage Landor." This is the first sentence of Prof. Colvin's book, which nevertheless makes no serious attempt to explain this discrepancy, whereas such an endeavor is at this date, we take it, the strict and very nearly the exclusive business of a book about Landor. Professor Colvin does indeed devote a page of his "Conclusion" to the causes of Landor's "scant popularity," which, he says, "are not difficult to discern." They are, in brief, his discursiveness and voluminousness, "imperfections of a great master," which impede the reader's efforts to get at his real

excellences; the universal rather than specific nature of his "thoughts" ("he ranged apart from the passions or the tempests of the hour"); and the fact that, in his own phrase, "he 'walked along the far eastern uplands, meditating and remembering,' and to the far eastern uplands those who would walk with him must brace themselves to mount." But this is no explanation at all of the fact, which Professor Colvin is compelled to chronicle, that "true Landorians may at present be counted on the fingers." To have given any other explanation, however, would have been fatal to enthusiastic panegyric, and quite inconsistent with the view of Landor here presented, according to which he is made to figure as one of the most important of English writers, in some qualities a rival of Shakspere, a master of style, a worker in marble, "in English prose, an artist comparable with the highest in their respective spheres; with Milton in English verse, or with Handel in music." Professor Colvin is never tired of grandiose epithets in characterizing this prose. He speaks of "clause upon clause of towering eloquence," of Landor's "outdoing" Plato "with a passage of splendid rhetoric on the nothingness and restlessness of human power as compared with the gentlest of the elements, the air"; and the recurrence of "massive" is almost fatiguing. The thought with which this massive prose is freighted is dignified in the same way and to the same degree. Landor is compared, "for power and compression, for incisive strength and imaginative breadth together, in general reflections," as well as "for the combination of conciseness with splendor in their utterance," to Pascal. "Such an anthology" of his detached sayings and sentences "as the literature of France itself could hardly surpass" might easily be made. He is "a great creative master of historic sentiment and of the human heart." The 'Imaginary Conversations' are remarkable for "the extraordinary richness, the originality of the reflections, and meditative depth and insight." "The mansions of his mind are so various, and the riches stored up in them so vast, that," etc., etc.

In short, Professor Colvin agrees cordially with the implication of Landor's own deliverance: "I shall dine late, but the dining-room will be well lighted, the guests few and select." In other words, he thinks Landor's "peers" entirely right about him, and "the general public" entirely wrong. It is the view of the latter that he attempts to assign causes for, and the general public—in this case all but a few persons who "may be counted on the fingers"—at least would undoubtedly have preferred an explanation of the magniloquence of the Landorians' panegyrics. In a popular work it may be justly said, too, that this line would have been the better one to take. As it is, the majority of Professor Colvin's readers who know Landor at all will, we do not doubt, maintain that he has misconceived the reasons of their neglect of his favorite. The real reasons of it, they would probably contend, are not wholly unintelligent. Landor lived long enough for Mr. Swinburne to make an especial pilgrimage to Italy to see him, but he was essentially of the generation of Coleridge and Wordsworth and a part of the English literary movement at the beginning of the century. He shared in greater or less degree in its excellences, and illustrated admirably the emotional rather than intellectual impulse that marked it. Byron might have called him, as justly as he called Southey, "the only existing entire man of letters"; but this phrase then meant, or was at any rate then employed to characterize, a certain amateurishness which neither before nor since that time has existed in conjunction with so much erudition and even genius. Certainly the amateur quality is conspicuous in Landor; and it has ceased to excite the admiration of the general public as it once did. Instead of interesting himself in "the passions or the tempests of the hour" (the hour being the French Revolution period, and his views being those of the Whig aristocracy which drove Burke into the arms of the Tories), as Byron did, or occupying himself with purely imaginative poetry, like Wordsworth and Shelley, or meditating intellectual problems with Coleridge, he threw himself into "letters," and excelled Southey mainly by the measure of genius which energy as distinguished from industry implies. He was an admirable scholar; he had a passion for books, and he lived, as Professor Colvin says, "among the heroic figures of the past." But this attitude of mind has come to have something indisputably old-fashioned about it. The only contemporary analogue of it is pedantry, and Landor was anything but a pedant, for an ingenuous pedant is a contradiction in terms. Yet the very conception of his chief work, the 'Imaginary Conversations,' is the conception of a bookish amateur. It was not wholly original, but, considering the scale on which he carried it out, it may be called Landor's own, and it is extremely characteristic. To the "general public" of the present day it cannot but seem less than deeply serious; and indeed it falls as a conception rather into the category of G. P. R. James's works than into those of Scott, whose tact in making his historical personages subordinate characters was unimpeachably happy. Landor himself thought Scott might have envied James's 'Mary of Burgundy,' just as he thought Southey a greater poet than Wordsworth or Shelley. His historical figures are not very real, as Prof. Colvin admits; and so all that can win for their 'Conversations' the admiration of any one who knows his Plutarch well, and is no longer filled with emotion at the thought that Pericles and Aurelian were as much human beings as his next-door neighbors, is the "wise and beautiful thoughts" on things in general which they contain, and the marble prose in which they are carved.

Both of these are a little old-fashioned too. Prof. Colvin assures us that Landor ranged not only "among the heroic figures of the past," but among "the permanent facts and experiences of life"; and that here he is comparable to Pascal. This must, of course, remain a matter of opinion. But the general public will remain sceptical until Landor's wise and beautiful thoughts are extricated from the mass of prosing in which his biographer acknowledges that they lie embedded. At present it is possible they lose from having to be picked out and sought for; but it is a great mistake on Professor Colvin's part not to have given his readers, who he assumes cannot know Landor, a few instances of these nuggets that suggest Pascal. Nothing would have been so convincing as some "detached sentence" that would match, for example, with this: "What is nature? Perhaps a first habit, as habit is a second nature." Prof. Colvin contents himself with saying: "The two volumes ('Pericles and Aspasia') are perhaps the richest mine which English prose literature contains of noble and unused quotations"—a remark which is only valuable to an undergraduate engaged on a "theme," and leaves "the general public" cold. On pages 160, 161, and 162, however, he does quote a long piece of sustained imaginativeness—Petrarch's allegory in the 'Pentameron,' of which he praises "the deep consolatory wisdom," besides calling it "an example unmatched in literature of the union of Greek purity of outline with Florentine piquancy of sentiment." The reader must judge for himself. It is eminently Landorian, and it is Landor at his very best. The time is long past, we suspect, when such imaginings, pretty and gravely pleasant as this unquestionably is, appeared to more persons than "could be counted on the fingers" "deep consolatory wisdom" of an especially novel order. Perhaps our palates are become jaded; perhaps George Eliot's "wise and beautiful sayings" have spoiled some tastes for Landor's. Goethe, at least, has been widely translated since the 'Pentameron' was written; and a desire for substantiality accompanies the modern impatience with the commonplace closely enough to make Professor Colvin's announcement, that those who would walk with Landor "must brace themselves to mount," seem suspicious. Full of emotions and emotional speculation about "the permanent facts and experiences of life" (at least about those within definite limits) Landor undoubtedly was; full of ideas about them he as certainly was not.

And these emotions he cast in a form which we have been bold enough to call old-fashioned, because it really seems as if what is known as "poetic prose," and writers who are known as "prose poets," were getting out of date. The more any "general public" that includes every one but Landorians reflects upon such matters, the more deeply it becomes convinced that the excellences of prose are not those of poetry, and that the more "poetic" prose is, the more unsatisfactorily evident is the prose handicap upon what suggests the need of expression in poetry. There is clearly no rule to be laid down even for an author "equally at home in prose or verse," as Professor Colvin truly says Landor was, but one feels the lack of fitness in Landor's prose expression often, as one feels it in Mr. Ruskin's. Prose often will not serve his purpose. A sense of trammelled effort is inevitably apparent. Persons who note this in Mr. Ruskin fail to note it in Landor because of that "Greek purity of outline" which Professor Colvin speaks of. But even that serves only for a time, and before long the attempt—which, as we were saying, could not be made nowadays without pedantry—to create the anomaly of the union of "Greek purity of outline with Florentine piquancy of sentiment" becomes inexpressibly wearisome. Landor was perpetually making that attempt. He admired the former quality immensely and sought to attain it by the greatest carefulness and containment of diction. But let any one compare the letters of his 'Pericles' with any translation of the Funeral Oration over the victims of the Peloponnesian War, or his 'Plato and Diogenes' with any translation of the 'Apology' or 'Phædo,' for example, and the difference between the purity of outline of Greek prose and the result of an endeavor to give severe expression to "Florentine piquancy of sentiment" will readily appear. No amount of culture, pure and simple, can overcome it; thought and style are too intimately connected. "The best skeleton type of a Landorian sentence," says Professor Colvin, "is that on Lord Byron: 'I had avoided him; I had slighted him; he knew it; he did not love me; he could not.' No conjunctions, no transitions; each statement made by itself, and their connection left to be discerned by the reader." One could not have a better illustration of a style even the idiosyncrasy of which is old-fashioned.

Finally, Landor fails to win admirers (or at least readers) at the present day, because his personality, the picturesqueness of which is at the bottom of the admiration for him of his "peers," we suspect, is of a kind that has ceased to be attractive to persons who care greatly for Greek purity of outline—intellectually attractive, that is to say. Nor has it anything like the force of

Byron's to captivate those who delight in "Florentine piquancy of sentiment." Indeed, it does not appear in his writings with any sharp distinctness, except in the tenderer and gentler passages, where it is admirable and charming—as in some of his portraits of women—but here it is not potent enough, and these passages are not numerous enough, to win a *clientèle*. Outside of his writings he must remain chiefly interesting to those who knew him, many of whom loved him devotedly, it is not difficult to see why. Nothing could be better than the biographical part of Professor Colvin's book, but it does no more than the critical portion to interest deeply the great non-Landorian general public in its subject, who was too plain a case to stimulate the modern spirit of curiosity. He was, says a recent reviewer, "the typical British Squire or John Bull beneath a very thick enamel of culture."

TYLOR'S ANTHROPOLOGY.

Anthropology: an Introduction to the History of Man and Civilization. By Edward B. Tylor. With illustrations. New York: D. Appleton & Co. 1881. 12mo, pp. xv.–448.

Mr. Tylor has produced just such a book as was to be expected from him—clear, sensible, well reasoned, and more systematic in substance than in form. Perhaps it might better have been called an Introduction to Anthropology, since it everywhere strives rather to lay out the particular subject under treatment, trace its outlines, put the student at the right point for contemplating and investigating it, argue down his prejudices, and win his favor for its scientific aspect, than to state exactly what is known and what is unknown about it. With regard to certain subjects, indeed, as the age of man and the divisions and relations of races, the former mode of discussion is decidedly preferable, and the chapters upon them are admirable, and must win general and nearly complete approval. As to some others, we should have liked a distincter and more confident style of teaching.

The author begins with the great fundamental question of the antiquity of the human race, showing how race differences, with languages and the other elements of civilization, join in demanding that lengthened existence of man on the earth which is most unequivocally evidenced by the remains of art in geologically ancient formations; then is taken up our relation, physical and intellectual, to the lower animals; and the account of races, in the third chapter, finishes the contemplation of man on the side of his nature and endowments. Mr. Tylor favors the doctrine of development, and with it, of course, the unity of human origin, and a difference only of degree between the gifts of man and of his inferiors; but his tone is nowhere dogmatic or controversial; he writes as one realizing how much all can agree about, and how useless it is to quarrel upon such points, which more knowledge will by and by settle peacefully. The rest of the work is devoted to explaining man's gradual acquisition of the means and elements of his culture, by way of answer to the fundamental question, as stated in the first sentence of the first chapter: "How mankind came to be as they are, and to live as they do." That is to say, By what steps have human beings, starting with nothing but capacities, arrived at possession of the accumulated and constantly improving products of the exercise of those faculties, in the form of institutions, which go down, not by nature and inheritance, but by tradition and teaching? That man has in all things actually worked his way up from a state of destitution is the more or less clearly indicated theory underlying the whole exposition. It is, of course, the only scientifically defensible theory, and no more controverted by the circumstance that some races and communities have retrograded in civilization than the doctrine that all wealth comes by accumulation of the fruits of labor is shaken by the fact that numerous individuals fall from wealth into poverty.

The results of culture are treated under the heads of language (with an appended chapter on the art of writing), the arts of life, the arts of pleasure, science (or advanced and regulated knowledge), the spirit world (an ill-fitting name for philosophy and religion), history and mythology (better in inverted order), and society and its organization. The author does not quite see clearly that language absolutely belongs in the same class with the rest, as the first and most fundamental of them, and that the vexed question of the relation of language and race is thus at once and completely solved; but his treatment of language in general is far superior in soundness and good sense to that of his favorite authorities, being only here and there warped or rendered superficial by his trust in them. In a work of the scope and method of this, it should not, for example, have failed to be pointed out that the original occasion and primary purpose of language-making is communication. But if something is wanting here, there is, we think, positive error in the account of the genesis of ethnic religions. These have grown out of the theories which men formed for themselves respecting the world about them and the forces that move it, to which forces, by the necessities of untrained thought, are attributed a mode of action and a form like those of human beings. A belief in the continuance of man's existence after death, and in the share taken by disembodied human souls in the processes of nature, is an element now of greater and now of less importance, in these primitive philosophies; but it is far from having the fundamental importance which here, as in others of the author's works, is arrogated to it. And a religion is a body of connected beliefs and practices growing out of the views taken of the powers of nature in their relations to men. Thus, as compared with a philosophy, a religion is something posterior and derived, although, as being the practical side of philosophy, it comes often to outgrow and overshadow the latter, even to making it seem historically subordinate. This is the only acceptable anthropological basis for the history of development of the world's religions in general.

The point most open to criticism perhaps in Mr. Tylor's volume is the illustrations of race varieties, in the third chapter. They are faulty especially in this, that they include a great deal more than is meant as illustration, and hence give the illustrative part on so small a scale that it is only imperfectly to be appreciated and partially to be trusted. The text and its descriptions call for heads alone; but we have full-length figures, and even groups, and dress, and weapons, and habitations, and scenery, with heads of course often of a size fairly to be called minute. And the contrast of big Patagonian and little Bushman, on page 58, is quite spoiled by the latter seeming distinctly further off, and therefore perhaps in reality as big as the other. The point is one hardly worth the attempt to illustrate by picture, unless the two individuals could have been taken together on one plate.

It was doubtless too much to expect that the still current (though now rather tolerated than favored) terms "Stone Age," "Bronze Age," and so on, should have been rejected in this volume; yet Mr. Tylor would have earned the gratitude of his readers by casting them out. Never, surely, was a greater disservice done to the nomenclature of a science than when these terms were borrowed from the Scandinavian antiquarians, in whose use, as applied to a certain limited district, they had a degree of propriety, and were generalized as fitting all Europe and the world at large. The word "Age" indicates a chronological period. No one would tolerate such expressions as the Savage Age, the Barbarous Age, the Age of Civilization; yet they would be every whit as defensible as the others. "Stage" is the word wanted instead. There are, it may be said, three natural stages in the development of instrument-making: first, that of use of the unmodified products of nature—sticks and unwrought stones, and the like—which leave behind no sign of their using (the stage being thus comparable to the Azoic Age in geologic record); then that of natural products modified in form for use—wrought and shapen clubs and stones and bones; and, finally, that of materials derived from nature by an artificial process of change or reduction, especially metals. The first two have, without question, succeeded one another in the independent history of every race; the third, as is the case generally with the higher developments of civilization, rather arises at certain points, under specially favoring circumstances, and is spread by communication to other races. Each of the last two stages has its well-marked sub-divisions, more or less clearly recognized in practice, though wont to be given, as "Ages," a false aspect, which deceives many writers and still more readers. Mr. Tylor shows his usual cautious good sense in declining to recognize the "Bronze Age" as anything more than an accidental and limited factor in the series.

While this volume, then, is in no sense a great work, it is a very good and serviceable one. It does not bring new knowledge, nor does it give old knowledge such new aspects and relations as charm and enlighten those to whom that knowledge is familiar; its sphere is that of popularization, and in this it is unusually successful. Its author shows here the same ability as in his other works to pass over the delicate and offensive parts of his theme without even letting it appear that he passes them over, and his chapters will bear being read aloud, as they stand, in any company. The volume will doubtless receive the wide circulation which it well deserves, and will exercise a marked and useful influence on the general views respecting the subjects of which it treats.

Goethe's Briefe an die Gräfin Auguste zu Stolberg. Zweite Auflage, mit Einleitung und Anmerkungen. Leipzig: Brockhaus. 1881.

As the years roll on, our knowledge of the youthful Goethe, in becoming clearer, seems only to intensify our admiration. All his writings of the ante-Weimar period have a charm of their own, undiminished by the splendor of his prime. Since the appearance of Hirzel's 'Der Junge Goethe,' nothing will better illustrate this than the present collection of letters. It lets us into the arcana of the poet's tumultuous heart during his first great crisis. These letters were, it is true, published in 1839 in the *Urania*; but the earlier edition has long been out of print. The present editor, Arndt, has collated the originals anew, and has also supplied an introduction and very full notes, which leave nothing to be desired.

The intercourse between the poet and the countess reads more like romance than sober fact. Auguste zu Stolberg was not merely a countess: she was a *Reichsgräfin*. She appears to have been from childhood an enthusiast for literature and literary men. Among her early favorites were Klopstock and the Göttingen

Bund. Soon after the publication of 'Werther' her brothers made the acquaintance of the author, and it was through them that she sent her first letter, withholding her name. But the veil of anonymity was soon lifted. Goethe's first two letters, January and February, 1775, are addressed to "The Dear Unknown." But No. 3, evidently written early in March, is addressed to "Dear Augusta"; and in No. 4, March 25, the confidential *Du* slips in. The poet writes as frankly as if to a sister, speaks of the petty affairs of life, of meals and dress, and all the trials of his engagement with Lili. He pours forth his lover's joys and woes into the ears of a patient listener, four years his junior. Franker and heartier letters were probably never penned than those numbered 7 and 8. Yet, written by a Goethe, they are free from anything maudlin. After reading them we can better appreciate the spirit of many a passage in the first part of 'Faust.' The correspondence was continued after Goethe's removal to Weimar, but died out in 1782, without any apparent reason; perhaps the numerous distractions of Goethe's court life were to blame. In 1822 it was suddenly revived for a moment. The countess, now the aged widow of Count Bernstorff, writes to the friend of her youth, recalls the bright hopes of the past, the loss of her parents, brothers, child, and husband; reminds him of his own sorrows and triumphs, and beseeches him to take comfort in the thought of a better hereafter. A letter so pure in sentiment, so graceful in expression, we have seldom if ever read. It comes straight from the heart of a noble woman. Goethe's reply, powerful as it undoubtedly is, seems cold and constrained in comparison.

Is it possible for us of the present day to enter into the spirit of the eighteenth century? We prate glibly of the old régime, its exploded notions, its deep-rooted prejudices. Yet here was a young plebeian, known only as a writer of dramas and stories, treated like a brother by the youthful daughter of one of the oldest and proudest families of Germany. And the two knew each other only by letter; they never met face to face.

Among the Americans. By George Jacob Holyoake. London: T. H. Roberts & Co.; Chicago: Belford, Clarke & Co. 1881.

Mr. Holyoake, who lately spent some little time in this country, has collected into a pamphlet the sketchy memoranda, suggested by what he saw here, which he contributed on his return home to the *Co-operative News.* "These pages," he tells us in his preface, "are the story of nearly four months' travel; and, if I had been in America four years, I should not think myself competent to write a 'book about America.' Only an ex-President could write that in a complete way." His fifteen chapters, which he modestly calls "a mere fireside story of what interested me," are entirely unpretending; but, as being the production of a penetrating and impartial observer of men and things, they lose nothing of value on that account. Nor is the author's good-nature less conspicuous than his shrewdness and freedom from prejudice. In short, alike as regards intelligence, temper, and an expansive charity, he is, within certain limits, an excellent sample of a traveller at his best.

Open Mr. Holyoake's pages where we may, there is a certainty of coming upon something or other worth reading, and that expressed with telling directness, or else with a dash of quiet pleasantry. For instance: "The Irish, whose charm is perplexingness, do not suffer that quality to deteriorate in America. They submit to the Church, but rebel against secular government. They submit to ecclesiastical authority abjectly, and resist the nobler authority of reason foolishly. Having been so long oppressed and deceived, they suspect nobody so much as those who try to serve them." "Lineal Americans," according to our complimentary critic, "are mostly as quick as four-eyed people, and seem to see at the back of their heads." And here, again, we get our full due, if not a little more: "American Christians are braver-minded than English. They believe in spite of irreverent humor. They can laugh at droll aspects of the thing they like. We think ridicule kills piety. The religion of the nation does not stand upon the connection of the church with the state, but upon conviction, which is braver." With some exaggeration, he has it that the terms "east," "west," and the like, are "never heard" in England; and he accounts for the alleged fact by urging that England is a small country, and has no room for the points of the compass. Referring to the popular national habit of estimating humanity, like pigs and turkeys, by pounds avoirdupois, he says, though not quite hitting the mark: "Weight, I observed, is, somehow, an element of rhetoric in the American mind." Wholly original, we surmise, is his apology for being a smoker—namely, that he would avoid pretence of perfection. Occasionally he delivers himself of a sterling apophthegm. Here is one: "It is only the few who see that a little truth makes you wealthier than ten times the amount of error." Another, equally good and none the less so for its jocoseness of form, is that "simplicity and truth seem shabbiness by the side of the profuseness of error and the opulence of delusion."

Though he freely mentions by name the various persons at whose hands he received courtesy or hospitable entertainment, the author does so without ostentation, and in a way that can give no offence. For everybody almost that he speaks of he has a good word; and he even finds excuses for the interviewers, to whom he was something of an enigma, and for the reporters, who audaciously invented speeches for him. Long and honorably distinguished for his labors and writings as a co-operationist, he devotes, as was to be expected, a good deal of space to his favorite subject. To this, however, as to every other topic which he handles, he has a happy knack of imparting an attractive freshness. Especially for the sake of his compatriots it may be regretted that a visitor of his alert discernment and cordial good-will should not have extended his brief sojourn among us, and brought within the scope of his scrutiny and commentation an ampler area, not to speak of the less superficial aspects of our broad and multifarious fatherland.

Elementary German. An Outline of the Grammar, with Exercises, Conversations, and Readings. By C. P. Otis, Ph.D. New York: Henry Holt & Co. 1881.

It would not be an easy or a pleasant task to look over and compare all the methods for learning German published in the English language. Every teacher seems to have learned by personal experience a trick or two which enables him to communicate a knowledge of certain peculiarities of the language more quickly than by the ordinary methods. There would be no harm in this if the teacher did not forthwith deem it necessary to write a new grammar in which his trick becomes the centre of gravity around which everything is made to revolve. The result of using such a grammar is usually this, that the pupil finds himself after a time able to converse quite fluently as long as every-day phrases are used, although he is unable to write a complicated sentence correctly in the new language; or, on the other hand, he may know every rule of the grammar in its proper place in the book and yet be unable to make an instantaneous application of it in conversation. Mr. Otis's aim in preparing his manual was to combine the advantages of the grammatical and the oral methods while avoiding the extremes of each. He has succeeded admirably, and we have met with no book which has seemed to us better adapted for elementary instruction in this difficult language, in high schools or private classes. The introduction of the verb at an earlier, and of the subjunctive mood at a later lesson than is customary, makes the task of the pupil more interesting, and prevents that discouragement which often succeeds an early introduction to the difficulties of the subjunctive. The conversation-exercises which follow each lesson have been made easy by making the question suggest the answer.

The difficult question as to what orthography should be adopted has been solved by simply retaining the old style. Much confusion exists in this matter just at present in Germany, where each State and each newspaper seems to have its own orthography. We should have advised Mr. Otis, however, to adopt at least a few of the improvements which leading German papers like the *Kölnische Zeitung* and the *Schwäbische Mercur* of Stuttgart have adopted, such as dropping the *h* where it is superfluous, and also the *t* in the combination *tz*—changes which will soon prevail everywhere as instances of the survival of the fittest. In selecting the type for his book Mr. Otis has been less conservative. Excepting some extracts in German prose and poetry in the latter part of the book, everything is printed in Roman type. The reason for so doing was to avoid putting an extra burden on the pupil at the outset. Another still more urgent reason for it might have been given. We practical Americans ought to be the last to encourage the Germans in their obstinate adherence to their ugly, sight-destroying, monastic type. Even in Germany, however, most scientific works are now published in Roman type. A recent newspaper item, indeed, states that the German type has found a new defender in Bismarck, whose private secretary the other day returned to the publisher a book forwarded to the Prince, on the ground that he had no time to read German books printed with Roman letters. The story is almost too silly to be true, but if it is true the result will hardly be that German books will cease being printed in Roman type, but only that they will cease being sent to Bismarck.

BOOKS OF THE WEEK.

Bugge, Prof. S. Studien über die Entstehung der nordischen Götter- und Heldensagen. Part 1. New York: B. Westermann & Co.

Carey, Annie. School-Girls; or, Life at Montagu Hall. New York: Cassell & Co. $1.25.

Ebers, Prof. G. Egypt. Parts 13, 14, 15. New York: Cassell & Co. 75 cents each.

Fyke, C. A. American Juvenile Speaker and Songster. Cincinnati: J. W. Helmick. 40 cents.

Grey, S. Gospel according to Satan. New York: James Pott & Co. 90 cents.

La Jonquière, Prof. A. de. Histoire de l'Empire Ottoman. New York: F. W. Christern.

Lord, Rev. J. Points of History, for Schools and Colleges. New York: A. S. Barnes & Co. $1.25.

Morley, Prof. H. Sketches of Longer Works in English Verse and Prose. New York: Cassell & Co. $5.

Rémusat, P. de. Letters of Madame de Rémusat to her Husband & Son. New York: Harper & Bros.—The same: D. Appleton & Co.

Sauveur, L. Contes Merveilleux. New York: F. W. Christern.

Science for All. Parts 26-29. New York: Cassell & Co. 50 cents each.

Smith, F. Story of the English Jacobins. New York: Cassell & Co. 25 cents.

Thackeray, Miss. Madame de Sévigné. Philadelphia: J. B. Lippincott & Co. $1.

Wentworth, Prof. G. A. Elements of Algebra. Boston: Ginn & Heath. $1.45.

The Nation.

NEW YORK, THURSDAY, SEPTEMBER 8, 1881.

The Week.

THE President's safe removal to Long Branch has diffused a sense of relief all over the country. If he now rapidly and steadily improves under the new conditions, it will in the minds of many seem to convey a sort of reflection on the judgment of the doctors, inasmuch as he was undoubtedly as movable five weeks ago as he is now, and has during that long period been languishing in a climate which even the very strong and well can hardly support with impunity. But it is well to remember, in this case as in so many others, the superiority of "hindsight" to "foresight." The possibility of moving him with safety never has been quite clear to anybody. It was not clear even on Wednesday morning, and there are, in the treatment of the sick as in other things, many steps of which the wisdom becomes plain only when they become unavoidable. A great load of responsibility has been put on the physicians, and they have borne it, on the whole, so well that we must not find fault with them, even if it now appears that there was some responsibility which they might have taken, but shrank from taking. The circumstances attending the removal made it in some ways one of the most pathetic incidents of recent history. It was probably watched from near and far with more sympathy and anxiety than have ever followed a sick man's carriage. The great crowds which assembled to see the train pass were impressive by their very silence and decorum, and almost as impressive were the minute and skilful provisions for the President's safety and comfort which the railroad company was able to make. No sovereign has ever had more, we might say has ever had so much, done for him, or has ever had such material resources to draw on for protection against all harm and all incommodity. More than this, no sovereign has ever, when surrounded by loyal precautions, had such assurance as President Garfield must have had, that the whole people demanded all that was done for him, demanded all that could be done for him, and would not have been content with anything less. In fact, the journey was a thing to be remembered, as a sign that in the coming world elected rulers are to have a very efficient and satisfactory substitute for the old loyalty; that "most votes" will, in short, surround a Chief Magistrate with as much respect and devotion as descent has ever done.

A Washington despatch of Friday to the New York *Times*, on the question of Presidential disability, says, speaking of the extent to which the public service has suffered from the President's illness: "If the public interests really demanded an executive signature, the papers might be taken to him now and would be. His absence from the executive office has not yet been as long as when President Hayes visited the Pacific coast, when no public interests suffered. One Cabinet officer, in speaking of this matter to-day, said that if he had half an hour in which to talk with the President he could transact all needed business with him in one minute." This is strictly true. The amount of imperative and important business to which in ordinary times the President has to attend, when Congress is not in session, is exceedingly small. There is not the least reason for supposing that any public interest has suffered from the President's confinement during the last two months. But we may go further than this and say that the necessary duties of the President since March last have not gone beyond a few appointments and the framing and signing of two or three treaties, in the whole of which there was probably not over a week's work to a man as familiar with public affairs and public men as General Garfield was when he took office. Nevertheless, as every reader of the newspapers knows, he was, until he went away to Long Branch with Mrs. Garfield, overwhelmed with work, which followed him even to his wife's sick bed, and constituted a draught on his nervous force such as even a strong man could not bear with impunity. It was work which began when he rose in the morning, and ended only when he retired for the night, and work of the most harassing and exhausting kind. But it was wholly unnecessary work. It was not work imposed on him by the Constitution or the laws. It contributed nothing to the improvement of the administration or of any other public interest. It did not tend to promote the public welfare in any manner whatever.

Now in what did this work consist? What was it? Simply the work of listening to arguments in favor of giving some hundreds of small offices, which were not vacant, to a few thousand insignificant and obscure persons who had discovered that they were unable to make a decent livelihood in any of the ordinary pursuits of active American life. It was to this class—one of the least important and the least worthy of the community—that he made the tremendous sacrifice of health and strength to which all the newspapers called attention during his first four months of office. Let us add that, had Guiteau not struck him down, he would have been kept busy in the same manner all summer, if he had remained in or near Washington. So that the business which has suffered most from the tragedy is not, after all, the legitimate business of the Government. It is a business for which it is the solemn duty of the country to insist that all Presidents shall be permanently disabled, and disabled with a disability which no Vice-President can make good.

Mr. Robeson has given a *Tribune* reporter his views on the inability question. As to the meaning of the term he says: "Whenever an officer meets a duty, the performance of which is actually or legally required of him, and he is unable to perform it, at the time when its performance is required of him, then an inability exists." On the other hand: "So long as the President is able intelligently to desire his Cabinet officers to discharge the duties which they are authorized by law to perform as his representatives, and so long as he is able affirmatively to desire that no other policy be pursued than that which is being followed out, then no inability will arise until some actual duty is presented which the Cabinet is not able to perform"; which is undoubtedly very true, but comes to little more than saying that inability to exercise the duties of his office consists in a want of ability to perform them. As to the constitutional method of deciding when a case of inability has arisen, Mr. Robeson thinks that there is no question that Congress, under its general authority to make laws carrying into execution powers vested in any officer of the Government, may legislate on the subject; but he thinks that while it may pass a law with regard to future cases of inability, it cannot judicially determine whether in a given case inability has arisen, because its functions under the Constitution are legislative and not judicial.

But this distinction has no bearing on the case at all. Congress, if it has the power to make a law on the subject, may pass a special just as well as a general statute, and while it cannot hold an inquest or arrive at any judicial conclusion itself, it can pass a law directing how and by whom an enquiry shall be made, and there is no reason why such a law should not apply to the present as well as to any future case. In the absence of legislation, Mr. Robeson thinks that the Vice-President should decide the question, upon the general principle that when the law imposes a duty upon any person to be performed in a certain contingency, he is to decide when that contingency occurs; but he does not inform us of any case in which this principle has been applied to offices, nor does he, as we should expect a jurist who displays such a tenderness for the distinction between judicial and other functions to do, refer to the bearing upon the matter of the still older principle of law, that no man shall be judge in his own case. Mr. Robeson thinks that if the President himself should declare his inability, this would be satisfactory evidence of the fact, or if the Cabinet and attending physicians should certify the fact, the Vice-President might act upon it. But, as we have before now had occasion to point out, if the Vice-President is really the judge of the matter, he is not restricted to any particular kind of evidence. He may decide it by reading the *Herald* despatches, or by an interview with Dr. Hammond, and, if Mr. Robeson's theory is correct, his decision would be final.

Mr. Evarts has been interviewed on his return from Europe by several reporters of the morning papers as to the results of the International Monetary Conference. His account, if we understand it rightly, does not seem very encouraging. To the *Herald* reporter he said

that the Conference "forced two conclusions on the minds of most of its members: that gold and silver, by being made in their relative capacity mediums of exchange, can add materially to the interests and convenience of commerce, and that by a proper understanding between the different governments the bi-metallic standard can be made to adjust itself easily and profitably to all concerned." This is not quite clear, because gold and silver are now "in their relative capacity" mediums of exchange in all European countries, the silver trouble consisting in the fact that the "relative capacity" differs in different countries. Moreover, the Conference, as we supposed, was held for the purpose of bringing about "the proper understanding" between the various governments. If it has not succeeded in bringing it about, its labors have been very like those of a man who should say that he had made an important step towards the purchase of a certain horse, for he had obtained from the owner a promise to sell him if they could agree on the price. Mr. Evarts also told the *World* reporter that through the Conference "foreign powers were made aware that there was nothing selfish on our part in the silver movement, that we were really working for the general good," and that "we expect a large and increasing share in the commerce and trade of the world." We are greatly afraid, however, that these truths were not borne in on the minds of the delegates without exciting a certain amount of secret mirth. An American silver man "working for the general good" would be to the European eye as diverting a spectacle as an American who was afraid people would doubt his desire for an "increasing share" in whatever trade was going. However, nobody has any right to blame Mr. Evarts or the Conference for not accomplishing more, for the simple reason that they had to deal with a subject so strongly appealing to the selfishness of every nation concerned that, where interests are not clearly identical, each looks out for its own. In fact, the object and the proper object of the Conference was to ascertain the best mode of promoting selfish interests without damage to others. It was not a philanthropic gathering in any sense.

We suggested the other day that Lieutenant Flipper, in considering what might be done to free himself from the difficult position in which embezzlement of public moneys had placed him, had apparently overlooked the case of Cadet Whittaker. If on the discovery of his peculations he had at once boldly denounced the whole affair as a military conspiracy to injure his race and prevent negroes from entering the army, he might at least have secured a protracted enquiry; and this would have given time for the manufacture of all sorts of theories, to say nothing of testimony which might have been of the greatest possible use to him. It might not have led to his acquittal, but it would at least have given him a national reputation and made him a representative man, and at the end of it the lecture field would have been open to him with the certainty of profitable employment. But by "giving himself away," just as a white officer might under the circumstances, he has become an ordinary embezzler, differing from other embezzlers merely in having a black skin. His friends now see that a mistake was made, and according to the latest despatches want him to come forward and denounce his fellow-officers for their attack upon him, and be "vindicated." But it is too late, for he has returned the money.

It seems to be now all but certain that Hartmann, who has been figuring here as a Nihilist and assassin of the most truculent type, and whom many enemies of assassination among us were eager to surrender to Russia, law or no law, is an impostor. Russia does not want him, having enough of the genuine conspirators. If it be true that Hartmann has been playing on our horror of murder to get himself some notoriety, it will serve as a useful warning against being too much troubled by the very numerous sham cut-throats and incendiaries who are now blowing up ships and condemning kings and prime ministers to death—in the newspapers. As we said a day or two ago, the passion for notoriety seems to be one of the most powerful motives of the age. Men will commit murder in order to procure it, but if they can procure it by simply accusing themselves of murder, or by threatening murder, they will be satisfied, because real bloodthirstiness is not common.

Among the most important changes introduced by the new Code of Criminal Procedure, which went into effect on Thursday, are those relating to the preliminary examination of persons charged with crime. These examinations have hitherto been entirely public. The new Code provides (sections 203-205) that the magistrate before whom the prisoner is brought must, "*upon the request of the defendant,*" exclude from the examination every person except the clerk of the magistrate, the prosecutor and his counsel, the Attorney-General, the District Attorney of the county, the defendant and his counsel, and the officer having the defendant in custody"; that the testimony of the witnesses must be taken down in writing, and that these depositions and the statement of the accused person, if any, also made in writing, must be kept private, and must not be inspected "by any person except a judge of a court having jurisdiction of the offence, the Attorney-General, the District Attorney of the county, and the defendant and his counsel." There is, it seems, some difference of opinion among the police justices in this city as to the precise meaning of these provisions, and a great unwillingness to comply strictly with them, one justice being reported to have said that there was nothing in the language of the Code to prevent his communicating with the reporters after the examination was over anything he saw fit to tell them about the case.

It is the press, of course, that is most affected by the changes, and there can hardly be a doubt that the clauses were intended to enable persons arrested for crime to "keep their names out of the papers." This is shown by the fact that the private examination is only to be had at the request of the defendant. There seems to be no reason why the prosecutor, or the county or the State should not have the same privilege. Cases continually arise in which the interest of the public would be greatly promoted by a private examination, but the Code does not allow it to be demanded by any one except the defendant. The true way would be to give the magistrate a discretion to make the examination private or public, but for the fact that the class of men who generally sit as magistrates, particularly in large cities, where most arrests are made, is not such that the public would willingly see them trusted with such a discretion. What sort of a notion of their duties many of them have may be inferred by the remark we have referred to above. A judge who sees no reason why he should not give "items" to reporters, with regard to a matter directed to be strictly private by the Legislature, is hardly likely to be a good man to repose any sort of "discretion" in.

The New York money market became decidedly "easier" for borrowers late in the week on account of the large arrivals of foreign specie and the extraordinary disbursements of the Treasury for 5 per cent. bonds redeemed. The foreign gold receipts were sufficient during the week to raise the total since the beginning of August to $8,377,349 against $12,869,243 in the corresponding time a year ago. The improved condition of the loan market was only slightly reflected in the weekly statement of the banks, which is a statement of average condition for the week instead of actual condition at the close of the week. The Bank of England and other leading European banks are using their influence to check the flow of gold to this country, as they have much less to spare than a year ago. Whether they will be able to keep our gold imports from August to January 1st next below $25,000,000 is very doubtful; but it is not expected that as much will be imported as a year ago. The public debt was reduced during the month of August $14,181,221, making $24,259,244 for the first two months of the fiscal year. The surplus revenues of the Treasury continue large, and it is expected that, during the autumn, bond purchases will be resumed, either of the 4 per cent. bonds or of the extended 5 per cents, which now bear 3½ per cent. No apparent progress has been made towards a settlement of the railroad war; the tonnage of the roads continues large, and there is every indication that the present volume of mercantile transactions throughout the country was never exceeded at this season. Our cereal crops have been injured by the prevailing drouth, while the harvests of Great Britain have been reduced by heavy rains. Speculation in grain has, however, subsided here during the week, and the price of wheat and corn has reacted. The Stock Exchange markets were very dull, but in the latter part of the week prices recovered the decline of the first half and advanced somewhat more. The market

for silver bullion was very dull, and the price in London closed at 51¼d. per ounce. The bullion value here of the 412½-grain silver dollar at the close was $0.8662.

The report of the receivers of the Manhattan Railway shows that the net earnings of the elevated railways are not sufficient to pay the stipulated interest on bonds and dividends on stock of the New York and Metropolitan Elevated Railways—the deficiency during the past two years having been $727,318. No account is made here of the city's claim for taxes. The deficiency, including disputed taxes, is upwards of $1,400,000, being something more than $700,000 per year. The capital stock of the Manhattan Company, $13,000,000, the report adds, was divided between the New York and Metropolitan companies, or their stockholders, as a consideration of the leases, no money having been paid for it. This showing is an ample justification of the proceedings instituted by the Attorney-General to put the company in liquidation. If there be any means by which the victims of this gigantic confidence game—the outside buyers of Manhattan stock—can be helped to recover their money, we trust they will be brought in requisition. It is to be feared, however, that the law furnishes no remedy for the misfortunes of those who buy "water" knowing it to be water, and who expect it to turn into milk through the chemical action of Wall Street.

The Cornell crew have again been making a sad exhibition of themselves, in disregard of a very judicious telegram from Ithaca which met them on their landing, requesting them to say nothing more about their Shinkel scandal. They have said a good deal more, and apparently enough to show that Shinkel was, after all, as a gentleman not greatly inferior to his company. They confess that they went abroad with no guarantees as to his character, apparently thinking it sufficient that he was a fine athlete, and being able to live in his society very comfortably. When they began to suspect him, they went to work to convict him very much in the style of sharpers who thought one of their fellows was "going back on them." Two of them, who apparently slept in the same room with him, lay awake with the view of searching his clothing after he had gone asleep; but he was too smart for them, and took his pocket-book to bed with him. They say now that he sold all the races, and made much money by it, and that he is afraid to come home, and will probably stay in London. The moral of it all is, that when a college crew goes abroad to row matches the moral character of its members is even more important than their muscle.

A Conservative Fair Trader has carried the North Durham election in England also; and this second triumph of the new idea is exciting a flutter in the Liberal ranks. There has been a similar triumph in Cambridgeshire on much the same issue. The Liberals are, in fact, very likely to lose on it every seat that may fall vacant in such of the counties as they wrested from the Conservatives in 1878 by small majorities. There could not be a more striking illustration of the sore need of an issue or "cry" in which the Conservative party now finds itself than Sir Stafford Northcote's admission that he is in favor of free trade if it is reciprocated, inasmuch as he has hitherto been a free trader without conditions, and in all economical matters an old pupil of Mr. Gladstone's.

We have once or twice spoken of the failure of the British "Fair Traders," as they call themselves, to produce any definite plan for bringing "fair trade" about. Sir Edward Sullivan, one of the leaders of the movement, has, however, made a suggestion in the last *Nineteenth Century*, on which the London *Economist* comments eagerly as the first substantial basis for discussion the new party has yet furnished. Sir Edward's plan is to put five shillings per quarter on the wheat imported into Great Britain, which he says would bring £6,250,000 into the Treasury, and thus "relieve other sources of taxation," such as the income tax. This of itself, however, would not help either the British farmer or the manufacturer. It would bring some money into the Treasury from a new source, but to serve the purposes of the Fair Traders it would have to frighten the Americans into changing their tariff. But there is no reason why it should. The American wheat would still be sold in England at the old rate. The consumers would pay a little more for it, but that would not trouble the American farmers. It would not enable British farmers to compete with them, or make it possible for British farmers to grow wheat enough for the home demand. In fact the Americans would not need to trouble themselves in the least about it. It would increase the cost of production to the English manufacturer, and thus make it more difficult for him to get access to the American market, or in other words make the American manufacturer easier in his mind than ever. The *Economist* suggests a more excellent way, which is that the British Government should pay the British farmer a bounty on the wheat he raises.

What is, perhaps, most comic about the "Fair Trade" movement is that our Pennsylvanians do not like it. The great and fundamental doctrine of the Pennsylvanian political economy is that each nation should think of itself as alone in the world, and so legislate in fiscal matters as to make it, as far as climate and soil will permit, self-sufficing. Anybody who does not believe this is apt not to find himself comfortable in Pennsylvania. But it would now appear that this is not, after all, one of the great central truths of the universe. On the contrary, it is liable to modifications, or rather, as the Catholic theologians say, it is a truth which should be economized in its applications. It is clearly not applicable to Great Britain, because it would there lead to the loss of a very important market for American produce. Now, what causes loss to American producers cannot be a truth of the universe, but only local truth.

We do not believe, however, they have yet fully realized the bearing of the Fair-Trade agitation on American interests, and we therefore beg their attention to one or two very important facts. In the year 1879–80 the United States exported to all parts of the world merchandise to the value of $823,946,353, 83 per cent. of which consisted of agricultural products. Of this, $459,406,475 (reckoning the pound sterling at five dollars), or considerably more than one-half, went to Great Britain. In the same year the United States exported wheat to the value of $190,546,305, and of this enormous quantity Great Britain took $97,752,110 worth, or again more than one-half. We might go through the remainder of the list of eatables—83 per cent. of our exports—with the same result. Great Britain is in fact not simply our best market, but by far our best market. Nothing that any one foreign nation could do would disturb our industry and derange our finances so much as a serious modification of her tariff in the direction of protection to her farmers.

It is reported by cable as a rumor that Mr. Kurd von Schloezer, the Minister of the German Empire to the United States, is likely to be appointed German Ambassador to the Vatican. The fact that he has been recently sent there on an extraordinary mission of a very important and delicate nature, gives color to the rumor. It shows that he possesses the confidence of Prince Bismarck in a high degree, and it would seem natural, if a German Ambassador is to be sent to the Vatican at all, that the extraordinary envoy who was first entrusted with the negotiations resulting in a renewal of regular diplomatic intercourse with the Pope, should have the place. Mr. von Schloezer is known in this country, after ten years' residence, as a man of great sagacity, of wide information, of rare keenness as an observer, of enlightened views, and of untiring industry. Added to these qualities, the overflowing cheerfulness of his character has made him, probably, in the best sense, the most popular Minister Germany ever had here, and while his friends will congratulate him upon his promotion, his recall from this country will be widely and sincerely regretted.

Affairs are not going well with the French in Tunis. The Arabs continue to resist and reinforcements to go out, and the money to disappear, and the climate to be unhealthy, and the heat unbearable, and the Arab horsemen difficult to catch. General Corréard gave them, as he reported, a severe thrashing lately, at Sourki, killing six hundred with a loss of only thirty to himself. But somehow, when the fighting was over, it was not the Arabs but the French who retreated, and the Bey's troops, who were near by, refused to take any part in the affair. There are numerous signs already that the French public begins to repent of its bargain and wishes itself out of a venture which is likely to swallow up much money and many men. The Ministers evidently looked for this reaction when they pushed on the election so as to take the vote before the pale cast of thought had begun to show itself on the treaty.

SUMMARY OF THE WEEK'S NEWS.

DOMESTIC.

THE week has been an uneventful one, the President continuing to "hold his own" beyond doubt, but not visibly improving. On the 30th ultimo still another incision was made in the parotid gland, which led to a considerable increase in the frequency of the pulse, and it was discovered that the ball had moved downward, which proved of course that it had not become encysted, but was regarded by the physicians as increasing the probability of its removal. On the 31st the pulse went down to ninety-five degrees, the parotid swelling sensibly diminished, and, in view of the advent of September, the question of removal was again discussed, Dr. Hamilton having this time more support among his associates. On Thursday, the only change was a rise of the pulse, which alarmed no one. The Friday bulletins reported no change at all. On Saturday, removal to Long Branch was determined upon, the President having gained slightly during the day. The plan of a sea trip on the *Tallapoosa* was abandoned after discussion and an inspection of the quarters that could be made use of. On Sunday a little more fever was observable, and the President vomited twice, which, however, was owing to an accumulation of phlegm rather than to serious gastric disturbance. Monday was the hottest day of the season; and the heat, together with the anticipation of removal, had a slightly unfavorable effect. The evening bulletin gave the pulse as 108, the temperature as 99.8, and the respiration as 18, and announced the removal on the morrow.

The President was removed from the White House to Long Branch, or rather Elberon, on Tuesday morning. Every preparation for the journey was completed by Monday night, and shortly after sunrise the President's bed was placed on a stretcher, specially made for it, and the whole taken down stairs by Doctors Bliss, Boynton, and Reyburn, and Colonels Rockwell, Corbin, and Swaim. These gentlemen placed it in the large express van which had been prepared for its reception, and taking it on their knees supported it thus while the van was slowly driven to the train at the terminus of the new track across Pennsylvania avenue, the President opening his eyes but twice as two slight jolts occurred. The train reached, the horses were taken out and the van backed up to the car by soldiers, and the stretcher transferred to the bed provided for its transit. The party left the White House at 5:55 A. M., the train started at 6:20, and reached the cottage of Mr. C. G. Francklyn, which had been placed at the President's disposal, at 1:10, after a perfectly successful trip.

The War Department received news on Saturday of the massacre, by White Mountain Apaches in Arizona, of General Carr and his entire command, consisting of five officers and sixty-three men, besides the commander, all belonging to the Sixth Cavalry. Later intelligence, however, failed to confirm the rumor, and on Monday General McDowell transmitted General Carr's official report of the engagement thus magnified into a terrible disaster. Under orders to arrest an Indian "medicine man" who had been stirring up strife, General Carr marched from Fort Apache on Monday, the 29th ultimo, with six officers, seventy-nine soldiers, and twenty-three Indian scouts. The next day he reached the village of the "doctor" and arrested him peaceably. As the troops were making camp, however, the scouts and many other Indians fired on them and stampeded their horses. The "doctor" was immediately killed, and the Indians driven off after a severe fight. A forced return march to Fort Apache was then made, and immediately after the arrival of the troops the post was attacked, but the assailants were repulsed. The loss is: Killed, Captain Hentig and ten privates; wounded, First Lieutenant C. G. Gordon, one sergeant, and one private. Forty-five horses and ten mules are killed, wounded, or missing. The treachery of the scouts is said to be unexampled, Indians employed by the Government having hitherto always proved faithful. Monday's despatches presaged a general rising of the Apache nation.

The reduction in the public debt for August is over $14,000,000, and for the two months ending on Thursday, $24,250,000. The August reduction has only been exceeded twice since March, 1877.

Reports of the damage and discomfort created by long-continued drought come from New Jersey, Pennsylvania, Ohio, Indiana, Illinois, Michigan, Kentucky, New York, and Canada. In Richmond, Virginia, there has been great suffering from lack of water, and at Harrisburg, Pennsylvania, and in the surrounding neighborhood a scarcity of water that is almost a famine is reported. The suburbs of New York are many of them badly off from the same cause. In northern New York and Canada, forest fires have burned over large districts.

Later reports from the South estimate the damage done in Savannah by the recent cyclone at $1,500,000. Most of the South Carolina rice plantations were submerged. Details as to the loss of life and personal injuries are extremely distressing, though the total is not greater than at first conjectured.

It appears from a letter written to Washington by his attorney that Lieutenant Flipper was short in his accounts to the amount of $300, part of which was found in the possession of his servant and the remainder of which was made up by some citizens of Fort Davis and by Colonel Shafter of Flipper's regiment, who contributed $100. The conspiracy "theory" has already been broached, but the "general sentiment" at Washington among colored people is reported to be one of indignation against Flipper.

Captain Howgate, the accused ex-Signal Service disbursing officer, failed to keep an engagement with his bondsmen on Thursday, and has not since been heard from. The bondsmen will, if he does not return, lose the amount of the bail—$40,000—inasmuch as an indemnity bond executed in their favor by Howgate was not filed, owing to some mishap, till after the Government had attached the property of the accused.

At a meeting of the Canal Board at Albany on the 30th ultimo, State Engineer Seymour presented an opinion upon the question of restoring west-bound tolls. Such a restoration he regarded as "a policy which proposes to destroy the business and tolls of the canals, ruin the 50,000 persons connected with them, and the $20,000,000 of property invested in them, this season, for fear that possibly they may meet with some disaster in 1882." Superintendent Dutcher and Comptroller Wadsworth, the committee appointed to investigate the propriety of adopting the proposition referred to, reported adversely to any reimposition during the present season. Their report was accepted and its recommendation adopted.

The receivers of the Manhattan Elevated Railway Company, ex-Judge John F. Dillon and Mr. A. L. Hopkins, rendered their annual report on Monday, which was filed in the County Clerk's Office in Albany. The capital stock of the company is reported to be $13,000,000, all paid for leases, no money having been paid on account of the stock itself. $175,000 are needed for necessary repairs, though the road is said by engineers employed by the receivers to be in better condition than when first operated. The total earnings are given as $10,541,769 65, and the total disbursements as $10,455,749 98, leaving $86,019 67 cash on hand. An "immense deficiency" is reported between liabilities and assets. Judge Westbrook ordered the repairs recommended.

The Cincinnati Southern Railroad has been leased for twenty-five years to Mr. Frederic Wolfe, of this city, who is believed to represent the Messrs. Erlanger, for about $1,750,000 a year, the lessee agreeing to stock the road and keep it in perfect repair. The five next highest bidders have endeavored fruitlessly to find some irregularity in the lease, which is considered a good one for the lessee as well as for the city.

The Coroner's Jury in the case of Jennie Cramer, a young girl found dead, but not drowned, in the water at New Haven some weeks ago, rendered a verdict on Saturday holding James Malley, jr., "criminally responsible," and Walter Malley and Blanche Douglass "morally responsible," for the death of the deceased. The three persons referred to were variously intimate with the dead girl and had been seen with her shortly before her body was found. The post-mortem examination, which "did not reveal the cause or manner of death," in the words of the examiner, and the chemical examination, which discovered enough arsenic "to indicate a probably fatal dose," furnish all the additional evidence upon which the verdict of the jury is based, so far as yet appears. The Malleys and Blanche Douglass have been for some time in jail, and the Malleys were arraigned for murder on Monday.

The New York Republican State Committee met at the Fifth Avenue Hotel on the 31st ultimo, selected October 5 as the time, and this city as the place for holding the next State Convention, and, in the absence of Vice-President Arthur, chose ex-Senator Thomas C. Platt as chairman *pro. tem.*

The Tammany General Committee met for the first time in several months on Friday evening last. Mr. Augustus Schell was absent, Mr. Grady, "the silver-tongued orator of the Fourth ward," made a speech; resolutions against monopolies and expressing appropriate sentiments in regard to the attempted murder of the President were passed, but the event of the evening was the oration of Mr. Kelly himself. Mr. Kelly poked fun at the Committee of One Hundred of the New York County Democracy, which he called a "conglomeration"; paid his respects to a treacherous Democratic press; said he "should like to see" the Tammany Hall Democracy kept out of a regular convention of the party—which is now the most interesting problem of speculation in Democratic circles—and disclaimed once more all responsibility for the defeat of General Hancock last fall. The Irving Hall faction met the evening before and resolved that "harmony" was the most important object of Democratic endeavor at present.

The Cornell crew, except Shinkel, arrived from Europe on Monday in the steamer *Spain*, and although they were met at Quarantine by a telegram from Ithaca desiring them to say nothing to reporters of the scandal, they were met at the same time by the reporters themselves and persuaded to talk freely. Commodore Chase said that after the first two or three days at Vienna Shinkel "kept away" from his comrades and was "always talking about his want of money and saying he had none." At the same time suspicions were first aroused by his fainting in the boat, "for which there was absolutely no reason" so far as has ever appeared. Some time afterwards the crew were informed by "a gentleman" that Shinkel had received 1,500 florins to sell them out. Then they "began to investigate," and found, by searching his trunk, that Shinkel "had bought a diamond," and heard that he had been trying to buy a draft on America. They said nothing then, but after getting to London informed Shinkel of their discoveries, and asked to search him. This he declined to permit, and they "at once concluded he was guilty," and "told the Associated Press that afternoon." Mr. Allen, one of the crew, added that, suspecting his clothes were to be searched one night, Shinkel took his pocket-book to bed with him. The accused is still in London.

The deaths of Lorenzo Delmonico, the head of the famous house of New York restaurateurs, at Sharon Springs, N. Y.; of ex-Congress-

man Hendrick B. Wright, at Wilkesbarre, Pa., and of Wm. L. Hanscom, ex-Chief of the Construction Bureau of the U. S. Navy, at Malden, Mass., occurred during the week.

FOREIGN.

Mr. John Dillon's withdrawal from agitation on the ground that the Land Bill will suit his countrymen too well to make agitation on any important scale possible, is regarded in England as convincing testimony to the value of that measure. The *Pall Mall Gazette* observes that Mr. Dillon's speech is the "strongest possible confirmation of the soundness of the Government policy." The Ballymena Tenant-Right Association has protested against Mr. Parnell's attempt to force a Land League candidate on the people of Tyrone. Mr. John Givan, appointed Assistant Commissioner under the Land Act, is said to be a pronounced partisan of tenant right, and his appointment to be "viewed with alarm" accordingly, by landlords. A large meeting of tenant farmers and others at Saintfield, County Down, on the 29th ultimo, expressed great satisfaction with the bill. The Bishop of Meath has written to Mr. Parnell that the bill ought to have a fair trial, though it is very incomplete, and he recommends the rejection of the Whig candidate at Tyrone to "teach Mr. Gladstone a lesson." In the North of Ireland numerous bonfires were lighted on Saturday night as a mark of gratitude to Mr. Gladstone. Two "suspects" have been released "on parole," and Mr. Lowell has written to Earl Granville asking for a medical examination in the case of Mr. Walsh, the alleged American, who has now been six months in prison. The members of the Irish Parliamentary party are arranging for a testimonial to Mr. Joseph Cowen, M. P. for Newcastle, for his opposition to the Coercion Bill. The Dublin Corporation has resolved to further peasant proprietary by the sale of their agricultural property to occupying tenants, "whenever compatible with the interests of rate-payers."

A riot began on Sunday in Limerick, arising from "insulting remarks" made by some soldiers about the Pope. The police fired upon a stone-throwing crowd and wounded fifteen persons (Limerick despatch), several of them dangerously. On Monday the state of affairs was scarcely better. Soldiers were stoned and charged the mob, who, after dispersing once, armed themselves and "attempted to decoy the police from the barracks," but "the stratagem failed," and serious bloodshed was avoided. Reinforcements were expected to arrive on the following day.

At the annual meeting in Dublin, on Thursday, of the Property Defense Association, it was determined to "put the organization on a permanent basis for three years," in the words of the despatch. The society has at present 120 men doing duty as "caretakers," and 160 engaged in saving crops.

The election in North Lincolnshire for the vacancy in the House of Commons caused by the death of Mr. Laycock, Liberal, resulted last week in the return of the Right Hon. James Lowther, Conservative, by a vote of 4,200 to 3,729 for the Liberal candidate. In North Durham, Sir George Elliott was elected to the seat of the late Mr. Joicey, Liberal, by a vote of 6,606 to 4,954 for his Liberal opponent. In both instances the canvass had been conducted mainly upon the tariff issue, the Conservative cry being for "Fair Trade"—a course reprehended by the *Standard*, by the way. Sir George Elliott's election is chiefly attributed to his "coquetting" with the Irish, who, to the number of 1,000 in this district, voted against the Liberal candidate upon Mr. Parnell's advice. The Marquis of Blandford has within the week assumed and withdrawn from the Liberal candidature for Cambridgeshire.

Mr. Bradlaugh has issued another proclamation to the English people, expressing an intention of going again to the House of Commons at the next session of Parliament, and asking protection against unlawful violence—at the hands of the House itself, apparently.

The Court of Inquiry into the *Doterel* explosion, which has been sitting at Plymouth, England, has rendered its decision acquitting the captain and officers of all blame for the disaster, and expressing its opinion that the first explosion was caused by gas in the coal bunkers into which a light had probably been introduced, and that the second was the result of the first.

A London despatch from Cape Town reports the wreck of the Union Company's steamship *Teuton* near Quoin Point on the 30th ult. Of the 147 passengers but 12, and of the 80 officers and crew but 23, were saved, though it is not certain that these figures are precisely accurate. The captain was lost. The vessel struck on a rock, floated off, and in three hours sank, owing to the collapse of the bulkhead dividing the injured compartment from that next to it.

It is announced that Gambetta's acceptance of the Premiership, which is now being demanded by almost the entire Left, will be conditional on the fusion of the different Republican groups, except, of course, the Irreconcilables. The London *Times's* Paris correspondent says that President Grévy will wait till M. Jules Ferry encounters a hostile vote in the Chamber before offering the Premiership to Gambetta. Speaking at a banquet on Sunday night, the latter expressed doubt as to the expediency of reopening the question of electoral reform immediately upon the assembling of the new Chamber, but thought it should be simply postponed, not abandoned, a fresh appeal to the country being unadvisable now. A reference to Sedan, which, he said, could have been wiped out if France had had "more steadfast hearts, more virtue, patriotism, independence, and disdain for material enjoyments," received the usual applause.

The supplementary elections in France on Sunday, held in those districts in which there was no declared result a fortnight before, resulted in the success of fifty-six Republicans of various shades, three Royalists, and five Bonapartists. The Republicans gain ten and lose two seats. Marseilles, Besançon, and Lyons returned Irreconcilables. Tony Révillon, Gambetta's Belleville opponent, defeated M. Sicks, Gambettist, and Maret, another Intransigeant, was successful in the other Parisian district which voted over again. The new Chamber will stand as follows: Republicans, 459; Bonapartists, 47; Monarchists, 41.

General Corréard's column was attacked last week near Sourki by a large force of Arabs, who were driven back with, according to his report, six hundred killed and wounded, the French having but fifteen killed and twenty wounded. A Marseilles despatch reports the immediate preparation of five large transport ships for North Africa. An army corps now forming will be sent half to Tunis and half to Algeria. More forest fires are reported in Algeria, twelve hundred hectares of woods being on fire near Algiers alone on the 29th ultimo, and two hundred thousand acres having been burnt over in the whole district. Hammamet has been occupied by the French without opposition. A concentration of Arabs for the defence of Kairouan is forming.

The German elections are to take place on October 27. In Berlin three Anti-Semitic candidates are running, one of them being Herr Stöcker, whose chances of election, though he is opposed by Professor Virchow, are esteemed good. The Guelph party of Hanover have issued a manifesto to the body of German electors begging for the restoration of the ancient monarchy of Hanover, and protesting against the "Prussianizing" of Germany.

Dr. Korum, the new Bishop of Treves, whose appointment is believed to argue the abandonment by Prince Bismarck of his anti-Catholic policy, was presented to the Emperor at Berlin on the 31st ultimo. He will be installed at Strassburg on the 9th instant. The *Germania* newspaper denies that he has an official mission from the Pope to the Chancellor, and declares that he holds the same views as the other Catholic bishops in regard to the abolition of the May laws.

A St. Petersburg despatch of the 31st ultimo, to the *Herald*, says: "The Hartmann who has visited you in America is a fraud. The real Hartmann is known to have been elsewhere throughout your country." The authority for this intelligence is "a high dignitary whose name you will easily guess" from the context to be General Ignatieff, but nothing is given to elucidate the despatch itself. The London *Standard* has a report that Hartmann has offered to turn informer on condition of being amnestied, which has so far been denied neither by the Hartmann who has visited us nor by him who is elsewhere throughout the country.

The St. Petersburg Nihilist organ has reappeared after a silence of three months. General Ignatieff, it is rumored, is to be made Vice-Chancellor of the Empire, Count Shuvaloff succeeding him as Minister of the Interior. The Czar and the Emperor William are expected to meet during the German military manœuvres at Konitz this week. The Vienna *Neue Freie Presse* says that the Emperor went to the Hanover manœuvres last week by a different route from that first intended, through fear of Socialist attacks on his life.

A St. Petersburg despatch, dated the 3d instant, says that by the terms of a Russo-Chinese convention, just signed, China has agreed to permit telegraph wires to be run across the Empire, and that Russia has already entrusted the work to the Danish company which laid down the Russian wires, and which is really a Russian corporation.

The funeral of Pietro Cossa, the Italian dramatic poet, at Naples, on Saturday, was attended by popular demonstrations and marked by the presence of representatives of the Cabinet and the Chamber.

An International Geographical Congress and Exhibition opened at Venice on the 1st instant. Russia, France, Italy, and Sweden are large exhibitors. England is poorly represented, but the Indian Government sends what is described as a "splendid collection" of maps.

A movement has been set on foot by a number of Englishmen and Germans, according to a Constantinople correspondent, to obtain from the Porte a grant of land in Syria for Jews who desire to emigrate from countries where they are suffering persecution, and a delegate is now at Constantinople endeavoring to secure the approval of the Porte. The Sultan is believed to favor the scheme, which will be recognized as Mr. Laurence Oliphant's.

The Sultan's dismissal of the Financial Administrator at Bayazid, in Armenia, is accepted in England as the firsts fruits of the gentle pressure Lord Dufferin is exercising upon the Porte in behalf of the reforms guaranteed by the Treaty of Berlin.

The census of India, just completed, shows a population of 252,500,000.

Ayub Khan issued a proclamation on the 31st ultimo, announcing that he no longer intended to fight the Amir, but was about to attack the British; and accordingly he invited all persons having weapons belonging to the Government to consider them their own provided they would join his standard at once. He is sending as much cash to Herat as he can get hold of, and apparently desires to collect there rifles also; and it is expected that he will retreat thither as soon as the Amir gets within fighting distance. Herat he can defend almost indefinitely, while hoping for another revolution at Kabul. Meantime the popularity of the Amir is said to be constantly increasing, and deservedly so.

THE INABILITY QUESTION.

THE uncertain though improving chances of the President's recovery necessarily give a renewed importance to the discussion of the "inability" clause of the Constitution. At the best, he must remain for some weeks or even months—probably until the time fixed for the assembling of Congress—in a very helpless condition, and one which will make it impossible for him to discharge as a well man could the duties of his office. The Constitution provides that, in case of the removal from office of the President, or of his death, resignation, "or inability to discharge the powers and duties of the said office, the same shall devolve on the Vice-President." The questions presented by this clause, so far as it bears upon the present condition of affairs, are first, what "inability" means, and second, who is to decide when it arises.

In the consideration of these questions we have no precedents to guide us, and we must rely chiefly upon common sense and the plain language of the clause itself. The word "inability" is coupled in the Constitution with three terms, each of which imports an absolute extinction of the capacity to discharge executive functions. Inability, on the other hand, may be either permanent or temporary. If, for example, a President should by a paralytic stroke actually be deprived of his mind, there could be no question that a case contemplated by the Constitution had arisen. If, on the other hand, he were to have an attack of fever which produced delirium, he would undoubtedly be temporarily deprived of the power to discharge the duties of his office, but we can hardly imagine that in such a case the framers of the Constitution intended that the Vice-President should take his place. The chief objection to such an interpretation is that, as a temporary inability of this kind may be removed, and then may return, the result might be an official see-saw between the two officers, which would not only be very ridiculous, but might actually make it difficult to know from month to month who was President—a situation of affairs to the last degree prejudicial to the repose and welfare of the country. If there is one thing that the experience of all nations teaches about the executive head of a Government it is that there must be no sort of doubt as to who he is, and we may be very sure that the framers of the Constitution knew this just as well as we do.

Between the two cases that we have just supposed there may be a third kind of inability, which is neither evidently permanent, nor evidently temporary, which may last a long time, and the probable extent and duration of which may be very difficult or impossible to ascertain. Such is actually the case which has now arisen. All that we know about the President is that he has been lying for some time nearly at the point of death, and that he must in any event remain a very sick man for a long time to come. He has, we believe, in the course of the last two months signed some documents which were imperatively needed, and has probably now and then consulted with members of his Cabinet; but beyond this we know little or nothing. Under these circumstances, has a case of "inability" arisen? Here again we find ourselves confronted by a difficulty quite as great as that of determining what "inability" is. The Constitution does not provide any means of ascertaining when a case of inability has arisen. It is silent upon the subject.

The reason of its silence does not seem to us to be hard to guess, the moment we appreciate, as everybody must now appreciate, the impossibility of defining in advance what extent of physical or mental disease or disability will actually make a change in the head of the Government necessary. This is not a matter of common notoriety, like death or removal, but is one about which it may be very difficult to get any but conflicting testimony, and one as to which much of it will be pretty sure to be warped by interest and party bearing. To attempt to define in advance what "inability" should vacate the office was impossible. The framers of the Constitution saw clearly enough that the whole question was surrounded with difficulties, and therefore, while carefully providing against such a possibility as now confronts us, they wisely left each case to be settled upon its own merits, according to the circumstances. Substantially they said, If the President cannot perform his duties, the Vice-President shall; but whether and when any given Vice-President shall be substituted for any given President, you must determine for yourselves.

The legal interviews published during the past week on the subject of the President's inability show only one thing clearly—that at the present time there is no common agreement among the lawyers upon what ought to be done. Mr. Robeson as well as Mr. Brewster, formerly Attorney-General of Pennsylvania, are positive that the decision of the inability question lies with the Vice-President. Indeed, Mr. Brewster is so confident that the Vice-President is the only person who can decide it that he thinks, even if the President should certify to Mr. Arthur his own inability to act, and request him to take his place, this would not be conclusive, but would be merely "evidence" on the subject for him to consider. Mr. Shellabarger agrees with them as to the right of decision being with the Vice-President, but admits the possibility of a new complication arising, after a decision by him, through *quo warranto* or *mandamus* proceedings, on the ground that the matter had been incorrectly decided, and that the courts have power to review the decision. Mr. Brewster thinks that in such a case the Supreme Court would "oust him instantly." Senator Hoar, on the other hand, thinks that the framers of the Constitution by the use of the word "inability" meant nothing short of permanent disability, and that not only ought the Vice-President not to think of assuming the office, but "newspapers and public men ought not to discuss it"; while Governor Long comes to the conclusion that "neither the President, Vice-President, Cabinet, nor Congress" is "specially charged" with authority to decide.

All this diversity of opinion shows incontestably that no decision arrived at under the present circumstances would be accepted as conclusive, or would be generally satisfactory to the public. Mr. Arthur, if he came in now, except in the case of the President's asking him to do so, would always be thought by a very large number of people to have come in wrongfully and needlessly, and any doubt as to his right to the office would embitter opposition to him to such an extent as seriously to cripple and embarrass his administration. The mere suggestion of a *quo warranto* case over the Presidency, about which Mr. Brewster jauntily lays down the law, as if such a thing were an every-day matter, is enough to open people's eyes to the danger of a wrong decision. For it must be remembered that in political difficulties of this kind the danger not only arises from the probability of a particular step being taken, but from the alarm and anxiety caused by the public discussion of its possibility as well. To most people who will stop to think about it there is something extremely ludicrous in the idea of a President *de jure*, ousted for inability by the Vice-President, bringing *quo warranto* in a United States Circuit Court (for, *pace* Mr. Brewster, the Supreme Court certainly has no original jurisdiction of such a suit) to test the question of his right to the office; but most people are so affected by unreasoning fears that they do not stop to weigh probabilities, and if a large body of them felt that the matter had been wrongly decided, we may be sure that we should have plenty of such talk, and that such talk would do a vast deal to disturb the repose of the country and impair its prosperity.

Under these circumstances the undisputed fact that Congress has power to legislate upon the subject becomes of the extremest importance. Upon this point there seems to be a perfect unanimity of opinion; and indeed the language of the Constitution is too plain to admit of question. It expressly gives to Congress the power to make all laws necessary to carry into execution "the foregoing powers and all other powers vested by this Constitution in the Government of the United States, or in any department *or officer* thereof" (Art. 2, sec. 8). The act of March 1, 1792, passed only five years after the adoption of the Constitution, and in part by men who had helped to frame it, contains in one of its clauses an instance of an exercise of this power. It provides that "the only evidence of a refusal to accept, or of a resignation of, the office of President or Vice-President shall be an instrument in writing declaring the same and subscribed by the person refusing to accept or resigning, as the case may be, and delivered into the office of the Secretary of State." Nobody has ever doubted that this was valid legislation, and if Congress can declare what the evidence of resignation shall be, it can of course also declare what the evidence of inability shall be.

A settlement of the matter by Congress would have the great advantage that it would necessitate a full public discussion of the facts of the case, and of the law bearing upon them, with an opportunity for all parties and factions to present their arguments and state their views; that the interval of time before the meeting of Congress would be sufficient to prepare the country for a calm consideration of the matter, and that it would also very likely settle the practical question of Mr. Garfield's

disability so that there could be no room for difference of opinion about it. Congress is very unlikely to approach the subject in a factious spirit, while it is only too evident that many of the arguments now put forward with regard to it are the product of thinly disguised partisanship. It has been suggested that the President should himself call an extra session of Congress to consider his own "inability"; but we may be very sure that if he is able to call an extra session of Congress, he is able to decide the question of inability himself; and notwithstanding Mr. Brewster's ingenious distinction between inviting the Vice-President to take his place, and laying before him evidence that he ought to do so, it may be presumed that when Mr. Garfield makes up his mind that he is unable to perform his duties, the country will be perfectly satisfied that such is the fact. If he himself sees no reason for this, we do not think the country will be content with anything short of a dispassionate consideration of the matter by the body which, under the Constitution, has, beyond the possibility of dispute, full power to act.

THE ANGLO-FRENCH COMMERCIAL TREATY.

THE attitude of the principal countries of Europe with reference to international trade just now presents features of unusual interest. Germany, after a long and beneficial experience of free trade, has reverted to protection. The new policy was foisted upon her as one part of a political manœuvre, being the resultant of several forces contending together in the empire, no one of which was penetrated with any special views on the subject of foreign commercial intercourse. The deciding force was the landed interest, which wanted protection against the cheap food of Russia and the United States. But it is of little consequence how Germany came to be turned backward. She must be counted for the present among the nations who think that something can be gained by producing an artificial scarcity of goods in their own markets. The noticeable thing in Bismarck's commercial *coup* is that the mass of the German people seem at this moment to have no opinions on the subject of free trade and protection, and are not likely to have any until they are pinched in their pockets, and not even then until they find out what pinches them. Of course the manufacturers were too smart to allow a tax to be put upon grain without a corresponding duty in favor of their own products. But the bulk of the population, upon whom these taxes fall, heeded nothing of what was going on, and it will probably be some years before they find out what has happened to them.

The situation in France is, in some respects, similar. The commercial treaty with England being near its end, the manufacturers, who have found British competition inconvenient, have obtained the ear of the public authorities, as any class can do in a free government, provided the mass of the people are indifferent to the issue involved. By offering the agriculturists protection against the wheat-growers and pork-packers of the United States they have obtained the same boon for themselves as against the spinners and weavers of Great Britain. It is curious to notice, however, with what shame-facedness they went about it. The commercial treaty with England had been productive of great benefits to France, and had come to be recognized in a general way as one of the important things of life. It would be dangerous to attack it in front, to deny its advantages, or to intimate a purpose not to renew it. So the manufacturers proposed a change in the method of levying duties from *ad valorem* to specific rates, protection being more easily concealed under the latter device. When the negotiations for the new treaty were opened it was found that more time would be required to unravel the tangled skein of specific duties than had been allowed by the French authorities—that is, the old treaty would expire before the new one could be arranged. The negotiations were suspended temporarily, and the English Government asked for an extension of the existing treaty in order to make the necessary examination of the French general tariff and its bearings upon British manufactures. The reply of Mr. Tirard, the Minister of Commerce and Agriculture, was a papal *non possumus*—the Government had no power to grant an extension. It is really a matter of dispute at Paris whether the Government has such power or not. The weight of opinion seems to be that if the Government desired to extend the treaty temporarily, it had the power to do so; if not, not.

The conviction having forced itself upon the English public that they have been trifled with, there has been a complete change of sentiment respecting the treaty, to the no small surprise and chagrin of the French authorities. The latter desired to humor the protectionists and to favor them as much as possible, but to make some kind of a treaty which would satisfy the nation that the *entente cordiale* between the two great powers of Western Europe was undisturbed. England has taken the position that she will not enter into a treaty which she does not fully understand, and that if time cannot be allowed her to solve the puzzle of specific duties, she will take her chances under the French general tariff. She has also indicated, through the leading organs of public opinion, that she will not enter into a new treaty which is less favorable than the old one. Moreover, the party of free trade, pure and simple, have improved the occasion to attack all commercial treaties, including the one with France which is just now expiring, on the ground that they put England in a false position, and give the cue to the reciprocitarians and "fair-traders" to demand retaliatory duties against countries which maintain hostile tariffs against Great Britain. Earl Grey commenced this battle some two years ago, when the preliminaries of treaty renewal with France were on foot. He made an assault upon the principle of the treaty which was simply overwhelming from the English point of view. Time has now proved that the theory upon which Cobden and Chevalier proceeded—namely, that the benefits of free trade would become so obvious in the course of twenty years that neither country would again consent to artificial restrictions upon commerce—was altogether faulty. In fact, the contrary has been proved. It has been proved, and not for the first time, that when a country is prosperous, whether its prosperity be due to free trade or anything else, the public become quite indifferent to tariffs and are in the best possible mood to become the prey of combinations of special interests. It is only when a pinch comes that people begin to enquire what they are paying in the way of bounties to the protected classes.

It does not appear that the commercial treaty cut any figure in the recent French elections, but since the negotiations have been dropped by England the Ministry have awakened to the fact that they have made a political blunder. The complaint made to the Paris correspondent of the *Economist* by a high official against the current of English opinion strikes us as extremely whimsical. France, he said, had done nothing worse than Germany had previously done; why then should England be more irritated against the one than against the other? Obviously because Germany has made no false pretences. If France had said in the beginning that for reasons satisfactory to herself she preferred not to renew the treaty, or that she did not choose to favor one nation more than another in matters of trade, she would have preserved her moral status, and given no ground for complaint in any quarter. Her course throughout has been that of a country desiring and intending to do one thing, but keeping up a show of intending to do something else. She overestimated the eagerness of England for a new treaty, and now that she has found her mistake she is in a new perplexity, which, coming on the heels of other complications, will make the Ministry of Foreign Affairs for some time to come no sinecure. It is not to be supposed that the failure of the commercial treaty will change England's foreign policy, which rests upon other considerations; but the partiality which she has entertained for France during the past two decades, and which was manifested in so decided a manner in the year 1875, when France was believed to be menaced with attack by Germany, has apparently been sacrificed to the greed of a few manufacturers.

GERMANY AND ROME.

OUR Berlin correspondent, who has excellent sources of information and is by no means a blind admirer of Prince Bismarck, presents, in his letter on another page, a view of the German Chancellor's negotiations with the Vatican which is not altogether in accord with the first impressions produced by recent cable despatches. The question is whether the ultramontane press in Germany, whose utterances were telegraphed as news a few days ago, was right in predicting the complete abandonment by the Imperial Government of all the principles involved in the Falk laws, or whether it attributed to those negotiations a significance more in accord with the demands and wishes of its party than with Prince Bismarck's intentions. While no clear judgment will be possible until the final result is known, the selection for the conduct of the negotiations of so skilful and liberal a diplomat as

Dr. von Schloezer would seem to indicate that no absolute surrender to the Vatican is intended. If it were, a mere commonplace envoy with a great aristocratic name would have better answered the purpose. Our correspondent has probably good reason for saying that "the Government has never shown any intent or purpose to do away with the principles of the Falk laws," and that "Bismarck has always treated the conflict with Rome as a matter of foreign policy, and will not give it up without gaining some real advantages." Prince Bismarck has frequently surprised the world by bluntly avowing his purposes, and he may have done so this time when in one of his evening conversations last winter he said: "We want peace with the Church; we want a chance to enforce mildly or wholly suspend the laws which protect the State against the encroachments of the Church. We want to hang up our arms in the fencing-room, but we do not want to give them away. We believe that we shall have peace, but the time may return when we shall need the arms again." This can be interpreted as meaning that the Church is to be put upon its good behavior; that if it behaves well the laws so distasteful to it will remain suspended, but that, if it makes itself troublesome, the old weapons are still in the arsenal as ready for use as ever.

Whether this policy will produce lastingly harmonious relations between the Church and the German Empire, only time can show. But the advantages Prince Bismarck may expect to gain by it in the pursuit of other political objects are obvious enough. The great leading thought of Bismarck during the more important part of his career has been to bring about and consolidate the unity of Germany in an imperial form. To this end he employed every means and used the aid of every political party that could serve him. He went through a bitter "constitutional conflict," and made himself the most unpopular man in Germany, to prepare Prussia for the Austrian war of 1866. He allied himself with the Liberal party, which represented the National sentiment. When, during and after the French war, the Catholic Church showed a spirit hostile to the national unification of Germany under the leadership of Prussia, he began his campaign against Church influence by bringing it more stringently under the control of the State. This was the famous "Kulturkampf," which resulted in the Falk laws. In carrying on this struggle he still had to lean upon the Liberal party as his natural ally. Then he thought it necessary to strengthen the hands of the Imperial Government in a fiscal as well as military point of view, and the demands of the Liberals for the observance of constitutional principles grew irksome to him. It became one of his principal aims to reduce Parliamentary influence upon the management of affairs to the narrowest possible limits. He thereupon snubbed the Liberals in a most demonstrative manner, and formed a new and congenial alliance with the "Conservative" interests. To make peace with the Catholic Church must have appeared to him thenceforward desirable, for a Conservative majority could scarcely in any other way be obtained. Some of his economical measures designed to win the favor of the manufacturing and the agricultural interests may to a certain extent be attributed to the same line of policy.

But it is probable that the German Chancellor has still other considerations in view. A considerable majority of the population of the two provinces acquired by conquest from France, Alsace and Lorraine, is strongly Catholic. At this moment the prevailing tendency in the French Republic is adverse to the traditional pretensions of the Church. The establishment of friendly relations between the Vatican and the German Empire may, therefore, be thought well calculated to turn the Church influence in the conquered provinces in favor of Germany, and to facilitate their assimilation with the Empire. The selection of Dr. Korum, an Alsatian, for the important post of Archbishop of Treves seems to have been made by Bismarck himself with this view. But this is not all. The relations between the Vatican and the kingdom of Italy are strained in the extreme. This circumstance is well calculated to make the Pope desirous of making peace with Germany, while on the other hand such a peace would enable Germany to appear in the complications between Italy and the Pope as the friend of both parties. It is not at all unlikely that in view of these things Bismarck may hope to obtain important concessions from the Pope, and that the Pope may be inclined to make them for the purpose of propitiating the influence of so great a power. It seems reasonable to assume, therefore, that with this new stroke of policy the German Chancellor had the following objects in view: to obtain a strong Conservative majority in the Reichstag, which would help him to carry his economical measures and the desired limitations of parliamentary influence in the management of affairs—and it is reported that the Vatican has already instructed the Catholic (Centre) party in Germany to support in the impending elections the Conservative candidates whenever it cannot hope to elect one of its own men; to turn the influence of the Church in the conquered provinces in favor of the German Empire, and thereby to offset the lingering French sympathies; to take advantage of the serious complications between the Vatican and the Italian kingdom to the end of obtaining concessions from the Pope, and of establishing German influence as that of a "mutual friend" between the Pope and the Italian Government and people; and lastly, by merely suspending the operation of the Falk laws instead of entirely abrogating them, and thus holding them *in terrorem* over the Church, to put the latter upon its good behavior under circumstances favorable to the Empire. How far the Chancellor may accomplish all this without giving up the important principles so strenuously asserted in the "Kulturkampf" remains to be seen.

These may be very clever movements on the political chessboard, and they may succeed in accordance with the Chancellor's wishes. But the worst feature of that success will be that it must necessarily be attended with a serious political reaction in Germany, which in fact has already been going on for some time, and, aside from its immediate effects, must in the long run draw very dangerous consequences after it. Bismarck's system of government, or rather the manner in which he carries on the government of the German Empire, is of its own kind and cannot survive him. He is a man of commanding genius, of the most powerful will, and has in addition to these natural qualities the tremendous advantage of having rendered to his country the greatest and most conspicuous services, sometimes in direct opposition to the current opinion of the day. More than any other statesman of our times he has impressed his countrymen, or at least a very large number of them, with the belief that the state cannot do without him. He can say to his opponents: "There was a time when I did great things for the country against your will, because I knew what was to be done, and you did not." And they will have to admit that in some instances it was so. He applies the same reasoning to the objects he wants to accomplish now; these objects may be ever so wrong, yet it cannot be denied that the argument with which he demands compliance with his wishes has a sort of overawing plausibility. Thus he rules the German Parliament and the nation not by the bold absolutism of brute force, but by a sort of intellectual autocracy which is strengthened by the authority derived from his extraordinary successes. This may go on in a measure, and other successes may be achieved as long as he is Chancellor, or at least as long as he retains his mental vigor, but what will he leave behind him? His rule has stunted parliamentary institutions. He has not permitted any parliamentary party to become acquainted with the exercise and the responsibilities of power; he has not only thus prevented the development of parliamentary methods of government, but studiously discredited them with a large number of his countrymen. When he leaves the scene, as he must some day, no parliamentary force will be there to take the helm as he drops it. The country will look for some successor to him to step into his place, and it is said that he has a younger statesman in training for that purpose. But no man can fill that place and carry on the government as he did; for even if the successor did possess a genius and will similar to his, he would not have that overpowering authority which is derived only from such services as Bismarck has rendered. Bismarck was able to use and snub one party after another, lose their confidence, and yet awe them into acquiescence by pointing out the instances in which, as all now admit, he understood things better than they, and served the country in spite of them. No successor can do that. He will be apt to succumb to the attacks of political parties, for the tendency of the times is so strongly in the direction of constitutional government that the German Empire will not be able to resist it. But those political parties will, owing to Bismarck's methods, not be educated for the duties of government, and, until they become so, nobody can tell how the really good things accomplished by Bismarck will endure the confusion.

DELMONICO'S.

No one can read the published notices of the life of Delmonico without perceiving that the public interest to which they appeal is something more than the ordinary curiosity about the details of the career of a successful restaurant manager. There is in them a tone of grateful remembrance and regret which implies a general consciousness of obligation, a sense that Delmonico did something for New York that no one else would have done; that he was a public benefactor. It was not merely that he had the biggest establishment of its kind in the world, nor that he made a great amount of money out of it, but that he had by his life conferred a positive benefit upon the community, had helped to make the city take its place among the half-dozen capitals of the modern world, and left it, in the department to which he had devoted himself, more enlightened and civilized, and, we may fairly say, more happy than he found it. The story told of his failure in business, of his determination to sell it for the benefit of his creditors, and their unanimous refusal to let it go into the market, illustrates a sort of sentiment which is not common in business relations. It would probably have stood a much severer test than this; no one who knows New York can doubt that if it were ever a question between the final closing of Delmonico's and a subscription of money to enable it to go on, the funds would readily be contributed for the purpose.

Of course this feeling may be ascribed to the materialism of a carnal-minded community; but this is a very incomplete view of the subject. New York is undoubtedly a city devoted almost exclusively to material interests. It cannot be denied that it has produced very little art, or literature, or science. Its great men are merchants, or bankers, or brokers, or "operators," or railroad men. The amusements of New York are to a very slight degree intellectual. The tone of its society is far from serious. In all these respects it may be called a headquarters of materialism. But there are different kinds of materialism. Materialism may be refined and it may be coarse, and the natural tendency of Anglo-Saxon materialism all over the world is towards unrefinement. Left to himself in a new country, with the pursuit of wealth before him as the one great object of life, the Anglo-Saxon's tendency is to make his materialism as bald and aggressive as he can. Everything that interferes with money-getting seems to be so much waste, and he consequently abandons it as useless. There is nothing which seems so essentially wasted to him as time and thought spent on eating and drinking. What would have been the fate of the table in America if we had been left to ourselves it is difficult and unpleasant, too, to imagine; we may get some faint idea of what was probably in store for us by reflecting upon the results actually produced in this department of life by a purely national development down to a generation ago. The habit of "perpendicular" drinking at bars seemed at one time destined to supersede altogether, as it still does in most of the newer parts of the country, the custom of drinking wine at table—undoubtedly owing to the fact that it takes up less time and interferes less with the despatch of business; and in the same way, the main thing kept in view in eating was neither to make a dinner agreeable to the palate nor to foster its social and humanizing influences, but to dispose of the greatest number of dishes in the shortest possible time. In the hotel dinner of a generation ago, with its multitude of simultaneously and silently devoured dishes washed down with ice-water, the typical national meal seemed to have been organized. The silence was an essential feature of it; for conversation also took up time and caused delay in getting back to work. Foreigners who came over here thirty or forty years ago saw this condition of things with something like horror, and wondered, if this was the first stage in the development of national gastronomic customs, what the last would be. Probably if we had gone on, meals in common would have been abandoned, and we should have fed and drunk in solitude, merely to satisfy the appetite when it became pressing—a practice which Epicurus thought it wise to warn his followers against two thousand years ago.

It was obviously idle to hope, in this state of affairs, for any reform from within. Although when the first Delmonico came to this country it was a reformatory period, and the air was full of "movements" of all kinds, no American was found to interest himself in gastronomic reform. Philanthropists took up the cause of the slave; literary men insisted on the creation of a national school of poetry and a national school of fiction. Architects began to ask why we had no American architecture, sculptors why we had no American statues, and musical reformers loudly called for an immediate development of the American ear and voice; but amid the general awakening of the country to the fact that it must elevate all its standards, not a voice was raised in the cause of the American stomach. This may have been partly from a crude idea that the devotion of any attention to such matters would have been a concession to materialism itself, but probably a still more fundamental reason was that the country had sunk so low in everything relating to the art of eating and drinking that it did not contain in itself the means of effecting an improvement. In fact, in that part of the country of which the reformatory spirit had taken the strongest hold, the love of intellectual things seemed to threaten in combination with the other causes we have mentioned to produce a novel and peculiarly American type of asceticism, based partly on the feeling that all time devoted to the table must be subtracted from that dedicated to spiritual improvement, and confirmed by the reflection that all money spent on the table makes a man so much out of pocket.

It was at this time and under these circumstances that the first Delmonico came to this country, and engaged in the beneficent work which his descendants are still carrying on. Their restaurant has in the last fifty years become one of the "institutions" of the city, a thing perfect of its kind, and at the same time peculiar to New York. It has become a place not merely to dine at, but a place to talk about, to take foreigners to, something to be proud of, something which we feel makes the city attractive the world over.

It was the mission of the Delmonicos to establish a little oasis of civilization in the vast gastronomic waste which America at the time of their arrival presented. The art to which they devoted their attention was a humble one, but it had in the country to which they owed it been brought to a very high state of perfection. Pretty much all the world knows about the table it has derived from France. Other countries have their national dishes and their national wines, but the art of cookery and the art of combining the results of cookery harmoniously are French. Why the Delmonicos should have selected New York as the field of their operations we do not know. Most likely it was from a shrewd calculation that the commercial capital of a country must also be its gastronomic capital. The enormous transient population of New York furnishes a *clientèle* for restaurants such as no other city affords. If the Delmonicos had gone to Boston or Philadelphia, they would inevitably have failed miserably.

The most remarkable thing about the Delmonicos to our mind is that their own standard should never have been lowered by the depraved national tendencies which we have been considering. They have instead educated their public to their own standard, and considering that their public embraces not only all the people of refined tastes in the city, but hosts of eminent politicians, sporting men, and "boys" as well, whose natural tendency is towards rapid and inconsiderate feeding and perpendicular drinking, this is a very remarkable fact. It must have originally required a very far-sighted instinct on the subject to induce them to believe that they could succeed. Like all reformers, they must have had a good deal of faith. It is curious even now to notice how essentially foreign the whole management is. If you go from any New York hotel kept on "the American plan" to Delmonico's, you seem to have passed from one country into another. Not only the *menu*, but the waiters, the handwriting of the *addition*, the decorations, the comic papers in the café, all are foreign. There is even an air of cheerful hilarity among the people at the tables which is in singular contrast with the solemnity which you have left behind you. If any one wishes to get a still more effective contrast, he has only to take any railroad out of the city, and after travelling a few miles endeavor to dine as his life in New York has accustomed him to do. He will find that he has got into an entirely different civilization, a land in which eating and drinking are looked upon not as an important part of the social economy of life, but simply as the consumption of sufficient nutriment to prevent the waste of tissue.

The national incapacity to do anything with or for the table still seems, notwithstanding Delmonico's influence, to be as pronounced as ever. Even the host of smaller cheap restaurants, which furnish a dinner at a fixed price, and which have become a marked feature of life in New York since the war, are all carried on by foreigners for our benefit. The public seem to know the difference between the bad and the good, but if left to themselves they have not the capacity to develop or even to imitate. Fortunately, the best traditions on the subject have been kept alive in New York by a long line of foreign benefactors, at whose head the Delmonicos have always stood.

THE CELTIC LANGUAGES.

A CURIOUS and interesting enquiry into the Celtic languages of the British Isles has been made by Mr. Ravenstein, and the results published in the journal of the Statistical Society of London. But a very brief outline of these results can be given. Of the two great branches of the Celtic languages there are spoken at the present time in various parts of Britain three of the northern or Gaelic, and of the southern, or Cymraeg, the Welsh is the only representative, as Cornish is extinct. Up to the beginning of the sixteenth century Cornish was spoken as far as the Tamar; but the Reformation led to its extinction, as it also led to the extinction of Celtic in Strathclyde. In 1791, according to Sir Henry Jenner, in all Cornwall there was but one person able to speak Cornish, though at the beginning of that century the language was common in twenty-three parishes.

When the geographical position of these languages is marked out, it will be found that the

districts in which the native languages predominate lie furthest removed from contact with English influences. At the beginning of the present century there were few counties in Ireland in which the old language had entirely died out. Now the Irish-speaking counties lie almost wholly in the western part of the island, and their population is not so dense as in the more fertile eastern or English-speaking districts. There is one curious exception to this distribution. In a small district near Louth, there is still a large Irish-speaking population. In times not very remote it is probable that it was connected with the western counties by a belt of Irish-speaking districts; but this belt was first broken through by the great highway which joins Armagh to Longford, and the little patch near Louth is all that remains to mark its existence, and the next census will probably show that the language is extinct in the east of Ireland. Another curious exception, no longer existing, was a small district in Antrim, where as late as 1851 the dialect spoken was identical with that in use in Kintyre, Scotland—a result produced by the constant intercourse maintained between the two places. In Scotland the extreme northern point, or the northern half of Caithness, together with the Orkney and Shetland Islands, is English, and the Gaelic-speaking portion of its population is maintained only by immigration from the Highlands. Thus the strongly Gaelic counties are encroached upon by English both from the north and from the south, and are confined to the western part of Scotland, and include the numerous islands on the west, which have but little contact with the English. It is in these islands that Gaelic will doubtless linger the longest. "The Gaels, like their kinsmen in Ireland and Wales, have been driven into the hills, or where they remained in the more fertile lowlands they have become amalgamated with the intruding Saxon." The Welsh districts all lie in the west, but there are two English peninsulas in the south—Carmarthenshire and Pembrokeshire—which are surrounded by strongly Welsh districts. It is said that when Arnulf de Montgomery conquered the country he brought some English settlers with him.

"In these early days southern Pembrokeshire was known as 'Little England,' and although the King's writ did not then run in Wales, it was duly acknowledged in this 'Anglia trans-Wallina.' The present English inhabitants may no doubt claim descent from these early settlers, but they have perpetually been receiving reinforcements, and the dialect they speak is said to resemble that of Somersetshire. Of course there has been some intermixture between the two races, but down to the present day they differ not only in language, but also physically."

It is not difficult to discover the causes of the decay of the native languages. They are disused among the educated classes. English is the language of business, and all the remunerative walks of life are open only to such as speak the English language. Highways and railroads, or whatever opens up the country to intercourse with foreigners, and commerce and trade, bring with them influences so strong as to destroy the local element among the natives. But it is in the system of national schools that the most destructive agent to these languages is to be found. In Ireland it is proved that the Irish language predominates only in those districts where, from some reason, the proper supply of schools is wanting, and the same could be said of Scotland and Wales. In all three the government is English, the pulpit is largely English, and the schools almost wholly English. But there are some causes of decay, peculiar to each country, which are worthy of a short notice. In Ireland, migration is an important factor of change. The general course of this migration is from the western to the eastern counties, the places of the emigrants from the east being supplied by emigrants from the west, where the Irish language prevails, and where the local element in the population is strongest. In their new situations they and their children learn English, and all traces of their native language disappear in two or three generations. Migration exercises a minor influence in the other countries; there is a constant flow of Welsh from Radnorshire into England, and of Scots from the Highlands to England, while natives of England settle in these districts. In Scotland, the Gaelic language is fast dying out in those counties which have been opened up by railways and are thus exposed to the inroads of tourists and sportsmen. For a considerable number of years graziers from Ayrshire and Lanarkshire have leased large holdings in the Highlands, bringing with them their Saxon servants. While these strangers settle in their new homes, the old inhabitants go elsewhere to seek their fortunes.

Of the three languages Welsh is that which promises to survive the longest, though it is rapidly disappearing when brought into direct contact with English. There is an important Welsh literature, which is even now said to be on the increase, and there are newspapers and periodicals in Welsh. "The Welshman may market in English, but he prefers his religion in a Welsh garb, gives a preference to Welsh reading, and cultivates Welsh at his fireside." The strenuous efforts to preserve these languages by the formation of societies, or by founding professorships in universities, can have little effect in staying their extinction, for the destructive agencies coming from a higher and more progressive civilization will be in no wise diminished in number or in strength; and it is but a matter of time before the Gaelic languages will be known only to the curious and the philologists, and will take their place in the long list of dead languages.

Some curious facts were brought out in the course of this investigation. For instance, the statistics collected showed that in Ireland the language loses ground at a slightly more rapid rate among the female than among the male population. But when the relative proportions in the two sexes able to speak both Irish and English were compared, the number of females was smaller than that of males. This is accounted for by the fact that young Irish women who migrate, soon forget their native tongue; while their sisters who remain at home and lead a life of greater seclusion than the men, retain it all the more tenaciously. "Hence I do not hesitate to say it is woman who will have the last word in Irish, as she had it in Cornish, and is supposed to have it in all languages." Wherever the Gaelic and Saxon have met, Saxon has won. The Gael learns English readily and is very proud of his accomplishment. When he wishes to be exceptionally severe, he says: "May you never speak correct English." The native languages, as might be expected, have the strongest hold on the older portion of the population; and it is no infrequent occurrence to hear a child, addressed by his parent in Irish or Gaelic, answer in English, and that too in districts where these languages are spoken by a very large proportion of the population. They are coming into disfavor with the younger generation, who, in all places which have some contact with the outer world, give English the preference.

THE RESULTS OF THE SESSION.

LONDON, August 20, 1881.

THE session now drawing to its close has been by far the longest of late years and in many ways the most tedious and dismal. Of all the lamentable and monotonous subjects English statesmen have to deal with, Ireland is the most lamentable, and this session has been entirely spent upon Ireland. The first three months were occupied in passing the two bills which conferred upon the Government exceptional and extra-constitutional powers for repressing agrarian outrages in that country, an operation so much delayed by the pertinacious obstruction of Mr. Parnell and his friends that it would probably never have been completed but for the introduction of the "rules of urgency," under which an extraordinary authority was committed to the Speaker. Nothing could have been more wearisome than the debates of those three months, for the Irish members of to-day have greatly declined from the reputation which Irish orators won in the days of Grattan, Curran, and Plunket. They are bold, ready, and sharp, but seldom eloquent, and totally devoid of humor. When this disagreeable business had been finished the Land Law Bill was brought in and it has covered the whole sky ever since. May, June, July, and half of August have been spent on this one measure, which became peculiarly irksome to the English and Scotch members, not only because very few of them understood its intricacies, but also because, while they were obliged to give a close attendance in order to vote, they were not permitted to speak. When it became clear that all the time of the House would be taken up by this bill, English members, and especially of course Liberal members, refrained from joining in the discussion lest they should delay its progress, and left the talking to the Government and the Irish members. The consequence is that there have been very few opportunities for private members to come out, and with one or two exceptions the only oratorical events of the year have been Mr. Gladstone's speeches.

A more serious result of the same cause has been the complete suspension of legislation for England and Scotland. One of the chief complaints levelled against Lord Beaconsfield's government was that it had neglected domestic reforms. Great things were therefore expected from the Liberal Ministry in this direction; and last year some troublesome questions, such as the quarrel about Dissenters' burials, and the liability of employers for injuries suffered by a workman from the negligence of a fellow-workman, were dealt with. But this year nothing whatever has been done. Bills were brought in to check corrupt practices at elections, to prevent the river floods which have become so serious an evil in central England, to amend that crying scandal, our Bankruptcy law, to improve the administration of charitable trusts, and to effect many other greatly needed changes in the law, but all had, sooner or later, to be dropped as the debates on the Irish Land Bill lengthened out. The case of Scotland was a particularly hard one. Scotland has long been the stronghold of the Liberal party. It was distinguished by its loyalty to Mr. Gladstone during the struggle over the Eastern question, when Lord Beaconsfield was carrying everything before him. Out of all the members whom it sends up to Westminster, only seven are Tories. It was therefore entitled to be specially considered, and to have time set apart for the measures which its people desire. But not a single Scotch bill of the least consequence has been passed either last session or this. Nothing but the personal enthusiasm which Mr. Gladstone inspires in Scotland prevents a mutiny there.

A further result has been the stoppage of discussion on foreign and colonial affairs. There was only one short debate during the whole session on the East—which three years ago occupied people's minds to the exclusion of every other

subject—one on Afghanistan, one on the Transvaal peace. This also is a misfortune, because, although things may go on smoothly for the moment in those regions, it is always wholesome for our governors abroad and our Foreign Office to feel that they are being watched; and it is impossible for public opinion at home to exercise an efficient control over foreign or colonial policy when it turns in that direction only by fits and starts, for in such cases it is necessarily ill-informed and liable to be misled. Our errors and misfortunes in the conduct of Eastern and Afghan affairs from 1876 to 1879 were very largely due to the fact that hardly anybody had been watching the progress of events among the Turks or on the Indian frontier for the twenty years preceding. In the lack of knowledge, crude views of material interest and heated sentiment had it all their own way. Nor was there anything to choose, in point of ignorance, between the two great political parties.

These are some of the reasons why there is no great sense of pleasure, though of course there is a certain sense of relief, in getting rid of the Irish land question. We have spent a whole year over it, and a year's time can ill be spared to Britain. But there is another reason. Nobody pretends to think that the Irish question is settled. The Parnellite party declare openly that it is only beginning, and, not to say that they will of course try to make good their predictions, our past experience of Irish difficulties holds out no great hope of peace. To a large section of the Irish people, every concession, as it appears to have been extorted by fear, constitutes a ground for further agitation. Boons have this year been granted which nobody expected two years ago. Who can tell that continued vigor on the part of the Land League, or some similar organization, may not in a few years more compel submission to demands to which England now closes her ear? It is therefore very natural that those Irishmen who honestly believe that nothing but legislative separation from Great Britain will really cure the evils of Ireland, should be encouraged to persevere in the courses of the last few sessions. It is true that the Land Bill if, as is probable, it ameliorates the condition of the tenant farmer, will deprive the agitators of some of their leverage. The appeal to material interest may not be so strong. But the sense of victory, the sense of having baffled the English Government by the Land League system, of having frightened the English by dynamite plots, of having extorted a Land Bill from the House of Lords as well as the House of Commons, will be an immense encouragement to keep the organization on foot and go on fanning the passion for national existence, not to add that so complicated a piece of machinery as the Land Bill cannot be expected to work quite smoothly, and may be thrown out of gear by a succession of bad harvests.

There is so much force in this that I am inclined to set down as one among the results of the present session an increase in the despondency with which thoughtful Englishmen regard our relation to Ireland. One begins to hear people ask you, almost under their breath, "If we are always to be on these terms with the Irish, if our business is to be always interrupted by them and our troops always employed in keeping order among them, what shall we have to come to? Is it worth our while to keep them? Would it be any such great harm to let them have a Parliament of their own, or even to let them go altogether? They don't add to our wealth or our strength; is it quite impossible that they should be cut adrift, and taught by the difficulty they would have in getting on alone that they will sooner or later have to come back to us?" I do not mean that people of consequence in England, any persons whose ability or experience makes their opinions worth regarding, have given public expression to such ideas, or have even adopted them in their own minds. I mean only that talk like this is in the air, and witnesses to the gravity which the Irish problem has assumed in the minds of men quite out of sympathy with the Irish national party. One more result of the last eight months' wranglings remains to be noticed, and for it we may be thought to owe some thanks to the Parnellite party. All the Liberal majority (with one or two trifling exceptions), and a large part of the Tory minority, are now convinced that our Parliamentary procedure requires speedy and sweeping amendments. At the dinner given to the Ministry by the Lord Mayor of London some three weeks ago, the three principal ministers present, Mr. Gladstone, Mr. Bright, and Lord Hartington, all took up this subject, and all expressed themselves with great decision upon it. Mr. Bright, in particular, declared that the old machine wanted much more than oiling, it wanted repairing; and from a person known to be so conservative of ancient parliamentary forms and usages as he is, these words mean a good deal. The Government notoriously intend at the beginning of next session to bring forward proposals for the improvement of our parliamentary rules and usages so as to overcome the two evils which have proved so serious this session.

The first of these evils is obstruction properly so called—that is to say, the employment of the forms of the House to prolong debate unnecessarily and prevent a division from being taken. To deal with this, something much more regular and systematic will be needed than the rude device of arming the Speaker with dictatorial powers, to which recourse was had this session. His office would become too powerful, and difficult to administer with impartiality, besides which this dictatorship can under the present sessional rule be conferred only by a large majority in a full House, so that no use could be made of it except when, as happened last spring, nearly the whole House was united against a small minority. Hence the expectation is that we shall have proposals for the establishment of the *clôture*, or what you call the previous question, with probably also some limitation placed on the power of moving the adjournment of the House, and moving, when in committee, to report progress. Other minor alterations of the same kind I pass over, though some will no doubt be needed, while yet it is not likely that any attempt will be made to fix a limit of length for speeches. The second evil is one more difficult to deal with, though it excites less bitterness of feeling. It is the fact that while Parliament is engaged upon one large measure, all its energy is absorbed by that one, and no progress can be made with others, even when they raise comparatively little controversy. This year, for example, nothing could be done with the Bankruptcy Bill, a measure as to which there is no party feeling, but only a national wish to see its provisions minutely and thoroughly criticised. An idea is afloat that to enable such subjects to be considered side by side with others of a more distinctly party character, an attempt will be made to revive the system of grand committees which existed in the seventeenth century, or to imitate the system of bureaux which now prevails in the legislative body of France. Thus various sections of the House, chosen with regard to their special knowledge, would be employed at the same time in discussing and getting into shape various measures, and the work of legislative reform would be greatly accelerated.

Whatever be done, it is clear enough that something must be done not only to get rid of the constantly recurring blocks and deadlocks of the last few years, but also to redeem the credit of Parliament itself. The last few sessions have seriously injured its prestige in the country. It has got to be considered as a place of "scenes," a place to give newspapers a theme for sensational descriptions; a place whence the ancient dignity and moderation, good feeling and good sense that were supposed to raise the House of Commons above the representative assemblies of other countries, are fast departing. It is all very well to tell the people that the discreditable incidents and offensive language which move their contempt proceed from a few people only, and that it is a scrupulous respect for the rights of minorities which causes endless delays and the loss of good measures. They will not stop to make fine distinctions; they think that what the House permits it in a fashion sanctions; they are in danger of losing respect for it as a whole. As it is the centre of our whole system of government, on whose excellence and authority the working of all the rest of the machine depends, a diminution of its weight and moral influence in the country would be a very serious misfortune, and indeed a misfortune for representative government all over the world. In the presence of such a danger it is to be hoped that a fair consideration will be given to any plans for reforming the inner part of Parliament which the Ministry may bring forward. But the spirit of party is extremely strong at present, and as the Conservatives, being in a minority now, and seeing that they are more frequently than not in a minority, may expect that any new rules will press more heavily on them than on the Liberals, it is only natural to expect a good deal of opposition from them to such rules. Thus a large part of the next session may be absorbed by discussions about procedure, and the crop of legislation prove not greatly larger than that over whose poverty we are now mourning. Y.

GAMBETTA AT BELLEVILLE.

PARIS, August 19, 1881.

THE electoral campaign is drawing to a close, and there never was a more quiet one, all over the country. In many places where Monarchists were elected four years ago, or where they had a large minority of votes, their candidates have quietly withdrawn from the contest. The Republicans have had it all their own way. There was, a month ago, a beginning of hostilities between the Ministerialists—those who follow M. Grévy and M. Jules Ferry—and the friends and admirers of Gambetta; but a sort of truce has been made between these groups of the Republican party. The President of the Council has, in his speeches in the Department of the Vosges, extended the olive-branch to Gambetta, and Gambetta has seized it, and praised in his paper, the *République Française*, the services rendered to the Republican cause by M. Ferry. As for the great body of the electors, they quietly accept the *status quo*, as it is their disposition to do in all circumstances; they turn a deaf ear to the accusations of the Monarchical press and to the insults heaped by the *Intransigeant* on the Opportunists.

I hardly understand why Gambetta criticised this word "opportunism" in one of his late speeches. He denies being the father of it, and finds the word ill-constructed. But surely, if the word is barbarous, the thing is eminently suited to the temper of a progressive but conservative country. Every progress should have its hour; the best things must be done at the opportune time. At the present moment the Conservatives

are learning this to their cost. There is much truth in all their criticism about the prodigality of the Republican Government, the perpetual inflation of the budget, the artificial impulse given to the building of railroads, the distant and costly expeditions to Tunis; but their criticisms are found inopportune, because the country instinctively feels that the Conservatives have lost the power by their own fault and weakness, and they are just now utterly incapable of forming a Government of their own. The situation in many respects is exactly what it was under the Empire: there were a few men, like Thiers and Prévost-Paradol, who constantly pointed out the faults of Napoleon III., but universal suffrage remained faithful to the last to the man whom it had chosen in 1849. Napoleon III. fell under the blows of fate, not under the blows of France. There is a place, however, where the natural spirit of obedience of the French people does not exist, where it is even replaced by a spirit of perpetual insubordination. Paris is this place; it is the restless brain of a quiet body, the nervous centre which every stimulant can move and irritate. Gambetta has just had a disagreeable experience of it.

After the rejection of the *scrutin de liste*, he chose to remain faithful to the electoral college which had first returned him to the Corps Législatif under the Empire. Belleville was the pedestal on which he had jumped as a young man full of vigor and ardor, and he would not loose the tie which bound him to this heart of the Parisian Democracy. He had entered political life with what is still called his Belleville programme; he determined to remain simply the deputy from Belleville. The increase of population in that quarter had forced the Chamber to cut Belleville into two districts; Gambetta offered himself as candidate in both, and promised to present himself before the electors in both wards. The first meeting at Belleville was quiet. Only fifteen hundred people had been admitted, and they by ticket, and Gambetta was allowed to pronounce amid great silence a very long speech. He dwelt chiefly on the changes which he had found it necessary to make in his first Belleville platform. For instance, this programme, signed under the Empire, contained an article on the abolition of permanent armies. The Empire was then plunging constantly into war. The Empire, meantime, had fallen; but France had lost two of her ancient provinces. Gambetta had no difficulty in showing that the abolition of permanent armies was now a dream of the past, and that the stern reality obliged France to remain constantly under arms. He went so far in the expression of his sentiments as to cause the official papers of Berlin to denounce his appeals to the sentiment of revenge. The speech was marked by a general sense of responsibility; Gambetta spoke like a man who feels that he can grasp the power whenever he likes. It was noticed that he avoided the old phrases against Clericalism; he feels perhaps that enough has been done by M Jules Ferry against the Catholic Church. The weak part of his programme was the attack on the Senate and the demand for a revision of the Constitution. In a country like France, so little accustomed to Republican institutions, the Constitution ought not to be treated like an ordinary law which can be tinkered at pleasure; the people ought to be taught to look upon the Constitution as something durable and permanent, which can only be altered with much difficulty and under the pressure of an absolute necessity. A few weeks ago Gambetta defended at Cahors the constitution of the Second Chamber; now he shows his ill-humor against the Senators because they rejected his pet *scrutin de liste*. He does not propose to abolish the Senate—the contradiction would be too great; but he would do away with the *inamovibles*—the life-senators—and change the mode of election of the members of the Upper Chamber. The game is not worth the candle; the object in view is not proportionate to the evil which would be done if the Constitution came to be regarded as a mere bit of paper—a rag constantly torn and mended. As it is, very few Frenchmen have ever read its text; it cannot be found in any bookseller's shop; it is a sort of political unknown quantity.

Two days ago Gambetta returned to Belleville for the second time, and arrangements were made in order that he should be able to speak before ten thousand people. A wooden building of large size, used as a depot, was prepared. At the given time, though the rain had been falling all day, and continued to fall, thousands of workingmen congregated in the distant quarter where Gambetta was expected. Those only who had tickets sent out by Gambetta's committee were admitted, but it is said that false ones had been made. At any rate, when Gambetta made his appearance the meeting had a decidedly hostile attitude. The struggle began when the president and other officers were nominated; and when Gambetta began his address his voice was completely drowned in a tempest of hisses, of interruptions. He stood for a time like a gladiator in the circus, in the midst of wild beasts. He looked defiant, shook his fist, called the interrupters "drunken slaves." He told them that the time would come when he would return and hunt them in their "infamous dens." It is probable that these insults, which appeared in print the next morning in the *République Française*, were never heard by those to whom they were addressed; otherwise, the meeting might have ended in a tragical manner. After a few vain attempts Gambetta was obliged to retire.

Of course, his friends and his papers say that there was only a group of interrupters, a few hundred men who overruled the will of a few thousands. It is difficult to form a correct opinion on the subject; the elections will show how many at Belleville have remained faithful to their deputy, and how many consider him a traitor to their cause. Their cause, it is idle to deny, is merely the Commune. In the interruptions which made the meeting impossible, the name of Gambetta was constantly associated with the name of General Gallifet. This young general is known to be now living on intimate terms with Gambetta. In 1871 he was one of the sternest officers who had to repress the Commune; his name inspires Belleville with dread and terror. Gambetta took no part in the events of the Commune; he retired to Spain during the terrible months of the siege and of the capture of Paris by the army of Versailles. He never openly condemned the Commune; he has among his most confidential friends Ranc, who was for a little while a member of the Commune, and who was in exile until the general amnesty. But this is not enough for Belleville. Belleville would not even give a moment's hearing to its deputy.

It is perhaps fortunate that this scene should have taken place. The majority of the electors will probably give their votes to Gambetta, and he has been spared the necessity of making to fervent and revolutionary Belleville some imprudent promises. If he is returned deputy, which is almost certain, at least in one of the two wards of Belleville, his hands will be more free. The "drunken slaves" who have insulted and hissed him have also delivered him. He is free from their bondage. May he understand it, and consider himself completely independent of an odious and detestable minority.

HAS BISMARCK "GONE TO CANOSSA"?

BERLIN, August 18, 1881.

THE Pope's appointment of a new Roman Catholic bishop for the Diocese of Treves is the great event of the week, and has created an excitement all over Germany. The negotiations were kept so secret that even the leaders of the party of the Centre were not initiated into the plan. If the fact had not leaked out through the indiscretion of a correspondent of the Augsburg *Gazette*, the public would probably not have become aware of it until after the installation of the new bishop. The way in which the result has been reached is not yet elucidated. So much only is certain, that Bismarck has treated directly with the Papal See, and that after having come to terms with it, he sent Herr von Gossler, the Minister of Public Worship, to Strassburg to confer with the new appointee. It is of course idle talk that the Minister acted on his own risk and responsibility. Herr von Gossler is but a tool in the Chancellor's hands. Belonging to a Lutheran orthodox family of the "noblesse de robe," nephew of the well-known Adelheid Mühler, the ambitious wife of a late minister of the same department, inexperienced and stiff, he attends to all political orders with that ardent subservience which distinguishes the Prussian civil officer, and which feels itself rewarded by a condescending smile from its superiors. Thus Gossler's journey was laid out for him, and it is Bismarck, not his innocent, unoffending Minister, who represents the party of the first part. Who, then, is the party of the second part? Dr. Felix Korum, a member of the chapter of Strassburg, is, as his adversary in the Augsburg *Gazette* says, a native of Alsace, and was educated by the Jesuits at Innsbruck in Tyrol. Although young (born in 1840), and not of superior talent, he was soon promoted to his high clerical position. After 1870 he sided with the ultra-French party, declared to a young German priest that his countrymen had nothing to do with Alsace, and was of course the sworn enemy of the so-called Falk laws.

Treves has been selected as the first experiment for renewing amicable relations with the Church because the chapter of this diocese, several months ago, with the consent of the Government, chose an administrator of the bishopric. The Prussian Government, however, did not confirm the person chosen for this office, Herr de Lorenzi, as that gentleman had on all occasions shown himself their bitterest enemy. From this state of affairs new difficulties arose, the negotiations with Rome became even more complicated, and both parties were driven into a blind alley out of which it was not easy to find escape. A renunciation of Lorenzi, and the subsequent election of another administrator, would have looked like an acknowledgment of the Falk laws on the part of the Catholic Church; while, on the other hand, an appeal of the Pope to Lorenzi to consider himself the duly-elected administrator and to perform all official acts, would have led to new conflicts. In order to avoid them and to find a compromise on which both parties could agree, Herr de Lorenzi had first to be put aside. Thus a possible quarrel about the administrator was avoided and superseded by the election of a new bishop, Herr Korum. The Treves chapter, having assigned its right of election to the Pope, was not suspected of having submitted to the Government; the Pope was free in his dispositions, and could, irrespective of former transactions, concur with the Government on a candidate suitable to both parties. On August 10 Korum was consecrated as bishop in Rome.

If it were not already known, this fact would prove that the German Government is as eager to do away with the *Kulturkampf* as the Pa-

pal See. It is therefore to be presumed that both have made substantial concessions, and that Berlin and Rome have evidently been led by more than personal interests and have taken into consideration the whole political situation. A new bishop merely would not have changed the state of affairs. Whether Bismarck is a better diplomatist than Leo XIII., or *vice versa*, both men are too shrewd not to make concessions before settling the terms on which they will bury the war-hatchet. I believe that both parties have yielded some of their former demands. Prussia may have dispensed the bishops from taking the oath, and Rome may have conceded the duty of the bishops to inform the Prussian Government of the nomination of their subordinates to clerical offices (*Anzeige-Pflicht*). Thus much is certain: both the contracting parties are striving for peace.

According to party affiliations, public opinion here is divided between fear and distrust on one side, and hope and joy on the other. Our Liberals suspect the Government of a foul peace, and apprehend that Rome once more has triumphed over Germany, as for the last sixty years it has always done in its frictions, conflicts, and battles with Prussia. The appointment of Herren von Puttkammer and Gossler, it is true, as successors of Minister Falk justifies to a certain degree the suspicion of a reactionary policy in the management of church and school matters; but in its present state the conflict with Rome is of a rather foreign character, and for the present I do not believe that Bismarck has become doughfaced. It was he who proposed Korum as bishop, and not Rome. He may be mistaken about the character of his candidate, but a possible mistake in the judgment of a character does not imply the sacrifice of a principle. The extent of the concessions only can decide the merits of the case, and as long as we do not know them we cannot correctly judge of the bearing of the measure. When after years of dissensions so important an act as the appointment of this new bishop takes place, the nation has a right to know who has carried his point; but in this respect Bismarck knows no consideration. If the Liberals were right, the concession of Prussia would amount to an abandonment of the Falk laws. The Ultramontanes demand this sacrifice, but the official and officious German press has declared, and still declares, it impossible to comply with it. Thus far it has been right. The Government has never shown any intent or purpose to do away with the principles of the Falk laws. Bismarck himself has always treated the conflict with Rome as a matter of foreign policy, and will not give it up without gaining some real advantages. Years ago he said he would have to make peace with Rome itself directly, and not with the Centre, and added that this peace would not weaken or humiliate the power of the Government. In one of his last evening-conversations during the winter session of the Reichstag the Chancellor said: "We want peace with the Church; we want a chance to enforce mildly or wholly suspend the laws which protect the state against the encroachments of the Church. We want to hang up our arms in the fencing-room, but we do not want to give them away. We believe that we shall have peace, but the time may soon return when we shall need the arms again."

When Bismarck says that he does not intend to go to Canossa we may believe him, for he knows very well that by so doing he would not only destroy his prestige among thirty millions of Protestant Germans, but also lose his authority in questions of foreign policy. Leo XIII., more than two years ago, acknowledged the above-mentioned duty (*Anzeige-Pflicht*) in principle, and Rome has acknowledged it in its relations with other Protestant Governments. If the Pope now orders his bishops to comply with it, the principal cause of trouble is removed. Bismarck is then in fact the winning party, and can hang up his arms. The present threatening complications of Rome with Italy and France make it desirable for her to meet Germany half way. † † †

AN AWKWARD PRECEDENT FOR THE MONROE DOCTRINE.

CAIRO, August 5, 1881.

THAT the United States has any purely political designs in the Mediterranean in general, or in Egypt in particular, would be a proposition too absurd to notice, were it not for the fact that for the past two years our consuls and judges in Egypt have persistently opposed England and France, who, by the unanimous decision of the five great European Powers, are firmly established as the joint controllers of Egypt. If we are to live up to the Monroe Doctrine, we must take good care not to assume any responsibilities in the Mediterranean which may involve us in other men's quarrels, or justly give offence to any foreign state. Nevertheless, it was only last year that our Consul-General warmly opposed the Law of Liquidation, and, after it had been accepted by all the Powers, refused to give in his adherence until forced to do so by cable instructions from Washington, obtained by representations made to the Secretary of State from London and Paris. Upon this occasion the United States played the rôle of obstructionist, and, much to the delight of the "unspeakable" Turk, delayed for some six weeks the efforts to introduce order into Egyptian finance. But the most significant fact was that the United States stood alone and diametrically opposed to the united voice of Europe upon a question concerning the internal affairs of Egypt, and which in no way involved the interests of the life or property of any American citizen—the sole American claim, that of the Messrs. Remington, having been previously most liberally settled by Sir Charles Wilson and M. de Blignières, and the money, some £70,000, paid in in gold at the United States Consulate upon the distinct understanding that the United States would assent to the Law of Liquidation.

This rather chauvinistic act of our Consul-General has never been forgiven by the English and French authorities in Egypt, nor by Riaz Pasha, the Egyptian Premier, and his colleagues. By a singular coincidence this Consul-General is now nominated by the United States Government for the position of Judge of the International Tribunals in Egypt, and his nomination is warmly pressed by the Secretary of State on the ground of the "great and important interests" of the United States in Egypt. As the salary (£1,200 per annum) is paid by Egypt, as the service rendered is rendered to Egypt, and as it is a matter of common notoriety that the ex-Consul-General is not on the best personal terms with the Egyptian Ministers and Comptrollers, it is quite probable that this nomination will not receive the necessary approval of the authorities, although, had not the applicant already, as Consul-General, taken a *parti pris* against the *nouveau régime*, a better nomination could scarcely have been made. The result is that negotiations are now being carried on at London and Paris that will probably prevent the present International Commission for Judicial Reform in Egypt from ever resuming its sessions. Moreover, the better opinion is that the Cabinets of Berlin, St. Petersburg, and Vienna—in compensation for increased influence in other parts of the Ottoman Empire and in the Danubian Principalities—are quite prepared to accord to England and France the exclusive right of providing Egypt with judges.

The United States is at present placed in a somewhat false position in the Levant because our representatives have never yet accepted as an accomplished fact what all the European powers have long ago frankly acknowledged—namely, the Anglo-French protectorate in Egypt. The clique of irreconcilable pashas who, as occasion may require, figure under the name of the "Old Turk Party," or of the "Egypt-for-the-Egyptians Party," and who are imbued with that kind of "patriotism" so forcibly defined by Samuel Johnson, make "American Intervention" one of their war cries against the *status quo*. The capital which this obstructionist party makes of such despatches as the following, which I cut from the *Phare d'Alexandrie* of August 1, may readily be imagined:

"NEW YORK, 9 juillet, 1881.

"INTERVENTION AMÉRICAINE DANS LA MÉDITERRANÉE.—La criminelle catastrophe survenue à Washington a suspendu l'exécution des mesures curatrices que le Gouvernement américain était décidé à prendre en vue des graves événements qui se passent dans la Méditerranée. L'éclosion de ces événements n'a pas surpris les hommes politiques actuels de Washington; car leurs prédécesseurs au pouvoir avaient déjà envoyé, il y a dix-huit mois, le Général Noyes, Ministre américain à Paris, visiter sous prétexte de voyage de santé, non-seulement l'Égypte, mais encore la côte de la Tripolitaine et autres États barbaresques. Le Gouvernement de Washington avait ses raisons de se douter des événements qui allaient surgir dans le bassin méditerranéen, où le commerce américain a de grands intérêts que l'on allait protéger d'une manière efficace, si la tragédie de Washington ne fût pas survenue."

It is quite unnecessary to add that Mr. Noyes's mission was undertaken solely to obtain information with a view to the extension of American trade and commerce in the Mediterranean. Curiously enough, the same journal makes a stirring appeal to the French Government to "intervene" in Mexico and to protect the "Colonie Française du Mexique" from the baneful effects of United States encroachment and predominance. This interference of ours in other men's quarrels in the Mediterranean furnishes an awkward precedent, which will surely be made use of whenever the Panama canal becomes a reality.

Correspondence.

THE PRICE OF FAME.

TO THE EDITOR OF THE NATION:

SIR: The paragraph which appeared in the *Nation* of August 25, in reference to "a new American industry," recalls to my mind a letter addressed some months ago by an enterprising citizen of the Union to an eminent judge of the Supreme Court of Nova Scotia. As the letter created a good deal of amusement at the time, and has a direct bearing upon the subject of your paragraph, and shows with what facility fame may be achieved by those who desire it, I send you the following copy:

"I called at your house about two months ago, but did not find you at home. I have written up Sir William Young, Judges Desbarres, Ritchie, Macdonald, James, Morse, and Johnstone (father and son), and from eighty to one hundred other persons in Nova Scotia, for a biographical work on Quebec and the Maritime Provinces. *All the persons whose names I have given have ordered a copy of the book* (price $25), with one exception, and that order I expect to-morrow.

"I leave on Saturday morning. If you would like a sketch and a copy of the book, please let

me know by Thursday P. M. Governor Archibald, Sir William Young, Judge Desbarres, and several others have ordered plates made, which order is optional with parties.

"Unless I hear from you I shall take it for granted you will not be *written up*."

As the letter was made public by the judge to whom it was addressed, the gentlemen who were being "written up" at $25 per head (plates extra) found themselves famous sooner than they anticipated, and in a way that they did not appreciate. M. G.

HALIFAX, N. S., Aug. 30, 1881.

CITY GOVERNMENT IN MASSACHUSETTS.

TO THE EDITOR OF THE NATION:

SIR: Your article of September 1, on "City Government in Massachusetts," does not state quite correctly the position assumed by the minority of the Newton Charter Commissioners in relation to the school government. A portion of the misapprehension is evidently due to a want of clearness in the report.

It was not proposed that a School Board should intervene betwixt the City Council and the Superintendent, but it was assumed that the School Board would be, or would include, the Superintendent. It was doubted whether one person would be able to do all the work of administration, and therefore the appointment of a School Board was assumed to be probable, as a plural superintendency. But all that is left, under the proposed charter, to be determined by the City Council.

It is not intended that the School Board, or the Superintendent, or anybody should be appointed by the Council, or be responsible to the Council, in the sense of liability to be removed by it. The head of the department, whether one person or a board, would be nominated by the Mayor, and might be removed by him "for the good of the service," the Council consenting. This phrase, "the good of the service," is made throughout both reports the basis of official tenure, and not "during good behavior."

Allow me a little space to speak of the reasons for prohibiting standing committees. No doubt your writer is correct in saying that "if these committees could be deprived of the power of *acting*, and given simply the power of *deliberating*, inspecting and reporting to the council itself, . . . they would serve a useful purpose"; and the majority report practically attempts to do just that; but the abuse of standing committees hereabout is very great, and, in the opinion of the minority, nothing short of prohibition would effect the result which you indicate to be desirable.

It is quite customary in Massachusetts city councils to pass orders that the committee on —— be instructed [or authorized] to do or construct this or that thing, and the frequency of such votes really constitutes the various standing committees heads of executive departments. The employment of contractors, workmen, etc., is a part of their "patronage." The minority cannot see how any evil could result from the absence of standing committees if their project were adopted. The heads of departments would do, and do well, a great portion of the work now done by committees, and there is no restriction upon special committees for any needed purpose.

The two reports of the Newton Commission have accomplished one good result in arousing discussion upon the matter of reform in municipal government, and I am quite sure that no member of the commission believes either or both reports to have exhausted all wisdom in dealing with the subject. F. J. P.

NEWTON, MASS., September 5, 1881.

Notes.

THE publishers' fall announcements of new books continue as follows:—J. R. Osgood & Co.: 'The Centennial History of the American Episcopal Church,' by William Stevens Perry, D.D., Bishop of Iowa, in two volumes 4to, illustrated; the last two volumes of the admirable 'Memorial History of Boston'; 'A Memorial History of the County of Hartford, Conn.,' 1631–1881, edited by Dr. J. Hammond Trumbull, in two volumes 4to, and Benvenuto da Imola's Latin Commentary on Dante, hitherto inedited, under the auspices of the Dante Society of Cambridge. The foregoing works will be published by subscription. In addition, the same house will bring out in the regular course of the trade 'Edwin Forrest,' by Lawrence Barrett, 'The Jeffersons,' by Wm. Winter, 'The Booths,' by Mrs. Asia Booth Clarke, and 'Charlotte Cushman,' by Mrs. Clement, in the illustrated "American-Actor Series," edited by Laurence Hutton; 'Genevieve Ward,' by Mrs. Gustafson; 'A Dictionary of the Stage,' by Townsend Percy; 'Famous Painters and Paintings' and 'Famous Sculptors and Sculpture,' by Mrs. Julia A. Shedd; 'Poets and Etchers,' with full-page plates; 'Parisian Art and Artists,' by Henry Bacon (enlarged from *Scribner's*); a translation of Gonse's 'Eugène Fromentin'; 'The Life of the Late Dr. William Rimmer,' by T. H. Bartlett; 'Original Portraits of Washington,' by Elizabeth Bryant Johnston; 'Ralph Waldo Emerson,' by George Willis Cooke; 'Walt Whitman's Complete Poems'; 'Songs and Lyrics,' by Ellen M. Hutchinson; 'The Poets and Poetry of Ireland,' by Alfred M. Williams; 'A Pickwickian Pilgrimage,' by J. R. G. Hassard; 'South Sea Sketches,' by Mrs. Madeleine Vinton Dahlgren; 'Japanese Episodes,' by Edward H. House; 'Events and Epochs in Religious History,' Lowell Lectures by Dr. James Freeman Clarke; 'Dr. Breen's Practice,' by W. D. Howells; 'Familiar Allusions,' by Wm. A. and C. G. Wheeler; 'Heavy Ordnance, as Invented and Improved in the U. S.,' by Gen. C. B. Norton; 'Modern Perspective,' by Prof. W. R. Ware; and the second volume of Shaler and Davis's 'Illustrations of the Earth's Surface.' Finally, separate mention deserves to be made of 'The Horse in Motion,' by Dr. J. D. B. Stillman, a work based upon the extraordinary revelations of instantaneous photography under the patronage of Mr. Leland Stanford, and illustrated with anatomical plates in chromo and otherwise.——Houghton, Mifflin & Co.: 'Memoir and Correspondence of James T. Fields'; a volume of 'Miscellaneous Essays,' by the late Prof. Diman; 'Longfellow's Poems of Sympathy,' edited by Miss C. F. Bates; a revised edition of Johnson's 'William Lloyd Garrison and his Times'; Björnson's 'Arne,' translated by Prof. Anderson; 'Country Byways,' by Miss Sara O. Jewett; 'A Home Idyl,' a volume of poems by J. T. Trowbridge; an illustrated edition of five of Bayard Taylor's most popular ballads; and 'The Children's Book,' a library of classic tales, by Horace E. Scudder.——Lee & Shepard: 'Young Americans in Japan,' by Edward Greey; 'Who Wrote It?' by Wm. A. and C. G. Wheeler; and 'Raleigh,' by Geo. M. Towle.——D. Lothrop & Co.: 'Beautiful Wild Flowers' and 'Beautiful Ferns,' by the Rev. A. B. Hervey, illustrated after water-color drawings by Isaac Sprague; 'Yellow Birds,' by Ernest Ingersoll; a second series of 'Our American Artists,' by S. G. W. Benjamin; 'The History of Spain,' by Prof. J. A. Harrison; 'The Story of Chief Joseph,' told in verse by Martha P. Lorne; a 'Young Folks' History of Boston,' by Hezekiah Butterworth; and 'A Family Flight'—through Europe, namely—by the Rev. E. E. Hale and Miss Susan Hale.——Harper & Bros. announce 'The Heart of the White Mountains,' already familiar to readers of their magazine, by Samuel Adams Drake, with Mr. Gibson's illustrations. They will also issue on the 9th instant 'The Yorktown Campaign,' by H. P. Johnston, of which the sterling quality may be predicted. It will be finely illustrated.——G. P. Putnam's Sons will publish Edmondo de Amicis's 'Spain and the Spaniards,' and Mr. Fraser Rae's 'Newfoundland to Manitoba.'——T. Whitaker will shortly have ready the Rev. C. A. Row's Bampton Lectures (1877), entitled 'Reasons for Believing in Christianity, Addressed to Busy People.'——John E. Potter & Co., Philadelphia, have in press 'The Artist and his Mission: a Study in Æsthetics,' by Prof. W. M. Reily, of Palatinate College.
